El puerco lo pelan y lo lavan sobre un hueco; allí tiene que caer pelos y bazofia en general. Cuando no están haciendo *Ut ká* se pela el puerco en una artesa. Mientras tanto, el médico adivina qué tanto de carne quieren las almas. Estas especifican la cantidad que el *té eu* la traduce en un palito, que es pasado inmediatamente a los matadores, quienes deben sacar los pedacitos de acuerdo con esa medida y ponerlos en una jigra. El médico bebe aguardiente y posée también ayudantes que ayudan a sentir las señas.

Las mujeres pelan el "mute", hacen tortillas pequeñitas, tantas cuantas almas de difuntos de la familia, existan. Aprontan asímismo toda clase de frutos y comida: plátano, arracacha, pan, yuca, bananos, granadillas, pepinos, maíz, huevos, carnes etc., para defenderlos del *ptans*. Cada pedacito de los comestibles los echan a la jigra.

Preparan también unos muñecos de madera, siendo el número igual al de los difuntos. Los visten como los indios: sombrero, ruana, calzón, camisa. A unos cuarenta metros de distancia de la casa caban una tumba tal y conforme hacen para enterrar muertos: fosa rectangular con cámara lateral. El médico pesa dos huevos de coca, coge dos tabacos y una botella de aguardiente. A las ocho de la noche aproximadamente, salen todos los de la familia, excepto los que no lo son. Va a efectuarse la limpiada. Entonces arriman nubes negras como pelotas. El médico les sopla remedios. Después de dos horas, las nubes se marchan por la izquierda, despejándose el horizonte y dejando mirar en la inmensidad del espacio las estrellas. El médico procede al entierro. En la cámara lateral de la tumba coloca los muñecos (representación de las almas) y una vela de cera de laurel, después de soplarles los remedios. Con una piedra tapa la cámara y pone en seguida las candelillas con la jigra de comida. Rellena de tierra la tumba y procede a la limpiada de los familiares. Regresan a la casa. Salen todos los peones y limpia nuevamente a todos. Solo entonces pueden entrar. Las mujeres tienen preparada toda la comida con la mitad del cerdo, pues la otra es de propiedad del médico. Beben chicha y aguardiente y en seguida se sirve la comida. Amanecen consumiendo los clásicos licores. El médico se marcha y otras gentes se encargan de llevarle el cuido. El médico, recibe, agradece, y lo cuelga fuera de la casa. Solo puede comerlo cuando ha matado mas candelillas.

Con esto el *Ut ká* se ha terminado y la peste se ha alejado de la familia.

Ut peu (sucio-bañar). Inmediatamente después del entierro y a la orilla de un río o de una fuente se efectúa la lavada de las ropas y la limpiada de las gentes. El médico prepara tres calabazos de remedios compuesto el 1º, por agua y boñiga de vaca, el 2º con ruda, *bitopiskue, ñundayuskei, dachak* (curíbano), machacados, y el 3º con *shu* y *shulape*.

Con esto y en el orden enunciado las gentes lavan sus ropas y sus cuerpos. Las ropas del difunto son lavadas por los herederos.

El médico, después de bañarse los pies con esos mismos remedios, permanece sentado percibiendo las señas. Prepara en seguida otro calabazo de remedios con *shú*, *shulape* y *yuskei*, para lavar las manos de todos los asistentes.

Inicia la limpiada de las gentes, las cuales están sentadas sobre unas piedras. El médico marcha hacia la izquierda y desde allá viene batiendo la tama. Al llegar donde el primer limpiado realiza los mismos actos conocidos, haciendo lo mismo con los demás. El "sucio" chupado lo trasboca en un hueco, donde las gentes echan también su mascada de coca, tabaco y *yuskei*. En seguida el médico lava las manos con aguardiente y el remedio previamente preparado. Todos se miden dos tragos: uno soplan al aire y el segundo lo beben. Lo que sobra se riega al aire. Colocados los asistentes en fila el médico bate nuevamente la tama primero por la parte frontal y luego por la parte dorsal. El sucio recogido lo echa al hueco, lo tapa con una piedra y apisona tierra. Ahora, las gentes, limpios del *ptans*, se marchan a la casa del difunto.

Yat put (casa-soplada). Después de la ceremonia del Ut Peu, todas las gentes marchan a la casa del difunto, donde no entran mientras no se realice la soplada de la casa. Salen todos los que dentro de ella estaban. El médico prepara los mismos tres calabazos de remedios que utilizó en el *Ut Peu*. El calabazo de la boñiga de vaca, disuelta en agua, la echa en el sitio donde estuvo el cadáver, haciendo lo mismo con el segundo. Con el tercero, o sea, el compuesto de *shu* y *shulape*, aspergea toda la casa (patio, paredes, salas, techo). Con esto las gentes pueden entrar y sus moradores continuar viviendo. El Dr. Hernández de Alba, describe así la limpiada:

"Amonth after the death, a shaman purifies the house. The relatives and Friends kill a pig, cut it lengthwise in two halves, one for the shaman, the other for the ceremonial banquet. The shaman sweeps the house floor with the pig's legs and some special branches, with are later buried. He chews coca, says some unintelligible words, and spites leaves on the house walls. The residents and guests then enter the house for the final proof of purification. The shaman, standing in the center of the house, gives a dog half a tortilla. If the dog does not die, he divides the

others half among those present. He does the same with a piece of cooked meat, and if the dog still does not die, he bdows chicha in all directions in the hut, and then divides what remains with those present. The hut and food are then declared clean. The food is then eaten and much chicha drunk" (8).

Este tipo de limpiada no ha sido confirmada por ningún informante sea médico o profano, joven o viejo, varón o hembra, de las Parcialidades de Santa Rosa, San Andrés, Calderas, Togoima, Avirama y Mosoco.

Conjuro del rancho nuevo. Las gentes para defender sus labranzas de la voracidad de los animales salvajes, construyen un rancho pequeño. Antes de habitarlo efectúan el siguiente conjuro. El médico sopla remedios en el centro del rancho donde va a quedar el fogón. Cava un hueco y entierra *shu y shulape.* Prende la hoguera y le echa *ñundayuskei* y *bitopiskue.* Recoge toda la ceniza y la bota fuera del rancho. Atiza nuevamente el fuego y asa un choclo pequeño que se lo da a comer a un perro. Si el perro no se muere, es señal de que allí no existe peste y los dueños pueden habitarlo. De lo contrario tienen que abandonarlo. En Santa Rosa el choclo se lo come el *Té eu.*

Esta misma ceremonia se realiza en el estreno de una casa. Al perro le dan maíz tostado de no ser tiempo de choclos. Después beben chicha y aguardiente.

E huse uña (Rosa-nueva-comer). La cosecha de frutos de roza nueva debe ser iniciada por el médico. El dueño de la labranza consigue coca, tabaco y aguardiente e invita al médico. Toda la familia se traslada a la labranza.

El *té eu* prepara un calabazo de remedios a base de *Chayuts, shugues, tayuskei, echiutse, ul ñiñ, tatse.* Aspergea, con esto, la roza. Reparte tantos atados de remedios cuantos asistentes hayan, para que masquen, traguen el zumo y con el resto se froten el cuerpo. Luego el médico recoge un fruto de cada especie por cosechar, forma un atado para obsequiar al Duende, como dueño de la tierra que es.

Después de practicada esta ofrenda, los dueños cosechan una jigrada de cada fruto sembrado. Márchanse a la casa y en la

(8) Véase: Mitología y Cuentos de la Parcialidad de Calderas, Tierradentro. Revista Colombiana de Antropología. 1953.

parte izquierda de la puerta de entrada yuxtaponen las jigras para que el médico sople nuevamente remedios. Sin este requisito no pueden entrar las jigras de comida a la casa, porque pueden portar la peste. Las mujeres empiezan a cocinarlos. Llegada la hora del consumo, el médico reparte primeramente una copa de aguardiente con *yuskei* y *bitopiskue*. Cuando son papas después de cocidas las entregan al médico. Este reparte a todos los asistentes un ejemplar; lo que sobra entrega al dueño, quien a su vez regala abundantemente al médico.

Si las primicias son de maíz y fríjol, se hace lo siguiente:

Con los choclos se preparan "bollos" o "envueltos"; con el fríjol se forma un atado grande. Cocen, entonces, choclos, el atado de fríjoles y los bollos. Aparte, la olla de sancocho con gallina para cuidar al médico.

En una artesa recogen los choclos, fríjoles y bollos cocidos y la cocinera reparte a todos los asistentes con un ejemplar de cada especie. Todos comen cuidando de sobrar un poco de cada bocado, que lo pasan al médico. Este hace un montón, lo ata y lo cuelga en la cumbrera de la casa con el fin de que la semilla de labranza que se empieza a cosechar fructifique abundantemente en el año venidero.

Las envolturas de los choclos se amontonan fuera de la casa donde el médico se queda una noche con el objeto de capturar candelillas y matarlas.

Espíritus auxiliares. El Trueno. Todos los informantes afirman que el Trueno es de estatura pequeña, 1.40 m. aproximadamente, lleva sombrero grande de ramo, pantaloncillo, ruana negra, tama y jigra de remedios. Con todo, álguien dice que tiene barba larga, no usa calzones, exhibe los genitales y lleva un instrumento musical llamado *tíngalo* (triángulo).

Es médico y maestro de todos los *té eu* paeces; protector de los *nasa* (gentes) y en cierta forma hasta su legislador. *Sat* (cacique) en tiempo de los Pijaos, los defendió de la voracidad de éstos y les dio buenos consejos. Ordenó que las varas de mando de los cabildantes fuesen limpiadas en las lagunas, moradas del Trueno para evitar que la peste mate las gentes.

El Trueno es un espíritu inmortal. No se lo vé. Es guardián del oro y mata a quien se atreva a recogerlo. Anuncia a las gen-

tes cuando un blanco malo los va a visitar mediante un trueno fuertísimo dado cuando no va a llover. Si el trueno cae frente a una casa indica al dueño que está con peste y que debe buscar un médico para que lo cure. Si truena primero en la casa del brujo y luego pasa a la del médico, es señal de que aquel lo está brujiando.

Cuando un paciente solicitó los servicios de un médico de Santa Rosa, por la noche cayó una lluvia torrencial acompañada de truenos. Al día siguiente informó al paciente que había hablado con el Trueno quien le aconsejó no lo curara si no le llevaba todo lo que había exigido.

Al único que tiene miedo el Trueno es al diablo. Sabe más de curaciones que el Duende.

Una médica-bruja de Santa Rosa informa que el Trueno, llamado Manuel José Tipo, se había enamorado de ella. Con el *tíngalo* le daba serenatas, siendo mas frecuentes cuando la bruja barría el patio de la casa. En las serenatas le enseñaba los remedios. Estuvo a punto de llevársela a la laguna de no haberse defendido enérgicamente.

Manuel José Tipo estuvo en Calderas (9). Las gentes echaron veneno a la laguna y tuvo que abandonar el lugar en compañía de su mujer. Por los aires se dirigió a Santa Rosa donde al llegar dejó caer a la mujer. La mató. En esta Parcialidad estaba enamorado de una cacica. Siempre se le presentaba bien vestido, con opulenta cacería de guacharacas. Intrigado el padre de la cacica de la manera cómo mataba tantas guacharacas, siguiólo a la montaña y observó que al desvestirse tenía en la espalda cuero de culebra. Era culebra y por lo mismo cazaba con facilidad las aves. Informóle de esto a la hija. Esta acompañada de una sirvienta marchóse al día siguiente, a su labranza de tierras feracísimas. Tenía hermosas labranzas de papas, coles y cebollas. El Trueno llegó a visitarla. El lugar empezó a lagunarse y la sirvienta advirtió a la patrona del peligro que corrían. No hizo caso. Lucía Kalguesh, la cacica, se quedó viivendo con el Trueno. La laguna era muy brava y el Trueno engañaba mucho a las mujeres. Entonces bajaron los *puswesh* (las estrellas) rozaron los bosques circundantes a la laguna y cavaron una acequia con el objeto de

(9) Frazer, Sir James George. *La Rama Dorada.* Fdo. de Cultura Económica. México. 1951. pp. 33-34.

secarla. En el momento de lograr su cometido salió el Trueno a suplicarles no secaran su vivienda. Los *puswesh* enojados le cosieron la boca y le cortaron la lengua que eran muy grandes.

El Trueno continuó manejándose mal y los médicos lo corrieron para otra laguna, sin la mujer y los hijos.

Kallumb. Vive en los manantiales y en los socavones. Es un espíritu bueno. Las gentes cuentan que la Virgen dejó un niño ambulante para que ayudara a los indios, los protegiera e infundiera la creencia en élla.

Los duendes se parecen a los ángeles y tienen el cuerpo cubierto de vellos. Las mujeres pueden verlos haciendo los movimientos de tejer y en tal caso salen buenas tejedoras. Los hombres, mirarlos con las jigras indicativo de que van a ser médicos.

Se dice que existen duendes grandes y pequeños. Los primeros cuando se levantan dejan el arco iris tras de sí, como una estela. Los segundos no se juntan con él y son menos bravos que aquellos. Los unos y los otros gritan como plañideras.

La mujer Té eu. Las mujeres pueden ser médicas, afirman las gentes; no hay razón para que no les corra las señas. No obstante, ninguna mujer es médica. En Santa Rosa existe una mujer, que según su propia confesión es buena médica, ha visto al Trueno, conversando con él y tienen buenos remedios. Inclusive el Trueno le dio un muñeco de madera llamado "Viento suave del Trueno" con el cual efectúa las curaciones. Pero la comunidad la considera como bruja de las más peligrosas y el cabildo le ha quemado los remedios y la ha metido al cepo. Aún más, todas las muertes causadas por la brujería la responsabilizan a ella.

Por otra parte, el comportamiento frente a la comunidad es idéntico al que observan todos los brujos, es decir, aislamiento y resentimiento contra ella. Un médico de Calderas explica así el fenómeno: La mujer es más astuta que el hombre; tiene pensamientos brillantes y por lo general domina a los hombres. La mujer puede ser médica, pero en cualquier momento puede convertirse en bruja, porque es más astuta que el hombre. Llega a veces, hasta tal punto que no le importa nada. De allí que las mujeres no aprendan medicina.

Tabúes del Té eu. Se refieren más que todo a sexo y alimentación. No tienen toda la fuerza y tenacidad que se observa en otras culturas.

Cuando el médico está percibiendo las señas no puede cohabitar. El brujo que está al tanto de esta interdicción, por picardía y maldad, suele llevar a su mujer al kachí y cohabitar con ella con el objeto de que no corran las señas al médico ni las candelillas se levanten. Y para acrecentar la maldad, dejan en el kachí pelos púbicos, que son venenosos.

El médico no puede comer ají, sobretodo el denominado de montaña, pues se enoja el Trueno y el Duende. La sal no la comen o la consumen muy poco. El Trueno no comía sal, dicen. Las carnes de los "cuidos", la consumen después de realizar la limpiada. En las ceremonias de *ut ká, wé ká, ut peu* ayunan un día. Es decir, comen al amanecer y vuelven a comer al día siguiente. Además, como las curaciones se hacen de noche la frugalidad les produce menos sueño.

Sueños del Té eu. La interpretación de los sueños paeces, como en la generalidad de las interpretaciones de los sueños populares, observa cierta relación entre el contenido manifiesto del sueño y la acción por venir. Mejor dicho, del contenido manifiesto del sueño, deducen los futuros acontecimientos.

Creen firmemente en los anuncios de los sueños, pero no hacen nada para prevenirse. Es como si fuera una fatalidad del destino. No existen sueños especiales de los médicos. La interpretación es patrimonio común de las gentes. La actitud frente a estos anuncios es la misma, esperar indiferentemente. He aquí algunos ejemplos, pues son muchos:

Soñar que una culebra lo pica, brujería. Pero si en el sueño, otra persona mata la culebra en el momento de picarlo, un buen médico va a revirar la brujería de la víctima al propio brujo.

Soñar que una piara lo ataca, están brujiando.

Soñar matando a un puerco, van a matar al brujo.

Soñar tigres y gatos, dentro de la casa hay "guaca" de pijaos.

Soñar una hoguera, en el sitio hay oro.

Soñar que un tigre se come los pollitos, la persona va a morir con peste de pijao.

Soñar una vaca, muere la mujer.

Soñar matando un toro o un caballo, persona buena que muere (médicos).

Soñar que lo pican las avispas, le van a pegar.

Soñar que se le caen los dientes sin dolor, va a morir un familiar cercano.

Soñar comiendo ají, la persona va a enojar por motivos insignificantes.

Soñar cogiendo *chambe* nuevo, trabajan para que el arco lo pique y si sueña envuelto con el mismo, el arco lo ha picado.

Soñar cargando vigas, canoas, va a ayudar a enterrar un muerto.

Soñar recibiendo monedas de plata, va a enfermar con blenorragia.

Soñar ahogándose, va a haber guerra y lo van a tomar prisionero, o simplemente se lo van a llevar al cuartel.

Pago del Te eu. En general los médicos no cobran honorarios ni en dinero ni en especies. El servicio es gratuito. El Trueno en la confirmación de la profesión lo primero que recomienda es ser caritativos con las gentes. Un médico manifiesta que no cura por negocio, pues no cobra ni dinero ni animales; las gentes lo gratifican con un pequeño regalo. Otro médico es más dogmático. Explotar a las gentes enciende las iras de Dios. La gratitud de las personas siempre se hace ostensible en los "cuidos" (carne, chicha y aguardiente).

De los artículos que el paciente les lleva para las curaciones apenas les sobra un poco de coca. De las ceremonias de iniciación de las cosechas reciben comida cocida y cruda. Del *Ut ká* y *Wé ká* llevan la mitad del animal sacrificado, chicha y aguardiente. En caso de enfermedad grave, exigen puerco, oveja, pavos. Pero es poco lo que llevan.

Si bien no faltan informaciones de médicos que cobran dinero por el ejercicio de su saber, como un médico de Togoima solicitado hasta de La Plata y Garzón, se puede afirmar que los médicos no hacen riqueza alguna con la profesión. El ejercicio de la medicatura mas bien perjudica sus actividades económicas. Algunos son completamente pobres, en tanto que otros poseen grandes extensiones de terreno, buenas labranzas de maíz, trigo, plátanos, arracachas, algunas cabezas de ganado y varios caballos, puercos, ovejas y pavos. Se catalogan como ricos. De los cinco médicos de la Parcialidad de Calderas tres pueden considerarse como ricos en tanto que de los considerados como brujos, solo uno es pobre. Naturalmente, esto ha sido conseguido mas por

herencia que por el fruto de sus propios esfuerzos. Sus trabajos los realizan conforme a las normas que rigen en la comunidad, es decir, por el sistema de mingas. En la cosecha realizan la distribución de alimentos tal como hacen los demás. Participan activamente en el trabajo de los demás, así como también en las fiestas y borracheras.

Sobra advertir que los más ricos de la comunidad no son médicos. En algunas ocasiones son frecuentemente criticados, cuando en las curaciones solicitan puerco y la mejoría del enfermo no llega. "No seas sinvergüenza —le gritan—, tú comiendo oveja y el enfermo muriéndose".

Los médicos buenos al referirse a aquellos considerados como brujos, dicen que cobran indefectiblemente. Lo que encuentran van solicitando. En igual forma se expresan los brujos de los médicos.

Status social del Té eu. Todos los médicos conocidos pasan de los treinta años de edad. Son "mayores" y por lo mismo acreedores al respeto de la comunidad. Alguien manifiesta que los médicos no valen más que los otros hombres, pero lo cierto es que gozan de una aureola de prestigio y de reconocimiento, diferente al prodigado por el concepto de mayoridad.

De todas maneras, "los médicos tienen algo y son cariñosos", dice un informante. Se les respeta, y en los agasajos se los atiende en el cuarto que se reciben las gentes importantes (síndico, capitán, gobernador, ancianos prestigiosos) y se los sirve en platos más grandes.

El prestigio es una ventaja del médico. No es raro que quieran más al médico que al capitán de la Parcialidad.

Todos los médicos manifiestan estar contentos con su profesión y muchos agradecen a su maestro la enseñanza. Es ventaja de ser médico el ser atendido por el personal, distinguido entre los demás, y también ser perseguido por sus saberes, dice un médico calderuno. Al médico bueno lo busca todo el mundo; muchos se consideran como padres, pues diariamente llegan a sus casas a buscarlos. Tienen mas poder que las otras gentes.

El médico ocupa por su función un status social elevado. Pero nada más que por su función. Es acreedor al respeto y al reconocimiento de los favores recibidos. Nadie puede maltratarlo. Si en las borracheras recibe ofensa, al día siguiente, se apresuran a desagraviarlo.

Características psicológicas del Té eu. Los médicos tienen una edad que oscila entre los treinta y sesenta años. En general, tienen los ojos hundidos en los cuencos orbitarios, mirada penetrante, de conversación y risa fáciles, ademanes suaves, nada agresivos, parsimoniosos, manifiestan un gran dominio sobre sí mismos, y seguridad en sus movimientos.

Hábito motor característico: sentados sobre un madero muy bajo dan la impresión de estar en cuclillas; sus brazos descansan sobre las rodillas y con sus manos se acarician la sien o la barbilla. Este hábito motor predomina en los hombres paeces.

La indumentaria es genuinamente páez; poco partidarios de las innovaciones, aunque son bastante amables con los blancos. Aconsejan siempre a sus pacientes no usar los remedios de los blancos porque se mueren.

Son muy tratables, amables y en términos de nuestra cultura diríamos que tienen un magnífico don de gentes.

Cuando viejos dejan de percibir las señas.

Consideran que cuando muere el médico se anuncia su muerte con los truenos. Viven en tensión permanente contra los ataques de los brujos. A los menores síntomas salen a su kachí a adivinar y tomar las precauciones del caso. Comen poco para no dormir por la noche; son resistentes al insomnio. Se inhiben de sus relaciones sexuales y del ají, en sus curaciones.

Absorben todo el interés de la comunidad cuando se presentan las epidemias. Los médicos de verdad, los conscientes de su profesión, son parsimoniosos, de gran concentración en el combate de las enfermedades, de natural bondadoso. Infunden confianza y no manifiestan egoísmo; explican fácilmente los secretos de su profesión.

Competencia entre los Té eu. Entre los médicos parece existir cierta rivalidad y aún los indígenas alcanzan a enumerar zonas de acción de los médicos. Lo cierto es que un médico se vanagloría de haber vencido a otro en el mismo lugar de la práctica. Un médico de Santa Rosa cuenta como venció a un colega suyo.

El informante salió a hacer curaciones al Alto de Atarraya a un enfermo blanco. Allí encontró otro médico que daba los remedios que no servían. El enfermo los cuidó muy bien con abundante chicha y aguardiente. El recién llegado bebió con cuidado. Su colega se había comido ya el puerco, pero el enfermo seguía

lo mismo. Se pusieron a pelear los dos médicos. El nuevo médico cogió su tama y su coca y a las nueve de la noche se puso a adivinar. Su espíritu auxiliar le dijo que el otro había dado remedios falsos. Tenía que averiguar, pues, los remedios efectivos. Pudo ver que el mal se lo había hecho una sirvienta indígena, en compañía con unos vecinos que no lo querían. Inmediatamente llamó a la cocinera para indagarla y cerciorarse de lo que había hecho; tenía que confesarle, pues, de lo contrario la mandaba presa. Ella tenía toda la culpa. La sirvienta se asustó y respondió que tal vez sería ella la responsable, ya que en una ocasión había cogido un *echi* y colocándolo en una mata de ají. Y ese *echi* bravo era el que estaba matando al patrón. Inmediatamente el médico fue a la mata de ají, sacó el *echi* y le sopló remedios frescos. Se puso a adivinar nuevamente y observó que el arco le había metido también pelos. Al día siguiente se los sacó. Se mejoró el enfermo, probó que era buen médico y demostró que el otro no sabía nada.

El Té eu y el brujo. Se dice que un brujo puede ser a la vez médico bueno, pero sabemos perfectamente que el Duende y el Trueno no auxilian con su saber a los brujos. Por otra parte cuando a un *té eu* se les solicita información de los remedios de los brujos indefectiblemente responden que ellos no saben de eso, pues si averiguan por esos remedios, pierden su sabiduría.

Los médicos se consideran siempre perseguidos por los brujos. Pero aquellos, pueden matar a estos. Así nos relata el suceso un médico de Santa Rosa:

"Cuando yo era mocito era astuto y pícaro; sabía de remedios ya. En una ocasión un brujo se me declaró enemigo porque estaba saliendo buen médico. Me enfermé y las señas me indicaban mi próxima muerte. En Huila, vivía un buen médico y allá me fui con bastante coca y aguardiente. Me dijo que me moría si no trabajaba inmediatamente. Era brujería y había que matar al brujo. Debía permanecer con él un mes por lo menos. "Trabajamos y hacemos un hueco para matar ese tipo", me dijo. Hizo el primer hueco, que nos servía para varias noches, pues el brujo que buscaba era muy listo. Llamaba el alma, llegaba, pero no se dejaba coger; era muy maliciosa. El brujo era peligrosísimo, había matado a mi mamá y hermanos. Seguimos trabajando. Pasó el mes y no podíamos cogerlo. No dormíamos. El médico hacía otro hueco y otro. Estábamos cansados. Este pícaro lo cogemos

prque sí, me decía. Cuando iban por el séptimo hueco, al cantar el primer gallo, llegó el alma. El médico estaba con la tama lista y de pronto suás! le dió un garrotazo y cayó al hueco; echó tierra encima y apisonó bien. Después de pocos momentos silbó el alma. Lo matamos exclamó triunfante el médico. Yo ví el alma del brujo. Después el médico me dijo que me regresara, pues estaba curado. Me recomendó que trajera remedios, ya que en el camino hay muchos salteadores. Así fue. Me vine con malicia de los sitios peligrosos. Las señas me indicaron la presencia de los salteadores e inmediatamente les soplé remedios (*kit sust*). Se durmieron.

Más acá encontré unas gentes que perseguían un reo. Me dieron coca y aguardiente para que desde mi casa hiciera los remedios y facilitara la captura del reo. Así fue. Me puse *chayuts* envuelto en los pies y el reo no pudo andar. Lo prendieron".

Otros informan que el brujiado con sus familiares van donde el médico portando coca, tabaco y aguardiente. Matan puerco y en una jigrita recogen un pedazo de cada órgano. Este es el sebo para capturar el alma del brujo. Al canto del primer gallo cuando todos están mascando coca llega el alma a coger la jigrita, cae inmediatamente al hueco y el médico le pone *echi* bravo, remedios, la mambeada de todos tapa y apisona la tierra. Así mata al brujo. Limpia luego al enfermo y a los familiares. Se ha salvado del peligro.

Cuando el médico siente las señas en el vértex, están enviándole *ptans*. Sale sin pérdida de tiempo al *kachí* con pringamoza, cabuya de páramo, tama y nica a esperarlo. Si viene una nube negra la corta con la tama. Es el *ptans*.

Las relaciones de estos dos hombres, sobre cuyas funciones reposa gran parte de la seguridad del grupo, no son cordiales; son de agresión latente y permanente. Los brujos espían los descuidos del médico. Si lo cogen dormido lo matan instantáneamente. Los brujos usan vidrios para acabar con la sabiduría del *Te eu*, es decir con las señas. Pueden llamar a las enfermedades, juntar todás las pestes y enviarlas a otra parcialidad o al mismo médico para que mate.

Cuando un *té eu* se encuentra con un brujo, apenas se saludan; por la noche anda con todas las precauciones.

Los médicos pueden acusar al brujo ante el cabildo, pero le temen.

CAPITULO II

Nasa Jihi

La visión que define un destino. Así como un *té eu* para definir su vocación necesita ver visiones, el brujo también la define por medio de las visiones. Ver, por ejemplo, en el pico de un ave, un burro con la boca abierta en la cual entran moscos, o simplemente puercos, la persona está destinada a ser bruja. Estas visiones son personales y generalmente acontecen en partes solitarias, tales como chorreras, barriales, donde no puedan andar animales, no importa el día y la hora, pues esto puede acaecer de día o de noche.

Cuando una persona manifiesta haber visto un burro, las gentes comentan que va a comer gente. Es común afirmar que quienes gustan andar mucho por la noche están mas propensos a convertirse en brujos, porque tienen ocasión de encontrarse con los espíritus malos.

Se dice que quien va a ser brujo no necesita de maestro; el mismo va cateando los remedios y los espíritus malos. Sin embargo, en la Parcialidad de Santa Rosa informan que la bruja más peligrosa del lugar, enseña a las gentes a realizar maleficios.

Los *té eu* pueden fácilmente convertirse en brujos, si muestran interés por conocer los remedios de estos. Un brujo puede ser médico bueno y curar a las gentes pero asimismo exige mejores cuidos.

En general es raro que un *té eu* tenga un reconocimiento universal como tal, pues muchos y los brujos entre otros, los señalan fácilmente como *nasa jihi* (*gente mala*).

Las visiones pueden tenerlas desde muy jóvenes, pero el ejercicio de la brujería empieza en plena adultéz, perfeccionándose con la madurez. Los brujos señalados públicamente tienen una edad aproximada de 35 años, siendo en su mayoría viejos.

Los brujos jamás exhiben sus remedios, ni mucho menos es posible asistir a una de sus sesiones. Es una actividad encubierta. Se sabe quiénes son los brujos, por el señalamiento público. Todas las informaciones que se consiguen al respecto son dadas por las gentes y aún por el mismo médico. Así mismo, ninguno de ellos confiesa practicar esta actividad y antes por el contrario se curan en salud y se presentan como las mejores personas de la comunidad.

Los remedios que los brujos poseen, dícese estar bien escondidos, pues si el cabildo logra descubrirlos, los castigan irremediablemente.

Los brujos realizan sus encantamientos por la noche. No duermen, dicen los naturales. Apenas empieza la noche y ya están mascando coca y tabaco. Duermen de día. Prefieren la noche oscura para realizar sus actividades, si ben que no tienen días especiales, ni horas determinadas.

Los brujos no colocan objetos en el cuerpo (sapos, pelos, etc.), ni tampoco pueden convertirse en animales.

Las mujeres brujas son muy frecuentes y parece que son las más temidas.

Los brujos reciben las señas del diablo y los espíritus malos que ayudan a estos se presentan en forma de culebra, burro o cerdo. Son diferentes al duende y Arco. Dícese que el puerco enseña a la persona a ser muy brava o propende a la borrachera (el borracho se revuelca en el suelo como el cerdo en las charcas), el burro a ser glotón.

En general parece que todo adulto es brujo en potencia y con mayor razón quienes tratan de apartarse de las normas de conducta institucionalizadas.

Víctimas de la brujería. Las víctimas de la brujería se extienden a todas las gentes, sin distingos de sexo ni edad, ni status ni función. Es común que tome la iniciativa el mismo brujo, pero también está al servicio de quien desee utilizarlo.

Frecuentemente las víctimas de la brujería recaen en aquellas personas eficientes, trabajadoras y con espíritu de ahorro, virtudes que en nuestra sociedad conducen al desarrollo de una economía capitalista.

En Santa Rosa informan la lamentada muerte de uno de sus ex-gobernadores. Era joven —dicen—, inteligente, conversador,

muy trabajador. Tenía mucho terreno y buenas labranzas de café, yuca, maíz, caña de azúcar. La envidia, fuente de discordias y de injusticias, impulsó a los brujos Lorenzo Io y Dolores Oinó, esposa, asesorados, desde luego, con la mayor de las brujas Felisa Ipia, a terminar con la vida de este hombre. Este es el dictámen de los médicos y la voz de la comunidad. Pero la acusación la dió la misma víctima, quien en los estertores de la muerte, que fueron muchos, soñaba con los mencionados brujos. Repetidas veces suplicó el moribundo hicieran venir a los brujos para arreglar cuentas con ellos. Cuando estos salieron de su casa, para atender la solicitud del moribundo, expiró. Murió con el convencimiento de que aquellos lo habían brujiado.

Un médico de Santa Rosa al deshauciar a un enfermo explicaba que este hombre tenía muchos terrenos y lo habían brujiado para apropiarse de ellos.

En Calderas un hombre que sabe leer, escribir, hacer memoriales para la Alcaldía de Inzá, pirotécnico, constructor de casas, buen agricultor, era naturalmente motivo de envidia. Un brujo quiso matarlo. Invocó su alma cuando estaba dormido. Pero al llamado asistió el alma del hermano, a la cual le sopló mambe. Un día después se le blanquió el ojo izquierdo y estuvo a punto de salírsele. Un médico pudo curarlo, pero quedó tuerto. Los dos hermanos quedaron enemigos del brujo.

En otra ocasión y en la misma parcialidad dos hermanos le dieron garrote a un brujo. En venganza brujió a ambos en el término de un año. Temeroso el brujo del castigo se marchó a otras parcialidades, pero a su regreso el cabildo lo metió al cepo.

Antiguamente —dice un médico de Santa Rosa— los cabildos castigaban a los brujos. Los de ahora les tienen miedo. Los mayores han muerto brujiados. En realidad, los indios se niegan a servir en el Cabildo a aceptar el cargo de Capitán por temor a los brujos.

Los brujos son todos ladrones. Roban muchas veces a la vista del mismo dueño, quien temeroso de que lo brujeen, no eleva la menor protesta. Pero los brujos, a su vez, temerosos de que aquel se queje ante las autoridades de los blancos, lo brujean.

En Calderas, aquellos que compran ganados para aumentar su pequeña hacienda, han sido agredidos por la brujería.

El indio que ha convivido con el blanco, ha adoptado su indumentaria, su dieta alimenticia, sus técnicas agrícola-ganaderas

y ha abandonado el hábito de consumir coca y chicha, no solamente es víctima de las agresiones mágicas sino que directamente recibe ofensas de palabra y obra.

De manera que son víctimas "los más hábiles, los más cariñosos con los caminantes, los amigos del blanco, los que despliegan mayor simpatía entre los indígenas, quienes poseen mucho ganado, grandes extensiones de tierras, buenas sementeras". En estas frases casi están compendiadas la amplia gama de las víctimas de la brujería. Por los ejemplos anteriores vemos que los que tienen terrenos, animales, habilidad mental y destreza manual, buenas labranzas, los cabildantes enérgicos, los que toman el camino de la transculturación, son víctimas de la brujería. Asimismo por medio de la brujería se cobran las venganzas y los resentimientos.

No es sorprendente que los blancos indeseables sean víctimas de la brujería. Son indeseables aquellos que codician sus tierras. Los médicos por su propia iniciativa, o ayudados por el Cabildo, en lugares estratégicos convocan el alma del blanco, la capturan y la azotan con pringamoza (urticácea) y le echan remedios malos para que nunca mas vuelva por esos lugares. Manifiestan que el blanco empieza a sentir demasiada pereza para transitar por esos lugares y finalmente opta por volver a su tierra.

En Parcialidades como la de Calderas, donde presentan gran resistencia a la convivencia y contacto con el blanco existen unas gentes tan brujas y tan enemigos del blanco que incluso en la Iglesia ponen huevos brujiados a fin de que ni siquiera llegue el cura.

Cuéntanse entre las víctimas de la brujería las mujeres parturientas y los recién nacidos. Cuando el brujo u otros envidiosos no quieren que prospere determinada familia.

El poder de los brujos no solamente se extiende a los hombres y a los animales, sino también a las sementeras. La pérdida de un cultivo significa padecimiento de hambre, carencia de coca, emigración de los padres a lugares distantes a contratarse como peones.

En la roza pueden poner huevos, sal, pelos púbicos, maíz capio brujiados para que la sementera se pierda.

Maneras de brujiar. Existen varios procedimientos para practicar la brujería:

a) El más extendido y del cual más informaciones suministran consiste en la hechura de un hueco sobre el cual se espera el alma de la víctima. Esta llega alumbrando como una vela. Al instante el brujo la golpea con la tama y cae al hueco. Está a su disposición; puede enterrarla, azotarla, soplarle remedios, mambe, mostrarle objetos perjudiciales.

Cuando se desea una muerte rápida el brujo entierra el alma con remedios malos apisonando fuertemente con tierra de cementerio. El alma sale silbando cuando la persona muere.

También puede azotarla con los siguientes remedios:

*Bao** (arácea). El estómago de la víctima se infla hasta que muere.

Borrachero (Datúra sp.). Narcótico venenoso. El sujeto enloquece.

Cabuya (agáve sp.). El zumo de las hojas es cáustico. La persona se pudre.

*Caspi** (Toxicódéndron striatum Kuntze). Arbusto venenoso cuyas emanaciones producen irritaciones en la piel. La persona se hincha y muere.

Chuwet castellano, llamado por los blancos estancadera (Krameria ixína?). Posee las hojas punteadas, juntándolas al alma apuñalean a la persona.

Lechero (Euphórbia cotinifolia L.), planta venenosa. La persona se revienta.

Pringamoza. Los pelos de esta urticácea entran al cuerpo y cuando alcanzan el corazón muere el sujeto.

El brujo puede soplar mambe al alma dejando la persona ciega o enloquecerla moviéndole una calavera de venado con un *echi* por dentro.

También puede chuzarla con huesos y pelos de puerco espín, huesos de culebra, uñas de perico ligero, garras de águila.

Para faciliatr la captura del alma el brujo recoge la tierra que pisa la víctima con lo cual cae fácilmente el *us* (corazón).

b) El brujo puede hacer enojar el Duende, Arco y *Echi.* Así:

Al Duende le coloca un ají grande de montaña (cápsicum sp.) en el sitio donde vive; pasa la persona y muere con unas picadas al corazón.

Al Arco le coloca trapos de mujer menstruante en las fuentes barriales, lugares húmedos. Pasa una persona, la pica y muere.

Al *echi* pone remedios donde trabaja la víctima, picado trasboca sangre y muere allí mismo.

c) Otra manera de brujiar es untando remedios malos a la sal, tocino, huevos que va a comer la víctima. Si por casualidad se los come otro no le pasa nada, puesto que el maleficio no estaba dirigido para ella.

d) Los brujos manejan la peste a su antojo. Pueden enviarla a las personas o a la comunidad entera. La bruja Felisa lleva la peste a Santa Rosa hasta por negocio.

e) Cuando los brujos desean que una persona no regrese mas colocan en sitio estratégico del camino dos atados de *chayuts* apuntando hacia arriba y soplando además, pringamoza seca.

f) Un médico de Santa Rosa informa la manera cómo brujiaron a uno de los exgobernadores de la parcialidad. El finado Leonidas estaba trabajando en su huerta y su rancho estaba solo. Entonces entró una mujer vestida de negro (Dolores Oinó) echó en la olla de comida pelos púbicos de ella misma y raspó un tiesto de pijao que contenía plata. Leonidas comió esa comida y empezó a secársele la garganta y a respirar con dificultad. Finalmente murió. La peste de pijao tiene los mismos síntomas.

g) Cuando el brujo quiere que una persona sufra un accidente (fracturas, contusiones, dislocamientos), coloca en cualquier parte de la casa de aquel una piedra muy lisa, sacada de la quebrada. Esa persona en cualquier parte se resbala y cae.

Si una persona al caerse se mata se piensa que el brujo le ha enviado *ptans*.

h) Para brujiar las sementeras usan tabaco, fósforos y otros remedios con las cuales se chamusca y se pierde.

Como bien puede observarse, los brujos no utilizan para sus hechicerías partes u objetos pertenecientes a la víctima, tales como pelos, uñas, ropas, etc. La mayor parte de los remedios que usan son hierbas u objetos que tienen propiedades nocivas al hombre o pueden causarle daño.

El brujo piensa que al ponerlos en contacto con el alma o simplemente con el cuerpo produce los efectos deseados.

La brujería paez es un caso claro de magia imitativa u homeopática, según la clásica definición de Frazer. Es "el deseo dominando al mundo con instrumentos nacidos del deseo" (10).

Los paeces temen a la enfermedad y a la muerte y viven con el temor de que los blancos les arrebaten sus tierras, sus ranchos, sus sementeras, es decir, sus fuentes mismas de la supervivencia.

Mientras los brujos atacan los hábitos de la economía capitalista y abiertamente a la trasculturación, los médicos defienden la comunidad de las enfermedades y del ataque de individuos o de grupos, mediante sus adivinaciones y sus conjuros enérgicos y constantes. En este sentido brujo y médico se identifican. Defienden a la comunidad.

Castigo de los brujos. El brujo es temido por toda la población; identificado totalmente por ella goza de la animadversión general; se fomentan caudales de odios contra éllos, terminando en la mayor parte de las veces con castigos violentos: metida al cepo, azotamiento, baños y aún hasta el destierro.

La aversión que las gentes de Santa Rosa tienen por la bruja Ipia, se expresa nítidamente en las palabras de un *lé eu*: "A esta vieja hay que traerla al pueblo, quemarle los remedios, bañarla con agua de ají, maniatarla y hacerla amanecer así para evitar que se fugue, se bañe con sus remedios y se convierta nuevamente en bruja".

En esta misma parcialidad los brujos acusados de haber matado con sus artes al exgobernador recibieron el siguiente castigo del Cabildo.

Los brujos, sacados de sus casas con todas sus jigras de remedios, fueron conducidos al pueblo. En la plaza y en presencia de las gentes el capitán iba sacando de las jigras remedio por remedio, exhibiéndolo al público y preguntando sus usos. Los remedios eran desconocidos en su mayor parte y los brujos no informaban nada acerca de ellos. Formaron un montón. El Gobernador del cabildo informa que hasta tierra de cementerio habían tenido. Roció los remedios con gasolina, colocó en medio a los brujos y prendió fuego. Los brujos asustados imploraron perdón alegando que eran inocentes.

En la jigra dizque encontraron flor de azufre con el cual hi-

(10) Ponce, Aníbal. *Estudios de Psicología.* El Ateneo. Buenos Aires. 1947. p. 363.

cieron una bebida que los obligaron a tomar a fin de que se les alejara los malos espíritus. Los brujos por su parte informan que la tal bebida era una mezcla de excrementos de animales domésticos y heces humanas.

Los brujos tuvieron que amanecer en el velorio y cavar parte de la sepultura. Después del entierro los invitaron a la comida que se ofrece en estos casos, invitación que rechazaron, pero fueron obligados a asistir. En la comida dizque les dieron pelos púbicos, informan las brujos. Luego las gentes los echaron a un remanso.

En Calderas los castigos son más violentos. En 1951, prendieron a un brujo lo metieron dos días al cepo, le obligaron a tomar el brebaje de excrementos, lo azotaron y finalmente lo desterraron. El brujo casi se muere. Se quejó a la Alcaldía de Inzá de la brutalidad de su Cabildo. La Alcaldía hizo destruír por la fuerza el cepo, a pesar de las protestas de los indígenas. Algo por el estilo eran los castigos de los brujos en la Parcialidad de San Andrés hasta hace unos treinta años.

Muchas veces, cuando existe un brujo demasiado peligroso, se reunen los médicos para matarlo. Invocan el alma y cuando se acerca le aciertan un garrotazo con un palo untado de *chayuts*. El alma sale silbando. Cuando erupsiona un volcán es señal que el diablo está castigando el alma de los brujos.

Características psicológicas de los brujos. A grandes rasgos, los brujos son tímidos, resentidos, esquivos, con un delirio de persecución muy acentuado; procuran evitar el contacto con las gentes, creyendo ver en cada una de ellas los presuntos acusadores; tienden a autoabastecerse; desconfiados en sumo grado, niegan rotundamente las acusaciones de que son víctimas, considerándose así mismas como personas buenas, sanas e inofensivas; aparentan ignorar los remedios y es muy difícil que suministren informes sobre brujería. En su mayoría son inteligentes. Endoculturalmente son inconformes con su propio grupo, en tanto que encarnan la lucha contra la influencia de culturas extrañas.

Los *nasa* tienen el convencimiento de que apenas se oculta el sol, los brujos ya están entregados a sus actividades. Los más peligrosos duermen de día. Por lo mismo consideran como características peculiares de los brujos la vista colorada, mirada huidiza, esquivez, mal semblante, egoísmo, desconfianza. Tienen el aspecto de criminales, afirman los informantes.

Valor dinámico-social de la brujería. Dentro de la sociedad paez, la brujería es vital, demasiado actuante, gravita en todos los intersticios sociales. Pero, cómo se realiza, dónde y cuándo, pertenece al ámbito de lo encubierto. Sus ejecutores son subrepticios. Actúan siempre a la sombra. Las gentes únicamente perciben los efectos. Solo la actitud expectante nos denuncia su presencia. Los temores latentes nos hablan de su vigor. Los miembros del Cabildo, el capitán, los *té eu*, los hombres de trabajo, las mujeres parturientas temen poderosamente al brujo.

Cuando la peste cunde por la comunidad, cuando los mayores mueren perdiéndose sus experiencias y consejos, piensan irremediablemente en el poder de los brujos. Las muertes en su mayoría son provocadas por los brujos dicen los informantes.

La brujería constituye una barrera poderosa contra la importación de los hábitos de la economía capitalista y aún contra la intromisión del blanco en sus parcialidades. Resulta singular la existencia de la brujería en las parcialidades menos aculturadas en tanto que la de San Andrés prácticamente ha desaparecido. Se dice que era vigorosa hasta 1926, año en que el Concejo Municipal de Inzá creó en la parcialidad una área de población en la que se radicaron los blancos. Con esta medida la convivencia era forzosa y optaron por aceptarlos. Sin embargo en las borracheras de los viejos aún aflora el tremendo resentimiento connaturalizado en ellos.

Asimismo, deja sentir sus influencias en la distribución de las tierras. Cada familia posee terrenos de los cuales vive. Con el aumento de la población ha relievado el problema de la desigual distribución de las mismas. Es pasto de la envidia y de la brujería quienes más terreno poseen; son mas propensos a los ataques mágicos con el fin de quitarles las tierras. Las tensiones intrasociales, parece que se equilibran con esta institución. El temor a la represalia, aplaca las agresiones. La venganza es demasiado perjudicial, puesto que no solamente puede manifestarse contra la persona sino también contra los animales y las sementeras. Cabe perfectamente la observación de que mientras en Calderas son escasísimos los hechos de sangre y desconocido el suicidio, en San Andrés, parcialidad aculturada en su mayor parte, los homicidios, asesinatos e incendios, son espeluznantes.

The Economy of the Paez

by

Segundo Bernal Villa

/Page 292 is blank./

/293/ General observations

433 Products of the soil make up the substantive part of the Páez economy. The Indians are barely familiar with a few manual arts practiced on very rare occasions. Hunting and gathering are quite secondary, and fishing even more so. Livestock-raising, while being an activity worthy of notice for its development, and for being, in addition, the essence of the native conception of wealth, serves more for carrying out disadvantageous barter transactions with the mestizo and white populations than for deriving a profit either in cash or in kind. The Páez economy is thus a direct one, devoid of intermediaries in the functions of production and consumption. The family consumes what it produces. The articles of consumption that are acquired are few. Essentially [439] they are salt, tools, cooking utensils, and clothing. On the other hand, the products that are sold are few: coffee, laurel wax, potatoes, garlic, and coca. It should be noted that the increase in some of these products is of recent date. Páez production merely provisions and seldom leaves a surplus to maintain regular trade. Foresight for times of scarcity exists, but it is neither sufficient nor organized.

221 Working the land conditions the daily activities of the Páez family. It might be said that the vital cycles are subordinated to the agricultural cycles. Basically, the year is divided into the months of the preparation of the soil and the months of the harvest, [166] including the protection of the crops in season. They devote the [464] months that fall between the extremes of this economic cycle to minor manual activities or they emigrate to hire out as day laborers

1. Generic term with which the natives designate all those who observe the norms of western culture, without any distinction as to race. For convenience we have adopted this usage, putting the term in quotation marks.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[578] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

/294 cont./

311 passes through Topa, Turminá, Guanacas, El Cabuyo, Malvasá,
/133 Pisimbalá, Lame, La Troja, and Irlanda, from where it twists eastward. The contour line of 3,000 meters, approximately parallel to the previous one, is very close to the ridge of the
[361] Central Cordillera. These two contour lines form a narrow zone that corresponds to the cold thermal level and within which are found the parcialidades of Toez, Huila, Vitoncó, San José, Mosoco, Lame, and Yaquivá, aside from a considerable area from the extinct parcialidades of Guanacas and Turminá.
311 This entire zone represents a "culturally influenced zone" in
[487] the literal sense that Professor Guhl gives it (2). A fine bridle-

2. Guhl, E. "Ambiente Geográfico-Humano de la Costa del Atlántico /Geographical-human Environment of the Atlantic Coast/," Revista Geográfica, p. 159.

[489] path joins Mosoco and Silvia, crossing the Paramo de Moras. The traffic of people is intense and constant during almost every /295/
311 month of the year. In the last decades, this has been an active zone
648 of native and "white" colonization. It still remains so. Coscuro
361 and Malvasá, in the Parcialidad of San Andrés, are purely "white" regions of colonization. But Tumbichukue, the high parts of Lame, Mosoco, San José, Huila, and Toez are zones of exclu-
361 sively native colonization. The importance of Mosoco is out-
311 standing. It was a great center of Páez settlement and still is, in the same manner as Pitayó and Tacueyó are on the other side of the Cordillera, but we cannot state on this account that "the major part of the settlements and the most important ones for the Paeces" are located in the cold region, as was stated
[177] categorically by Professor José Pérez de Barradas. Mosoco,
[433] fully in the process of acculturation, is a good producer of potatoes, wheat, and maize. It is the true Tierradentro in
[648] physiography, production, and progress. But in the times of
[175] the Conquest it was the people of Tálaga, Avirama, Calderas, and Togoima who defeated Ampudia and Belalcázar, and the

361 /295 cont./
311 strong political groupings had their principal seats at Tálaga,
643 Suin, and Avirama (3). "The place of residence of a cacique
175
[622]
[103]

3. Hernández de Alba, Gr. "The Highland Tribes of Southern Colombia," pp. 915-960.

constituted a sort of settlement or gathering place, most of which remain today as Indian pueblos and retain their names, such as Suin, Tálaga, Avirama, Togoima," Chitoquez, Cuetando, Yaquivá, Pisimbalá, and Itaibe, all of them located at the
361 temperate thermal level. It is precisely along the course of
311 the Páez River and along the middle and lower courses of its
161 tributaries that the Páez population is now concentrated.

13 2. Physiography. Merely a single glance at the wild geography of Tierradentro will give an idea of the pattern of life of the Páez people. The physiography of the entire course of the Páez River, from Irlanda to Itaibe, with nearly all of its tributaries, is compressed into profiled accidents. It might be said that it forms a "thermic chimney," Professor Guhl's expression. It belongs to the temperate thermal level. This is the land of the great slopes covered with natural pastures and of the short, narrow vegas with fertile soils. There are those who speak of the fertility of all the soil of Tierradentro, classifying it, consequently, as a privileged zone. The concept proves to be deceptive, because it does not take into account the physiographic factor. We find the usable vegetal layer /296/ only in the extremely narrow vegas of the rivers, ravines, and streams, and in places
13 where the topography becomes a little smoother. The left bank
241 of the Páez River, from Toez to La Plata, is usable for agricul-
[233] ture and stock-raising only with difficulty, given the brutality of the slopes. Every tributary that enters on this side is a deep ravine isolated by ridges running from northeast to southwest. On the other hand, the left bank has important vegas. It is there that plantains, manioc, sugar cane, coca, arracacha, maize, and lately coffee and guadua bamboo are grown. The soils are essentially acid, and the Gramineae grow in abundance

/296 cont./

13 and are of very good quality. The wheat and coffee from the
241 municipio of Inzá enjoy a deserved reputation in the republic for the quantity and quality of their crops.

133 The Páez River receives approximately 32 watercourses on
134 the left bank, and 17 on the right. It is easy to imagine the ruggedness of the terrain if we bear in mind the fact that each
[241] one of them forms an impassable ravine. It is also easy to imagine the magnitude of the erosion, assisted by factors of a cultural nature, such as the systematic battle against herbaceous vegetation by means of the system of annual fires. The violence of the wild waters denudes and even forms veritable rivers of stone, such as are seen at the place called Vicanenga in the municipio of Páez. The streams and torrents sometimes swell to extraordinary proportions. In 1949 the Topa torrent completely washed away its small tributary valley, on which stood the hamlet known by the name of Brisas, now Valencia, a flood which was repeated in April of this year.

241 Of course, the extent of the workable land does not keep
133 pace with the increase in population. The physiography of the
134 cold thermal level, on the other hand, spreads out and flattens
[161] a little, the horizon broadens, the patches of arboreal vegetation increase, and the plots multiply, like veritable chessboards in Mosoco, San José, and Vitoncó. Their soils nourish maize, wheat, potatoes, ullucos, nasturtium, and garlic. On the dividing lines between the plots there rise, like green walls, the plantings of cabuya.

161 3. Population density. The growth of the indigenous popu-
361 lation in general, and of the "white" one in particular, has
311 compelled the former to utilize lands increasingly more difficult, steep, /297/ and sterile, or to emigrate in search of uncultivated land. As early as the time of the Conquest we find notes on the spread of the Páez people to the western slopes of the Central Cordillera, forming such nuclei as Pitayó, Tacueyó, and San Francisco. Nowadays, we find Páez groups on the eastern slopes of the Western Cordillera in the department of Cauca, in the departments of Huila and Tolima, and in the Cauca Valley, as Páez

/297 cont./

Agriculture and horticulture

241 Agriculture and horticulture constitute the primary source
133 of subsistence for the Páez. It covers a wide hypsometric zone
[433] that goes from 1,000 meters (La Plata, Huila) to well beyond the contour line of 3,000 meters in altitude above sea level (Mosoco). Naturally, the species cultivated vary with the thermal level, and, consequently, the dietetic regimen. What do not vary are the methods of cultivation and, above all, the magical practices
241 associated with them. There are also variations in the extent
134 and the type of cultivable soils. Those used the most in Tierradentro are the ones included in the temperate thermal level. We have already discussed their fertility and extent. The soils of the cold thermal level are fertile and more extensive. Thick humus layers are found in Lame, Mosoco, San José, La Troja, Irlanda, Guanacas, Turminá, and Coscuro. These are, of course, truly privileged zones. Nevertheless, the soils are not rationally utilized or conserved. The land is exploited in an exhaustive manner. A clearing will not tolerate two consecutive plantings. Thus, each year new land, new clearing, new fencing, and new burning are required. After having been harvested once, the ground is abandoned, and in the course of the years it once more becomes covered with shrubs and thickets. After seven years, more or less, the land is again cleared of its underbrush, and the same cultivated species are planted once more. In Calderas, Santa Rosa, and Togoima, maize, arracacha, frijoles, cabbages, potatoes, and sometimes peas are planted. The process described earlier is typical of these parcialidades. In Mosoco and the cold parts generally, maize, potatoes, /298/ broad beans, and frijoles are planted in the same clearing, and

/298 cont./

241 in some cases, fruit trees, and after this, wheat. In San Andrés,
134 especially in the vegas, maize, plantains, frijoles, arracacha, manioc, sugar cane, and coffee are planted. Thus, there is not proper utilization of the soil or protection of it, aside from the several years of rest. They are not familiar with fertilizers, the rotation of crops, or irrigation systems.

241 It is interesting to note that the families of San Andrés,
423 Calderas, Lame, and Mosoco generally have lands in the low places along the rivers and streams and in the high places where arboreal vegetation abounds, which they call the "montaña." In this way, they can cultivate cold and temperate zone plants (Calderas, San Andrés, Lame) or take advantage of the annual seasonal cycle in the high parts of the Cordillera (Mosoco).

244 A principal dwelling is erected on one of the fincas, while
342 on the others ranchos where the families live during the months of harvest are built. It is at the principal dwelling where the garden is made with plantains, sugar cane, onions, coriander, coca, cabbage (San Andrés, Santa Rosa, Calderas, Togoima), or with cabbage, garlic, onions, yuca de pipchao /yams/, peaches, and apples (Lame, Mosoco, Vitoncó). Peppers are cultivated in the gardens. This principal dwelling forms what in our culture is called hogar /hearth, home/. It is here that the fire is always maintained, that the ears of maize, bundles of wheat, bags of frijoles, tools, troughs, cooking utensils, and sugar mills are kept, where the chickens, guinea pigs, pigs, and turkeys live.

249 Industrial crops practically do not exist. There are no
[248] tobacco or cotton plantations. Sugar-cane plantings are not
[273] extensive among the natives. They are used solely for pro-
[778] ducing guarapo, which has almost completely replaced the maize chicha. Only the whites and a few mestizos have extensive sugar-cane fields for producing panela.

248 Figue thrives in Tierradentro. But it is in Vitoncó and Lame that there are numerous plantings of cabuya of very good quality in terms of the size and quantity of the fiber, planted on the boundaries of the properties. This wealth is not utilized as much as it should be. The natives merely make pouches and lassos for internal consumption.

P /298 cont./
245 Guadua bamboo thrives in the temperate valleys. It is of excellent quality. In most cases it serves as shade for the coffee. Its increase would redound in obvious benefits.

P 249 /299/ In spite of the fact that plantings of coca are pro-
C [249] scribed by Colombian law, it is cultivated for consumption at
[656] almost every home, and in some parcialidades there are numerous
P [435] plantings for commercial purposes. The value of the leaf is high. A pound is quoted at three pesos.

P C 313 Sawmills are found in Coscuro, Toez, the Símbola River, and the Salado stream. But this is almost exclusively an industry
P C [785] of the "whites." Only in San Andrés and Mosoco was it possible to see native sawyers. There is no reforestation.

P 241 172 137 In a large part of the parcialidades of San Andrés, Calderas, Lame, Mosoco, and Vitoncó, and the entire valley of the Páez River, the clearings seem to have been done in quite remote times. There are no forests, but remnants are found along the crests and ridges that separate the valleys and in the windings where the human foot does not venture to tread. The cliffs are covered with uniform savanna vegetation.

P 172 241 In many parcialidades there are archeological remains belonging to an unknown civilization earlier than that of the Páez.
P [783] The lands where these elements are found are utilized without any qualms. But when the plantings are in a "new clearing," the natives take the precaution of performing the required purifications before beginning to consume the crops, in order to avoid the "Pijao" plague which might happen if the crops had been in contact with the archeological remains, "pijaos" in the expression of the natives.

P 245 The cultivation of fruit trees is not very widespread, in spite of the fact that up to not very long ago Inzá enjoyed the reputation of being the producer of peaches and apples of very good quality. Nowadays they are cultivated for commercial purposes in Vitoncó, La Troja, and El Cabuyo, where true orchards of these trees are maintained with care. The fruits are splendid and are harvested during the first three months of the

/299 cont./

245 year. Traders in Silvia sell the crops at up to 14 pesos an arroba.
[439] Lame produces perhaps the best peaches, but they are not suitable for export because they are easily damaged. There are also numerous plantings in Tumbichukue and Calderas, although they do not have much care.

247 Floriculture does not exist among the Páez, and they cannot understand the labor that the "whites" invest in their gardens. They are always of the opinion that food plants should be sown on such lands.

241 Among the cultivated plants, they regard as native maize ("the /300/ Pijao had maize"), the hartón /large-sized/ plantain ("the Pijao also had it"), frijoles, mejicano /squash, Cucurbita pepo/, cabbages, and the cane "criolla" /Creole, native/, while coca, they say, seems rather to have come from the "whites."

241 Species cultivated and zones of cultivation

137 Here is a list of the food plants cultivated by the Páez (5):

192

[128]

5. We thank the Herbario Nacional Colombiano, especially Dr. Jesús M. Idrobo, for the scientific identification of the plants.

/222 In reality, as far as a certain type of frijole that the natives
241 call "kacha" is concerned, as well as the ground cherry, the chachafruto, fruits in general, and all the plants listed under "Other cultivated plants," with the exception of coca, the word "cultivated" is unsuitable, since they are practically in a semiwild state. The natives make use of their fruits, consumption thus being occasional and not always necessary.

133 Although it would appear that the territory of the Páez, at the
241 time of the Conquest, extended up to very close to the Magdalena
361 River, the principal nucleus of the population was located in the
[131] temperate zone and in the cold zone. The thermal levels determine
[161] the zones of cultivation. One of them goes from 1,000 to 2,000 meters and includes the entire valley of the Páez from Huila to La Plata, and the middle and lower courses of its tributaries Símbola, the river Negro de Narváez, Moras, Kukiyú, and Ullucos. Within it are located the capitals of the district, Inzá and Belalcázar, and the following native aldeas: Itaibe, Chitóquez (Ricaurte), Cuetando, Yaquivá, San Andrés de Pisimbalá, Santa Rosa, Togoima, Avizama, Chinas, Suin, Tálaga, Toez y Huila (Byla), as well as Valencia, Topa, Pedregal, and Turminá. They cultivate principally plantains, manioc, maize, sugar cane, frijoles, arracacha, coca, and coffee,

/301 cont./

133 which is in full development. The other zone goes from 2,000 to
241 3,000 meters and contains the pueblos of Calderas, Lame, Mosoco,
361 San José, La Troja, Vitoncó, and Irlanda. They cultivate potatoes, maize, ullucos, wheat, garlic, and nasturtium.

241 In the cultivation of cane, the Paez differentiate the following /302/ varieties: java /Java/, criolla, amarilla /yellow/ (mum ñusha), negra /black/ (ñusha kuchi). Of maize: capio (white, tender, and mulberry-colored) or kukiguafi, the calentano maize /maize of the hot regions/ or kukibah, the hard calentano, and the fine or kukimull. Of potatoes, the kaka chime (white), the kaka kuchi (with mulberry-colored skin), the kaka bé (red), and the tusa /corncob/ potato (has a mulberry-colored heart). Of manioc, they distinguish the noli, guaturunga, pitaleña, negra /black/, and colorada /red/. Of these, the first and last yield in a year and in three years, respectively, and the others in two years.

433

Crop	Planted	Harvested	Successive Harvests
Arracacha	Any month	In 2 years	Continuous
Sweet potato	Any month	In 6 months	Continuous
Coca	March-April	In 1 year	Every 3 months
Onion	Any month	In 2 months	Continuous
Garlic	Feb.-April	In 4 months	Cut every 6-8 months
Cane	April-May	In 2 years	
Coffee	March-April	In 3 years	2 harvests per year

Manioc, arracacha, sweet potatoes, plantains, onions, and cabbages are harvested throughout the year and in any month.

/303/ Coffee is harvested during the months of October and November (principal harvest) and in May and June (mid-year harvest).

In Calderas (Tumbichukue, Lame, El Cuartel, La Troja, and Vitoncó), they harvest peaches chiefly during the months [439] of February and March. Although they consume this fruit, the major part is intended for sale.

In the parcialidades of temperate climate, they consume, though not systematically, the fruits: avocado, orange, guava, and star apple.

In the parcialidad of Mosoco and toward the first half of the year, they harvest potatoes, maize, frijoles, broad beans, barley, wheat, and ullucos. The harvest begins with frijoles and immediately continues with maize, broad beans, potatoes, wheat, and barley, ending with the harvest of ullucos, which is done in the month of August.

The harvests of potatoes, nasturtium tubers, and ullucos of the first half of the year are done with splendid results in the "paramo," a mountainous region that merges into the savannas of the Paramo de Moras. This area, conquered in

/303 cont./

241 relatively recent times, has fertile and humid soils. The harvests
433 are large and of excellent quality. It produces profitable yields.
244 The real production of Mosoco potatoes is there. They them-
[492] selves designate it as the principal harvest. During the months of April and May, when the potatoes are being harvested, numerous droves of pack animals carry the produce daily to the market
[435] in Silvia. The profits from this crop are dependable. The cultivators state that even selling at four pesos per arroba it gives a profit. Normally an arroba of potatoes is quoted at six or seven pesos. The planting of potatoes in the paramo begins in October, is intensified in November and December, and the last is done in January. They take advantage of the mildness of the climate
[132] at this time. During the months of June, July, and August the
[484] winter is harsh, with intense cold and hurricane winds. Crossing the paramos at this time is quite perilous.

241 In San José, La Troja, El Cabuyo, El Cuartel, Lame, and
433 Vitoncó, during the first four months of the year, wheat, barley, maize, frijoles, broad beans, and peaches are harvested.

Toward the months of October, November, and December, harvesting is done in Suin, Chinas, Calderas, San Andrés, Togoima, Santa Rosa, and Mosoco itself and consists principally of Maize, frijoles, ullucos, potatoes, and coffee. They constitute what we might /304/ call the second harvests of the year in Tierradentro. The planting begins after Ash Wednesday (March approximately) and is intensified in the months of April and May.
244 The last is done in July. The potato seed planted at about this
433 time in Mosoco comes from the harvest in the "paramo." This is a secondary planting of scant yield. It usually results in losses, but the Mosoco cultivators plant with the aim of preserving the seed. It is interesting to note that the sole agricultural activity of one trader based in Mosoco is the planting of potatoes in the
[434] paramo. He dispenses with the July sowing altogether. He prefers to buy the seed in Silvia, he pays the entire labor force, and in spite of these investments, which are high, he gets a good profit.

/304 cont./

241 Aside from maize, a basic product of consumption in all
433 the parcialidades, some of them emphasize certain crops primarily intended for commercial purposes. Thus, Mosoco produces potatoes and garlic; San José, wheat; Vitoncó, wheat and peaches; Lame, wheat and laurel wax; Togoima, coca; and the others, coffee.

241 The months of the most intense labor in the temperate
433 zone correspond to the first five of the year, and especially to February and March, in order to take advantage of the sunny days during those months for the burning and the sowing, which in turn will benefit from the rains of April, May, and June. During this time, the reserves of the previous year's harvests are consumed, which, let it be said in passing, do not amount
[132] to much. Thus, the months of scarcity are June, July, and August, and those of relative abundance, October, November, and December; the former relatively dry and the latter with copious rainfall.

In Mosoco this schedule varies considerably, owing to the
[132] peculiar climate and the geographical position. The rains are constant in almost every month of the year; nevertheless, one can count on a few weeks of sunshine during the months of January and February. In the middle of the year, when the trade winds blow from the southeast, the winter is harsh. Thus, the months of intense labor are April, May, and June and coincide exactly with the harvesting of potatoes, wheat, and maize, and also those of November and December, for the planting of potatoes in the "paramo." March, April, and May, are months of plenty, and to some extent September and October as well. It would seem that there should not be any months of "hambruna" /extreme hunger/, but there are.

/305/ It is clear that the people of Mosoco work more and harder than the other natives; they actually harvest in almost every month of the year, but, like the others, they have months of "hambruna," which are September, October, and November, in spite of the fact that during these months they harvest potatoes and ullucos, but they call them such because they do not have
600 maize. The cultivation of potatoes on a large scale began more

The cultivation of potatoes on a large scale
/305 cont./ began more
244 or less two decades ago. "From 1925 to 1930 the one who
433 planted the most potatoes was Ezequiel Mulcué, who caused amazement among the people; now the least planted is 20 arrobas," says one informant. Nowadays there are natives who sow up to 200 arrobas in a year, of which only 70 are planted in the "paramo," and they yield better results than the other arrobas planted. Then, we ask, why do the people of Mosoco have their months of hunger?

262 The basic product of the Paez diet is maize. It was in
154 the past and it continues to be so in the present. Psychologi-
[198] cally, they feel completely satisfied when they have maize for consumption. Its absence causes a sensation of dietary dissatis-
[243] faction. Before the era of the potato, the cultivation of maize and wheat predominated.

461 During the months of July, August, September, and Octo-
464 ber, the natives have little work. This is why those from
166 Vitoncó, San José, Lame, and Suin go and sign up as peons on the fincas of the "whites" on the other side of the Cordillera (Popayán, Corinto, and even in the Cauca Valley). They return toward the end of the year, when the maize and wheat harvests are drawing near. The natives of Calderas, San Andrés, Santa Rosa, and Togoima go to the fincas of Inzá or La Plata. They return in October when the maize harvests are approaching. It must be said that this labor force is excellent and cheap. And for this reason very much in demand.

The natives of Mosoco have sufficient work in their own country.

Clearings /rozas/

241 The term roza is used generically for the extent of land
433 cleared, burned, cleaned, and fenced, ready for planting. It is found on every private property. It has an area of approximately one hectare. Clearings of two or more hectares are rare. An increase in production does not reflect an enlargement of the clearings, but rather their multiplication and the utilization of ever more rugged and /306/ sterile lands. The natives, to

/306 cont./

241 indicate the size of their clearings, refer to the quantity of maize
433 planted, that is to say, four cuartillas (approximately two arrobas). Since each clearing does not produce more than one annual harvest, the Páez calculate the size of their property in terms of years. Thus, if asked how much land they own, they state that they have two, four, six, or ten years. Which is the same as saying that they have land where they can lay out two, four, six, or ten separate clearings. Thus, among the Páez, one year is not merely a measure of time, but also an agrarian measure.

241 The clearings are never made in the foothills covered with grass /pajonales/. They are laid out where thick brush or true forest is found. Seen from a distance, they look like open rectangles or squares in the midst of forest or brush. When they are laid out in virgin montaña, the work begins in October. But ordinarily it is during the months of December, January, and February that the natives are busy at this task. These are summer months, and furthermore there is food for consumption. The summer sun rapidly dries out the underbrush, and toward the end of February and through the month of March it is completely burned. When passing through Tierradentro at this time of year, one sees black patches everywhere. At the same time, all the grasses on the slopes are burned so that with the winter rains they will come back vigorously and serve as pasture for the animals.

Burning is the most widespread and most deep-rooted system of agriculture in Tierradentro. It is the most effective way to clear the lands full of vines, grass, brush, and trees, and, logically, the most economical. It combats all sorts of insects injurious to the plantings, and poisonous reptiles, which are not scarce. The ashes produced, when they are not carried away by the rushing waters, are a true corrective for the unquestionably acid soils. The burning of the grasses is essential, for aside from doing away with the dry straw, a veritable thicket that prevents the shoots from growing, it also does away with ticks. The tender shoots of the herbaceous plants make splendid fodder for the bovine, mule, and wool-bearing livestock. Unfortunately, these burnings are not done in a creative spirit, but
000 rather in a destructive one. Fire is also set to the vegetation on

Fire is also set to the vegetation on
/306 cont./
241 the ridges, crests, and windings, where no obvious advantage
185 can be gained and where, instead, it destroys a vegetation that virtually /307/ could be turned into a barrier that would prevent the danger of the animals.

The clearings are also laid out on the banks of brooks, streams, rivers, springs, and damp hollows, which, from a lucrative standpoint, is excellent, since it is precisely there that the harvest yields the most, but it is very harmful, since it destroys the vegetation that preserves the moisture and holds the soil, thus avoiding erosion.

241 The clearing is done by all the male members of the
476 family. But more generally the mingas /communal work-parties/ do it. In this case, the workers first cut with their machetes the grasses, branches, vines, etc., in the lower part of the forest; then, with axes and machetes, they fell the trees. It should be noted that these trees are not cut at the base, but more or less at eye level. The fallen trees are allowed to dry for approximately one month and then are burned. The thick logs remain intact, as does the brush. This is piled up, and sticks are cut to make fencing. This work is also done by mingas. First the stakes are driven in about a meter apart. Then sticks and branches are woven in. The fences are made so tight that they prevent dogs,
[417] pigs, and other animals from entering. People enter by means of a stick with notches that leans against the fence on either side. These sticks are called afa, and they are also placed at difficult spots on the paths, chiefly for crossing obstructions.

241 In Mosoco, where the lands are cleared and divided into lots, clearings do not exist. Only in the "paramo," the mountainous region, can they be observed. But the custom of leaving the land uncultivated for several years has not disap-
[824] peared. The fences are made of lechero /Euphorbia/ stakes, a tree that has the peculiarity of taking root and continuing to live. But the use of barbed wire is steadily increasing.

Planting and harvesting

[152] Planting is conditioned by the pluviometrical conditions in Tierradentro. The summer months are January, February, March, July, August, and September, and those of winter are

/307 cont./

241 April, May, June, October, November, and December. Natu-
132 rally, these periods of summer are relative and correspond in reality to the temperate zone. In Mosoco and the high parts of the Cordillera, /308/ a fine rain is falling almost constantly, if not an actual downpour. In July, August, and September, the winter is harsh, influenced entirely by the trade winds from the southeast.

Bearing these climatic factors in mind, planting is done during the months of March, April, and May. They take advantage of the rains of these months. This agricultural cycle is common for all of Tierradentro including Mosoco proper. The "páramuna" part of Mosoco is excepted, for the reasons listed earlier.

243 Of the cultivable species, maize occupies the dominant place in the agricultural activity of Tierradentro. The preparation of the soil differs somewhat in the temperate and cold thermal levels. Whereas cleaning out and burning the underbrush are sufficient in the temperate one, planting beds are made in the cold one. Maize seed is selected from the best and most filled-out ears, avoiding the small kernels at the points. They believe that they would not fruit, calling them, for this reason, "maize-man," and, on the other hand, calling the big kernels
[842] that yield produce "maize-woman." They make the association that it is the women who have children, even though they do not conceive of fertility without concourse with the man.

243 It is common to have mingas for sowing. In this way the
244 work is soon finished. On the appointed day, eight to ten
476 laborers assemble, with bags full of maize tied at their waists;
[462] they start sowing very early. This is a masculine activity, al-
[184] though in Lame and Mosoco women also participate. The holes are made with a strong, pointed stick at intervals of one meter and 50 centimeters and to a depth of 10 to 15 centimeters. Six or seven kernels are placed in each hole. They bury the frijole next to the logs that remain from the clearing. Peas are also commonly sown there. The seeds of bottle gourds and ahuyama/ squash, /Cucurbita maxima/, which are sown in the maize fields,

/308 cont./

243 are also selected; the larger, round one is regarded as the
244 woman and the less vigorous one as the man. In the cold climates
476 they usually sow, in addition, broad beans and wheat, and in the temperate ones arracacha, manioc, plantains, and other species.

243 In three months, when the maize is man-high, weeding
476 is done. The underbrush is uprooted and left on the same ground to dry out and rot. It serves as fertilizer for the plantings. But the natives have no conception of fertilizers, and any suggestion made in this connection is regarded by them /309/ as a waste of time. There are also mingas for weeding, and boys and even women participate. In about six months the dry and yellow leaves are stripped from the stalks, a task which they call descalzar /to discalceate/; they believe that this makes the tender leaves acquire a dark-green color and the ears grow
[824] strong. The stripped leaves are used to cover the roofs of the ranchos which are built for watching over the plantings and to house the family at harvest time.

243 The fields are attacked by flocks of parrots and chamones
825 /a kind of bird/; they are driven away with scarecrows (kanasá), which are put in strategic places. Squirrels and dogs are also enemies of maize, and to protect it they build traps or use their shotguns. In addition, the women and children constantly go around the fields. Next to the rancho a high platform is often built, from which the integrity of the plantings can be guarded.

243 The natives know that droughts parch the sown ground and
789 an exaggerated winter injures them. When the leaves are scorched
754 and the plant does not make ears, they think then that envious people (the sorcerers) have cast a spell on the maize. In such cases, they call the good curer (tẽ eu) to lift the spell. Protection thus has a magical character (13).

13. Bernal Villa, S. "Magia of Medicina entre los Paeces /Magic and Medicine among the Paez/," p. 245.

/309 cont./

685 The natives do not steal maize. If they need some, they
243 buy it from their neighbor. Such transactions are made at very
[432] low prices. If someone refuses to sell, that is to say, "is stingy
[623] with maize," the buyer threatens to rob him, although he never
[692] does it if he is a good person, but will if he is bad (sorcerer). Such thefts are punished by the cabildo.

243 When the ear of maize is filled out and tender (choclo /a
[789] roasting ear/) consumption begins, after the performance of magical practices if the produce is from a new clearing (14).

14. Ibid., p. 246.

Consumption begins at the outer part and all around the field, leaving the central part to turn into dry maize. If someone picks maize from just any part, people comment acidly that he "eats like a dog." The harvesting of the maize is done in one or two days. Relatives and friends are invited to help
[476] and are rewarded with approximately one arroba. The same
[465] amount is also given to those who helped disinterestedly with the clearing and sowing.

243 /310/ An informant from Mosoco says that it is customary
431 among the natives to present relatives and friends with a "carrera" /stretch, row/ of each harvest. Those of wheat and barley are excepted. The carrera consists in harvesting all the "matas" /bushes, sprigs/ that remain around the plantings, since, as we have seen, the harvesting is done from the periphery to the center. The beneficiaries in turn do the same, so that the amounts received are reciprocally returned. This favor to relatives and friends carries with it implicit factors of understanding and affection, for not all receive this manifestation of esteem.
243 The same informant says that the consumption of roasting ears
574 begins with what is called "cura de la labranza" /treatment of the field/, which consists of the following: The owner invites his relatives and friends to a kind of banquet with an abundance of tender-maize cakes /bollos/ or tamales /envueltos/, chicken, and other select dishes.

/310 cont./

243 As may be noted, the magical practices of the té eu are
756 absent, although there still exists that of the eating, which in
789 other parcialidades complements his practices.

249 The cultivation of sugar cane is quite widespread in the
273 temperate thermal level, although the plantings are not extensive and are not pursued for commercial purposes; they serve only for obtaining guarapo (fermented cane juice) for individual and collective labor and for social affairs. Guarapo is an essential part of the domestic economy, in the same manner
249 as coca. It is not produced for public pay. Each house has its
257 sugar mill, either outside or in its interior, but there are no ovens or other accessories for producing panela. The latter industry belongs exclusively to the white or mestizo people.

249 The cultivation of the cane requires three weedings before the first cutting. Three cuttings with good results are generally obtained from each planting.

245 The cultivation of coffee is also very widespread. Its expansion is of recent date, but it already has strong and universal acceptance, like cane and plantains. The method of cultivation suffers from certain deficiencies: the shade is insufficient and inadequate; there is no pruning; the care is not very satis-
[433] factory; many do not have pulping machines. The coffee
245 plantings produce several arrobas per year. The monetary in-
434 come of the natives in the temperate zone is provided basically by
[439] coffee. They sell it to steady and familiar customers for prices
[452] that are usually low. The coffee plantings secure credit for the natives; they often collect money or merchandise against a future
245 harvest. Coffee has permitted them /311/ to acquire dishes, to
434 modify their clothing, to enrich their agricultural equipment,
177 to buy every once in a while the drugs of the "whites." At harvest time they eat meat regularly, and they are also able to pay wages for the improvement of their fincas. But, above all,
[273] it opens the doors of the liquor stores to them. They consume considerable amounts of alcoholic beverages. They have not yet learned to make good use of their monetary income.

/311 cont./

243 Wheat is cultivated with special emphasis in the areas of Lame, El Cuartel, La Troja, and Vitonco. It is destined primarily for sale. It is planted along with maize, although there are already clearings intended exclusively for its cultiva-
[412] tion. They reap it with knives, rarely with sickles. They do not bind it into sheaves, but make bundles and hang it from the eaves or beams of the house. When dry, they thresh it with wooden chubs /masas/ and separate out its husks by exposing it to the
[256] wind. They grind it at once in hydraulic mills built by them themselves and take it to market. They have no sifters to separate the bran.

128 Below /see pp. 25-33 / we present a statistical table on
241 the production of the various species cultivated by 25 families
433 of Mosoco, 8 of Lame, and 15 of San Andrés including that of
[563] some mestizos and whites, marked with an asterisk, in order to make some comparisons and to estimate the volume of production. We specify the percentage of the production intended for sale. For obvious reasons, we have omitted the names of the family heads, identifying them solely by number in order. The statistical data correspond to the production in the year 1953.
[124] In spite of the fact that this type of investigation presents some
[123] difficulties, owing to the reluctance of people to reveal the data on their production they are in general completely trustworthy, since they were collected after a firm interpersonal relationship had been established between the investigator and the person investigated. In addition, they appreciably agree with our observations noted in "General observations" on Páez agriculture.

/312/ Potato cultivation in Mosoco

244 We have deliberately omitted anything about the cultivation of potatoes in order to deal with it more thoroughly.

The methods of cultivation differ somewhat from those commonly practiced in the other parcialidades. The soil is prepared in beds that follow the direction of the slope. The

The
/312 cont./

244 pluviometrical system in this region is relatively high, and the
[134] soils are saturated with moisture. As a result, this method of making the beds pursues a protective aim for the seeds and fruits. Each bed is raised by a thickness of 60 centimeters, with a distance of one meter between one and the next. The formation of the beds has two stages: the molding /moldeada/ and the raising /alzada/. The former consists of lifting the grass covering and folding it over itself, following the capricious undulations of the ground. It is left like this for several weeks, while the grass completely rots away. This is the only fertilizer. Then comes the planting and after this the raising, an operation which consists of covering the molding with the crumbled earth taken from the part where the grass cover was lifted. In this fashion, the beds have abundant soil in which the roots can grow. The planting does not require any weeding.

In the region that the people of Mosoco call "paramo,"
[243] potatoes are planted without order or rows of any sort. In Moras-Mosoco, as in San José, Lame, Tumbichukue, and Vitoncó, two rows of maize are planted at the edge of the beds and within them the potatoes, very close together and without any sort of order. Frijoles, broad beans, peas, or cabbages are also planted
[243] there. Cultivation is multiple and thus exhaustive. After this harvest, wheat is sown, and then the land is left to lie fallow for three or four years, after which the process is repeated. Naturally, these collective sowings rapidly exhaust the soils. Hence, the May and June sowings yield poorly and usually are lost.

The work is done by the members of the family. Mingas
[476] are still in force as a system of collective labor. They are usually
[464] attended by consanguineous and political familiars. Contract labor is common with Guambiano natives. Mosoco day-laborers are not encountered.

The potato harvest is selected into three classes: large, seed, and birucha. The first serves exclusively for the market, while
000 the last is for family consumption. /In the original text, the following tables for Mosoco, Lame, and San Andres, with the observations deduced from them, appear on two sheets inserted between pages 312 and 313./

1. The potato production is itemized in a separate table.

2. Loss of the harvest.

241 433 From the above table, and relying exclusively on the data given there, we can deduce the following observations:

1. The production of Mosoco is superior to that of Lame, both in quantity and in the variety of species cultivated.

2. The numerical data indicate that there is underproduction, and for that very reason it may be deduced that there is underconsumption, although these data are rough estimates, since the only approximately exact figures that the natives keep are for the production of potatoes.

[243] [244] 3. The production of wheat, garlic, and potatoes is intended almost exclusively for the market, like that of barley, the production of which is not included in the statistical table, because we only have three figures of Mosoco and three for Lame. On the other hand, the production of maize, frijoles, barley, broad beans, ullucos, and nasturtium tubers is intended almost wholly for internal consumption.

[243] 4. Maize is the basic article of consumption, but the production given does not reflect this fact. Nevertheless, it does not include the amount consumed as roasting ears.

5. Losses of the harvest are frequent in Lame, owing to the lack of fertilizers.

[276] [262] [464] 6. Underproduction is compensated for by a larger consumption of coca (Lame) or by the acquisition of other food items such as panela, lard, bread, and coffee (Mosoco). On the other hand, underproduction explains why the natives go and sign up as day laborers on the haciendas of the "whites."

8. Owns plantings of coca.

241
433

From the above table we can make the following deductions:

[245]
[434]
[439]

1. The coffee production is wholly intended for sale. It thus constitutes the principal source of monetary income for the natives and, of course, for the "whites."

2. Maize, frijoles, sugar cane, and coca are intended almost exclusively for internal consumption. The production of panela indicated in the table refers to the whites and mestizos.

[262]
[276]
[273]

3. The food base of San Andrés is provided by maize, plantains, manioc, and arracacha. At the time of the coffee harvest, meat is consumed. Coca and guarapo indispensably complement this dietary regimen.

6: Bernal Villa--34 E-5 (1952-1953) 1954 SC15 Paez SC15

[Mosoco]

/313/

128 We present below a statistical table on the potato produc-
244 tion of 25 families. Nearly all of them have two harvests per
43 year. The first row represents the November planting and the second one that of May and June. For those who have only one harvest a year, the planting is in the month of November.

We establish, in arrobas, the amount planted, the amount harvested, and that intended for sale and for consumption. We specify in Colombian pesos the value received from sales, an estimate of the amount alloted for consumption, the total value of the harvests, and the costs. An arroba of potatoes is sold for four pesos, on the average, at the place of harvest. In Silvia it is quoted at six. The quantity left for consumption is valued
[465] at two pesos per arroba, a standard price for everyone. Costs include only the expenses for mingas, wage labor, and contract labor. Family labor is excluded. We also determine the percentage of the total harvest allotted for sale.

105 Potatoes are the principal crop in the parcialidad of Mosoco
[178] and the primary source of the natives' monetary income. It has
[244] made possible the establishment of intensive trade with the municipio of Silvia and has plainly had repercussions in the modification of rules of behavior and the restructuring of institutions. The transformation embraces nearly all aspects of Páez culture.

In the first place, work has intensified. The people of Mosoco have permanent work throughout the year. The women participate directly in the preparation of the soil, the planting, and the harvesting.

The children of both sexes go to school regularly, learn basic skills, and utilize them in everyday life. Mosoco is the only part of Tierradentro where there is a private school supervised by a native.

[191] Bilingualism is general. The "chontales," that is to say, persons who do not speak Spanish, are very few. There are not more than ten.

[276] The consumption of coca has disappeared among all the youthful element.

[262] The alimentary diet and schedule have been altered con-
[264] siderably. They have breakfast very early in the morning, lunch at noon, and dinner at nightfall. Milk, panela, lard, meat, and bread are consumed regularly.

The utensils are completely modern, consisting of aluminum and iron pieces.

There are wooden beds for sleeping, and blankets as well.

The houses are better built and furnished. There are houses of adobe and tile. Two tile-works inclusively already exist in the parcialidad.

The people are hospitable and generous toward foreign visitors.

[291] The clothing of the men is almost completely transformed. They dress like any Colombian peasant. The palm hat worn in other parcialidades has disappeared from this region. The women are clean, orderly, and talkative. They retain the slit skirt and sash, but have adopted chemises and the blue rebozo of the

/316 cont./

105 Guambianos. They adorn themselves with showy necklaces and
178 pins. Not a few of them wear fine gold earrings.

[232] Livestock-raising has intensified and is in full swing. Norman cattle are replacing and being crossed with the native cattle. The same thing has happened with the wool-bearing livestock. The /317/ saddle and pack horses are indispensable for every family. The natives also possess fine breeds of hogs and domestic fowl.

[565] Social stratification is in full progress. Rich and poor families can already be named.

Mosoco women seldom marry natives from other, less acculturated parcialidades. People speak of mingas, and even of burials, of the rich and poor, a larger number of people going to those of the former.

They live on good terms with the whites and treat them as equals. There are many good native dealers.

These natives are thoroughly familiar with the methods of curing, the use of remedies, and sorcery. But the té eu and even more the nara jihi (sorcerer) are on the wane. Many consult the doctor of the "whites" in Silvia and use the drugs of the "whites." They are less superstitious.

They are believers by conviction. A few are Protestants with great reasoning powers.

The cabildo retains its power and is duly respected.

The properties are duly parceled out. Many of them are planted with pastos de selección /literally, choice pasture grasses/. Fences with barbed wire are frequently encountered.

Agricultural implements

412 Among the implements used in agriculture, only the
[241] digging stick for planting maize (uhach) is of native manufacture.
[177] The others are of European origin.

The universal implement among the Paez is the machete. With it the clearings are made, the ground is cleaned, and the fields, the montañas are felled, sugar mills are made, and bridges are laid over rivers and streams. They prefer it large and with a leather sheath that they fasten to the belt. They are

/317 cont./

412 never without it. Inseparable from a man's body, they put it on for journeys, fiestas, and work. On the other hand, it is also the weapon of attack and defense par excellence. They have few rivals in wielding the machete. In the cleaning out of underbrush they are peerless. As a rule, the number of machetes corresponds to the number of adults in the family. The persons who own more than four machetes are rare.

The shovels /palas/ and small bars /barretones/ needed for making the beds and holes and for weeding are also common. The shovels, which /318/ are owned in larger numbers than machetes, are not used to dig, but to scrape the ground; they are handled horizontally, away from the body. Shovels that form an angle with the handle are unknown.

Iron bars, spades /palendras, spade, hoe/, and picks are rare, especially the last two.

A few Mosoco families possess sickles and knives for reaping wheat.

The tools are sharpened on sandstone, although files are also used frequently.

A few natives possess saws, handsaws, troceras, chisels, and gouges for making a few objects out of wood.

In the statistical table presented one can see the frequency of the agricultural implements that they possess. It also indicates the nominal value of these implements.

Domestic animals

231 The Páez have bovine, equine, porcine, and wool-bearing livestock, turkeys, chickens, dogs, and cats. The guinea pig is the only American domestic animal that is raised in many homes.

231 124 An accurate investigation of the livestock would present serious difficulties, in view of the suspicion of the natives. In the parcialidad of Calderas, information on the subject is almost invariably distorted, whether direct or indirect methods of investigation are employed. Acquiring data of this nature would be problematical even for the mestizo traders with a relatively high standing among the natives and very familiar with them. In our investigating zeal we visited almost all the households in this parcialidad, covering the entire territory on foot. In the shade of thickets, in the fields and pastures, a goodly number of bovines, equines, and wool-bearers are seen grazing. Once in a while one comes upon herds of swine feeding on grasses and roots. In the communal llano of Calderas /320/ about 36 head of cattle ordinarily graze. In all of these households

/320 cont./

231 chickens were not lacking. But it was impossible to obtain trust-
124 worthy information about this wealth. A mestizo trader very familiar with the region estimates that in Calderas there must be no fewer than about 350 head of cattle, a figure that is well
[162] deserving of credit. This parcialidad has approximately 150 families. In the statistical table that we present below 55 families are represented, for many of which the data are incomplete and others have an approximate value, deduced from information by third parties and from direct observation. The statistical tables for the parcialidades of Mosoco, Lame, and San Andrés correspond to reality.

233 Lands intended exclusively for pasture do not exist, with
[311] the exception of that which, on account of its rugged topography and deforestation, covered with grasses that become green again in winter, cannot be used for anything except for pasture, with the risk, of course, that the animals might wander away. In general the animals graze in the stubble, in the communal pastures, in the shade of the brush and thickets. In Calderas, for example, most of the livestock is hidden from strangers' eyes. They eat the branches and grasses that grow on lands that were once fields. In this way they grow wild and shy, but fat and exempt from disease. To catch these animals is equivalent to going on a real hunting expedition in that trained dogs participate, and 10 or 15 men outfitted with their respective lassos and suitably distributed in especially good places for lassoing, detaining, deflecting, or directing the progress of the animal being chased by the dogs. This work is done preferably on Sundays, at the special invitation of the cattleowners, either to brand the calves or to catch a cow intended for trade, sale, or slaughter. When the work is done, a good amount of chicha is consumed. Only the livestock that grazes on the communal llano is visible to strangers and relatively tame.

232 Everyone prefers females for reproduction. The males
439 are consumed, sold, or traded for young females and, rarely, for
231 other articles. Often there is a lack of breeding bulls. In such cases the cows do not calve and are regarded as sterile, a fact that is duly exploited by the white and mestizo traders in order to

propose "trades".

/320 cont./

231 propose "trades." Traders who are interested in a cow, once
439 they have located the true /321/ owner, assail him with proposi-
tions for a trade. They offer young, fertile heifers, smaller
in size and usually thin. In exchange, they obtain a large and
231 fat cow. The profits are more than 200%. Before handing over
439 the animal, the native invariably requests a bottle of aguardiente
789 and pulls out a few hairs from the left eye or lower leg of the cow
[782] as an offering to the Duende /ghost/, the virtual owner of the
lands and animals and potentially the protector of their multi-
plication. Likewise he blows chayuts (Scutellaria racemosa Per.)
on the rope with which the cow will be led, so that it will not
create difficulties along the way. There are frequent statements
by whites and mestizos, cattle traders, to the effect that, when
this requisite was not met, the cow stopped halfway on the
journey and could not be budged by any human power. Then it
sufficed to blow at the rope with chayuts to make her move again.
How can this be explained? The persons relating the story re-
231 peatedly ask.

262 Occasions for the consumption of cattle are mingas, re-
[796] ligious fiestas, and, on a small scale, the post-matrimonial and
[527] baptismal "cuidos" (courtesies for the sponsors). The meat and
[281] the skin are both used. The latter is not tanned, but dried in
[234] the sun and used as a sort of mattress for sleeping. The milk is
not used. When they sacrifice a head of cattle that comes from
262 "wild" places, such as bogs, lagoons, or montañas, they take the
782 precaution of calling the Té eu. He orders them to take a small
756 piece from each organ and to put a little blood on a reed. He
231 wraps all this in a leaf, puts a sprig of contento (chayuts) on top
of it, then goes toward the east, and, in a spot determined by
him, leaves the bundle, taking care always to put it to the left
of things such as trunks or rocks. This placement does not have
any special ceremony associated with it; it is not accompanied
by prayers or the blowing of medicines, and it does not take
place at a specific time. It is an offering to the Duende which
is performed before consuming the meat, the primary purpose
of which is to please him.

/321 cont./

231 The slaughtering of the head of cattle for consumption
[796] at religious fiestas is accompanied by music (1).
[533]

1. Bernal Villa, S. "La Fiesta de San Juan en Calderas, Tierradentro /The Fiesta of San Juan in Calderas, Tierradentro/," p. 208.

[232] Of the equine livestock, they also prefer the females for
492 reproduction. Horses are used for the milling of sugar cane, for
484 the transport of loads, for long journeys. Many own saddles,
[249] /322/ although generally deteriorated ones. Women never ride
[482] on horseback. On long journeys the woman walks with a heavy
[562] load on her back, while the man rides without carrying anything to hinder him.

231 The horses of the Páez are small, but very hardy and suitable for the rugged and difficult roads. They do not own mules or
[754] donkeys. In Calderas it is said that someone brought a donkey
[789] for the purpose of producing young mules, but the envious ones (sorcerers) cast a spell on it and killed it. Nor do they own goats, which they regard as very thievish and destructive.

In the houses they raise guinea pigs, chickens, and turkeys, and, on a smaller scale, ducks. Furthermore, dogs,
[422] cats, and hogs are also raised. The former belong indifferently to men or women, while hogs and dogs are the exclusive property of the men.

The scant care given to domestic animals is worthy of note. There are no corrals of any sort, nor special caretakers
[233] for the animals. Cattle are commonly left to fend for themselves in the pastures, and only every 15 days, or, more frequently, once a month, are they rounded up by their respective owners to
[232] check on their existence or multiplication. They know about the need to give salt to cattle, but this article is supplied in small quantities and at very long intervals. Most of the animals of Calderas go to a small spring of brackish water in Tumbichukue. Among the other domestic animals, only the chickens, turkeys, and guinea pigs are fed regularly with grass, maize, manioc, and

/322 cont./

231 arracacha. Dogs, cats, and pigs live, the first on kitchen refuse, the second by hunting mice, and the last on grasses and roots from the thickets. They are not familiar with breeds of cattle, hogs, and sheep. Only the guinea pig is regarded as American, while the other animals are said to be genuinely Spanish.

[236] Sheep seem to have emotional value because they provide the wool for people's clothing. They are kept with affection and rarely sold or eaten.

Dogs also seem to have emotional value because of being the guardian of the houses and fields. In addition, they have symbolic value: they are the iron curtain, the protective barrier against the dark memory of the Pijao. If the latter were to reappear again, the natives argue, they would not be able to approach /323/ the houses, because dogs live there, which would inspire fear in the Pijao, for they are so dangerous for them that mere contact with their footprints or their hair would kill them. In the legends and tales there is frequent reference to these de-
[552] fensive concepts. The dogs have special names: Guagás (white),
[635] kuchi (black), salgento, pitán, policía. Dogs that eat sheep are invariably killed with a shotgun without previous consultation with the owner.

[262] Guinea pigs are the favorite food of children. They kill
[252] them by strangling them and eat them boiled. These animals are
[782] not used as offerings to the Duende. Nor do they serve as presents
[755] for friends or relatives. They are also used to combat mental illness by covering the patient's forehead with the entrails of the still living animal.

235 They "cuidan" /show special attention/ to favorite persons
[554] with chickens and eggs. They have mingas with turkeys. Eggs
[262] are consumed, but in general they are sold.
[432] They use the honey and the wax from the hives of wild bees.
222 The honey, they say, is good for persons who suffer from "cold."
237 With the wax they soften hide lassos, and they occasionally use it
[757] for illumination. Domestic hives do not exist.

231 Wild animals, such as parrots, chicaos /a kind of bird/, squirrels, and micos, are never domesticated.

/328 cont./

231 There are no animal "pets," and none of the domestic animals serve as playthings or are regarded simply as "pretty." They all have a utilitarian purpose.

[556] The possession of domestic animals is a symbol of wealth. The owner of large tracts of land does not regard himself as rich, while the one who has domestic animals does.

231 There are commercial transactions with animals among the
435 natives. The prices are very low. "The Indian is poor," they
438 say, "he has no silver." For this reason, animals that among the whites would bring 200 pesos or more are sold among the natives for half the price or even less.

233 This state of affairs hardly exists among the natives of the
232 parcialidad of Mosoco. There are already ranches dedicated
[246] solely to livestock-raising. Some are planted with pasture grasses, especially poa. There is a marked tendency to improve the livestock, in quality as well as quantity. They know the excellence of the Norman and Holstein among the cattle and the Merino
231 among the sheep. They have special breeds of hogs and chickens.
[232] Many /324/ own mules and splendid riding horses. Commercial
[438] transactions involving animals bring a just price even among the natives themselves. Some of them are marvelous traders. They
782 still retain the practice of making an offering to the Duende when
[233] slaughtering cattle or pigs. On the savannas of the Paramo de Moras the natives have magnificent herds. Livestock-raising in Mosoco is thus an industry at the height of development that deserves full attention on the part of the authorities.

23 In the statistical table that we present below one can observe the expansion of the livestock industry in Mosoco and com-
[128] pare it with those of Lame, San Andrés, and Calderas. The owners are natives, except for the whites and mestizos marked with an asterisk.

! Estimates by the author.

/326 cont./

262 [252] The chachafruto (úsual), a leguminous plant that bears rather sweet fruits which are eaten merely boiled in water, readily grows in the stubble and thickets; this is a favorite food of children. It bears fruit during the months of August and September. They also gather mushrooms (kalaguai), orejas de palo /literally, ears of wood/ (kallumbo) that grow round and white on rotting trunks, fríjol /327/ cacha (us tape) that abounds in thickets, moras (sutsion) and the ground cherries (chimbú) that grow in profusion in the maize fields and with which they make cakes or tamales and mush /mazamorra/ mixed with ground maize. Likewise, they gather wild granadillas (shlal).

224 [411] [789] Hunting is of minor importance among the Páez. Shotguns and dogs are needed. Authentic lovers of hunting are few, and there are no magical rites or ceremonies connected with it.

Hunting is most frequently done to protect the plantings or the herds. We have seen that the enemies of maize are coatis, guaras, squirrels, and birds. The chickens are attacked by wolf-dogs. On the savannas of the Paramo de Moras bears are the most common enemies of the herds.

[237] In Calderas, the hunters customarily keep the skulls of the captured booty inside the house, on one of the wall posts. In one of them we counted five coati skulls, two from guaras, and one from a wolf. Hunting is done on Sundays and at any time of the year. They go to selected locations with dogs, shotguns, and provisions. The dog raises the game and the men wait in strategic spots, with their shotguns ready to shoot it. If the shot misses, they set out after the game on a fast run. When they hunt deer, they have a minga. For the hunting of guaras they use traps consisting of nets which they place at the exit of the haunts of these animals. Bats are hunted with bags. As soon as they fall, they are kicked to death, for these animals easily break out of bags. [262] [252] They are eaten roasted. Armadillo meat is rather favored. Sparrow hawks are hunted with blowguns. "The Indians are poor" -- says an informant from Calderas -- "and for this reason they make blowguns and hunt birds. God made the birds so that the poor would eat them and not steal." Wild pigeons are hunted on the ridges by means of traps that are well concealed. Chamones, 223 [411]

Chamones

/327 cont./

223 black birds, are not eaten because they are probably animals of
825 the devil. It is said that in times past the Calderas Indians ate
262 beetles, the reason that they are nicknamed tandayaha (one who
[578] eats beetles), an epithet which they regard as offensive and which nearly always irritates them. The Calderunos say that they do not
[224] eat worms or the meat of rabbits and snakes. They regard as game
[223] animals the guara, deer, coati, armadillo, bat, and various species of birds.

224 Concerning bear hunting, the people of Mosoco relate /328/ real feats performed by Indians in open fights with the ani-
[237] mals. Bear fat is highly esteemed among the natives and "whites."

226 Fishing is less important than hunting. The rivers and streams contain sardines and coruntas /small river-fish/. During Holy Week and at Christmas they engage in fishing, when the
[462] water is low, by means of barbasco, nets, and hooks. This is strictly a masculine activity. In the Paez River they fish during the months of January and February and generally in months of drought.

They also gather crabs.

Laurel wax industry

388 Laurel, introduced by a man from Popayan /el payanés/,
824 Agustín Valencia, has played an important role in the economy of some parcialidades of Tierradentro. It grows wild in Calderas, Tumbichukue, Lame, San Andrés, Chinas, and Suin. The production of wax was the only industry in these parcialidades that permitted them to maintain regular trade with the "whites."

388 A mestizo trader from Mosoco says that he was a great ex-
43 porter of laurel wax. "It was the native industry" -- he says -- by means of which salt, trousers, shirts, hats, and centavos came." In this business, he states, he made one arroba of profit per load. The pound was quoted at a peso in Silvia. The informant says that in the years 1946 and 1947 he took out from 800 to 1,000 arrobas of wax. He almost had a monopoly on the business. What little wax escaped him was purchased by traders from Belalcázar, who in turn took it by way of Mosoco to Silvia. The chief consumers of this product were the soap factories of Cali. The laurel wax industry waned in 1950, when those factories

/328 cont./

388 began to use other types of raw materials. The death blow was
43 thus given to the only home industry of the above-mentioned regions. Wax is still gathered, but the price for an arroba in Silvia does not reach eight pesos. There is no longer any profit.
388 The Indians go on using it to make candles for household con-
[373] sumption and above all for illumination at religious fiestas. We
[796] have described the methods of gathering, extracting, and manufacturing laurel wax in the work entitled "La Fiesta de San Juan en Calderas, Tierradentro /The Fiesta of San Juan in Calderas, Tierradentro/," published in the Revista Colombiana de Folklore, Number 2 of 1953.

/329/

Mingas

476 The minga is the most widespread form of labor among the
461 Páez. The natives can work for themselves alone and are excellent laborers. But the task would demand more of their time
[464] and effort. Thus, the minga serves to prevent "boredom" during the work, to gain time, and to provide a labor force which would otherwise be hard to obtain.

476 The minga then is a co-operative system of labor whereby the interested party invites a specific number of acquaintances to perform a job, duly rewarding them with food, drink, and coca. "Communal work for any particular individual is truly loaned labor, with obligatory recompense," says Hernández de Alba /cited in English/.

476 Indispensable articles of reward are meat, chicha, and, in
554 nearly all the parcialidades, coca. The incidence of the mingas is thus almost in direct proportion to the possession of domestic
[231] animals. Those who lack such stock, that is to say, the poor according to the concepts of Páez culture, work alone or in the company of their sons, if they have any.

476 In the course of the cultivation cycle the following mingas
241 are held: to fell the trees (clearings); to pile up the wood that remains after the burning and to cut stakes for the fence; to build fences; to do the planting and weeding.

In Calderas a minga for clearing is carried out in the following way:

/329 cont./

476 The master of the minga kills a head of cattle or, more
241 commonly, a pig. He prepares a trough of chicha (fermented sugar-cane juice), several bottles of aguardiente, an arroba of mote (maize skinned with ashes), and procures a few pounds of coca. He invites the men of his choice. At dawn on the day agreed upon for the job, all those invited, with their tools on their shoulders, proceed with shouts to the house of the minguero. There they are given one egg (25) of coca, chicha, and a dish of

25. Measure of weight equivalent to a hen's egg.

476 mote with meat. At 8:00 A.M. they are all at work. Up to
461 30 laborers attend. They take along to the place of the work
241 calabashes of chicha to drink during the rest periods, which correspond exactly to the "botada de la mambeada" /taking the chew of coca/. In the course of the day they have three mambeadas, and thus three rest periods. They more or less coincide with 10:00 A.M., 12:00 noon, and 2:00 P.M. During these rest periods they sit, talk, laugh, drink /330/ chicha, and soon go back to the work enthusiastically. They do it steadily and diligently.
476 No one talks then. At 4:00 P.M. they leave work and go to the
241 house of the minguero, where their respective wives are already. Everyone receives chicha and aguardiente. Then the food, consisting of a large wooden platter full of mote, stew /revuelto/ with frijoles, arracacha, plantains, and three pieces of meat. Since they cannot eat all this, they put it in fique knapsacks to
[782] take it to their respective homes. After eating, they pray, always invoking the deceased relatives of the minguero, whether
[273] they be ancestors, collaterals, or descendants. Then, they re-
[535] ceive new gourds of chicha until they are drunk. Very often
[578] they dance. There is no lack of fighting on these occasions.

476 According to an informant from Calderas, one minga with
435 15 laborers costs the following:

/330 cont./

476
435

	1 bull	$40.00
	1 1/2 arrobas of maize	1.50
	2 pounds of coca	3.00
	3 loads of chicha	6.00
	Total	$50.00

The prices cited above prevail only among the natives. Among the "whites" an arroba of maize costs $6.00, a pound of coca $3.00, the cattle $25.00 per arroba, and chicha has a higher value. In the expenses of the minga there is no mention of the cost of aguardiente, frijoles, arracacha, and plantains, which are usually mixed with the mote. It should be noted that the articles listed are produced on the same finca, with the exception of the coca, which has to be purchased. In San Andrés the mingas consist of six to ten laborers more or less, usually relatives. Mote, stew with plantains, manioc, arracacha, pork, chicha, and coca are served. No cattle are killed, and there is no dancing after the work. The costs of the minga are as follows:

	1 pig	$35.00
	1 trough of chicha	2.00
	1 arroba of maize	1.50
	1 pound of coca	1.00
	3 pounds of salt	0.60
/331/	3 pounds of frijoles	0.60
	2 arrobas of manioc	1.00
	2 bunches of plantains	2.00
	Total	$43.70

476 In Lame the chicha is purchased in Suin and Chinas, as is the coca. They commonly kill a pig.

In Mosoco we had the opportunity to observe a minga for the raising of the seed beds. There were three women, one boy, and five men. They were relatives. They had eaten at seven
461 in the morning. They worked in a group without distinction as
476 to sex or age, talking and laughing. Only the older ones, who usually chew coca, worked in silence, for talk produces

/331 cont./

461 insalivation, which disturbs the normal consumption of coca.
476 They worked steadily until 10:00 A.M., when they took a short rest. Then they went on working until 1:00 P.M., when they were served "refreshments," consisting of a cup of coffee and two large maize griddlecakes /arepas/ seasoned with salt and two eggs, which had been toasted on a piece of earthenware and finished by roasting in the hot ashes of the hearth. They went on working until 3:30 P.M. and then went to the house of the minguero. The reward usually consists of the following:

476 Two bowls of chicha; then a large platter with mote, stew
465 with potatoes or ullucos. They eat what they can and put the rest in an aluminum pan which they brought for this purpose, or they simply put it in a fique knapsack to take it to their respective homes. After this, they receive still another bowl of mote without meat. Then, once more, two bowls of chicha and, following this, a large pot overflowing with chicha to be distributed among those present. This is done for each of the persons in-
[273] vited. The consumption of chicha is thus abundant. After this they are given aguardiente. Already drunk, they organize a dance. All this, of course, among the natives of means. Among the poor, the mingas are usually made up of relatives, who "conceal the scarcity." No dancing is done.

476 In the mingas of Mosoco, they sacrifice bulls, calves, or pigs, and they always purchase one or two pounds of coffee and two or three arrobas of panela. From their own finca they consume wheat or maize flour, potatoes, ullucos, or broad beans.
[461] Coca has been replaced by "refreshments." During the work there
[276] are periods of rest that /332/ correspond roughly to taking a chew of coca in other parcialidades. The young people of Mosoco do not chew coca, but the old custom still influences the work. On the other hand, it is obvious that a minga in Mosoco is more expensive than paying wages, since various articles are purchased, and, in addition, they sacrifice cows or pigs worth more than 100
[464] pesos. But the mingas are indispensable in Mosoco as a means of obtaining labor which otherwise would be impossible to get. No one signs up for wages, because everyone has his own lands to work.

/332 cont./

476 From the data on the mingas in the three parcialidades,
184 we see that on the whole they have similar rules. But in Mosoco there is already a modified procedure, both in the rewards and in the form of the work. In San Andrés, Calderas, and Lame, a minga is relatively cheaper than paying wages, since they actually buy only salt and coca, when they do not cultivate it on their own fincas.

Communal tasks

476 Among the Páez there is another type of co-operative labor
651 different from the system of the mingas. It might be called communal work, and it pertains basically to the execution of tasks for the common welfare, such as, for example, the construction and maintenance of the roads, bridges, public buildings (schools, church, rectory, house of the cabildo) and the cultivation of the clearing of the saint.

To this end, the cabildo calls upon all the able-bodied men in the parcialidad, who come supplied with their respective rations of coca and work tools.

The execution of the works of communal interest is a duty of every member of the parcialidad, and anyone who refuses to lend his aid is punished by the cabildo and often taken before the Colombian authorities. The greater or lesser effectiveness of this obligation naturally depends on the moral authority of the members of the cabildo and, above all, of the Capitán of the parcialidad. In many parcialidades, the members openly refuse to give their share of labor, and in such cases the roads and public buildings are in precarious condition.

/333/

Foresight and storage

477 In all of the native dwellings there are frames plaited with
353 rods and vines above the hearth and also at what we might call
251 the open ceiling. The ones of the fireplace are suspended, while the others rest on the braces or crosspieces that give strength to the walls of the house. This already clearly indicates to us that the natives have foresight. On these frames there are ears of maize tied by their own husks, bundles of wheat, and

/333 cont./
417 bags full of frijoles, which are also suspended from the wall
353 posts. This is also where the grains (lumps) of salt are kept.
251 The amounts kept for the months of scarcity are not sufficient, but there are other comestibles that help them: domestic ani-
[244] mals, cabbages, onions, sugar cane, and coca. In Lame and Mosoco they cultivate a plant which they call ijuca de pijao. It
[464] is an edible discoria /Dioscorea/. We have also seen that want is avoided by going to work as laborers on the fincas of the "whites."

[263] Meat is also kept on the frame above the hearth. They utilize the smoke to preserve it. Salt is not used for this purpose.

251 In the parcialidades of Mosoco, Vitoncó, and San José, where large quantities of wheat are planted, one frequently finds under the eaves of thatched houses bundles of wheat that remain hanging for several months. In this way they preserve it from the attacks of small rodents, and the grain is of excellent quality because it dries out thoroughly.

261 During times of scarcity, the natives do not seek solace in
273 religion. Actually, their defense is in the sale of their own work-
276 ing capacity for a small daily wage, a few eggs of coca, and
[771] food. It should be noted that guarapo and coca are splendid
[464] sedatives against the pangs of hunger. It is curious that one of the
[465] most noted religious fiestas of Calderas is held precisely during a time of scarcity. Large quantities of guarapo are consumed for nearly a month.

Provision of water and firewood

312 In Tierradentro the rainfall is relatively high. As a result, water abounds in small and /334/ large watercourses. This geographical factor leads the natives to bring the water close to their homes by means of a system of drainage ditches that are true engineering works. The distances that have to be faced or the accidents of the terrain make no difference. When necessary,
[177] they use bamboo tubes as artificial channels. This system has been adopted by the "whites" and even by the towns. Since the high parts on both margins of the Paez River are bare of vegetation,

/334 cont./

312 water abounds during the rainy season. Then the stream beds, dry during the summer (ravines), swell disproportionately. During the summer months, the scarcity of water is still a serious problem.

313 In areas where water is scarce, there is also a scarcity of firewood, owing to the intensive deforestation. As the felling of the trees moves out from the populated centers of Tierradentro, the acquisition of this item becomes increasingly difficult. The fuel problem in Belalcázar, Cuetando, Chitoquez, Valencia, [314] and Guasdualejo is becoming increasingly serious. Furthermore, [439] charcoal is neither used nor produced for trade in Tierradentro.

[312] Providing firewood for feeding the hearth, as well as water, [462] is more an activity for women and children than for men. In most of the parcialidades, firewood abounds, and ordinarily each dwelling has sufficient reserves to maintain the fire on the hearth. In cold parcialidades, such as Calderas and Lame, reviving the fire through the night is essential for protection [513] against the cold. The natives sleep around the hearth, from which comes the warmth that they need for sleeping, since they use no covering other than the clothing on their own bodies and no mattress other than a hard cowhide.

376 The abundance of water also facilitates the construction of 256 hydraulic mills, in order to utilize this motive force. They are relatively numerous.

Property

423 The lands of the native communities are protected. That is to say, they belong to the parcialidad. They are inalienable. In addition, they are exempt from taxes. This peculiarity of our legislation has fortunately permitted the preservation of the [311] Paez group and their culture. The lands contained within the parcialidades are uncultivated, usable, /335/ or in use. The uncultivated lands of the communities of Tierradentro are rapidly being colonized.

In each parcialidad there is a specific amount of land that belongs to all the members of the community. It is communal

land.

000 /335 cont./
423 land. On it usually stand the native pueblos, and from it the
623 municipal councils have set aside the so-called settlement areas,
648 into which, since they belong to the municipio, "white" penetration has been possible.

423 Private ownership of land is acquired essentially through
425 adjudication, through work, and through inheritance. It may also be acquired through gift or sale, but this is quite rare.

423 Since the true owner of the protected lands is the cabildo,
425 it is this institution that distributes the lands to each member
623 of the community. The titles that it grants are called adjudications. The condition for enjoying possession of a specific parcel is residence in the community and, above all, work. In the case where an individual has idle lands because he cannot manage to work them, the cabildo reserves the right to take this part away from him in order to give it to someone who needs it. Those who through special circumstances live elsewhere, outside of the parcialidad, lose their right to possession of the land.

423 Although it is true that in the distribution of land made by
425 the cabildo it venerates, respects, and is guided by the laws of
623 justice, it is also true that they are not exempt from committing
662 unjust acts. If a member of the community can advantageously entertain and show courtesies to the members of the cabildo and is interested in acquiring more land, he can obtain it in this way. It is relatively easy to suborn the cabildo. Then the cabildo can wrong some in order to benefit others. But this defect may be corrected with the selection of men who can fulfill their functions as members of the cabildo competently and with the exercise of sound directive policies on the part of the municipal executive.

423 Now then. It is also true that some natives have more
623 land than others. But this is due to the fact that their respective
428 ancestors cleared more forest than others. They colonized more land. Their right of ownership is granted through labor. "The ancestors" -- says a Calderun informant -- "worked the montaña and this is why we have land. This land does not belong to the cabildo." This procedure is still followed in the parcialidades where there is still uncultivated land. /336/ The cabildo has

/336 cont./

423 no rights over land won by the sweat of the brow. It is inherited
623 directly by the sons. In such cases the cabildo confirms owner-
428 ship by issuing the respective adjudication.

423 When the colonization has been done by several persons,
578 usually brothers, and the division of the land does not satisfy one of the parties, famous litigations take place that eat up the small savings of the families. The feeling for ownership of land is highly developed among the natives, and the usurpation of the slightest piece of ground gives rise to quarrels, enmities, and
42 litigations. The sale of land to "whites" is prohibited by
[648] Colombian law and by the consuetudinary law of the natives. But among the natives themselves transactions can be made with immovables. They do not sell the land, but the ownership. The owner of land is the man. A widow, too, can be an owner by inheritance from the husband. Single women do not own land.

422 The bovine, equine, porcine, and wool-bearing livestock belong to the man, although a few women own pigs and sheep. Turkeys, chickens, cats, and guinea pigs belong to the women, and so do dishes, spoons, pots, grinding stones,
[428] calabashes, and bags. These are inherited through the female line. Children are owners merely of their own clothes.

423 Concerning communal property, we have already seen that in each parcialidad there are several hectares of land that
[794] belong to all the members of the parcialidad. Also regarded as communal property are public works, such as roads, bridges, the main ditches, the house of the cabildo, and the church, and they collectively maintain them; likewise regarded as the property of the parcialidad are the sums of money collected for the church, the produce of the clearing of the saint, and any livestock or mills that it might own.

428 Concerning inheritance, let us look first at the concepts
[842] expressed by an informant from Calderas. Asked about the ideal number of children for native families, he replied that everyone wished to have many children. "When one dies and one has land, who can handle it? The ancestors worked the montaña, and this is why we have land. We are five brothers and we work

/336 cont./

428 together. The land does not belong to the cabildo. Women do not inherit. Only the men. The women go with their husbands. Among the men it is divided into equal shares. The /337/ sons are the legitimate heirs.* If a man dies without leaving sons, [593] his brother inherits. A brother can be asked for a piece of land to [423] work. And he gives it. If we are niggardly about it, what will [425] my brother eat, how will he support his children. The eldest son is important, because if the father dies, it is he who takes charge of the family."

The words are nearly all textual. One may deduce from them that inheritance is carried out through the male line. It is the men who inherit the land, houses, and animals, in equal shares. The women virtually do not inherit, since, when they marry, they go with the husband. The sons are the legitimate heirs. If a man dies without leaving progeny, his brothers inherit.

423 The women, nevertheless, can also be heirs and in equal 428 shares with the men, if the husband has no land to work. Cases [591] are not frequent, but neither are they rare, when the man goes to live in his wife's home, where he remains and works the land [563] which belongs to him through his wife's right. Likewise some "whites" who managed to marry natives have the right of usufruct over the lands of their wives, and the latter demand land to work from the cabildo if they do not possess any.

423 Another Calderun informant, one of the major owners of 428 land in extensity wishes to leave it to his sons without dividing it. Since there is enough land, there is no reason for them to quarrel. Since two of his sons went to Cali when they were small, he says that if they should return there is land for them to work. 423 The lands are solely for the men; the women marry and go with the husband. Referring to the llano of Calderas, he says that it belongs to all of the members of the community. They may build their houses there, while those from other parcialidades [342] have no right to do so. If a member builds a house on the com- [476] munal llano, all the others are obliged to help him with timber and labor. Even the women. The land is communal because the cabildo has decided upon it. Some have plots on this

/337 cont./

423 communal land, since they have a right to it and anyone can do so. Those who come from elsewhere have a right to the communal land provided that they have grown up there. In Calderas there are people from Lame who own their land because they have cleared the montaña. Nowadays there are no more montañas [591] to clear, and thus persons from elsewhere cannot come in. If a [582] Calderuno marries a woman from another parcialidad, his father-in-law or brothers-in-law must give land /338/ to his wife and the spouse thus enters the community. Thus spoke the informant.

Distribution of implements, stock, and crops

121 We are basing the distribution of implements, stock, and crops on the research carried out in the parcialidades of Mosoco, Lame, San Andrés, and Calderas.

162 The parcialidad of Mosoco has, approximately, some 250 families with an average of 4 children; Lame, some 130 with an average of 3 children; San Andrés, some 200 with an average of 4 children; and Calderas, some 150 families with 3 children on the average also. In Mosoco we studied 25 families, or 10% of the total; in Lame, 8 or 5.3%; in San Andrés, 15 or 7.5%, and in Calderas 55 or 36.6%. In the first parcialidad listed there is one family of a mestizo and another of a white, which are equivalent to 8% of the total families investigated; in the second, two families of whites are represented, equivalent to 25% of the total families investigated; in the third, 26.6% of the total families investigated are represented by two families of whites and two families of mestizos. No family of "whites" lives in Calderas.

Average Distribution of Agricultural Implements per Family

Parcialidad (26)	Machetes T	Machetes P	Shovels T	Shovels P	Small bars T	Small bars P	Axes T	Axes P	Spades T	Spades P	Bars T	Bars P
Mosoco	71	2	85	3	50	2	39	1	3	-	13	-
Lame	16	2	26	3	12	1	2	-	-	-	-	-
San Andrés . . .	37	2	42	2	18	1	9	-	-	-	3	-

26. Note: T indicates the total implements of the families investigated. P indicates the average number of implements for each family.

/338 cont./

412 Bearing in mind that of the 48 families investigated, 52%
422 are from Mosoco, 16.6% from Lame, and 31.2% from San
[162] Andrés, we can make the following deductions: The average
/339/ number of machetes owned by each family in the three
parcialidades is two. This indicates the universality of this
implement.

Implements for working the land are more numerous in Mosoco and Lame than in San Andrés, especially in the former, where shovels almost reach 4 and the small bars 2 per family. This is explained by the fact that in those parcialidades they do not need to clear the lands, but only raise the beds in the pastures.

The number of axes for each family in Mosoco is almost double.
[423] The reason for this is that almost all the families own land in the
[311] mountainous part called "paramo." The clearing of wooded areas is intensive in Mosoco because they still exist. In San Andrés and Lame, virgin montañas have almost disappeared.

Average Distribution of Domestic Animals per Family

Parcialidad	Bovines				Equines				Swine				Wool-bearers				Fowl Raised			
	T	P	B	%	T	P	B	%	T	P	B	%	T	P	B	%	T	P	B	%
Mosoco	171	6	22	12,8	113	4	13	11,5	42	1	4	9,5	130	5	25	19,2	243	8	25	10,3
Lame	32	4	10	31,2	44	5	19	43,1	19	2	—	—	21	2	—	—	50	6	10	20,0
San Andrés	60	4	50	83,3	27	1	19	70,3	20	1	14	50,0	12	—	5	41,6	231	16	135	58,7
Calderas	98	1	—	—	114	2	—	—	107	2	—	—	97	1	—	—	271	4	—	—

Note: T indicates the total animals of the families investigated.

P indicates the average number of animals for each family investigated.

B indicates the number of animals for the "white" families.

% indicates the percentage of the total animals that is owned by the "whites."

/The commas in the figures are to be read as points for the translation to English./

/341/

422 For each native family in the three parcialidades and in
23 their respective order, there is on the average the following animals: Bovines, six, three, and one; equines, four, six, zero; swine, one, three, one; wool-bearers, four, three, zero; fowl raised, ten, six, fifteen. In Calderas this is what is given in the table.

23 It is obvious that livestock-raising in Mosoco is an authentic native industry, with the implication of a relative technical improvement in it. Whereas, in the other three parcialidades, it is of no special importance, especially in Calderas. The live-
[563] stock industry in San Andrés is the exclusive patrimony of whites and mestizos.

	Manioc				**Arracacha**											
San Andrés	1.849	123	1.200	64,8	183	12	40	21,8								

Note: T indicates the total arrobas produced by the family investigated.

P, the average number of arrobas for each one of these families.

B, the arrobas produced by the "whites," and %, the percentage that the latter produce in relation to the totals indicated.

/The commas in the figures are to be read as points, and the points as commas, in the translation to English./

27. The figures indicate the number of plantain trees producing.

/343/

241 433 Thus, a native family of Mosoco and Lame, in their respective order, has for its subsistence throughout the year 18 and 36 arrobas of maize, 16 and 5 arrobas of wheat, 2.5 and 2.5 arrobas of broad beans, 3 and 0 arrobas of garlic, 8 and 4 arrobas of ullucos, 5 and 4 arrobas of nasturtium tubers, 1.5 and 4.5 arrobas of frijoles, and 149 and 11 arrobas of potatoes. A native family of San Andrés has 7 arrobas of coffee, 124 bunches of plantains, 21.5 arrobas of maize, 59 arrobas of manioc, 13 [249] arrobas of arracacha, and 4 arrobas of frijoles. Unfortunately it is impossible to obtain statistics on the production of coca and, above all, on the amount of sugar cane consumed in the form of guarapo, which makes it impossible for us to find out in what ways and in what amounts it complements the consumption of each family.

As for maize, we see that the amounts for the families of San Andrés and Lame are superior to those for the families of Mosoco. Those for Lame are exactly double. But while in the latter, aside from coffee, there is no species produced for sale, in Mosoco, on the other hand, there are wheat, garlic, and potatoes for such a purpose. From which we deduce that the smaller the number of crops intended for trade that there is in a parcialidad, the larger will be the production of species for internal consumption, above all those that can be preserved for long periods of time, such as maize, frijoles, and broad beans. Ullucos, potatoes, and, above all, nasturtium tubers demand almost immediate consumption. The same is true of plantains, manioc, and arracacha. This is the reason why the families of San Andrés and Lame have at their disposal larger quantities of maize and frijoles than those of Mosoco.

Division of activities according to sex

462 From the earliest age, differences are established in the technological, economic, and everyday activities.

Among the Páez, only the man can make palm hats for the woman and for himself, wield the machete with full skill and dexterity, fashion the trough, sugar mill and the plates for eating, and play the musical instruments. On the other hand, only the

/343 cont./

462 woman can weave the kuetand yaha (mambe pouch) for carrying coca and mambe /lime for the chew/, weave the fique bags for carrying things, weave the ponchos and the skirts, spin wool and cabuya. Naturally, these differences in activities are observed by children, and they practice them from the earliest age, especially if there is stimulation /344/ by the persons who live with them. The differences in daily, technological, and economic [241] activities are strictly observed. In agriculture, however, men [178] and women are beginning to share the work equally. This phenomenon is, of course, recent.

The scheme that we present below shows the distribution of activities according to sex.

Activity	Men	Women
Construction of houses	yes	
Construction of roads, drainage ditches, bridges	yes	
Preparation of fique and making lassos	yes	
Making hats	yes

Tenant farmers of San Andrés

In the haciendas that lie above the valley of the Pisimbalí torrent and the left bank of the Ullucos River, some 35 native families live as tenant farmers. There are five haciendas that make use of this type of servitude. Many of these families have developed and become established within the hacienda itself. Others have been driven to this condition out of a lack of land from which to derive sustenance.

[San Andrés]

/345 cont./

427 San Andrés is the sole region of Tierradentro, as far as we
161 know, where tenant farmers are found. Although the number of persons sunk in this servitude is no higher than 100, the mere occurrence of this phenomenon already tells us of an excess of population, at least in the parcialidades of San Andrés and Santa
[131] Rosa, from which the tenant farmers came. On the other hand, the scattering of the Páez group through this very department of Cauca, the departments of Huila and Tolima, and even through
[311] the department of the Valle is well known. The colonization of the uncultivated lands in Tierradentro by the natives has been systematic and intensive during recent years. There is the utilization of ever more inaccessible lands for agriculture in the temperate thermal level. All of these are factors that clearly tell us of an excess in the Páez population.

427 Here is what a tenant farmer told us about the phenomenon
241 of tenant farming: As a tenant farmer he has the right to own a
466 house, a garden, and a clearing. The house and garden are contiguous and complementary. His garden occupies one plaza /a Colombian measure with 80 meters to the side/ more or less, and in it he has planted plantains (about 200 trees), oranges (about five trees), onions, arracacha, manioc, sugar cane, sweet potatoes, and some 200 coca trees. He has surrounded the garden with barbed wire provided by the owner in order to avoid damage by the animals of the hacienda. He can lay out his clearing on any site of the hacienda. It changes every year. In his present clearing he has planted 1,500 manioc plants; 200 of arracacha (he could not find more seed); maize; small frijoles /frijol chiquito/ (in one month he hills the "sprigs," in two months they flower, and in three months he harvests) and large frijoles /frijol grande/, and, finally, about two loads of sugar-
[433] cane shoots (seed). The produce of the clearing and of the garden is primarily for consumption, but if there is a surplus he may sell it to anyone, even though the owner urges him not
[249] to sell to anyone but himself. The sugar cane is milled in the
[257] /346/ sugar mill of the owner, with the subsequent use of his implements to make panela, half of what is produced being given to him.

/346 cont./

466 given to him. From the harvests of maize, frijoles, and
427 arracacha the owner receives one bag (approximately half an
[241] arroba) of each product, and one or two bunches of the plantains.

231 He says that the hacienda owner has permitted him to raise
427 animals, but he has none, because he spends more time working
466 on the hacienda than in his own house. He says that he owned
[235] some 20 sheep, but is finished with them. Now he has only eight chickens.

427 The informant is the son of another tenant farmer and
466 grew up on this very hacienda. He has owned the house in which he now lives for 18 years. He has not signed any kind of document with the owner and has not been bothered by him about the possession of the house, but rather, on the contrary, has been urged by him to repair the house. In exchange for the use of the house and the land he is obliged to pay three days for rent
[465] per month, eating his own food and using his own tools. On the other days of the month he works for the same owner for daily wages, earning two pesos a day, excluding, of course, the days of religious or national holidays. Each week he re-
[452] ceives 12 pesos. From the owner he buys maize, manioc, and frijoles on credit, which is immediately deducted in labor. The owner only gives him salt and bananas. The panela comes from what he produces.

466 Since the informant specializes in milling and the making
427 of panela, he ordinarily does nothing else. His work begins at
257 six in the morning and ends at ten at night. He is assisted by his
[463] wife, who earns one peso a day, a deaf and dumb son who earns
[512] nothing, and another son who carries the cane to the sugar mill.
[465] This one is married, is also a tenant farmer, earns two pesos a day, and has a separate clearing. His wife does not help in the work because she stays at home caring for the house, looking after the children, and weeding the garden and the clearing.

427 At the mill he works even on Sundays at wrapping panela,
257 a task that cannot be neglected. Ordinarily he spends two weeks
461 at the mill and has the following one free (without pay) to rest,
466 to look after his own field, or to hire out his labor to anyone who

466 /346 cont./
427 needs it (nominal). On the following week he must return to
257 work at the hacienda.
[461] /347/ Each week he produces some 40 arrobas of panela.
[433] The informant boils it down, his wife mills with the deaf and dumb son, and the other son strips the cane. The milling
[422] equipment is expensive and thus belongs to the hacienda. His own tools are two shovels, one small bar, and three machetes, with which he works for the hacienda. The owner of the hacienda has tried to dismiss him three times. Once because he made panela for another owner; it displeases the owner to have him work elsewhere, especially at a mill. The informant did not want to leave his house.

427 The plantings that he has made have sometimes been
241 lost because of the wetness of the soil, leaving no solution but
466 to plant again. The owner does not help at all in such calamities. He has the right to plant as much as he wishes.
[423] Now he owns about 200 coffee trees, but the owner has forbidden him to plant more trees.

427 The informant has seven children, five of whom are females;
465 three of them earn a peso a day working on the hacienda, harvest-
466 ing and weeding coffee. One who is younger earns 50 centavos, and the son pays land rent and earns a daily wage of two pesos. The owner is not honest. To pay the daily wages he usually takes out bills of ten or twenty pesos and sends one of the peons to exchange them for smaller currency, which is always short when it is received. He pays in part and later maintains that the total was met.

Another informant from the same hacienda says that for two years of vaquería (tending cattle) the owner gave him in payment for his labor one mare that is not worth 30 pesos. While doing this work he suffered hunger and worked too hard. Now, aside from having remunerated him very badly, he demands the payment of rent for the two years that he was engaged in this work.

In general terms, the tenant farmers of San Andrés, in exchange for the use of half a hectare of land, one garden, and one house, are obliged: to pay three days of rent per month, providing their own food; to work as day laborers for the hacienda,

/347 cont./

427 earning a small daily wage (the maximum daily wage that they
466 earn is two pesos, but this is exceptional; ordinarily the men
465 earn one peso and the women 80 centavos); not to work on other fincas; to sell the surplus from their crops to the owners of the hacienda themselves, especially if it is coffee; to divide in half or distribute in equal parts with the owner the panela obtained /348/ from the ovens of the hacienda; the wife and children of the tenant farmers are also obliged to work on the hacienda. They have the right to plant any crop except coffee. They earn nothing on Sundays or on religious or national holidays, nor do they receive any remuneration for extra hours of work. They do not get any social services. When the owner is good, he gives them salt and, ordinarily, one "spot" of plantain (a ration of cooked plantains).

427 Many are sons of tenant farmers born on the hacienda itself.
466 Others have suffered in this servitude for more than ten years. Although a few have freed themselves from this situation, most of them resist giving up their rancho and their garden when the owners want to dispossess them. One tenant-farmer informant, when questioned as to whether his situation was good or bad, said: "I have to be satisfied, what else can I do if from childhood I have been here" (on the hacienda). Besides, he figures that if the owner wants to remove him, he will have to pay him
[423] for the improvements in his garden. Here and there a tenant farmer with more than 20 years of usufruct from his piece of land has already refused to pay his rent.

One tenant farmer who has worked for several owners recalls that some were good, but most of them were bad, ambitious, exploiters, who had their laborers work too hard, cheated in the wages, and one even gave them beatings.

Alimentary diet

262 We wish to note that most of the notes concerning the diet
[121] were gathered in the parcialidad of Calderas.

/348 cont./

262 Maize is the species most intensively cultivated, the one of major consumption and the one that satisfies the most psychologically. We have already seen the case of the "hambruna" /extreme hunger/ in Mosoco, where, in spite of the harvest of other produce, it seems to be precisely because there is no [252] maize. With maize they make mote, griddlecakes /arepas/, tamales /envueltos/, and "sango" a maize soup/, in addition to eating it toasted or roasted when it is tender.

252 262 Mote is practically the raw material of the daily foods. It is obtained by boiling the maize in water and ashes until the cuticle is completely loose and then washing it in an abundance of water. This mote is put on to boil, and when it has gone through three "boilings," that is to say, the water has been changed three times, one tosses into it first dry frijoles, then plantains, manioc, arracacha, /349/ cabbages, and meat if [263] there is any, and lastly onions, cumin, and saffron. Salt, which is always preferred in grains or lumps, is put in by each individual, who takes the grain and mixes it into his own dish until he thinks that he has enough. They do not eat food highly salted. This kind of food is a "pot-au-feu," the one most widespread among the people and the one which they eat daily. The informants consider it "delicious."

The griddlecakes /arepas/ are made with dry or tender maize. With the first, they skin the maize in ashes and then they grind it not too fine; the resulting flour is mixed with boiling water and ground once more, this time very fine. With this mass the women make large, round griddlecakes, harden them on a heated piece of earthenware, and finish roasting them in the embers of the hearth. These are the griddlecakes of the religious fiestas of Calderas. When they want the griddlecakes to have "a good taste," they put in salt, onions, or coriander (in Mosoco we have seen that they put in eggs); these are griddlecakes for family consumption. To make griddlecakes from roasting ears, they shell the ear, grind the mass well, and, without any kind of condiments, they make the griddlecakes and harden and roast them in the familiar form. The frequency of

/349 cont./

252 consumption of griddlecakes is low in most of the parcialidades,
262 but in Mosoco it is almost daily. These natives take their coffee
[272] and milk with griddlecakes, which are good substitutes for bread.

The "envueltos" or cakes are made when there are roasting ears. Shelled, ground, and unsifted, the small masses extend along the husks of the same ear, removed carefully by cutting
[263] off with a knife the thicker part of the ear. No condiment of any kind is put in because the roasting ear in itself has "good flavor." The envueltos, once cooked, are eaten with sancocho /a stew/. They say that it is a "very tasty" dish. Ordinarily, when they make envueltos they kill a pig or chickens and invite relatives to eat them. The eating of envueltos is implicitly associated with the start of the maize harvest, in which the local curer plays a part.

"Sango" is based on finely ground and unsifted maize flour, which is put in the pot when the frijoles are sufficiently cooked. They make sure that the soup does not thicken too much. They also add to this dish chopped cabbage, onions, or coriander for "flavor."

Frijoles are very necessary, very tasty, and the most common food; /350/ mote without frijoles is not tasty; frijoles have flavor and the 'cacha' are the tastiest, and especially green, the (tender) little things are eaten with the shell," says an informant from Calderas.

Frijoles are eaten in sancocho. When the frijoles are cooked sufficiently, one adds plantains peeled and in pieces, arracacha peeled, washed, and cut up, manioc prepared like the arracacha, chopped onions, and saffron. Meat or lard is added if they have any. This dish is said to be "tasty." Frijoles are also eaten mixed with mejicano /squash, Cucurbita pepo/. The beans are boiled first, and when they are thought to be sufficiently cooked the finely chopped mejicano is added and, much later, ground maize. When all this is cooked, they eat it without salt, saying that it is as tasty as the rice with milk of the "whites." They also eat mejicano with well-cooked mote and frijoles, and it is very tasty if cows' feet are added to it.

/350 cont./

252 Cabbages are cultivated in the gardens and are almost never
262 lacking throughout the year; they are eaten daily, chopped into
244 the dish of the day. At religious fiestas it is customary to cook
[796] the cabbages "on the bough," that is to say, with their respective stalks, and serve them as a special dish. White cabbage is seldom cultivated and thus its consumption is almost null. The few heads grown in the cold part of San Andrés are intended for sale.

252 Plantains are eaten preferably in sancocho, and their con-
262 sumption is intensive in the temperate climate. They are also eaten roasted, in which case they are preferred with meat or entrails. Potatoes, especially in Mosoco, are eaten with gravy, a favorite dish for entertaining "white" or civilized visitors. This dish is prepared with water, milk, eggs, onions, and meat. The potatoes are peeled and washed well. In Calderas they are also eaten in this fashion, but frijoles are added to them as well.

In general wheat is cultivated to be milled and sold. Sometimes it is eaten in griddlecakes, in which case the dough is prepared with water and panela. They also make soup with wheat flour, without removing the bran, with cabbages, frijoles, and salt.

Sweet potatoes are consumed in small quantities. They are washed, cooked, and eaten without salt and with peppers. They prepare peppers by cooking them in a pot (a bag, said the informant) and adding onions, coriander, and salt. This condiment thickens and keeps for about a month.

Chachafruto is cooked with frijoles or in the soup, but it is also eaten by itself and skinned. It is very tasty.

273 /351/ Sugar cane serves solely for extracting the juice and
[249] fermenting it. With the guarapo, thirst is quenched, mingas are held, "courtesies" are shown, religious fiestas and social life in general are carried on. From cane juice, duly fermented, alcoholic beverages are also extracted. They make chicha from maize, but this is not prevalent.

/351 cont./

273 The maize is ground, and they cook the flour with plenty of water; this liquid is removed and put in a trough to ferment [272] for several days, adding panela to it. It is said that this chicha is tastier than guarapo, but that it does not inebriate and does not work satisfactorily; it serves only to quench thirst, like the "cola" (carbonated drink) of the "whites."

262 Peaches and apples are eaten in the regions where they are produced, and oranges as well, but in general the consumption of fruit is very low.

252 262 Guinea pigs are eaten when the family wants meat. They kill them by breaking their necks; then they wet them with cold water and put them in the embers of the fire in order to loosen the hide and skin them; they are washed, the entrails are removed, they are washed again, and then they are cooked in the pot of sancocho, mote, "sango," or maize-ball soup; some people eat the entrails, while others do not. The guinea pig is regarded as "tasty."

With chicken special attention is shown to favorite friends and to compadres, and mingas are held. At the fiesta of San Juan in Calderas, it is customary to eat chicken. After being plucked, the entrails are removed, it is washed, and it is cooked in the pot of sancocho or mote. The natives regard the leg as the best piece, and for this reason this is what they present to the elders (compadres, fathers, eldest sons); to the others they give a piece of breast or any other part. The head goes to the owner. The washed and cooked entrails are also distributed among all present. Turkeys and ducks are prepared and consumed in the same manner.

From the pig some organs are eaten roasted: pancreas, kidneys, intestines, and the meat of the backbone; the bacon 262 is kept to flavor food; the rest is eaten boiled. When a pig is killed out of the mere desire to use the meat, portions are distributed to the "elders" of the family (fathers-in-law, fathers, etc.), and the same thing is done when cattle is slaughtered. [237] From them they use the meat, the hide, and the horns for making [534] whistles which are blown when a house is being built in the [342] [234]

262 /351 cont./
[234] settlement and when they are dragging down /352/ the timber;
[237] the milk is not used, except in Mosoco, where we have seen
[534] that it is really consumed.
[342]

The Calderunos say that sheep are eaten frequently in the
[231] temperate regions such as Avirama and San Andrés, but few are consumed in Calderas; some say that sheep give wool for clothing, "Why eat them when they provide ponchos," and others state that to eat mutton brings bad luck, because it would be like eating one's papa.

262 When there are visits by "elders" such as compadres, older
574 brothers, fathers-in-law, or own fathers, they are entertained ("cuida") with dishes different from the ordinary ones, based essentially around barnyard fowl and eggs. If there is meat, a large piece is cooked. The compadres, in turn, bring as a gift griddle-cakes (about 15), eggs (about 10), and frequently chickens.

262 There is no special diet for children; they eat exactly the
846 same as adults. There are differences of diet according to sex only when the woman has just given birth. Then, she is given ground maize, arracacha, manioc, ripe plantain, laying hens ("these
[261] are nice and fat"), and mutton. The mejicano is proscribed for them, because it brings cold into the stomach and gives much pain; onions, because they cause a stomach ailment and rot the in-
[844] testines; pork and the fríjol bueno for the same reason. Peppers are also taboo for parturient women.

262 For hard labor, it is regarded as good to eat mote, with
263 cabbage, fríjol bueno, and well salted, because it gives strength for the daily activities; if one eats the same thing (" a good dish"), but without salt, they say that one is already hungry by the middle of the day.

262 Foods regarded as aphrodisiacs are "sango," prepared with
832 finely ground and sifted maize, and raw eggs.

261 Of the foods that they eat, they believe that chicha and water are transformed into blood, and the maize, potatoes, fríjoles, and arracacha into flesh.

To gain weight, they believe that it is necessary to eat and not to work, rather than to follow a special diet.

/352 cont./

261 The natives lose weight -- says an informant -- because first they eat good and abundant food, and then they do not have [262] enough to eat and, naturally, grow thin. In times of scarcity ("hambruna"), they eat frijol cacha and its tender leaves, in the same way as they eat mejicano leaves; cabbages are gathered leaf by leaf, for at this time of year they are less abundant. When there is nothing more to eat they kill a cow and eat meat; they hunt /353/ wild pigeons or chachalacas, cook them, and [273] drink the broth with salt. They also make chicha, and the old [276] people get drunk every day; the consumption of coca increases: "the people chew and chew so as not to feel too hungry"; the little ones suffer hunger because they do not know how to chew, and they eat mejicano, which does not require the salt that they try to save. Finally, they end up going to the fincas of the "whites" to earn food, coca, and a few centavos.

264 When they do not work, they have one meal at 3:00 P.M. and another at 6:00 P.M. After the first meal they lie down and say, "We are making estancia," that is to say, digesting and [261] getting nourishment. Skinned maize with saffron, chicken, plantains, and peppers gives more "estancia."

261 They barely eat enough unskinned maize, which they cook as mote, but they eat to excess the sancocho of potatoes and frijol bueno because it is so good. No one eats an entire chicken. It is divided. In the former state they would believe that the chicken was stolen. Mejicano makes some people vomit, because they are used to eating meat, and they are the ones who might be thieves.

As a rule, everyone eats only one plate of food; if they eat [758] two, they cannot walk. The curers eat little in order to be able to [787] spend the night in vigil, devoted to their activities; they always [262] eat eggs and they avoid eating peppers in order to be able to [263] feel the "signs" (31).

31. Vernal Villa, S. "Magia y Medicina entre los Paeces /Magic and Medicine among the Paez/," p. 248.

/353 cont./

262 The Indians like meat, but they state that they eat any type of food; they believe that the "whites" eat better, because the Indians cannot eat meat every day nor spend money on lard or meat. They only eat the produce that they cultivated.

264 The Indians have two meals a day: one at dawn and the other one in the afternoon when the sun is setting. The women and children have one meal at midday, from what was left over from the morning. The principal and large meal is cooked at [252] night. Before lying down the women hang from a wooden or iron hook, or from a wire, the pot with mote or frijoles and stir up the fire at least three times during the night; at four in the morning they add the easily cooked products and eat at the first light of day.

574 The natives are generous and hospitable among themselves; 262 no sooner does a visitor enter a home than they offer him whatever they have available: chicha or food.

177 /354/ In the parcialidad of Mosoco, which is undergoing 262 complete acculturation, the diet is changing visibly and the 264 eating hours have changed fundamentally. Coffee, panela, bacon, meat, and maize griddlecakes are consumed regularly.

Trading

43 Except for the parcialidad of Mosoco, the natives produce primarily for internal consumption; but the self-provisioning is insufficient, for they suffer a few months of scarcity. As a result, trading must necessarily be restricted and scanty. In Calderas, Suin, and Chinas, animals are ordinarily exchanged, large, fat cows being surrendered for smaller, thin, fertile heifers and a few pesos besides. We have already referred to this extensively in discussing the livestock. We have also seen how the only industry intended exclusively for trade, that of laurel wax, was a patrimony of San Andrés, Calderas, Tumbichukue, Lame, Suin, and Chinas, and that the drop in price was a fatal blow for the industry. Thus, aside from coffee, potatoes, wheat, and garlic, which are intended almost entirely for trade, nothing remains but small amounts of manioc, arracacha, plantains,

/354 cont./

43 onions, cabbages, barley, and eggs, with which it is not possible to maintain regular trading. The Indians, without exception, buy salt and also acquire hats, shirts, trousers, machetes, shovels, bars, axes, knives, aluminum pots, cups, iron plates, spoons, candles, soap, and aguardiente. Less frequently, large and brilliantly colored kerchiefs for the children, and tweezers /pinzas/ and necklaces for the women.

439 San Andrés is a small native settlement which has been
443 inhabited by the "whites" since the settlement area was estab-
438 lished. It contains three stores that sell some merchandise,
[162] some drugs, beer, aguardiente, and bread. Two of them have gramophones. There are also two other stores, which sell chicha and aguardiente exclusively. On Wednesdays a small market is held. In front of one of the houses, peddlers and traders from other areas display their wares; on the small plaza an awning is raised by an acculturated native woman in order to sell food, and a little farther there is a stand where meat is sold. The market starts moving at dawn. The natives bring small amounts of manioc, arracacha, white cabbage, eggs, coffee, and onions, /355/ which are bought immediately by the "whites." Then the butcher starts selling meat, usually in two-pound portions, which are what the natives buy. The peddlers sell a few trinkets and commodities. At 9:00 A.M. the liquor places
[273] begin to move. At ten in the morning the market is over, and
[578] at midday and in the afternoon only drunken natives are to be
[643] seen. At those times quarrels between them are frequent, and often the natives' aggressiveness is channeled against the "whites," as they assert that they are the true owners of the land and the settlement. The natives have the habit of selling their articles (coffee, eggs) only to persons known to them, even if others can pay them better prices.

On Wednesdays there are also markets in Guasdualejo (Togoima) and Turminá; on Thursdays in Valencia, and on
[491] Saturdays in Inzá and Belalcázar. Those of Belalcázar and Valencia, because they are connected by vehicular road with La Plata (Huila), are better attended and have a larger volume of trade. Large numbers of natives from different parcialidades

/355 cont./

443 of the municipio and even from Calderas flock to the market
438 in Belalcázar. Itinerant peddlers are numerous in Tierradentro,
439 and several of them walk through the parcialidades offering their wares. The articles that they sell are few. Traders also travel through the parcialidades, chiefly to acquire cattle that bring them handsome profits. But there are also those who go from
439 house to house to buy agricultural produce. A trader from
426 Mosoco, mestizo, bilingual, boasts of his friendship with the natives and of the trips that he took, up to about four years ago, through Suin, Chinas, Calderas, Avirama, and Lame, distributing ("showering") advance money for maize, frijoles, laurel wax, saffron, and cattle. "A debt with Indians is never lost," he states categorically, to emphasize the Indians' honesty. At harvest time he returned to collect the products bought and he took them directly to Silvia. He also says that from San Andrés he took from 100 to 200 arrobas of panela each month to sell in Mosoco. Lately, owing to the impassable condition of the Inzá roads, he has given up this business.

443 The parcialidad of Mosoco, and in general the entire
438 hydrographic valley of the Moras River, which contains the
439 parcialidades of San José, Mosoco, Vitoncó, Lame, Suin, and Chinas, trades with the municipio /356/ of Silvia, located on the western slopes of the Central Cordillera. All of the agricultural production goes there: potatoes, maize, wheat, barley, peaches, garlic, broad beans, and ullucos. Only when the prices of agricultural produce are low in Silvia, do they go to Belalcázar and Valencia. But this rarely happens. From Silvia they bring, in exchange, all their tools, their clothing, drugs, and housewares. The Mosoco women are the chief buyers of woolen rebozos (rebosos de Castilla), showy necklaces, gold earrings, and hairpins; the men, of fine cloth hats, fabric for their trousers, and shirts.

437 The riding paths in that area are surprisingly well main-
[476] tained. Each year, in the summertime, all of the neighbors take charge of needed repairs, and they are an obvious contrast to the riding paths of the municipio of Inzá. The people of

The people of
/356 cont./
43 Mosoco have numerous droves of pack animals for handling the
628 import and export traffic, in which the Guambianos (with their
492 horses), called kasukos by the people of Mosoco, who regard them as good friends and not very different from themselves, also participate. The fact is that they live together, work together, and do their trading jointly.

563 The relations between "whites" and natives in Mosoco
621 seem to be cordial and based on mutual respect.

Family economy

594 The Paez family is basically an economic unit. It is made up of the parents and the children, and it represents a
[602] closed but effective circle. They do not go beyond their own
[476] limits in any way, so that the mingas and the distribution of the
[431] first fruits of the harvests are carried out primarily with consanguineal and political relations.

594 The manner in which this economic unit functions and in
462 which its members collaborate can be clearly understood from the division of the activities by sex. The supreme management of the family economy rests in the hands of the man; it is he who owns the land, the house, the tools, and the domestic animals. His arm has not been taught to wield anything but the machete, the axe, and the shovel. He is the owner of the crops and the one who determines where, how, and when work is to be done. His primary work is outside the house: on the land itself. The woman, on /357/ the other hand, remains inside the house, and her basic work is connected with the administration and working up of the products handed over to her by the man. Cooking and
[464] weaving are her specialities. It is true that the woman hires
[178] herself out as a day laborer on the fincas of the "whites" and that in some parcialidades, such as Mosoco, she participates directly in the preparation of the land and the weeding of the crops, but this is a relatively new phenomenon and is not yet universally accepted among the natives.

261 In general terms, the primary incentive for economic activity
594 dealing with food is the satisfaction of the basic needs of the individual and the survival of the family group. It is the security

/357 cont./

261 that is provided by having what is to be consumed. An abundance
594 of guarapo and maize undoubtedly gives them great gratification. When these products are abundant the religious fiestas, mingas, and "entertainments" are good, the natives say, and they describe at great length the incidents as they unfold.

178 But, in spite of the fact that the work capacity of the in-
241 dividual is acknowledged, that the possession of domestic animals
433 lends a certain prestige within the group, and that the abundance
[554] of food and guarapo brings gratification, the agricultural cycle
[231] remains stationary within the lineaments of time, of the systems of labor, and of the quantity of seed. They produce essentially
178 for consumption. The stimulation of prestige does not exist. In
433 many parcialidades, the habits of a capitalistic economy are openly
[754] combated by the sorcerers (32). Nevertheless, we have already

32. Bernal Villa, S. op. cit., p. 256.

had the opportunity to state that the introduction of the cultivation of coffee (temperate zone), the development of livestock-raising and of the cultivation of potatoes in Mosoco, and the creation of settlement areas in the very heart of the native parcialidades are rapidly modifying all of the institutions of Páez culture. The family economy of self-provisioning and of small barter operations is changing perceptibly into a purely money economy. By the same process the routine monotony is disappearing from production and is being replaced by new techniques of work, a greater quantity of production, and a greater volume of trade.

434 In the parcialidades of Mosoco, Lame, and San Andrés, we
121 made an investigation of familial income and expenses /358/ for
124 the year 1953, on the basis of questionnaires prepared by the Comisión de Planeamiento de la Seguridad Social Campesina of the Ministerio del Trabajo, questionnaires that were filled out by us for the said commission with reference to Tierradentro.

/358 cont./

434 There were 48 families investigated, of which 25 were
[121] from Mosoco, 8 from Lame, and 15 from San Andrés. They are identified by numbers in order.

The sources of monetary income are provided by agriculture, especially by potatoes, wheat, garlic, and coffee; by livestock-raising, that is to say, the sale of animals, including derivatives such as milk and cheeses, as well as barnyard fowl; by business transactions, including the resale of agricultural and livestock products produced by the natives; by daily wages, including some contract work; by crafts, which include manufactures (blankets, rugs, sashes, pouches, sewing, ceramics, and tile-making) and hydraulic mills; by freightage, that is to say, the profit from renting beasts of burden; by the previous year's savings; and by loans.

At first sight agriculture stands out as the principal source of family income, corresponding specifically to potatoes, wheat, and garlic for Mosoco, laurel wax and potatoes for Lame, and coffee for San Andrés. But in the parcialidad of Mosoco livestock is not merely complementary, but as important as agriculture itself. Even more so. In nine of the 25 families investigated, livestock-raising balances the family budget, which the deficit
[427] was due to the loss of harvests. We also observed that the renting of beasts of burden is an important factor in the family income; an incipient development of family industry that represents sources of monetary income; and, finally, the income from daily wages in the parcialidad is rather limited. In the parcialidades of Lame and San Andrés, on the other hand, livestock-raising occupies a secondary position, and the family income is complemented, when agriculture produces an imbalance, chiefly by day labor.

434 Trade is primarily an activity of the "whites," and so are
563 industries of elaboration such as panela and cheese. In regard to
[439] trade we found one case of a "white" family established in a parcialidad, whose only source of income through life has been nothing but the profits from trade.

434 /359/ The statistical tables on income which we present below demonstrate to us with numbers the arguments of our guesses, since they permit us to compare the incomes of the families in the three native parcialidades and give us a clear idea of the process of acculturation which is taking place in the parcialidad of Mosoco.

6: Bernal Villa--89 E-5 (1952-1953) 1954 SC15 Paez SC15

Note: The peso sign ($) indicates the total monetary income, and % indicates the percentage of income from one activity in relation to the total income. /The commas in the figures should be read as points, and the points as commas, in the translation to English./

33. The deficit was compensated for by a loan of $600.00, which is equivalent to 12.3% of the total income.

34. Deficit compensated for by $60.00 saved in 1952, or 8.4% of the income.

35. Deficit compensated for by $300.00 saved in 1952, or 51.1% of the income.

36. Deficit compensated for by $250.00 saved in 1952, or 54.8% of the income.

37. Deficit compensated for by $150.00 saved in 1952, or 25.3% of the total income.

/The headings are obviously in error on this table./

38. Deficit compensated for by $65.00 saved in 1952, or 14.1% of the income.

511 In the statistical table of expenses, the first thing that we observe in the three parcialidades is the small amount of money spent under the headings "Drugs," "Medical Service," "Taxes," and "Education."

75 The protection of the health of adults and children is fundamental among the Páez. Child mortality has a high percentage,
511 [165] and parasitosis, diarrhea, and tuberculosis are almost endemic.
[164] But in Páez culture the care of the té eu (good curer) and the nasa jihi (sorcerer); the former protects people from illness and from the curses of the latter; the sorcerer with his magic powers can take people's lives. On the other hand, the té eu openly condemn the use of the drugs and the medical service of the "whites."
[182] These two institutions still enjoy great power and basically govern almost all of the institutional life of the Páez. In Mosoco seven heads of families spent small sums of money for the purchase of drugs. /The following table and illustrations appear between p. 360 and p. 361 in the original text./

/361/

75 Their importance is emphasized if we make a comparison
511 with the parcialidad of San Andrés, where there is a Centro de
743 Salud duly staffed by a registered nurse, and furthermore, not far away, there is the Centro de Higiene of Inzá, staffed by a doctor and a group of nurses whose services are free and who also distribute free drugs. In spite of this, the natives do not always go to these centers, preferring their own doctors and most commonly the té eu of Calderas.

651 Concerning taxes, we have already said that the immovables
511 of the native communities are exempt from this type of encumbrance; hence, the column reserved for this type of expense remains empty. The few figures that are found in it are payments on immovables within the settlement area and, in one case or another, the payment of taxes for the exercise of trade in various plazas of the municipio of Inzá.

511 The amounts devoted to the education of children are the
871 smallest, if we except those of the "white" informants, some of
[563] whom have their children in high schools, in rural normal schools,
[115] and even at the university. In the parcialidades of San Andrés and Lame, they are practically null. The children of San Andrés go to school, as a rule, unprovided with school supplies, carrying in their bags provisions for lunch, consisting of manioc and cooked plantains, mote, and roasted maize, since the dwellings are located at a distance of several kilometers from the school, with very bad and rugged paths. School cafeterias and the donating of school supplies are more than indispensable in these regions. These children go to school irregularly and do not remain there for more than two years; they are taught in Spanish, and on the
[562] whole the benefit is minimal. Girls attend in smaller numbers
[212] than boys; the adults believe that women do not need to learn to read and write. This situation is different in Mosoco. The children of both sexes attend school and try to attend regularly, and many walk several kilometers a day; the fathers of families are interested in having their children learn to read, write, and count, and for this reason they try to outfit them with some equipment for their tasks of apprenticeship.

/361 cont./

276 The consumption of coca has disappeared almost completely
511 in Mosoco; the few data on expenses that appear in the statisti-
[178] cal table pertain exclusively to elderly informants. /362/ In Lame and San Andrés, on the other hand, the consumption is general and considerable sums, in comparison with the total income, are spent to procure this article. In San Andres, the expenses for this fancy would be higher if there were not a cer-
511 tain number of coca trees in each garden. The monies invested in improvements on immovables and livestock-raising are frequent in Mosoco, while in the other two parcialidades they are practically absent. This already implies a veritable process of capitalization, an activity unknown to the majority of the native population of Tierradentro.

The largest and most constant expenses were paid out, in this order, for food, clothing, amusements, and the acquisition of candles and soap.

511 As far as food in Mosoco is concerned, purchases of panela,
43 coffee, lard (fat), and salt appear for all 25 families; the purchase of maize and rice appears for 12 families. They also buy chocolate, bread, and plantains with some frequency. They do not consume manioc. For the eight families of Lame purchases of panela, salt, and coffee appear, and in one case or another the acquisition of rice, lard, manioc, plantains, and meat. In San Andrés the articles most in demand for the home are meat, panela, and salt, which appear for more than half the families investigated, but the purchase of maize, lard, potatoes, manioc, and plantains also figures with some frequency. On analyzing the statistical table of expenses for the three parcialidades, we find rather interesting coincidences that exist between the higher percentages for food and the deficiencies in agricultural production, either because of the loss of harvests or the scarcity of seed. In the former case, which refers primarily to Mosoco, we have already seen that the budgetary imbalance is compensated for by the sale of domestic animals, especially cattle, and in the latter case, which refers to the other two parcialidades, the low production is compensated for by the sale of labor.

/362 cont./

511 The articles of clothing most in demand are trousers, shirts,
438 hats, underwear, rebozos, and sashes (Mosoco), large shawls
439 /pañolones/ (Lame and San Andrés), and smocks for the children.
[301] Ponchos are also purchased with some frequency. In Mosoco,
[223] gold earrings are ornaments appreciated by the women, in contrast to other parcialidades where gold is /363/ regarded as taboo. The natives wear no sandals or shoes. It should also be noted that the women's skirts are not purchased, but made at home; while in Mosoco the purchase of the reboso de Castilla /Spanish shawl/ is quite frequent and a sign of elegance, in the other parcialidades
511 they buy pañolones. If we compare the figures for food and clothing, the percentage of the income devoted to the former in Mosoco, with two exceptions, is higher than that devoted to clothing. In Lame, and especially in San Andrés, the percentages for food and clothing tend to be the same, and often the latter is higher than the former. The phenomenon is not strange if we bear in mind that in these two parcialidades cultivation is more for internal consumption than for sale. As for "Amusements," although various expenses have been included among them, they refer basically to expenses for the fancy for alcoholic and fermented beverages. Naturally, the expenses are necessarily higher, as we shall see later. As for lighting, in spite of the fact that in San Andrés and Lame it is made out of wild laurel wax, stearic candles are also purchased, and in Mosoco they are always
511 purchased. Soap is purchased by all the natives. In the column
454 showing the part for savings we note that only six of the 48 families
[434] investigated have no figures for it.* And in order to make a few deductions, we have made an analysis of the incomes of the 48 families studied:

*[see p. 93 for this table -- Analyst]

/363 cont./

511
454
434

Parcialidad	Less than $100.00	From $100.00 to $500.00	From $500.00 to $1,000.00	From $1,000.00 to $2,000.00	From $2,000.00 to $5,000.00	More than $5,000.00
Mosoco	-	2	12	9	1	1
Lame	-	4	2	-	2	-
San Andrés	2	6	2	-	4	1
Totals	2	12	16	9	7	2

We thus observe that 28 of the 48 families studied, or 78.3%, have incomes of less than 1,000 pesos, with which savings [426] practically cannot exist. Even with regard to the Mosoco family [691] identified by the number 18, which in the Savings column has the amount of $1,034.24 ¾ we were able to verify that this amount /364/ was strictly nominal and that the head of the family had resorted to the Caja Agraria to ask for a loan of $500.00 to make improvements on his finca, a loan which he indeed obtained; through indirect information we were able to ascertain that the amount given as savings was possibly spent on the expenses of a [563] lawsuit for land which a brother-in-law was prosecuting. The savings of the "white" families are true and also those of some few native families, but in general terms what we would calculate as savings can be assigned to the "Amusements" column; the natives live from day to day. The impulse to save does not exist or is minimal. We had the opportunity to verify that there is no prudence with regard to expenses when considerable sums are received, such as, for example, those that come from the sale of coffee. The modest savings of the natives go up in smoke

¾ [column actually reads $1033.24, see p. 93-Au.]

/364 cont./

511 in the cantinas, in lawsuits over land, or for religious fiestas.
434 These arguments are confirmed, on the other hand, by the
454 statistical table on income in that only five native families in the three parcialidades made up the deficits in their budgets of last year with sums saved in 1952.

Economy and acculturation

121 Before closing the present work we wish to describe in
177 broad outline the process of acculturation which is now going on in some Páez parcialidades.

[101] The material on Páez culture which we have published and that which we are now elaborating on were collected in the parcialidades located on the right bank of the Paez River, leaving aside those located on the left bank of this river, owing above all to factors of public order which have been disturbing their peace for several years.

[178] The native communities of San Andrés, Santa Rosa, Togoima, Calderas, Avirama, Suin, Chinas, Lame, Vitoncó, Huila, Toez, and Tálaga are more traditionalistic, live in accordance with the institutions of the culture, and for this reason we regard them as more "primitive." On the other hand, the community of Mosoco, suspended on the slopes of the Central Cordillera itself and extending into the very heart of the Paramo de Moras, is fully in the process of transformation.

[648] /365/ Our research was begun in the parcialidad of Calderas,
[101] isolated, by reasons of a geographical nature, from the principal centers of the "white" population and whose inhabitants have defended their independence at all costs and have been hostile to living with the "whites" (39). From here comes the greater part

39. Bernal Villa, S. "Mitología y cuentos de la parcialidad de Calderas, Tierradentro /Mythology and tales from the parcialidad of Calderas, Tierradentro/," pp. 289 ff.

[101] of our materials. But we also carried out systematic investigations in San Andrés, Santa Rosa, Togoima, Lame, Vitoncó, Tálaga, and, lastly, in Mosoco.

/365 cont./

177 For our outline of acculturation, we understand by diffusion
[121] achieved cultural transmission, and by acculturation cultural trans-
[127] mission in process, terms expounded by Professor Melville J. Herskovits in his book, El Hombre y sus obras /Man and his Works/.

Within Páez culture there is widely diffused, to the point of constituting an integral part of the cultural body, the following economic elements of alien origin and, more concretely, of European origin:

[231] All of the domestic animals with the exception of the
[137] guinea pig, bananas, sugar cane (the variety known as "criolla"), wheat, barley, garlic, coffee, peaches, apples, and oranges, the agricultural implements, the hydraulic mills, sugar mills, the guadua bamboo, and some varieties of pasture grass, such as orejuela /Alchemilla pectinata/, kikuyu, and poa.

177 Throughout the pages of this work, we have emphasized in
361 particular the cultural developments in process, that is to say, the
563 phenomenon of acculturation. It is obvious that this phenomenon has appeared, with greater or lesser intensity, in those parcialidades where there have been created areas of settlement, within which a specific number of "white" families have settled. But the intensity of the acculturative phenomenon does not rest merely on this fact or on the number of families who live by the norms of Western culture. San Andrés, for example, had its settlement area established for all practical purposes in 1928 and now reckons with more than 20 "white" families, with its nearness to the settlement of Inzá, and, for nearly 15 years, with the Parque Arqueológico of Tierradentro, to some extent a tourist attraction, and yet the process of acculturation is minimal and cannot be compared with the intensity of the same phenomenon in Mosoco, where the settlement area /366/ was created in 1923 and where
177 nowadays there are not more than 12 families of "whites." In
[487] Mosoco there is another factor: the riding path that joins the
[491] municipio of Belalcázar with that of Silvia, a road that has existed since pre-conquest times. Mosoco has been and still
[628] continues to be the mandatory stopping place. In addition, this parcialidad has had intensive contacts with the Guambiano group and the Páez group from the other side of the Cordillera, who are more acculturated.

/367 cont./

177 [137] varieties are being introduced, such as "java," for example, which, although the natives call it "wild," they nevertheless praise for its quality and recommend its cultivation.

Such are the general outlines of acculturation in some parcialidades of Tierradentro.

113

/366 cont./

[77] are more acculturated. All of these circumstances have permitted the extensification of the cultivation of garlic, wheat, and especially potatoes, as well as the extensification and intensification of livestock-raising, which, in turn, has given rise to a series of phenomena now in the full process of development, such as the modification of work schedules and agricultural cycles, the regularization of trade and transport, the appearance of the habit of capitalization and of the use of credit, the use of barbed wire for fencing, reforestation on a eucalyptus base, the development of household industries, modification of the diet and eating times, adoption of specific objects of adornment by the women (gold earrings), disappearance of coca consumption ("decultuation," to use Fernando Ortiz's neologism), social stratification, the undermining of the institutions of the té eu and the nasa jihi, the calming of the real and magical aggressiveness against the "whites," intensification of primary education, and greater conviction in religious beliefs.

In the temperate zone in general and in San Andrés in particular, the cultivation of coffee is in full swing, and the consequences of this economic fact are beginning to be visible. The palm hat, very common in the parcialidad of Calderas, is not seen very much among the Andresunos, who are adopting the cloth hat of the "whites"; some of them already wear sandals or shoes, and likewise the use of the poncho and of the bag of a manufacture foreign to the culture is spreading; the agricultural implements are being enriched in the same manner as modern housewares; although the most widespread labor system in the parcialidad is that of the mingas, some already pay daily wages for work on their fields; the consumption of meat and panela is [756] quite frequent when there are coffee harvests. It is also interest- [554] ing that in the entire parcialidad there are only two té eu, who are not greatly respected, though they utilize the services of the té eu of Calderas.

[137] /367/ The "criolla" is the most widespread variety of sugar cane and the one which has been fully accepted by the natives, to the point of being regarded as their own, but other new

ECONOMIA DE LOS PAEZ

Por

SEGUNDO BERNAL VILLA

[P. 291]
[P. 292 is blank]

Consideraciones generales

Los productos de la tierra constituyen la parte sustantiva de la economía Páez. Apenas conocen los indios algunas artes manuales practicadas muy raras veces. La recolección y la cacería son actividades bastante secundarias y, mucho más aún, la pesquería. La ganadería, con ser una actividad de merecida consideración por su desarrollo y por ser, además, la esencia de la concepción indígena de la riqueza, sirve más para efectuar operaciones desventajosas de trueque con la población blanca y mestiza que para derivar lucro bien sea en dinero o en especies. La economía Páez es, pues, directa, carente de intermediarios en las funciones de producción y de consumo. La familia consume lo que produce. Pocos son los artículos de consumisión que se adquieren. Se refieren esencialmente a la sal, las herramientas, los artefactos culinarios y al vestido. Asímismo, pocos son los productos que se expenden. El café, la cera de laurel, la papa, los ajos y la coca. Cabe advertir. que el incremento de algunos de estos productos, es de reciente data. La producción Páez apenas abastece y rara vez deja un excedente para sostener un comercio regular. La previsión para las épocas de carestía existe, pero no es suficiente ni organizada.

El trabajo de la tierra condiciona las actividades diarias de la familia Páez. Podría decirse que los ciclos vitales se sumergen en los ciclos agrícolas. Primordialmente, el año se divide en meses de la preparación de la tierra y en meses de la cosecha incluyendo la defensa de los productos en sazón. Los meses comprendidos entre los extremos de este ciclo económico se dedican a pequeñas actividades manuales o emigran a contratarse como jornaleros en las fincas de los "blancos" (1). La vida social y las fiestas religiosas son frecuentes en este lapso. El trabajo se reali-

(1) Término genérico con que los indígenas designan a todos los que poseen las normas de la cultura occidental sin discriminación racial. Para comodidad del trabajo adoptamos esta acepción poniendo la palabra entre comillas.

za con devoción y constancia. No se efectúa con prisa pero tampoco se descansa.

Cada familia Páez posee sus terrenos. Es su ambición. La fuente primaria de su seguridad. Cada fragosidad tiene un dueño cuyo título ha sido ganado con el sudor de la propia frente. Cada fragosidad esconde el rancho que aloja a la familia. Cada pulgada de tierra es defendida por el indígena con pasión. No son pocos los pleitos suscitados por este hecho. Asímismo, los Cabildos nunca son tan celosos como en la defensa de los terrenos de la Parcialidad. Las áreas de población constituyen puntas de lanza en el corazón mismo de la comunidad. Se han establecido con la plena oposición de los indígenas. Por otra parte, la defensa de las tierras y la incontaminación con pueblos extraños son postulados de la mítica. La distribución de las casas sugieren de antemano la profusión de los caminos y la propiedad privada.

Cuando la tierra escasea la conquistan, no importan las distancias ni las dificultades que sobresalgan. Son buenos colonizadores y raras son las personas que careciendo de tierra se contratan como peones permanentes o se convierten en terrazgueros de los grandes hacendados. Prefieren antetodo, la independencia.

Al estudiar la economía de los Páez no se pueden pasar por alto algunos factores de índole geográfico-físicos y culturales. Ellos son:

1º *Pisos térmicos.* Las tierras ocupadas actualmente por los Páez de Tierradentro, corresponden a los pisos térmicos frío y templado. La curva de nivel correspondiente a los dos mil metros pasa por *Topa, Turminá, Guanacas,* El Cabuyo, *Malvasá, Pisimbalá, Lame,* La Troja e Irlanda, desde donde tuerce hacia el oriente. La curva de los tres mil metros, sensiblemente paralela a la anterior, está pegada muy cerca del espinazo de la Cordillera Central. Forman estas dos curvas una zona estrecha que corresponde al piso térmico frío y dentro de la cual se encuentran las Parcialidades de *Toez, Huila, Vitoncó,* San José, *Mosoco, Lame* y *Yaquivá,* además de una considerable extensión de las extintas parcialidades de *Guanacas* y *Turminá.* Representa toda esta zona una "región culturalmente influída" en el sentido literal que le da el Profesor Guhl (2). Un magnífico camino de herradura une a *Mosoco* con Silvia, atravesando el Páramo de Moras. El tránsito de gentes es intenso y constante en casi todos

(2) Guhl, E. *Ambiente Geográfico-Humano de la Costa del Atlántico.* Revista Geográfica, p. 159.

los meses del año. En los últimos decenios, ha sido una zona activa de colonización indígena y "blanca". Lo sigue siendo aún. *Coscuro* y *Malvasá*, en la Parcialidad de San Andrés, son regiones de colonización netamente "blanca". Pero *Tumbichukue*, las partes altas de *Lame*, *Mosoco*, San José, *Huila* y *Toez* son zonas de colonización exclusivamente indígenas. La importancia de *Mosoco* es relievante. Fue un gran centro de población Páez y lo sigue siendo aún, en igual forma que lo son *Pitayó* y *Tacueyó* al otro lado de la Cordillera, pero no por ello podemos afirmar que "la mayor parte de las poblaciones y las más importantes para los Paeces" se hallen situadas en la región fría como lo afirma categóricamente el Profesor José Pérez de Barradas. *Mosoco*, en pleno proceso de aculturación, es buen productor de papa, trigo y maíz. Es el verdadero Tierradentro por la fisiografía, la producción y el progreso. Pero en tiempos de la conquista fueron los *tálagas*, *aviramas*, calderas y *Togoimas*, quienes derrotaron a Ampudia y Belalcázar, y los grupos políticos fuertes tenían como sedes principales a *Tálaga*, *Suin* y *Avirama* (3). "El lugar de residencia de un cacique constituía una especie de población o sitios de reuniones, la mayoría de los cuales permanecen hoy como pueblos de indios y conservan sus nombres tales como *Suin*, *Tálaga*, *Avirama*, *Togoima*," *Chitoquez*, *Cuetando*, *Yaquivá*, *Pisimbalá* e *Itaibe*, todos ellos localizados en el piso térmico templado. Es precisamente en el curso del río Páez y en los cursos medio e inferior de sus afluentes donde actualmente se concentra la población Páez.

2º *Fisiografía*. Ya la simple ojeada de la loca geografía de Tierradentro, sugiere al espíritu el esquema de vida del pueblo Páez. La fisiografía de todo el curso del río Páez, desde Irlanda hasta *Itaibe*, con casi todos sus afluentes, se constriñe en perfilados accidentes. Pudiera decirse que forma una "chimenea térmica", expresión ésta del Profesor Guhl. Pertenece al piso térmico templado. Es la tierra de las grandes pendientes cubiertas de pastos naturales y de las estrechas y cortas vegas de suelos feracísimos. No faltan quiénes hablen de la feracidad de todo el suelo de Tierradentro, calificándolo, consecuencialmente, como zona de privilegio. El concepto resulta engañoso porque no se tiene en cuenta el factor fisiográfico. La capa vegetal aprovecha-

(3) Hernández de Alba, Gr. *The Highland Tribes of Southern Colombia*. pp. 915-960.

ble únicamente la encontramos en las estrechísimas vegas de los ríos, ramblas y quebradas y en las partes donde la topografía se suaviza un poco. La rivera izquierda del río Páez, desde *Toez* hasta La Plata, difícilmente es aprovechable para la agricultura y la ganadería, dada la brutalidad de las pendientes. Cada afluente que entra por ese lado es un zanjón separado por filos orientados de noreste a suroeste. Más bien la margen izquierda ofrece vegas importantes. Es allí donde crecen con vigor el plátano, la yuca, la caña de azúcar, la coca, la arracacha, el maíz y últimamente el café y la guadua. Las tierras son esencialmente ácidas y las gramíneas se producen en abundancia y de muy buena calidad. El trigo y el café del municipio de Inzá gozan de merecida reputación en la república por la abundancia y calidad de los granos.

Treinta y dos cursos de agua, aproximadamente, recibe el río Páez por la margen izquierda, y diez y siete por la derecha. Fácil es imaginar lo quebrado del terreno, si tenemos en cuenta que cada uno de ellos forma un zanjón infranqueable. Fácil es, también, imaginar la magnitud de la erosión, ayudada por factores de índole cultural, tal como el combate sistemático de la vegetación herbácea mediante el sistema de las quemas anuales. La violencia de las aguas salvajes denuda y aún forma verdaderos ríos de piedras, tal como se observa en el punto denominado *Vicannenga*, en el municipio de Páez. Los riachuelos y torrentes tienen, a veces, descomunales crecidas. En 1949 el torrente de *Topa* arrastró íntegramente su pequeño valle de confluencia, sobre el cual estaba asentado el caserío conocido con el nombre de Brisas, hoy Valencia, creciente que nuevamente se repitió en abril del presente año.

Naturalmente, la extensión de suelos laborables, no guarda proporción con el crecimiento de la población. La fisiografía del piso térmico frío, en cambio, se distiende y suaviza, el horizonte se amplía, las manchas de vegetación arbórea se acrecientan, se multiplican las parcelas semejando verdaderos tableros de ajedrez en *Mosoco*, San José y *Vitoncó*. Sus suelos nutren el maíz, el trigo, la papa, el ulluco, la majua y los ajos. Por las divisiones de la parcelas se levantan, como muros verdes, las plantaciones de cabuya.

3º *Densidad de población*. El aumento de la población indígena en general y de la "blanca" en particular, ha obligado a aquéllos a utilizar o terrenos cada vez más difíciles, empinados

6: Bernal Villa SC15 Paez

y estériles o a emigrar en busca de terrenos baldíos. Ya desde la época de la conquista tenemos noticias de la expansión del pueblo Páez hacia las vertientes occidentales de la Cordillera Central, formando núcleos como *Pitayó*, *Tacueyó* y San Francisco. En la actualidad encontramos grupos Páez en las vertientes orientales de la Cordillera Occidental en el Departamento del Cauca, en los departamentos de Huila y Tolima, y en el Valle del Cauca, como avanzada Páez, los centros de Chinche y Potrerillos al norte de la población de Palmira (4).

Agricultura y horticultura

La agricultura y la horticultura constituyen la fuente primordial de subsistencia de los Páez. Abarca una amplia zona hipsométrica que va desde los mil metros (La Plata, Huila) y rebasa holgadamente la línea de los tres mil metros de altura sobre el nivel del mar *(Mosoco)*. Naturalmente, las especies de cultivo varían con los pisos térmicos y, consecuencialmente, el régimen dietético. Lo que sí no varían son los métodos de cultivo y, sobre todo, las prácticas mágicas asociadas a él. Igualmente, varían la extensión y los tipos de suelos cultivables. Los más aprovechados en Tierradentro son los comprendidos en el piso térmico templado. Vimos ya la feracidad y extensión de los mismos. Los suelos del piso térmico frío son feraces y mayores en extensión. Gruesas capas humosas se observan en *Lame*, *Mosoco*, San José, La Troja, Irlanda, *Guanacas*, *Turminá* y *Coscuro*. Constituyen, desde luego, auténticas zonas de privilegio. Con todo, los suelos no son racionalmente aprovechados ni conservados. La explotación de la tierra se hace en forma exhaustiva. Una rocería no resiste dos cultivos consecutivos. De manera, pues, que cada año es menester un nuevo terreno, nueva rocería, nuevo cercado y nueva quema. Una vez efectuada la cosecha se abandona el rastrojo y con el correr de los años se recubre nuevamente de arbustos y matorrales. A los siete años, más o menos, se limpia otra vez el terreno de las malezas y se vuelven a sembrar las mismas especies de cultivos. En Calderas, Santa Rosa y *Togoima* se siembra maíz, arracacha, fríjoles, coles, papas, y, a veces arvejas. El proceso anteriormente descrito es típico de esas parcialidades. En *Mosoco* y partes frías en general, se siembra en la misma roza maíz, papas,

(4) Duque Gómez, L. *Problemas Sociales de algunas parcialidades indígenas del Occidente de Colombia*, p. 187.

habas, fríjoles, árboles frutales en algunas partes y después de esto trigo. En San Andrés, especialmente en las vegas, se siembra maíz, plátano, fríjol, arracacha, yuca, caña de azúcar, y café. No existe, pues, un conveniente aprovechamiento del suelo ni defensa del mismo, aparte de los varios años de descanso. No conocen los abonos, ni la rotación de cultivos, ni los sistemas de riego.

Es interesante anotar que las familias de San Andrés, Calderas, *Lame* y *Mosoco*, tienen, generalmente, tierras en las partes bajas de los ríos y quebradas y en las partes altas donde abunda la vegetación arbórea, denominadas, por ellos, la "montaña". De esta suerte, pueden realizar cultivos de zona fría y templada (Calderas, San Andrés, Lame) o aprovechar el ciclo estacional anual de las partes altas de la cordillera *(Mosoco)*.

En una de las fincas se levanta la vivienda principal, en tanto que en las otras se construyen ranchos donde vivirán las familias en los meses de cosecha. Es en la casa principal donde se forma la huerta con plátano, caña de azúcar, cebolla, cilantro, coca, coles (San Andrés, Santa Rosa, Calderas, Togoima) o con coles, ajos, cebolla, yuca de *pipchao*, duraznos y manzanas *(Lame, Mosoco, Vitoncó)*. El ají se cultiva en las huertas. Esta casa principal forma lo que en nuestra cultura se llama hogar. Es aquí donde el fuego se conserva siempre, donde se guardan las mazorcas de maíz, los haces de trigo, las jigras de fríjoles, las herramientas, las canoas, la vajilla, y los trapiches; donde viven las gallinas, los cuyes, los puercos y los pavos.

Cultivos industriales prácticamente no existen. No se hallan plantaciones de tabaco y algodón. Las plantaciones de caña de azúcar, entre los indígenas, son de poca extensión. Sirven únicamente para obtener guarapo, que ha reemplazado casi por completo a la chicha de maíz. Sólo los blancos y algunos mestizos poseen extensos cañaverales para la obtención de la panela.

El fique en Tierradentro prospera muy bien. Pero es en *Vitoncó* y *Lame* donde se observan numerosas plantaciones de cabuya de muy buena calidad por la extensión y abundancia de la fibra, sembradas en los alinderamientos de las propiedades. Esta riqueza no tiene todo el aprovechamiento que debiera tener. Los indígenas apenas confeccionan jigras y lazos para el consumo interno.

La guadua prospera muy bien en los valles templados. Es de excelente calidad. En la mayor parte de los casos sirve como sombrío del café. Su incremento redundaría en evidentes beneficios.

6: Bernal Villa SC15 Paez

Aunque las plantaciones de coca están proscritas por la ley colombiana en casi todos los hogares se cultiva con fines consumitivos y en algunas parcialidades se observan numerosas plantaciones con fines comerciales. El valor de la hoja es alto. Una libra se cotiza a tres pesos.

Aserríos de madera existen en *Coscuro*, *Toez*, el río de la *Símbola*, la quebrada del Salado. Pero es una industria casi exclusivamente de los "blancos". Unicamente en San Andrés y *Mosoco* ha sido posible observar aserradores indígenas. No hay reforestación.

En gran parte de las parcialidades de San Andrés, Calderas, *Lame*, *Mosoco* y *Vitoncó* y toda la hoya del río Páez los desmontes parecen haber sido efectuados en tiempos bastantes remotos. No se encuentran bosques, pero se hallan restos a lo largo de los filos y cuchillas que separan los valles y en los recovecos donde no alcanza a hollar la planta humana. Los escarpes están recubiertos de uniforme vegetación de sabana.

En muchas parcialidades existen restos arqueológicos pertenecientes a una ignota civilización anterior a la de los Páez. Las tierras donde existen estos elementos son aprovechados sin temor alguno. Pero cuando los cultivos están en "roza nueva" los naturales tienen la precaución de efectuar las purificaciones de rigor, antes de empezar a consumir los productos, para evitar la peste de "pijao" que puede sobrevenir en caso de que los frutos hayan estado en contacto con los restos arqueológicos, "pijaos" en el decir de los indígenas.

La fruticultura no está muy extendida, si bien que hasta no hace mucho tiempo Inzá gozó de la fama de ser productor de duraznos y manzanas de muy buena calidad. En la actualidad se cultivan con fines comerciales en *Vitoncó*, La Troja y El Cabuyo, donde existen verdaderos huertos de estos árboles mantenidos con cuidado. Los frutos son magníficos y se cosechan en los tres primeros meses del año. Negociantes de Silvia rematan las cosechas, cotizándose hasta catorce pesos la arroba. *Lame* produce quizá los mejores duraznos, pero no son aptos para la exportación porque se dañan fácilmente. Tambien existen numerosas plantaciones en *Tumbichukue* y Calderas, aunque sin mayores cuidados.

Entre los Páez la floricultura no existe y no justifican el trabajo que los "blancos" invierten en sus jardines. Opinan siempre que en aquellas tierras debe sembrarse plantas alimenticias.

De las plantas cultivadas consideran indígenas el maíz ("los

Pijaos tenían maíz"), el plátano hartón ("también tenían los Pijaos"), el fríjol, el mejicano, las coles y la caña "criolla", mientras que la coca, dicen, parece [illegible]ás de los "blancos".

Especies cultivadas y zonas de cultivo

Hé aquí la lista de las plantas alimenticias que cultivan los Páez (5):

Nombre vulgar	*Nombre latino*	*Nombre Páez*
Maíz	Zea maiz L.	*kuki*
Plátano	Musa paradisiaca L.	*tulú*
Banano	Musa sapientum L.	*kineño* (6)
Yuca	Manihot utilissima L.	*ña*
Batata	Ipomea batatas Poit. Andigenum	*ut*
Papa	Solanum tuberosum	*káka*
Arracacha	Arracacia xanthorrhiza Bancr.	*as* (7)
Caña de azúcar	Saccharum officinarum L.	*ñusha*
Col	Brassica oleracea var. acephala	*kulles* (8)
Cebolla	Allium cepa L.	*spulla* (9)
Fríjol	Phaseolus vulgaris L.	*us*
Ullucos	Ullucos tuberosus ex Lozano	*shubill*
Trigo	Triticum aestivum L.	*scuchi*
Cebada	Hordeum vulgare L.	*sebara* (10)
Ajos	Allium sativum L.	*akos*
Majuas	Tropaeolum tuberosum R. et P.	*puel*
Ahuyama	Cucurbita maxima Duchesne	*Ape*
Mejicano	Cucurbita pepo L.	*Peté*
Habas	Vicia Faba L.	*apas* (11)
Arvejas	Pisum sativum L.	*alpés*
Ají	Capsicum sp.	*ámus*
Cilantro	Coriandrum sativum L.	*klandós* (12)
Aguacate	Persea americana Mill.	*útse*
Naranjas	Citrus sinensis (L) Osbeck	*llimas*
Manzanas	Pyrus malus L.	*manzanas*
Durazno	Frunus persica L.	*lashno*

(5) Agradecemos al Herbario Nacional Colombiano, especialmente al doctor Jesús M. Idrobo, por la determinación científica de las plantas.

(8) Del castellano: coles.
(9) Del castellano: cebolla.
(10) Del castellano: cebada.
(11) Del castellano: habas.
(12) Del castellano: cilantro.

Nombre vulgar	*Nombre latino*	*Nombre Páez*
Piña	Ananas comosus (L) Camargo	*chakú*
Granadilla	Passiflora Ligularis Juss.	*shlul*
Café	Coffea Arabiga L.	*café*
Uvilla	Physalis sp.	*chimbú*
Chachafruto	Erythrina edulis Triana ex Michell	*ásual*
Pepino	Solanum muricatum Ait.	*pina*
Yuca de pipchao	Dioscorea sp.	*shud*
Otros cultivos:		
Coca	Erythroxylon coca Lam.	*esh*
Guadua	Guadua angustifolia Kuth	*mam*
Calabazo	Lagenaria vulgaris Serg.	*tuka*
Totumo	Crescentia cujete L.	*shiptuke*
Cabuya	Fourcrea cabuya Trel.	*bats*
Eneldo	Anethum graveolens L.	*llinoju*
Yerbabuena	Mentha viridis L.	*tachú*
Ruda	Ruta graveolens.	*luda*

En realidad, para cierta clase de fríjol que los indígenas llaman "kacha", para la uvilla, el chachafruto, frutas en general y todas las plantas especificadas como otros cultivos, excepto la coca, la palabra cultivo resulta inadecuada, puesto que se dan casi en estado semisilvestre. Los indígenas aprovechan sus frutos siendo el consumo, por lo tanto, ocasional y no siempre necesario.

Si bien parece que el territorio de los Páez, en tiempos de la Conquista, se extendió hasta muy próximo al río Magdalena, el núcleo principal de la población estuvo localizada en la zona templada y en la zona fría. Los pisos térmicos determinan las zonas de cultivo. Una va de los mil a los dos mil metros y comprende toda la hoya del Páez desde Huila hasta La Plata y los cursos medio e inferior de sus afluentes *Símbola*, río Negro de Narváez, Moras, *Kukiyú* y Ullucos. En ella quedan situadas las capitales de distrito Inzá y Belalcázar y las siguientes aldeas indígenas: *Itaibe*, *Chitóquez* (Ricaurte), *Cuetando*, *Yaquivá*, San Andrés de *Pisimbalá*, Santa Rosa, *Togoima*, *Avirama*, *Chinas*, *Suin*, *Tálaga*, *Toez y Huila* (*Byla*), además, de Valencia, *Topa*, Pedregal y *Turminá*. Cultivan predominantemente plátano, yuca, maíz, caña de azúcar, fríjol, arracacha, coca y el café que está en pleno desarrollo. La otra zona va de los dos mil a los tres mil metros y contiene los pueblos de Calderas, *Lame*, *Mosoco*, San José, La Troja, Vitoncó e Irlanda. Cultivan papa, maíz, ullucos, trigo, ajos y majuas.

Del cultivo de la caña los Páez distinguen las siguientes va-

riedades: java, criolla, amarilla (*mum ñusha*), negra (*ñusha kuchi*). Del maíz el capio (blanco, blando y morado) o *kukiguafi*, el maíz calentano o *kukibah*, el calentano duro, y fino o *kukimull*. De la papa la *kaka chime* (blanca), la *kaka kuchi* (de cutícula morada), la *kaka bé* (colorada) y la papa tusa (tiene el corazón morado). De la yuca distinguen la noli, guaturunga, pitaleña, negra y colorada. De éstas la primera y la última se dan al año y a los tres años respectivamente y las otras a los dos años.

Ciclos agrícolas

Cultivo	*Siembra*	*Cosecha*	*Cosechas sucesivas*
Maíz	marzo-mayo	A los 8 meses (templado)	Una cosecha anual
	mayo-agosto	A los 10 meses (frío)	Una cosecha anual
Fríjol	marzo-mayo	A los 7 meses (templado)	Una cosecha anual
	mayo-agosto	A los 8 meses (frío)	Una cosecha anual
Habas	mayo-agosto	A los 10 meses	Una cosecha anual
Papa	octubre-diciembre (páramo)	A los 5 meses	Una cosecha anual
	abril-agosto	A los 5 meses	Una cosecha anual
Ullucos	abril-junio	A los 5 meses	Una cosecha anual
Trigo	julio-septiembre	A los 8 meses	Una cosecha anual
Yuca	cualquier mes	Al año (noli)	Continuo
Plátano	cualquier mes	A los 2 años	Continuo
Arracacha	cualquier mes	A los 2 años	Continuo
Batata	cualquier mes	A los 6 meses	Continuo
Coca	marzo-abril	Al año	Cada tres meses
Cebolla	cualquier mes	A los 2 meses	Continuo
Ajos	febrero-abril	A los 4 meses	Corte cada 6-8 meses
Caña	abril-mayo	A los 2 años	
Café	marzo-abril	A los 3 años	2 cosechas al año

Durante todo el año y en cualquier mes cosechan yuca, arracacha, batata, plátano, cebolla y coles.

El café lo cosechan en los meses de octubre y noviembre (cosecha principal) y en mayo y junio (mitaca).

En Calderas, *Tumbichukue*, *Lame*, El Cuartel, La Troja y *Vitoncó* cosechan duraznos principalmente en los meses de febrero y marzo. Aunque consumen esta fruta la mayor parte está destinada para la venta.

En las parcialidades de clima templado consumen, aunque no sistemáticamente, frutas: aguacates, naranjas, guabas, caimitos.

En la parcialidad de *Mosoco* y hacia la primera mitad del año cosechan papa, maíz, fríjol, habas, cebada, trigo y ullucos. La cosecha empieza con el fríjol y se continúa, luégo, con el maíz, haba, papa, trigo, cebada, terminando con la cosecha de ullucos que se realiza en el mes de agosto.

Las cosechas de papa, majua y ullucos, de la primera mitad del año, se hacen con magníficos resultados en el "páramo", región montañosa que muere en las sabanas del Páramo de Moras. Esta región, conquistada en tiempos relativamente recientes, es de suelos feraces y húmedos. Las cosechas se dan abundantes y de excelente calidad. Produce pingües beneficios. Aquí está la verdadera producción de papa de *Mosoco*. Ellos mismos la designan como cosecha principal. En los meses de abril y mayo, en que se efectúan las cosechas de papa, numerosas recuas sacan diariamente esta producción al mercado de Silvia. Las utilidades de esta siembra son seguras. Los cultivadores informan que aún vendiendo a cuatro pesos la arroba se obtiene ganancia. Normalmente la arroba de papas se cotiza a seis y siete pesos. Las siembras de papa en el "páramo" empiezan en octubre, se intensifican en noviembre y diciembre y en enero s ralizan las últimas. Aprovechan la benignidad del clima en este tiempo. En los meses de junio, julio y agosto el invierno es fuerte, con fríos intensos y vientos huracanados. El tránsito de los páramos por esta época ofrece serios peligros.

En San José, la Troja, El Cabuyo, El Cuartel, *Lame*, *Vitoncó*, durante los cuatro primeros meses del año se cosecha trigo, cebada, maíz, fríjol, habas y duraznos.

Hacia los meses de octubre, noviembre y diciembre realizan cosechas en *Suin*, *Chinas*, Calderas, San Andrés, *Togoima*, Santa Rosa y *Mosoco* propiamente dicho y consisten principalmente de maíz, fríjol, ullucos, papas y café. Forman lo que pudiéramos

llamar las segundas cosechas del año en Tierradentro. Las siembras comienzan después del miércoles de ceniza (marzo aproximadamente) y se acentúan en los meses de abril y mayo. Las últimas se hacen en julio. La semilla de papa que siembran por este tiempo en *Mosoco* proviene de la cosecha en el "páramo". Son siembras secundarias de escaso rendimiento. Generalmente producen pérdidas, pero los cultivadores mosoqueños siembran con el fin de conservar la semilla. Es interesante hacer resaltar que la única actividad agrícola que realiza un comerciante radicado en *Mosoco* es la siembra de papa en el "páramo". Prescinde totalmente de la siembra de julio. Prefiere comprar la semilla en Silvia, paga toda la fuerza de trabajo, y a pesar de estas inversiones que son altas, obtiene jugosos beneficios.

Aparte del maíz, producto de consumo básico en todas las parcialidades, algunas de éstas dan preponderancia a determinados cultivos destinados especialmente para el comercio. Así, pues, *Mosoco*, produce papas y ajos; San José, trigo; *Vitoncó*, trigo y duraznos; *Lame*, trigo y cera de laurel; Togoima, coca y las demás café.

Los meses de más intenso trabajo en la zona templada corresponden a los cinco primeros del año, especialmente, a los de febrero y marzo, con el fin de aprovechar los días de sol de estos meses, efectuar las quemas y realizar las siembras, que a su vez se beneficiarán con las lluvias de abril, mayo y junio. Durante esta época se consumen las reservas de las cosechas del año anterior, que dicho sea de paso, no son muchas. De esta manera tenemos que los meses de escasez son junio, julio y agosto, y los de relativa abundancia octubre, noviembre y diciembre; aquéllos de un relativo verano y éstos de abundantes lluvias.

En *Mosoco* varía sensiblemente este esquema debido a la peculiaridad de su clima y a la posición geográfica. Las lluvias son constantes casi en todos los meses del año; no obstante, puede contarse con algunas semanas de sol en los meses de enero y febrero. A mediados del año cuando soplan los vientos alisios del SE. el invierno es violento. Así, pues, los meses de intenso trabajo son abril, mayo y junio y coinciden, p recisamente, con las cosechas de papa, trigo y maíz; también lo son los de noviembre y diciembre, por las siembras de papa en el "páramo". Son meses de abundancia marzo, abril y mayo y algo también septiembre y octubre. Aparentemente no debería existir meses de "hambruna", pero sí los hay.

Es evidente que los mosoqueños trabajan más y mejor que los otros indígenas; prácticamente cosechan en casi todos los meses del año, pero tienen como los otros meses de "hambruna", que son septiembre, octubre y noviembre, a pesar de que en estos meses cosechan papas y ullucos; pero los llaman así porque no tienen maíz. El cultivo de la papa en grande escala comenzó hace, más o menos, dos decenios. "De 1925 a 1930 quien más sembraba papa era Ezequiel Mulcué, lo cual producía asombro entre las gentes; ahora quien menos siembra son veinte arrobas", dice un informante. En la actualidad hay indígenas que siembran hasta doscientas arrobas en el año, de las cuales solo setenta se siembran en el "páramo" y se obtienen mejores resultados que de las otras arrobas sembradas. Entonces, nos preguntamos, por qué los mosoqueños tienen sus meses de hambre?

El producto básico de la alimentación Páez es el maíz. Lo fue antaño y lo sigue siendo actualmente. Psicológicamente se sienten plenamente satisfechos cuando tienen maíz que consumir. Su ausencia produce sensación de insatisfacción alimenticia. Antes de la era de la papa predominaban los cultivos de maíz y trigo.

Durante los meses de julio, agosto, septiembre y octubre, los indígenas tienen poco trabajo. Es así cómo los de *Vitoncó*, San José, *Lame*, *Suin*, salen a contratarse como peones en las fincas de los "blancos" al otro lado de la Cordillera (Popayán, Corinto y hasta en el Valle del Cauca). Regresan a finales del año cuando están próximas las cosechas de maíz y trigo. Los indígenas de Calderas, San Andrés, Santa Rosa y Togoima salen a las fincas de Inzá o La Plata. Regresan en octubre cuando las cosechas de maíz están cercanas. Huelga decir que esta mano de obra es excelente y barata. Y por lo mismo muy solicitada.

Los indígenas de *Mosoco* tienen trabajo suficiente en su propio terruño.

Rozas

Se llama genéricamente roza a la extensión de tierra desmontada, quemada, limpiada y cercada, lista para la siembra. Se halla en cada propiedad particular. Tiene una extensión de una hectárea aproximadamente. Rozas de dos o más hectáreas son escasas. El aumento de la producción no se refleja en el ensanchamiento de las rozas, sino más bien en la multiplicación de las mismas y en la utilización de terrenos cada vez más escabrosos y

estériles. Los indígenas para explicar la extensión de sus rozas apelan a la cantidad de maíz sembrado, es decir, cuatro cuartillas (dos arrobas aproximadamente). Como cada roza no produce más que una cosecha anual, los Páez cuentan la extensión de sus propiedades por años. Así, si se les pregunta qué extensión de terreno poseen, manifiestan que tienen dos, cuatro, seis, diez, años. Lo que equivale a decir que tienen un terreno donde se pueden establecer dos, cuatro, seis, diez rozas distintas. De manera que un año, entre los Páez, no solamente es una medida de tiempo sino, también, agraria.

Las rozas no las hacen nunca en las faldas cubiertas de pajonales. Se establecen donde existen matorrales tupidos o bosques verdaderos. Miradas a distancia, semejan claros rectangulares o cuadrangulares en medio de los bosques o matorrales. Cuando se establecen en una montaña virgen los trabajos se inician en octubre. Pero comúnmente es en los meses de diciembre, enero y febrero cuando los indígenas están atareados en esta faena. Son meses de verano, y, además, tienen alimentos qué consumir. Con los soles del verano secan rápidamente las chamizas y a fines de febrero y todo el mes de marzo se queman íntegramente. Recorriendo Tierradentro por esta época se contemplan manchas negras por doquier. Por otra parte, se queman todos los pajonales de las pendientes con el fin de que, con las aguas del invierno, renazcan con vigor y puedan pastar los animales.

La quema es el sistema agrario más extendido y más arraigado en Tierradentro. Es el medio más efectivo de limpiar los terrenos llenos de lianas, pajonales, matorrales y árboles, y, lógicamente, el más económico. Con ella se combaten toda clase de insectos dañinos a las plantaciones y ofidios venenosos que no son escasos. La ceniza producida, cuando no es arrastrada por las aguas salvajes, constituye un verdadero correctivo de los suelos indudablemente ácidos. La quema de los pajonales es imprescindible, pues aparte de acabar con la paja seca, verdadera maleza que no permite prosperar los retoños, termina con la garrapata. Los tiernos retoños de los herbáceos constituyen un magnífico alimento del ganado vacuno, mular y lanar. Desafortunadamente estas quemas no se realizan con un sentido creador sino, más bien, destructivo. Se pone fuego también a la vegetación de los filos, cuchillas y recovecos, donde ninguna evidente utilidad puede obtenerse y antes, por el contrario, se destruye una vegetación que virtualmente

podría convertirse en barrera que impediría el despeñadero de los animales.

Las rozas también se establecen en las orillas de los arroyos, quebradas, ríos, fuentes, huecos húmedos que, desde el punto de vista lucrativo, es excelente, puesto que es allí, precisamente, donde mejor rinde la cosecha, pero es completamente perjudicial, puesto que destruye la vegetación que conserva la humedad y mantiene fijos los suelos, evitando, de este modo, la erosión.

La rocería se efectúa con todos los miembros varones de la familia. Pero lo más general es que se realicen mingas. En tal caso, los peones con sus machetes cortan primero las hierbas, ramas, lianas, etc., que quedan debajo del monte; luego con hachas y machetes tumban los árboles. Es de notar que estos árboles no se cortan por la base sino a la altura de los ojos más o menos. La tala se deja secar un mes aproximadamente y luego se quema. Los maderos gruesos quedan intactos de igual manera que las chamizas. Estas se amontonan y los palos se cortan para estantillos de la cerca. Para esta obra también se hacen mingas. Se paran primero los estantillos con un metro de distancia aproximadamente. Luego se entrecruzán varas y chamizas. Las cercas quedan tan tupidas que evitan la entrada de perros, cerdos y otros animales. La entrada de las gentes se hace por medio de un palo con muescas que se recuesta sobre la cerca en ambos lados. Estos palos se denominan *afa*, los cuales se colocan también en partes difíciles de los caminos sobre todo para salvar barrancos.

En *Mosoco*, donde los terrenos son limpios y parcelados, las rocerías no existen. Solo en el "páramo", región montañosa, puede observárselas. Pero la costumbre de dejar el terreno sin cultivar por varios años no ha desaparecido. Las cercas se hacen con estantillos de lechero, árbol que tiene la particularidad de enraizar y seguir viviendo. Pero el uso de alambre de púa es cada vez más creciente.

Siembra y cosecha

Las siembras están condicionadas por el régimen pluviométrico de Tierradentro. Son meses de verano enero, febrero, marzo, julio, agosto, septiembre, y de invierno son abril, mayo, junio, octubre, noviembre y diciembre. Naturalmente, estas épocas de verano son relativas y corresponden prácticamente a la zona templada. En *Mosoco* y partes altas de la cordillera casi constantemente

pérdida de tiempo. En las deshierbas también hacen mingas e intervienen muchachos y hasta mujeres. A los seis meses aproximadamente, arrancan las hojas secas y amarillas de las cañas, labor que denominan descalzar; piensan que haciendo así las hojas tiernas adquieren un color verde-oscuro y las mazorcas crecen vigorosas. Las hojas arrancadas sirven para cubrir el techo de los ranchos que construyen para cuidar las sementeras y para alojar a la familia en tiempos de la cosecha.

Las labranzas son atacadas por bandadas de loros y chamones; las ahuyentan con espantapájaros (*kanasá*) que colocan en sitios estratégicos. Las ardillas y los perros son también enemigos del maíz y para defenderlo construyen trampas o hacen uso de sus escopetas. Por otra parte, las mujeres y los niños rodean constantemente las labranzas. Junto al rancho construyen, muchas veces, una alta barbacoa, desde la cual se puede vigilar la integridad de las sementeras.

Los indígenas consideran que las sequías agostan los sembrados y el invierno exagerado los perjudica. Cuando las hojas se chamuscan y la planta no forma mazorca, piensan, entonces, que los envidiosos (los brujos) han brujiado el maíz. En tal caso, llaman al médico bueno *(té eu)* para que levante la brujería. La defensa, es pues, de tipo mágico (13).

Los indígenas no roban maíz. Si necesitan lo compran al vecino. Las transacciones se hacen a precios muy bajos. Si alguno se niega a vender, es decir, "mezquina el maíz", el comprador amenaza robarle, aunque nunca lo hace, si es gente buena, pero lo hace si es malo (brujo). Estos hurtos son castigados por el Cabildo.

Cuando la mazorca está granada y tierna (choclo) comienza el consumo, previa la realización de prácticas mágicas, cuando el producto es de roza nueva (14). El consumo empieza por la parte externa y al derredor de la labranza, dejando la parte central para que se convierta en maíz seco. Si alguien coge el maíz de cualquier parte, las gentes observan ácidamente que "come como los perros". La cosecha de maíz la hacen en uno o dos días. Invitan a los familiares para que ayuden y son gratificados con una arroba aproximadamente. Obsequian también igual cantidad a las personas que desinteresadamente ayudaron a efectuar la roza y siembra.

(14) Ibid., p. 246.

están cayendo lluvias menudas cuando no son verdaderos aguaceros. En julio, agosto y septiembre el invierno es crudo, influito totalmente por los vientos alisios del SE.

Teniendo en cuenta estos factores climáticos las siembras se verifican en los meses de marzo, abril y mayo. Aprovechan las lluvias de estos meses. Este ciclo agrícola es común para todo Tierradentro inclusive *Mosoco* propiamente dicho. Exceptúase la parte "paramuna" de *Mosoco*, por las razones enunciadas anteriormente.

De las especies cultivables el maíz ocupa lugar preponderante en la actividad agrícola de Tierradentro. La preparación del suelo difiere un tanto en los pisos térmicos templado y frío. Mientras que en el templado la limpia y quema de malezas es suficiente, en el frío se forman eras. La semilla del maíz es escogida de la mejor y más granada mazorca, evitando los granos menudos de las puntas. Consideran que éstos no fructifican denominándolos por lo mismo "maíz-hombre", llamando, en cambio, "maíz-mujer" a los granos gruesos que sí dan frutos. Hacen la asociación de que son las mujeres las que tienen hijos, si bien que no conciben la fecundación sin el concurso del hombre.

Para las siembras es común hacer mingas. Así la labor se termina pronto. El día convenido se reúnen de ocho a diez peones con las jigras repletas de maíz atadas a la cintura; desde muy temprano inician la siembra. Esta es una actividad masculina, si bien que en *Lame* y *Mosoco* ya intervienen también las mujeres. Los huecos se abren con bastón fuerte y puntiagudo, observando una distancia de un metro con cincuenta centímetros y una profundidad de diez a quince centímetros. En cada hueco se colocan de seis a siete granos. El fríjol lo entierran junto a los maderos que han quedado de la rocería. Acostumbran sembrar allí mismo también arvejas. Las semillas de calabaza o ahuyama, que se siembran en los maizales, también son seleccionadas, considerándose la más grande y redonda como mujer y la menos vigorosa como hombre. En los climas fríos acostumbran a sembrar, además, habas y trigo y en los templados arracachas, yucas, plátanos y otras especies.

A los tres meses, cuando el maíz alcanza la estatura del hombre, se realizan deshierbas. La maleza es desraizada y dejada sobre el mismo terreno para que seque y pudra. Sirve de abono a las plantaciones. Pero los indígenas no poseen ideas acerca de los abonos y toda sugerencia que se haga al respecto creen que es

Un informante de *Mosoco* manifiesta que es costumbre entre los indígenas regalar a los familiares una "carrera" de cada cosecha. Exceptúase las de trigo y cebada. La carrera consiste en cosechar todas las "matas" que quedan en contorno de las sementeras, pues, como hemos visto, la cosecha se realiza de la periferia hacia el centro. Los beneficiados, a su vez, hacen lo mismo, de manera que se devuelven recíprocamente la cantidad recibida. El obsequio hacia los familiares lleva implícito factores de entendimiento y afecto, pues no todos reciben esta manifestación de aprecio. El mismo informante manifiesta que la consumisión de choclos comienza con lo que se denomina "cura de la labranza" y que consiste en lo siguiente: El dueño convida a los familiares a una especie de banquete en el que abundan bollos de maíz tierno o envueltos, gallinas y otros platos selectos.

Como se puede observar las prácticas mágicas del *té eu* están ausentes, si aunque todavía subsiste el de la comida que en las otras parcialidades complementa a las prácticas de aquél.

El cultivo de la caña de azúcar está bastante difundido en el piso térmico templado, aunque los cultivos no son extensos ni persiguen fines comerciales; sirve únicamente para obtener guarapo (jugo de caña fermentado) para los trabajos individuales, colectivos y para atenciones sociales. El guarapo es parte integral de la economía doméstica, de la misma forma que lo es la coca. No fabrican para el estipendio público. Cada casa tiene su trapiche bien sea aledaño o en el interior de la misma, pero no poseen hornos ni demás accesorios para la obtención de la panela. Esta industria es exclusiva de la gente blanca o mestiza.

El cultivo de la caña exige tres deshierbas hasta el momento del primer corte. De cada siembra se obtienen, generalmente, tres cortes con buenos resultados.

Muy extendido está también el cultivo del café. Su incremento es de data reciente, pero ya tiene aceptación vigorosa y universal como la caña y el plátano. La forma del cultivo adolece de algunas fallas: el sombrío es deficiente e inadecuado; la poda no existe; el cuidado no muy satisfactorio; muchos no poseen despulpadoras mecánicas. Los cafetales les produce varias arrobas al año. Los ingresos monetarios de los indígenas de la zona templada están dados básicamente por el café. Lo venden a clientes fijos y conocidos a precios ordinariamente bajos. Los plantíos de café respaldan el crédito del indígena; perciben, muchas veces, dinero o mercancía por la futura cosecha. El café les ha permi-

tido adquirir elementos de vajilla, modificar su indumentaria, enriquecer sus herramientas agrícolas, comprar, de cuando en vez, drogas de los "blancos". En los tiempos de cosecha consumen regularmente carne y también les permite pagar jornales para el adelanto de sus fincas. Pero, sobre todo, les abre las puertas de los estancos. Consumen buenas cantidades de bebidas alcohólicas. Todavía no han aprendido a hacer buen uso de sus ingresos monetarios.

El trigo se cultiva con especial predominancia en las veredas de *Lame*, El Cuartel, La Troja y *Vitoncó*. Está destinado primordialmente para la venta. Se siembra asociado al maíz, pero ya se destinan rozas exclusivas para este cultivo. Lo siegan con cuchillos, raras veces con hoces. No lo engavillan sino que forman haces y lo cuelgan en los aleros de las casas o en las tirantas de las mismas. Una vez seco, lo desgranan con masas de madera y separan sus envolturas exponiéndolo al viento. Luego lo muelen en molinos hidráulicos construídos por ellos mismos y lo sacan a la venta. No tienen cernidores para separar el salvado.

A continuación, presentamos un cuadro estadístico de la producción de las diversas especies cultivadas por 25 familias de *Mosoco*, 8 de *Lame* y 15 de San Andrés, incluyendo la de algunos mestizos y blancos, señalados con asterisco, para poder efectuar algunas comparaciones y apreciar el volumen de producción. Especificamos el porcentaje de la producción destinado a la venta. Por razones obvias, suprimimos los nombres de los jefes de familia, identificándolos únicamente con el número de orden. Los datos estadísticos corresponden a la producción del año de 1953. Si bien que esta clase de investigaciones ofrece algunas dificultades, debido a la renuencia de las gentes a revelar los datos de su producción, son dignos, en general, de todo crédito, pues se han recogido una vez que se ha establecido una sólida relación interpersonal entre investigador e investigado. Además, corresponden sensiblemente, con nuestras observaciones escritas en Consideraciones generales de la agricultura Páez.

Cultivo de papa en Mosoco

Deliberadamente hemos dejado el cultivo de papa para tratarlo con más detenimiento.

Los métodos de cultivo difieren un tanto de los comúnmente practicados en las otras parcialidades. El terreno se prepara en eras que siguen la dirección de la pendiente. El régimen pluviométrico en esta región es relativamente alto y los suelos están saturados de humedad. Por consiguiente, esta manera de formar las eras persiguen un fin defensivo de las semillas y los frutos. Cada era se levanta con un espesor de sesenta centímetros y con un metro de distancia entre una y otra. La formación de las eras tienen dos etapas: la moldeada y la alzada. La primera consiste en levantar la capa de hierba y doblarla sobre sí mismo, siguiendo las caprichosas ondulaciones del terreno. Se la deja así, por varias semanas, mientras pudre completamente la hierba. Esto es el único abono. Luégo viene la siembra y sobre ésta la alzada, operación que consiste en cubrir la moldeada con la tierra desmenuzada que sacan de la parte de donde levantaron la capa de hierba. De suerte y manera, que las eras quedan con abundante tierra, donde las raíces pueden extenderse. El cultivo no necesita de deshierbas.

En la región que los mosoqueños llaman "páramo" siembran la papa sin formar orden ni hilera alguna. En Moras-*Mosoco*, así como en San José, *Lame*, *Tumbichukue* y *Vitoncó*, siembran dos hileras de maíz en el borde de las eras y en el interior de éstas la papa muy tupido y sin orden alguno. Allí mismo siembran fríjoles, habas, arvejas o coles. El cultivo es múltiple y, por lo tanto, exhaustivo. Pasada esta cosecha se siembra trigo y, luégo, se deja descansar la tierra unos tres o cuatro años, en que se vuelve a repetir el proceso. Naturalmente, estas siembras colectivas agotan rápidamente los suelos. De allí, que las siembras de mayo y junio rindan poco y generalmente se pierdan.

En cuanto al trabajo lo realizan los miembros familiares. Las mingas todavía están vigentes como sistema de trabajo colectivo. A ellas asisten, generalmente, familiares consanguíneos y políticos. Trabajo por contratos son frecuentes con indígenas guambianos. Jornaleros mosóqueños no se encuentran.

La cosecha de papa es seleccionada en tres clases: gruesa, semilla y birucha. La primera sirve exclusivamente para el mercado, en tanto que la última para el consumo familiar.

[P.312-B4]

Presentamos a continuación un cuadro estadístico de la producción de papa de 25 familias. Casi todos realizan dos cosechas al año. La primera fila corresponde a la siembra de noviembre y la segunda a la de mayo y junio. Quienes realizan sólo una cosecha al año, la siembra corresponde al mes de noviembre.

En arrobas, establecemos, la cantidad sembrada, la cantidad cosechada y la destinada a la venta y al consumo. En pesos colombianos especificamos el valor producido por la venta, el estimativo de la cantidad dedicada al consumo, el valor total de las cosechas y los costos. La arroba de papa la venden a cuatro pesos, en promedio, en el mismo lugar de cosecha. En Silvia se cotiza a seis. La cantidad dejada para el consumo está cotizada a dos pesos arroba, precio standard para todos. Los costos incluyen únicamente las erogaciones por mingas, jornales y contratos. Está excluído el trabajo familiar. Establecemos también el porcentaje del total de la cosecha dedicada a la venta.

Familia	Siembra	Cosecha	Venta			Consumo		V. total cosecha	Costos

La papa constituye el principal cultivo de la parcialidad de *Mosoco* y la fuente primordial de los ingresos monetarios indígenas. Ha permitido establecer un intenso comercio con el municipio de Silvia y abiertamente ha repercutido en la modificación de pautas de conducta y la reestructuración de instituciones. La transformación abarca casi todos los aspectos de la cultura Páez.

En primer lugar, el trabajo se ha intensificado. Los mosoqueños tienen trabajo permanente a lo largo de todo el año. Las mujeres intervienen directamente en la preparación de la tierra, la siembra y la cosecha.

Los niños de ambos sexos concurren puntualmente a la escuela, aprenden los conocimientos elementales y los utilizan en la vida práctica. En *Mosoco* es la única parte de Tierradentro donde existe una escuela particular regentada por un indígena.

El bilinguismo es general. Los "chontales", es decir, personas que no hablan castellano, son limitadísimos. No rebasan de diez.

El consumo de la coca ha desaparecido en todos los elementos jóvenes.

La dieta alimenticia y el horario se ha modificado substancialmente. Desayunan en las primeras horas de la mañana, almuerzan al mediodía y comen al anochecer. Consumen regularmente leche, panela, manteca, carne y pan.

La vajilla es completamente moderna, consistente en piezas de aluminio y hierro.

Tienen camas de madera para dormir y también cobijas.

Las casas son mejor construídas y acondicionadas. Se encuentran casas de adobe y teja. Inclusive existen ya dos galpones en la parcialidad.

Las gentes son hospitalarias y generosas con los visitantes extraños.

El vestido del hombre está casi completamente transformado. Visten como cualquier campesino colombiano. El sombrero de pindó, que usan en otras parcialidades, ha desaparecido en esta región. Las mujeres son limpias, arregladas y locuaces. Conservan el anaco y el chumbe, pero han adoptado camisas y el reboso azul de los guambianos. Se adornan con collares y prendedores vistosos. No son pocas las que portan aretes de oro fino.

La ganadería se ha intensificado y continúa en pleno auge. Vacunos normandos están reemplazando y siendo cruzados con los criollos. Igual cosa está acaeciendo con el ganado lanar. Los

caballos de silla y de carga son indispensables para cada familia. Los indígenas poseen, también, razas finas de cerdos y de aves de corral.

La estratificación social está en plena marcha. Se numeran ya familias ricas y pobres.

Difícilmente casan mujeres mosoqueñas con indígenas de otras parcialidades menos aculturadas. Se habla de mingas, y aún de entierros, de ricos y pobres, afluyendo mayor número de gentes donde los primeros.

Conviven bien con los blancos y los tratan como sus iguales. Existen muy buenos negociantes indígenas.

Los métodos de curación, uso de remedios y la brujería son perfectamente conocidos por estos indígenas. Pero el *té eu* y, aún más, el *nara jihi* (brujo) está en decadencia. Muchos consultan al médico de los "blancos" en Silvia y utilizan las drogas de los "blancos". Son menos supersticiosos.

Son creyentes por convicción. Los hay algunos que son protestantes con un gran poder de raciocinio.

El cabildo conserva su fuerza y es debidamente acatado.

Las propiedades están debidamente parceladas. Muchas tienen sembrado pastos de selección. Es muy frecuente observar cercas con alambre de púa.

Herramientas agrícolas

De los utensilios empleados en la agricultura, únicamente el bastón para sembrar el maíz (*uhach*) es de manufactura autóctona. Los demás son de procedencia europea.

La herramienta universal entre los Páez es el machete. Con el se efectúan las rozas, se limpian los terrenos, y las labranzas, se talan las montañas, se labran los trapiches y se montan los puentes sobre los ríos y quebradas. Prefiérenlo grande y con funda de cuero que amarran a la cintura. No lo abandonan jamás. Inseparable del cuerpo del hombre, lo lucen en los viajes, las fiestas y los trabajos. Por otra parte, es el arma de ataque y defensa, por excelencia. Tienen pocos rivales como macheteros. En la limpia de malezas son insuperables. En general, el número de machetes corresponde al número de adultos de la familia. Son contadas las personas que poseen más de cuatro machetes.

Comunes son también las palas y barretones indispensables para la factura de eras, huecos y deshierbas. Las palas, que tie-

nen en mayor número que los machetes, no la usan para cabar la tierra sino para raspar; su manejo es en sentido horizontal, del cuerpo hacia afuera. Las palas que forman ángulo con el mango son desconocidas.

Las barras de hierro, palendras y picos son poco frecuentes, sobre todo las dos últimas.

Alguna que otra familia mosoqueña posee hoces y cuchillos para la siega de trigo.

Las herramientas las afilan en areniscas, aunque también utilizan con frecuencia las limas.

Algunos naturales poseen sierras, serruchos, troceros, escoplos y gubias para facturar algunos objetos en madera.

En el presente cuadro estadístico puede observarse la frecuencia de cada uno de los utensilios agrícolas que poseen. Contempla también el valor nominal de las herramientas.

Animales domésticos

Los Páez tienen ganado vacuno, caballar, porcino, lanar, pavos, gallinas, perros y gatos. Unicamente el cuy es el animal doméstico americano que se cría en muchos hogares.

Una investigación pecuaria exacta ofrece serias dificultades, dada la suspicacia de los indígenas. En la parcialidad de Calderas, los informes al respecto resultan casi siempre adulterados sea que se utilicen métodos directos o indirectos de información. Aún para los negociantes mestizos de un relativo ascendiente entre los indígenas y muy conocedores de los mismos, resulta problemático adquirir datos al respecto. En el afán investigativo hemos visitado casi todos los hogares de esta parcialidad, recorriendo a pie todo el territorio. A la sombra de los matorrales, en los rastrojos y potreros se observan pastando buen número de vacunos, caballares y lanares. De cuando en vez se encuentran piaras alimentándose con yerbas y raíces. En el llano comunal de Cal-

deras, ordinariamente pastan unas treinta y seis reses. En todos los hogares no faltan las gallinas. Pero una información fidedigna de esta riqueza no ha sido posible obtenerla. Algún negociante mestizo muy conocedor de la región calcula que en Calderas no debe existir menos de unas 350 reses, dato que merece bastante crédito. Esta parcialidad tiene poco más o menos unas ciento cincuenta familias. En el cuadro estadístico que más abajo presentamos figuran 55 familias en muchas de los cuales los datos son incompletos y otros tienen un valor aproximado, deducidos por informes de terceros y por la observación directa. Los cuadros estadísticos de las parcialidades de *Mosoco, Lame* y San Andrés corresponden a la realidad.

Tierras destinadas exclusivamente al pastoreo no existen si exceptuamos aquellas que por razón de su brava topografía y desforestación, cubiertas de pajonales que reverdecen con el invierno, no pueden utilizarse más que para el pastoreo, corriendo, naturalmente, los riesgos de que los animales se desempeñen. Lo general es que los animales pasten en los rastrojos, en los potreros comunales, en la sombra de los arbustos y matorrales. En Calderas, por ejemplo, la mayor parte del ganado está a cubierto de las miradas extrañas. Se alimentan con las ramas y hierbas que crecen en los terrenos que en otra época fueron labranzas. En ese medio se desarrollan bravos y ariscos, pero gordos y exentos de enfermedades. Prender estos animales equivale a realizar una verdadera labor de cacería en que intervienen perros amaestrados, y diez o quince hombres provistos de sus lazos respectivos y distribuídos convenientemente en sitios especiales bien para enlazar, detener, desviar, o dirigir la marcha de la bestia, perseguida por los perros. Esta labor se realiza de preferencia los domingos, por convite especial de los dueños de ganado, sea para marcar los becerros o para prender la res destinada al cambio, venta o degüello. Concluída la labor se consume bastante chicha. Sólo el ganado que pasta en el llano comunal es visible a los extraños y relativamente manso.

Todos prefieren las hembras para la reproducción. Los machos son consumidos, vendidos o cambiados por hembras jóvenes y, rara vez, por otros artículos. Muchas veces carecen de reproductores. En tal caso las vacas no dan crías y son consideradas estériles, hecho, que es debidamente aprovechado por los negociantes blancos y mestizos para proponer "cambios". Los negociantes interesados en una res, una vez localizado el verdadero

dueño, lo asedian con proposiciones de cambio. Aquellos ofrecen novillas jóvenes, fértiles, de menor tamaño y generalmente flacas. Obtienen, a cambio, una res grande y gorda. Los beneficios rebasan el 200%. Antes de entregar el animal, el indígena exige inflexiblemente, una botella de aguardiente, arranca unos pelos del ojo o pata izquierdos de la res, para ofrendar al Duende, dueño virtual de las tierras y animales y, potencialmente, protector de la multiplicación de éstos. Asímismo, sopla *chayuts* (Scutellaria racemosa Per.) al lazo que conducirá a la res para que ésta no presente dificultades en el camino. Son frecuentes las declaraciones de blancos y mestizos, negociantes de ganado, acerca del hecho de que habiendo faltado este requisito, la res se ha echado en la mitad del trayecto, no habiendo poder humano que la obligue a movilizarse. Entonces, ha bastado soplar el lazo con *chayuts* para que nuevamente se ponga en marcha. Cómo se explica este hecho? Preguntan repetidas veces los relatantes.

Son ocasiones para el consumo de vacunos las mingas, las fiestas religiosas y, en menor escala, los "cuidos" (atenciones a los padrinos) post-matrimoniales y bautismos. Aprovechan la carne y la piel. Esta no se curte, se seca al sol y sirve a manera de colchón para dormir. No consumen la leche. Cuando sacrifican una res que procede de sitios "bravos", tales como pantanos, lagunas, montañas, tienen la precaución de llamar al *Té eu*. Este ordena sacar un pedacito de cada órgano, envasar en un carrizo un poco de sangre. Todo esto lo envuelve en una hoja, encima del cual coloca una ramita de contento *(chayuts)*, se dirige en seguida hacia el oriente y en un lugar determinado por él mismo, abandona el atado, cuidando de colocarlo siempre a la izquierda de las cosas tales como troncos o piedras. Esta colocación no lleva ceremonial especial, ni va acompañada de rezos, ni soplada de medicamentos, ni tampoco tiene una hora especial. Es una ofrenda al Duende, que se realiza antes de consumir la carne, cuyo objeto primordial es tenerlo contento.

El degüello de la res para consumir en las fiestas religiosas va acompañado de música (1).

Del ganado caballar prefieren también las hembras para la reproducción. Los caballos sirven para la molienda de caña, para el transporte de carga, para viajes largos. Muchos poseen aperos,

(1) Bernal Villa, S. La Fiesta de San Juan en Calderas, Tierradentro, p. 208.

aunque generalmente deteriorados. Las mujeres jamás montan a caballo. En los viajes largos la mujer va a pie, con un pesado fardo a la espalda, mientras que el hombre cabalga sin portar nada que le estorbe.

Los caballos de los Páez son pequeños pero muy resistentes y aptos para los caminos quebrados y difíciles. No poseen mulas ni burros. En Calderas cuéntase que alguien llevó un burro con el fin de producir muletos, pero los envidiosos (brujos) lo brujiaron y lo mataron. Tampoco poseen cabras por considerarlas muy ladronas y dañinas.

En las habitaciones se crían cuyes, gallinas y pavos; en menor proporción los patos. Asímismo, se observa la crianza de perros, gatos y cerdos. Aquellos pertenecen indistintamente a la mujer o al hombre, en tanto que los cerdos y los perros son de pertenencia exclusiva del hombre.

Llama la atención el escaso cuidado que tienen con los animales domésticos. No existen corrales de ninguna especie, ni cuidadores especiales de animales. Comúnmente el ganado vacuno se abandona en los lugares de pastaje y sólo cada quince días, y con más frecuencia cada mes, es rodeado por sus respectivos dueños para constatar su existencia o las reproducciones del caso. Saben de la necesidad de dar sal al ganado, pero este artículo lo suministran en poca cantidad y muy de cuando en cuando. La mayor parte de los animales de Calderas buscan un pequeño manantial de agua salobre existente en *Tumbichukue*. De los otros animales domésticos, únicamente las gallinas, pavos y cuyes son alimentados regularmente con yerba, maíz, yuca y arracacha. Los perros, los gatos y los cerdos viven, los primeros de los desperdicios de la cocina, los segundos de la cacería de ratones y los últimos de yerbas y raíces de los matorrales. Desconocen razas de vacunos, porcinos y lanares. Solamente el cuy es considerado como americano, en tanto que los otros animales dicen ser genuinamente españoles.

La oveja parece poseer un valor emotivo, porque provee de lana para el vestido de las gentes. La conservan con cariño y difícilmente la venden o la comen.

El perro también parece tener un valor emotivo por ser el guardián de las casas y de las labranzas. Por otro lado tiene un valor simbólico: es la cortina de hierro, la barrera que los escuda del tenebroso recuerdo de los Pijaos. En caso de estos reaparecieran nuevamente, arguyen los indígenas, no podrían acercarse

a las viviendas, porque allí vive el perro que atemorizaría a los Pijaos, pues es tan peligroso para ellos, que el simple contacto con su rastro o sus pelos, los mataría. En las leyendas y cuentos es frecuente la alusión de estos pensamientos defensivos. Los perros tienen nombres especiales: *Guagás* (blanco), *kuchi* (negro), salgento, pitán, policía. Perro que se come las ovejas es irremediablemente matado con una escopeta sin previa consulta del dueño.

Los cuyes representan el alimento preferido de los niños. Los matan ahorcándolos y los comen cocidos. Con estos animales no se hace ofrenda al Duende. Tampoco sirven para agasajar a amigos o familiares. Los utilizan, también, para combatir enfermedades mentales cubriendo la frente de los pacientes con las entrañas de los animales todavía vivos.

Con gallinas y huevos "cuidan" a las personas de sus preferencias. Con los pavos hacen mingas. Los huevos los consumen, aunque lo general es que los vendan.

De las colmenas de abejas silvestres aprovechan la miel y la cera. La miel, dicen, es buena para las personas que sufren de "frío". Con la cera suavizan lazos de piel y de vez en cuando la utilizan para el alumbrado. Colmenas domésticas no existen.

Animales de monte tales como loros, chicaos, ardillas y micos no se domestican jamás.

No existen animales "pets", ni ninguno de los domésticos sirven de juguetes o que sean considerados, simplemente, como "bonitos". Todos éstos tienen un fin utilitario.

La posesión de animales domésticos es símbolo de riqueza. El propietario de grandes extensiones de tierra no se considera como rico, mientras que el que tiene animales domésticos sí.

Operaciones comerciales de animales existe entre los indígenas. Las cotizaciones son muy bajas. "El indio es pobre, dicen, no tiene plata". Por lo mismo, animales que entre los blancos se cotizan a doscientos pesos y más, entre los indígenas se ferean a mitad de precio y hasta menos.

Para los indígenas de la parcialidad de *Mosoco* casi no juega este estado de cosas. Existen, ya, potreros destinados exclusivamente a la ganadería. Algunos están sembrados de pastos especialmente el poa. Existe marcada tendencia a mejorar la ganadería tanto en número como en calidad. Conocen las excelencias del normando y holstein entre los vacunos y del merino entre el lanar. Tienen razas especiales de cerdos y gallinas. Muchos po-

6: Bernal Villa SC15 Paez

seen mulas y magníficos caballos de silla. Las transacciones comerciales de animales tienen el precio justo aún entre los mismos indígenas. Algunos son estupendos negociantes. Conservan todavía la práctica de sacar la ofrende para el Duende en los degüellos de vacunos y de cerdos. En las sabanas del Páramo de Moras tienen los indígenas magníficos hatos. La ganadería en *Mosoco* es, pues, una industria en pleno desarrollo, que merece toda la atención por parte de las esferas oficiales.

En el cuadro estadísticos que a continuación presentamos puede observarse el desarrollo de la industria pecuaria de *Mosoco* y compararla con las de *Lame*, San Andrés y Calderas. Los propietarios son indígenas, salvo los blancos y mestizos señalados con un asterisco.

Recolección, caza y pesca

En los rastrojos y matorrales crece fácilmente el chachafruto *(úsual)*, leguminosa que da unos frutos un tanto dulces y que los consumen cocidos simplemente en agua; es alimento preferido de los niños. Fructifica en los meses de agosto y septiembre. Recogen, también, hongos *(kalaguai)*, orejas de palo *(kallumbo)* que crecen redondas y blancas en los troncos podridos, fríjol

(23) Parámetros a centro hectáreas.
(24) Terrenguero.
! Estimativos del autor.

cacha *(us tape)*, que abunda en los matorrales, moras *(sutsion)* y las uvillas *(chimbú)* que crecen abundantes en los maizales y con las cuales hacen bollos o envueltos y mazamorra mezclada con maíz molido. De igual manera recogen granadillas de monte *(shlal)*.

La cacería tiene escasa importancia entre los Páez. Es menester de escopetas y perros. Auténticos aficionados a la cacería son pocos, y de ella están ausentes ritos y ceremonias mágicas.

La cacería más frecuente se realiza para defender las sementeras o los hatos. Hemos visto que los enemigos del maíz son cusumbes, guaras, ardillas y aves. Las gallinas son atacadas por perros-lobos. En las sabanas del Páramo de Moras el oso es el enemigo más frecuente de los hatos.

En Calderas, los cazadores acostumbran a conservar en el interior de la casa y sobre uno de los postes de la pared, los cráneos de las presas logradas. En una de ellas contamos cinco cráneos de cusumbe, dos de guara y uno de lobo. Realizan la cacería los domingos y en cualquier época. Salen con perros, escopetas y fiambre a los lugares escogidos. El perro levanta la presa y los hombres esperan en sitios estratégicos listos con sus escopetas para dispararle. En caso de fallar el tiro salen detrás de la presa en veloz carrera. Cuando cazan venados hacen minga. En la cacería de guaras utilizan trampas consistentes en redes que colocan a la salida de las guaridas de estos animales. Los murciélagos los cazan con jigras. Tan pronto caen los matan a patadas, pues estos animales rompen fácilmente las jigras. Los comen asados. La carne de armadillo es bastante preferida. Los avichuchos los cazan con bodoquera. "Los indios son pobres —dice un informante de Calderas— y por lo mismo hacen bodoqueras y cazan aves. Dios crió a los pajaritos para que coman los pobres y no roben". Las torcazas las cazan en los filos mediante trampas colocadas en forma bastante disimulada. Los chamones, unas aves negras, no los comen porque dizque son animales del diablo. Se dice que en tiempos pasados los indios Calderas comían cucarrones, razón por la cual los apodan *tandayaha* (come cucarrones), epíteto que lo consideran ofensivo y los irrita casi siempre. Los calderunos dicen que no comen gusanos, carne de conejo y de culebras. Consideran como animales de cacería guara, venado, cusumbe, armadillo, murciélago y diversas clases de aves.

Acerca de la cacería de osos los mosoqueños cuentan verda-

deras hazañas realizadas por indios en lucha abierta con las fieras. La manteca de oso es muy estimada entre los indígenas y "blancos".

La pesca es menos importante que la cacería. Los ríos y quebradas tienen sardinas y coruntas. En Semana Santa y Nochebuena realizan actividades pesqueras, mediante el secamiento de las corrientes, la utilización de barbasco, redes y anzuelos. Es una actividad netamente masculina. En el río Paáz pescan en los meses de enero y febrero y en general en los meses de sequía.

Recogen también cangrejos.

Industria de la cera de laurel

El laurel, introducido por el payanés Agustín Valencia, ha jugado un papel relievante en la economía de algunas parcialidades de Tierradentro. Se da algo silvestre en Calderas, *Tumbichukue, Lame,* San Andrés, *Chinas* y *Suin.* La obtención de la cero era la única industria de estas parcialidades que les permitía mantener un comercio regular con los "blancos".

Un mestizo negociante de *Mosoco* informa que fue gran exportador de cera de laurel. "Era la industria indígena —dice— con la que entraba la sal, el calzón, la camisa, el sombrero y los centavos". En este negocio, declara, que le quedaba una arroba de beneficio por carga. La libra se cotizaba a peso en Silvia. En los años de 1946 y 1947, el informante dice haber sacado de unas ochocientas a mil arrobas de cera. Era casi el monopolizador del negocio. La poca cera que se le escapaba la compraban los negociantes de Belalcázar, quienes, a su vez, la sacaban por *Mosoco,* a Silvia. Los principales consumidores de este artículo eran las fábricas de jabón de Cali. La industria de la cera de laurel decayó en 1950, cuando aquellas fábricas comenzaron a utilizar otra clase de materias primas. De esta suerte se le dio el golpe de gracia a la única industria casera de las regiones arriba mencionadas. Todavía se sigue recogiendo cera, pero el precio de la arroba en Silvia no llega a ocho pesos. Ya no produce beneficios. Los indígenas la siguen utilizando para la fabricación de velas para el consumo casero y sobretodo para el alumbrado en las fiestas religiosas. Los métodos de recolección, extracción y manufactura de la cera de laurel los hemos descrito en el trabajo intitulado *"La Fiesta de San Juan en Calderas, Tierradentro"*, publicado en la Revista Colombiana de Folklore, número 2 de 1953.

Las mingas

La minga es la forma de trabajo más extendida entre los Páez. Los indígenas pueden trabajar por sí solos y son excelentes trabajadores. Pero la tarea les demanda mayor tiempo y mayores esfuerzos. Entonces la minga sirve para no "aburrirse" en el trabajo, para ganar tiempo y para disponer de mano de obra que en otra forma sería difícil conseguirla.

La minga, es, pues, un sistema cooperativo de trabajo mediante el cual el interesado invita a un determinado número de personas conocidas para realizar una labor, retribuyéndolos debidamente con alimentos, bebida y mambe. "Communal work for any particular individual is truly loaned labor, with obligatory recompense", dice Hernández de Alba.

Artículos indispensables de la retribución son la carne, la chicha y, en casi todas las parcialidades, la coca. La frecuencia de las mingas, está, pues, casi en proporción directa con la posesión de animales domésticos. Quienes carecen de estos semovientes, es decir los pobres, en concepto de la cultura Páez, trabajan solos o en compañía de sus hijos si los tienen.

En el ciclo de los cultivos realizan las siguientes mingas: Para talar el monte (rocerías); para amontonar la madera que queda después de las quemas y cortar estantillos para la cerca; para construir cercas; para efectuar las siembras y deshierbas.

En Calderas una minga para rocería se desarrolla en la siguiente forma:

El dueño de la minga mata una res o, más comúnmente, un cerdo. Prepara una canoa de chicha (jugo de caña de azúcar fermentado), varias botellas de aguardiente, una arroba de mote (maíz pelado con ceniza) y adquiere algunas libras de coca. Invita a los hombres de su preferencia. A la madrugada del día convenido para el trabajo, todos los invitados con su herramienta al hombro, se dirigen gritando a la casa del minguero. Allí reciben un huevo (25) de coca, chicha y un plato de mote con carne. A las 8 a. m., todos están trabajando. Asisten hasta treinta peones. Al lugar de trabajo llevan calabazos de chicha para beber en los descansos, que corresponden exactamente con la "botada de la mambeada". En el día realizan tres mambeadas y, por lo tanto, tienen tres descansos. Coinciden más o menos con 10 a. m., 12 m. y 2 p. m. Durante estos descansos se sientan, conversan, ríen, beben chi-

(25) Medida de peso equivalente a un huevo de gallina.

cha y luego reinician con entusiasmo el trabajo. Este lo realizan con diligencia y constancia. Nadie conversa, entonces. A las 4 p. m., abandonan el trabajo y se dirigen a la casa del minguero, donde ya se encuentran también sus respectivas mujeres. Todos reciben chicha y aguardiente. Luego la comida, consistente en un plato grande de madera, repleto de mote, revuelto con fríjol, arracacha, plátano y tres pedazos de carne. Como no pueden consumir todo esto, lo guardan en mochilas de fique para llevarlo a sus respectivas casas. Después de la comida, rezan invocando do siempre a los familiares fenecidos del minguero, bien sean antecesores, colaterales o descendientes. En seguida, reciben nuevos totumos de chicha hasta que se emborrachan. Muchas veces forman bailes. En estas ocasiones no están ausentes las peleas.

Según un informante de Calderas, una minga con 15 peones cuesta lo siguiente:

1 toro ....$	40-00
1 arroba y media de maíz	1-50
2 libras de coca	3-00
3 cargas de chicha	6-00
Total ....$	50-00

Las cotizaciones arriba enunciadas imperan únicamente entre los indígenas. Entre los "blancos" la arroba de maíz se cotiza a $ 6-00, la libra de coca a $ 3-00, los vacunos a $ 25-00, la arroba y la chicha tiene un valor más alto. En los costos de la minga faltan las cotizaciones de aguardiente, fríjol, arracacha y plátano, que generalmente revuelven con el mote. Cabe advertir que los artículos enunciados son producidos en la misma finca a excepción de la coca que tienen que comprarla. En San Andrés las mingas constan más o menos de seis a diez peones, ordinariamente, familiares. Distribuyen mote, revuelto con plátano, yuca, arracacha, carne de cerdo, chicha y coca. No matan res ni bailan tampoco después del trabajo. Los costos de la minga son los siguientes:

1 cerdo ....$	35-00
1 canoa de chicha	2-00
1 arroba de maíz	1-50
1 libra de coca	1-00
3 libras de sal	0-60

3 libras de fríjol	0-60
2 arrobas de yuca	1-00
2 racimos de plátano	2-00
Total ....$	43-70

En *Lame* compran la chicha en *Suin* y *Chinas*, de igual manera que la coca. Comúnmente, matan un cerdo.

En *Mosoco* tuvimos la oportunidad de observar una minga de alzada de eras. Estaban tres mujeres, un muchacho y cinco hombres. Eran familiares. Habían comido a las siete de la mañana. Trabajaban en grupo sin distinción de sexo y edad, conversando y riéndose. Unicamente los viejos, que son generalmente mambeadores, trabajaban aisladamente, pues la charla produce insalivación que perturba el normal consumo de la coca. Trabajaron continuamente hasta las 10 a. m. hora en que tomaron un pequeño descanso. Luego continuaron el trabajo hasta la 1 p. m. cuando les sirvieron el "entredía" consistente en una taza de café y dos arepas grandes de maíz, sazonadas con sal y dos huevos, tostadas en un tiesto y acabadas de asar en el rescoldo del fogón. Siguieron trabajando hasta las 3 y media p. m. y se dirigieron luego a la casa del minguero. La retribución consiste generalmente en lo siguiente:

Dos escudillas con chicha; luego, un plato grande con mote, revuelto con papa o ullucos. Consumen lo que pueden y el resto lo echan en un caldero de aluminio, que llevan para el efecto o, sencillamente, lo guardan en una mochila de fique, para llevar a la casa respectiva. Después de esto, reciben todavía otra escudilla con mote sin carne. En seguida, nuevamente dos escudillas con chicha y, acto seguido, un caldero grande rebosante de chicha para que lo repartan entre todos los asistentes. Esto se hace con cada uno de los invitados. El consumo de chicha es, pues, abundante. Después reciben aguardiente. Borrachos ya, organizan el baile. Estos, naturalmente entre los indígenas pudientes. Entre los pobres las mingas se hacen generalmente con los familiares, quienes "disimulan la escasez". No hacen bailes.

En las mingas de *Mosoco* sacrifican toros, terneros o cerdos y se compran siempre una o dos libras de café y dos o tres arrobas de panela. De la propia finca consumen harina de trigo, o de maíz, papas, ullucos o habas. La coca ha sido sustituída por el "entredía". En el trabajo existen minutos de descanso que co-

rresponden más o menos con la botada de la mambeada en las otras parcialidades. Los mosoqueños jóvenes ya no mambean, pero la vieja costumbre todavía disciplina el trabajo. Por otra parte, es evidente que una minga en *Mosoco* resulta más cara que pagar jornales, pues, son varios los artículos que compran y, además, sacrifican reses o cerdos que valen más de cien pesos. Pero las mingas en *Mosoco* son indispensables, como medio de obtener mano de obra que de otra suerte sería imposible conseguir. Nadie se contrata por jornales, puesto que todos tienen sus terrenos para trabajar.

A través de los datos de las mingas de las tres parcialidades nos damos cuenta que en general tienen pautas comunes. Pero en *Mosoco* resulta ya el proceso modificatorio, tanto en los cuidados como en la forma de trabajo. En San Andrés, Calderas y *Lame* una minga resulta relativamente más barata que pagar jornales, pues en realidad no compran más que sal y coca, cuando no la cultivan en sus propias fincas.

Trabajos comunales

Entre los Páez existe otro tipo de trabajo cooperativo diferente al sistema de las mingas. Se puede llamar trabajo comunal y, se refiere, esencialmente, a ejecución de obras de beneficio común, tales como, por ejemplo, la construcción y conservación de los caminos, de los puentes, de los edificios públicos (escuelas, iglesia, casa cural, casa del cabildo) y el cultivo de la roza del santo.

Con tal fin el Cabildo convoca a todos los hombres hábiles de la parcialidad, los cuales asisten provistos de sus respectivas raciones de coca y herramientas de trabajo.

La ejecución de las obras de interés comunal es un deber de cada miembro de la parcialidad y quien se niegue a prestar su concurso es castigado por el Cabildo y muchas veces conducido ante las autoridades colombianas. La mayor o menor efectividad de esta obligación depende, desde luego, de la autoridad moral de los miembros del Cabildo y sobre todo del Capitán de la parcialidad. En muchas parcialidades los miembros se resisten abiertamente a prestar su contingente de trabajo y en tales casos los caminos y edificios públicos se hallan en precarias condiciones.

Previsión y almacenamiento

En todas las habitaciones indígenas se encuentran barbacoas tejidas con varas y bejucos encima del fogón y también en lo que pudiéramos llamar cielo raso. Las del fogón son colgantes, mientras que las otras descansan sobre las tirantas o atravesaños que dan solidez a las paredes de la habitación. Esto nos indica ya claramente, que los indígenas tienen espíritu de previsión. Sobre estas barbacoas se hallan mazorcas de maíz amarradas con sus propias envolturas, haces de trigo, mochilas llenas de fríjoles, las cuales también se acostumbran a colgar de los postes de la pared. También se guardan allí los granos (terrones) de sal. Las cantidades que se conservan para desafiar los meses de carestía no son suficientes, pero tienen otros comestibles que los favorecen: animales domésticos, coles, cebollas, caña de azúcar y coca. En *Lame* y *Mosoco* cultivan una planta que la denominan yuca de pijao. Es una discoria comestible. Hemos visto también que la escasez se sortea saliendo a trabajar como peones en las fincas de los "blancos".

En la barbacoa que está encima del fogón se guarda también la carne. Aprovechan el humo para conservarla. La sal no se utiliza para este fin.

En las parcialidades de *Mosoco, Vitoncó* y San José, donde siembran buenas cantidades de trigo, es frecuente encontrar en los aleros de las casas pajizas, haces de trigo que duran colgados por varios meses. En esta forma lo preservan del ataque de pequeños roedores y el grano resulta de excelente calidad, pues seca muy bien.

En las épocas de escasez, los indígenas no buscan refugio en la religión. En realidad su defensa está en la venta de la propia fuerza de trabajo por un jornal reducido, unos huevos de coca y la comida. Sobra decir, que el guarapo y la coca son magníficos sedativos del acicate de la necesidad alimenticia. Es singular que una de las fiestas religiosas más sonadas de Calderas se realiza precisamente en época de escasez. Ingieren buenas cantidades de guarapo por espacio de casi un mes.

Provisión de agua y leña

En Tierradentro el grado de pluviosidad es relativamente alto. En consecuencia el agua abunda en corrientes de pequeños y

grandes caudales. Este factor de tipo geográfico, induce a los indígenas a situar el agua al pie de la casa, mediante el sistema de acequias que representan verdaderas obras de ingeniería. No importa las distancias que haya que sortear, ni tampoco la accidentalidad del terreno. Cuando es menester, utilizan guaduas como canales artificiales. Este sistema ha sido adoptado por los "blancos" y aún por los propios poblados. Las partes altas de ambas márgenes del río Páez, desnudas de vegetación, el agua abunda en tiempo de las lluvias. Entonces los hechos acuáticos, secos en el verano (ramblas), crecen de manera desproporcionada. Allí en el verano la escasez de agua no deja ya de ser un serio problema.

En las partes donde el agua es escasa, también es escasa la leña, debido a la intensa desforestación. A medida que la tala se aleja de los centros poblados de Tierradentro, la adquisición de este artículo va siendo cada vez más difícil. El problema de combustibles en Belalcázar, *Cuetando, Chitoquez*, Valencia y Guadualejo, va siendo cada vez mayor. Por lo demás, en Tierradentro, no se utiliza carbón vegetal ni se produce para el comercio.

La provisión de leña para alimentar el hogar, así como la del agua, es actividad más femenina e infantil que masculina. En la mayor parte de las parcialidades abunda la leña y ordinariamente cada habitación mantiene reservas suficientes para mantener el fuego del hogar. En las parcialidades frías como Calderas y *Lame*, el avivamiento del hogar por la noche es fundamental, para defenderse del frío. Los indígenas duermen al rededor del fogón, de donde proviene el calor que necesitan para dormir, pues no utilizan más mantas que las ropas de su propio cuerpo ni más colchón que un cuero duro de res.

La abundancia de agua hace también fácil la construcción de molinos hidrálicos, para aprovechar esta fuerza motriz. Ellos relativamente abundan.

Propiedad

Las tierras de las comunidades indígenas son de resguardo. Es decir, pertenecen a la parcialidad: Son inalienables e inajenables. Están, además, exentas del pago de impuestos. Esta particularidad de nuestra legislación ha permitido, afortunadamente, la conservación del grupo Páez y de su cultura. Las tierras comprendidas dentro de las parcialidades son baldías o aprovecha-

bles o aprovechadas. Las tierras baldías de las comunidades de Tierradentro están siendo rápidamente colonizadas.

En cada parcialidad existe una determinada extensión de tierra que pertenece a todos los miembros de la comunidad. Es tierra comunal. En ella se asientan, generalmente los pueblos indígenas y de ella han tomado los concejos municipales, las llamadas áreas de población, donde por razón de pertenecer al municipio, ha sido posible la penetración de los "blancos".

La propiedad particular de la tierra se adquiere esencialmente por adjudicación, por trabajo y por herencia. También pueden adquirirse por donación o por compra, pero esto es bastante raro.

Como el auténtico dueño de las tierras de resguardo es el Cabildo, es esta institución la que distribuye las tierras a cada uno de los miembros de la comunidad. Los títulos que otorga se llaman adjudicaciones. Es condición para disfrutar la posesión de una determinada parcela la residencia en la comunidad y, sobretodo, el trabajo. En caso de que un individuo tenga tierras ociosas, porque no alcanza a trabajarlas, el Cabildo se reserva el derecho de quitarle esa parte para donarlo a quien la necesite. Quien por circunstancias especiales vive en otro lugar, fuera de la parcialidad, pierde el derecho de posesión de la tierra.

Si bien es cierto, que en la distribución de tierras que realiza el Cabildo, este acata, respeta y se guía por los fueros de la justicia, también es cierto, que no están exentos de cometer actos injustos. Si un comunero puede atender y cuidar convenientemente a los miembros del Cabildo y está interesado en adquirir más tierras, puede lograrlo mediante este método. Sobornar al Cabildo es relativamente fácil. Entonces el Cabildo puede perjudicar a unos para beneficiar a otros. Pero esta falla se corrige escogiendo a hombres que puedan desempeñar cabalmente sus funciones de cabildantes y ejerciendo una sana política directriz de parte del ejecutivo municipal.

Ahora bien. También es cierto que unos indígenas tienen más terreno que otros. Pero esto se debe a que los antecesores respectivos han descuajado más bosque que otros. Han colonizado más tierra. Su derecho de propiedad está dado por el trabajo. "Los antiguos —dice un informante calderuno— han trabajado la montaña y por eso tenemos terreno. Esta tierra no pertenece al Cabildo". Este proceso se sigue en la actualidad en las parcialidades donde todavía existen tierras baldías. Sobre las tierras

conquistadas con el sudor de la frente no tiene derecho el Cabildo. Se heredan directamente a los hijos. En tal caso el Cabildo confirma la propiedad mediante la expedición de la respectiva adjudicación.

Cuando la colonización se ha realizado por varias personas, comúnmente hermanos, y la repartición de la tierra no satisface a una de las partes se suscitan sonados pleitos en donde se consumen las pequeñas economías familiares. El sentido de la posesión de la tierra está muy desarrollado entre los indígenas y la usurpación de mínimas extensiones de tierra da origen a disgustos, enemistades y pleitos. La venta de terreno a "blancos" está prohibida por la ley colombiana y por el derecho consuetudinario de los indígenas. Pero entre los propios indígenas pueden realizar operaciones con los inmuebles. No venden el terreno sino la posesión. El propietario de las tierras es el hombre. La mujer viuda también puede ser propietaria por herencia del marido. Las mujeres solteras no poseen tierras.

El ganado vacuno, caballar, porcino y lanar pertenece al hombre, si bien que alguna que otra mujer es poseedora de cerdos y ovejas. Los pavos, gallinas, gatos y cuyes pertenecen a las mujeres, de igual manera que los platos, cucharas, ollas, piedras de moler, calabazas y mochilas. Son heredables por línea femenina. Los niños son propietarios únicamente de sus propios vestidos.

Respecto a la propiedad comunal hemos visto ya que en cada parcialidad existen varias hectáreas de terreno que pertenece a todos los miembros de la parcialidad. También se consideran de propiedad comunal las obras públicas tales como caminos, puentes, acequias matrices, la casa del Cabildo, la iglesia y abogan colectivamente por su conservación; de la misma forma consideran como propiedad de la parcialidad los dineros que recogen para la iglesia, los productos de la roza del santo y la ganadería y molinos que aquélla pueda poseer.

Sobre la herencia miremos en primer lugar los conceptos expresados por un informante de Calderas. Inquirido por el número ideal de hijos de las familias indígenas, contestó que todos deseaban poseer bastantes hijos. "Cuando uno se muere y uno tiene terreno, quién puede manejarlo? Los antiguos han trabajado la montaña, por eso tenemos terreno. Somos cinco hermanos y trabajamos juntos. El terreno no pertenece al Cabildo. Las mujeres no heredan. Unicamente los hombres. Las mujeres se van con sus maridos. A los hombres se les reparte por partes iguales. Los hi-

jos son los herederos legítimos. En caso de que el hombre muera sin dejar hijos, hereda el hermano. Al hermano se le puede pedir un pedazo de terreno para trabajar. Y éste da. Si mezquinamos, mi hermano qué come, con qué mantiene a los hijos. El hijo mayor tiene importancia porque si el padre muere, es él quien se hace cargo de la familia".

Las palabras son casi todas textuales. Dedúcese de ello que la herencia se verifica por la línea masculina. Son los hombres quienes heredan los terrenos, casas y animales, en partes iguales. Las mujeres virtualmente no heredan, pues al casarse se van con el marido. Los hijos son los herederos legítimos. En caso de que un hombre muera sin dejar descendencia heredan los hermanos.

Las mujeres, no obstante, pueden ser herederas también y en partes iguales con los hombres, cuando el marido no tiene tierras dónde trabajar. No son frecuentes, aunque tampoco son raros, los casos en que el hombre váse a vivir a la casa de su mujer, donde se queda trabajando los terrenos que por derecho de su esposa le pertenecen. Asímismo, algunos "blancos" que han logrado casarse con indígenas tienen derecho a usufructuar los terrenos de su mujer y esta misma exige al Cabildo tierras para trabajar cuando no las posee.

Otro informante calderuno, uno de los mayores poseedores de tierra en extensión, desea dejarla sin dividirla a sus hijos. Habiendo bastante tierra no tienen por qué pelear. Como dos de sus hijos se han marchado desde pequeños a Cali, dice, que si regresan les queda tierra para trabajar. Las tierras quedan únicamente para los hombres, las mujeres se casan y se van con el marido. Referente al llano de Calderas manifiesta que pertenece a todos los comuneros. Pueden hacer sus casas allí, los de otra parcialidad no tienen derecho. Si un comunero construye una casa en el llano comunal, todos los demás están obligados a ayudarle con madera y trabajo. Hasta las propias mujeres. El terreno es comunal porque el Cabildo lo ha determinado. Algunos tienen en ese terreno comunal solares, puesto que tienen derecho a ello y cualquiera puede hacerlo. Quienes proceden de otra parte tienen derecho al terreno comunal, siempre y cuando se hayan desarrollado allí. En Calderas hay lameños que tienen sus terrenos porque han descuajado la montaña. En la actualidad ya no hay montañas que talar, por lo mismo ya no pueden llegar personas de otra parte. Si un calderuno se casa con una mujer de otra parcialidad, el suegro o los cuñados tienen que darle terre-

no a la mujer y el esposo ingresa de hecho a la comunidad. Así habló el informante.

Distribución de enseres, semovientes y cultivos

La distribución de enseres, semovientes y cultivos la hacemos basándonos en las investigaciones efectuadas en las parcialidades de *Mosoco*, *Lame*, San Andrés y Calderas.

La parcialidad de *Mosoco* tiene, aproximadamente, unas 250 familias con 4 hijos en promedio; *Lame* unas 130 con 3 hijos en promedio; San Andrés unas 200 con 4 hijos en promedio y Calderas, unas 150 familias con 3 hijos también en promedio. En *Mosoco* hemos estudiado 25 familias, o sea el 10% del total; en *Lame* 8 o sea el 5,3%; en San Andrés 15 o sea el 7,5% y en Calderas 55 o sea el 36,6%. En la primera parcialidad enunciada figura una familia de un mestizo y otra de un blanco, las que equivalen al 8% del total de familias investigadas; en la segunda están representadas dos familias de blancos, equivalentes al 25% del total de familias investigadas; en la tercera el 26,6% del total de familias investigadas están representadas por dos familias de blancos y dos familias de mestizos. En Calderas no vive ninguna familia de "blancos".

DISTRIBUCION PROMEDIADA DE HERRAMIENTAS AGRICOLAS POR FAMILIAS

Parcialidad	Machetes		Palas		Barretones		Hachas		Palanquetas		Rastrillos	
(26)	T	P	T	P	T	P	T	P	T	P	T	P
Mosoco	71	2	85	3	50	2	39	1	3	—	13	—
Lame	16	2	26	3	12	1	2	—	—	—	—	—
San Andrés. . . .	37	2	42	2	18	1	9	—	—	—	3	—

Teniendo en cuenta que de las 48 familias investigadas el 52,0% son de *Mosoco*, el 16,6% de *Lame* y el 31,2% de San Andrés, podemos hacer las siguientes deducciones: El promedio

(26) Nota: T indica el total de herramientas de las familias investigadas. P indica el promedio de herramientas que le corresponde a cada familia.

de machetes que posee cada familia en las tres parcialidades es de dos. Indica la universalidad de esta herramienta.

Las herramientas para labrar la tierra son más numerosas en *Mosoco* y *Lame* que en San Andrés, sobre todo en la primera donde las palas casi alcanzan a 4 y los barretones a 2 por cada familia. Ello se explica porque en aquellas parcialidades no tienen que rozar los terrenos sino levantar las eras en los potreros.

El número de hachas por cada familia de *Mosoco* casi se duplican. La razón está en que casi todas las familias poseen tierras en la parte montañosa denominada "páramo". La tala de bosques es intensa en *Mosoco* porque los hay todavía. En San Andrés y *Lame* las montañas vírgenes casi han desaparecido.

DISTRIBUCION PROMEDIADA DE ANIMALES DOMESTICOS POR FAMILIAS

PARCIALIDAD	VACUNOS				CABALLARES				PORCINOS				LANARES				AVICOLAS			
	T	P	B	%	T	P	B	%	T	P	B	%	T	P	B	%	T	P	B	%
Mosoco	171	6	22	12,8	113	4	13	11,5	42	1	4	9,5	130	5	25	19,2	240	9	55	22,9
Lasso	22	4	10	45,2	44	8	19	43,1	19	3	—	—	21	3	—	—	50	6	20	40,0
San Andrés	60	4	30	50,0	27	1	19	70,3	28	1	14	50,0	22	—	9	41,0	232	16	120	51,7

Nota: T indica el total de animales de las familias investigadas.
P indica el promedio de animales que corresponde a cada familia investigada.
B indica el número de animales que corresponde a las familias "blancas".
% indica el porcentaje poseído por los "blancos" del total de animales.

[P340]

6: Bernal Villa SC15 Paes

A cada familia indígena de las tres parcialidades y en su orden respectivo le corresponde en promedio los siguientes animales: Vacunos: seis, tres y uno; caballares: cuatro, seis, cero; porcinos: uno, tres, uno; lanares: cuatro, tres, cero; avícolas: diez, seis, quince. A Calderas le corresponde lo señalado en el cuadro.

Salta a la vista que la ganadería en *Mosoco* es una auténtica industria indígena que lleva implícito un relativo mejoramiento técnico de la misma. En tanto que, en las otras tres parcialidades no tiene relieves de importancia, sobre todo en Calderas. La industria ganadera de San Andrés es patrimonio exclusivo de blancos y mestizos.

DISTRIBUCION PROMEDIADA DE LOS CULTIVOS POR FAMILIAS

PARCIALIDAD	MAIZ				TRIGO				HABAS				AJOS			
	T	P	B	%	T	P	B	%	T	P	B	%	T	P		%

Nota: T indica el total de arrobas producidas por la familia investigada.
P el promedio de arrobas que corresponde a cada una de esas familias.
B las arrobas producidas por los "blancos" y % el porcentaje que éstos producen con relación a los totales indicados.

(27) Las cifras indican el número de árboles de plátano en producción.

[P.342]

SC15 Paez
6: Bernal Villa

De esta suerte una familia indígena de *Mosoco* y *Lame*, en su orden respectivo, cuenta para la subsistencia a lo largo de todo el año, con 18 y 36 arrobas de maíz; 16 y 5 arrobas de trigo, 2,5 y 2,5 arrobas de habas; 3 y cero arrobas de ajos; 8 y 4 arrobas de ullucos; 5 y 4 arrobas de majuas; 1,5 y 4,5 arrobas de fríjol y 149 y 11 arrobas de papas. Una familia indígena de San Andrés cuenta con 7 arrobas de café; 124 racimos de plátanos; 21,5 arrobas de maíz; 59 arrobas de yuca; 13 arrobas de arracacha y 4 arrobas de fríjol. Desgraciadamente es imposible obtener una estadística de la producción de coca y, sobre todo, de la cantidad de caña de azúcar consumida en guarapo, lo cual nos imposibilita saber cómo y en qué cantidad complementa el consumo de cada familia.

En cuanto al maíz vemos que las cantidades que corresponden a las familias de San Andrés y *Lame* son superiores a las de las familias de *Mosoco*. Las de *Lame* son el doble exactamente. Pero mientras que en aquéllas no se producen, aparte del café, especies para la venta, en *Mosoco*, en cambio, están el trigo, los ajos y la papa para tal fin. De ello deducimos, que a menor número de cultivos destinados para el comercio haya en una parcialidad, mayor será la producción de especies de consumo interno, primando sobre todo los que se pueden conservar por largo tiempo, tales como el maíz, el fríjol y las habas. Los ullucos, las papas y, sobre todo, las majuas, exigen un consumo casi inmediato. De igual manera acontece con el plátano, la yuca y la arracacha. Es ésta la razón de por qué las familias de San Andrés y *Lame* disponen de mayores cantidades de maíz y fríjol que las de *Mosoco*.

Repartición de actividades según el sexo

Desde la más temprana edad se establece diferencias en las actividades tecnológicas, económicas y de rutina diaria.

Entre los Páez únicamente el hombre puede hacer el sombrero de pindo para la mujer y para sí, manejar el machete con toda habilidad y destreza, labrar la canoa, el trapiche, los platos para comer, tocar los instrumentos musicales. En cambio, sólo la mujer puede tejer la *kuetand yaha* (jigra del mambe) para portar la coca y el mambe, tejer la mochila de fique para llevar cosas, tejer las ruanas y los anacos, hilar la lana y la cabuya. Naturalmente estas diferencias de actividades las observan los niños y practican desde la más temprana edad, sobre todo si existe esti-

mulación de las personas que conviven con ellos. La diferenciación de actividades diarias, tecnológicas y económicas se observan estrictamente. En la agricultura, con todo, empiezan a trabajar hombres y mujeres por partes iguales. El fenómeno natural mente es nuevo.

El esquema que a continuación publicamos muestra la distribución de actividades según el sexo.

Actividad	*Hombres*	*Mujeres*

[P.344]

Terrazgueros de San Andrés

En las haciendas que quedan sobre la hoya del torrente *Pisimbalá* y la margen izquierda del río Ullucos viven unas treinta y cinco familias indígenas en calidad de terrazgueros. Cinco son las haciendas que utilizan esta clase de servidumbre. Muchas de esas familias se han desarrollado y constituído en el seno mismo de la hacienda. Otras se han visto empujadas hacia esa condición por carecer de tierras de qué derivar el sustento.

San Andrés es la única región de Tierradentro, que nosotros sepamos, donde existen terrazgueros. Si bien que el número de personas sumidas en esta servidumbre no es superior a ciento, la simple afloración del fenómeno nos habla ya de un excedente de población, por lo menos de las parcialidades de San Andrés y Santa Rosa de las cuales son originarios los terrazgueros. Por otra parte, es bien conocido la diseminación del grupo Páez por el mismo Departamento del Cauca, los departamentos de Huila y Tolima y aún por el Departamento del Valle. La colonización de tierras baldías tierradentrunas por los indígenas ha sido sistemática e intensa en los últimos años. La utilización de tierras cada vez más inaccesibles para la agricultura en el piso térmico templado. Todos éstos son factores que nos están hablando claramente de excedentes de la población Páez.

He aquí lo que nos informa un terrazguero acerca del fenómeno de la terrazguería: Como terrazguero tiene derecho a poseer una casa, una huerta y una roza. La casa y huerta son contiguas y complementarias. Su huerta ocupa más o menos una plaza y en ella tiene sembrado plátano (unos 200 árboles), naranjas (unos cinco árboles), cebolla, arracacha, yuca, caña de azúcar, batata y unos doscientos árboles de coca. La huerta la ha cercado con alambre de púa, suministrado por el patrón para evitar daños de los animales de la hacienda. La roza puede establecerla en cualesquier sitio de la hacienda. Cambia cada año. En su actual roza tiene sembrado 1.500 arbolitos de yuca; 200 de arracacha (no encontró más semilla); maíz; fríjol chiquito (al mes aporca las "matas", a los dos meses florece y a los tres cosecha) y fríjol grande y, finalmente, unas dos cargas de cogollo (semilla) de caña de azúcar. Los productos de la roza y de la huerta son para el consumo, primordialmente, pero si le queda algún excedente puede venderlo a quienquiera, si bien que el patrón le recomienda no vender a otros sino a él mismo. La caña de azúcar muele en el

trapiche del patrón con el consiguiente uso de los implementos para obtener panela dejándole a aquél la mitad del producido. De las cosechas de maíz, fríjol y arracacha obsequia al patrón una jigrada (media arroba aproximadamente) de cada producto y del plátano uno o dos racimos.

Manifiesta que el hacendado le ha autorizado para criar animales, pero no los posee porque más permanece en los trabajos de la hacienda que en la propia casa. Dice que tuvo unas veinte ovejas, pero acabó con ellas. Ahora posee únicamente ocho gallinas.

El informante es hijo de otro terrazguero, se crió en la misma hacienda. La casa que actualmente habita la posee desde hace 18 años. No ha firmado ninguna clase de documentos con el patrón sin que por ello sea molestado por la posesión de la vivienda y, antes por el contrario, aquél le recomienda que arregle la casa. A cambio del usufructo de la vivienda y de la tierra está obligado a pagar tres días de terraje por cada mes, alimentándose por propia cuenta y utilizando sus propias herramientas. Los demás días del mes trabaja a jornal para el mismo patrón, devengando dos pesos diarios, excluyendo, naturalmente, los días de fiestas religiosas o nacionales. Cada semana recibe doce pesos. Al patrón le compra maíz, yuca y fríjol a crédito descontando luego en el trabajo. Aquél únicamente le regala sal y bananos. La panela la toma él mismo de la que produce.

Como el informante es especializado en molienda y fabricación de panela, ordinariamente no se ocupa más que en ello. Su labor comienza a las seis de la mañana y termina a las diez de la noche. Le ayudan su mujer, que gana un peso diario, un hijo sordomudo que no gana nada y otro hijo que acarrea la caña hasta el trapiche. Este es casado, también terrazguero, devenga dos pesos al día y posee su roza aparte. La esposa de éste no ayuda a la labor, pues se queda cuidando la casa y atendiendo a los hijos y deshierbando la huerta y la roza.

En la molienda trabaja hasta los domingos envolviendo panela, labor que no se puede descuidar. Ordinariamente invierte dos semanas en la molienda, teniendo la siguiente libre (sin remuneración) para descansar, atender su propia labranza o alquilar su fuerza de trabajo a quien la necesite (nominal). A la siguiente semana tiene la obligación de volver a trabajar nuevamente en la hacienda.

Cada semana saca unas cuarenta arrobas de panela. El informante cocina, la mujer muele con el hijo sordomudo y el otro hijo alista la caña. El equipo de la molienda es costoso y por eso es de la hacienda. Las herramientas de su propiedad son 2 palas, un barretón y tres machetes con las cuales trabaja para la hacienda. El dueño de la hacienda ha intentado sacarlo tres veces. Una vez porque estuvo de panelero donde otro hacendado; al patrón le disgusta que trabaje en otra parte sobre todo si es en molienda. El informante no quiso abandonar su casa.

Las siembras que ha efectuado se han perdido, a veces, por la humedad del suelo, no quedando más solución que volver a sembrar. El patrón no remedia en nada esta calamidad. Tiene derecho a sembrar todo lo que quiera. Actualmente posee unos doscientos árboles de café, pero el dueño le ha prohibido sembrar más árboles.

El informante tiene siete hijos, de los cuales cinco son mujeres; tres de ellas ganan un peso diario trabajando en la hacienda en cosechas y deshierbas de café. Una menor gana cincuenta centavos y el varón paga terraje y devenga un jornal de dos pesos. El patrón no es honrado. Para pagar jornales acostumbra sacar billetes de diez o veinte pesos, manda a alguien de los peones para que los cambie por moneda fraccionaria que al recibirla siempre hace falta algo. Paga parcialmente y después manifiesta que la cancelación ha sido total.

Otro informante de la misma hacienda dice que por dos años de vaquería (cuidar vacunos), el patrón le dio en pago de su trabajo una yegua que no alcanza a valer treinta pesos. En ese oficio padeció hambre y trabajó demasiado. Ahora, aparte de haberlo remunerado muy mal, le exige el pago de terraje de los dos años que estuvo dedicado a esa labor.

En términos generales, los terrazgueros de San Andrés por el usufructo de media hectárea de tierra, una huerta y una casa, están obligados a: pagar mensualmente tres días de terraje, alimentándose por propia cuenta; a trabajar como jornaleros de la hacienda, devengando un diario reducido (el jornal máximo que devengan es dos pesos, pero es excepcional; ordinariamente devengan un peso los hombres y ochenta centavos las mujeres); a no trabajar en otras fincas; a vender el excedente de los cultivos a los propios dueños de la hacienda, sobre todo si es café; a promediar o repartir por partes iguales con el patrón la panela ob-

tenida en los hornos de la hacienda; la esposa e hijos de los terrazgueros también están obligados a trabajar en la hacienda. Tienen derecho a sembrar cualesquier cultivo, excepto el café. No devengan los domingos ni los días de fiestas religiosas o nacionales ni tampoco reciben remuneración de las horas extras de trabajo. No tienen prestaciones sociales. Cuando el patrón es bueno les obsequia sal y, ordinariamente, una "mancha" de plátano (ración de plátano cocido).

Muchos son hijos de terrazgueros nacidos en la propia hacienda. Otros llevan más de diez años en esta servidumbre. Aunque algunos se han liberado de esta situación, la mayoría se obstina a abandonar su rancho y su huerta, cuando los patrones quieren despojarlos. Un informante terrazguero al ser interrogado sobre si su situación es buena o mala, dice: "Contento tengo que estar, qué más puedo hacer si desde pequeño soy de allí" (de la hacienda). Además, reflexiona que si el patrón quiere sacarlo, tiene que comprarle las mejoras de su huerta. Alguno que otro terrazguero, con más de veinte años de usufructuar su pedazo de tierra, se ha negado ya a pagar el terraje.

Un terrazguero que ha tenido muchos patrones recuerda que algunos eran buenos, pero los más eran malos, ambiciosos, explotadores, que hacían trabajar demasiado, engañaban en los pagos y, alguno, hasta garrote dio a los trabajdores.

Dieta alimenticia

Hacemos la advertencia que la mayor parte de las notas acerca de la dieta alimenticia fueron recogidas en la parcialidad de Calderas.

El maíz es la especie más intensamente cultivada, la de mayor consumo y la que más satisface psicológicamente. Hemos visto ya el caso de la "hambruna" en *Mosoco*, donde, a pesar de cosechar otros productos, aparece ésta, precisamente porque no hay maíz. Con el maíz preparan mote, arepas, envueltos y "sango", aparte de comerlo tostado o asado cuando está tierno.

El mote es prácticamente la materia prima de las comidas diarias. Lo obtienen hirviendo el maíz en agua y ceniza hasta que la cutícula esté completamente suelta, y en seguida lo lavan en abundante agua. Este mote lo ponen a cocer y cuando ha pasado tres "hervores", es decir se le ha cambiado agua por tres veces, se le echa fríjol seco primero, luégo plátano, yuca, arracacha,

coles y carne, si la hay y, por último, cebollas, cominos y azafrán. La sal, que siempre la prefieren de grano o terrón, la echa cada cual tomando el grano y batiéndolo en su respectivo plato hasta que considere suficiente. No comen muy salado. Este tipo de comida es un "pot au feu", el más extendido entre las gentes y el que consumen diariamente. Los informantes la consideran "sabrosa".

Las arepas las preparan de maíz seco o tierno. Con el primero pelan el maíz en ceniza y, luégo, lo muelen no muy fino; la harina resultante la mezclan con agua hervida para molerla nuevamente y, en esta vez, muy fina. Con esta masa, las mujeres, hacen unas arepas grandes y redondas, las endurecen en un tiesto caldeado y terminan de asarlas en el rescoldo del fogón. Estas son las arepas de las fiestas religiosas de Calderas. Cuando desean que las arepas tengan "buen sabor" le echan sal, cebolla o cilantro (en *Mosoco* hemos visto que le echan huevos); son arepas de consumisión familiar. Para hacer arepas de choclo, desgranan la mazorca, muelen muy bien la masa y sin ninguna clase de condimentos, hacen las arepas y las endurecen y asan en la forma conocida. La frecuencia de consumisión de arepas es baja en la mayor parte de las parcialidades, pero en *Mosoco* es casi diaria. Estos indígenas toman café y leche con arepas, las cuales reemplazan debidamente al pan.

Los "envueltos" o bollos los hacen cuando hay choclos. Desgranado, molido y sin cernir alargan las masitas en las hojas del mismo choclo, sacadas cuidadosamente, cortando con un cuchillo la parte más gruesa de la mazorca. No le echan ninguna clase de condimentos porque el choclo por sí mismo tiene "buen sabor". Los envueltos, una vez cocidos, los comen con sancocho. Dicen que es una comida "muy sabrosa". Ordinariamente, cuando hacen envueltos matan cerdo o gallinas e invitan familiares para el consumo. La comida de envueltos lleva implícito la iniciación de la cosecha de maíz, en la que interviene el médico del lugar.

El "sango" se hace a base de harina de maíz finamente molida y sin cernir que se echa en la olla cuando el fríjol ha hervido suficientemente. Tienen el cuidado de que la sopa no se espese. Agregan también a este menú coles picadas, cebolla o cilantro para que "dé sabor".

"El fríjol es muy necesario, muy sabroso y que se come más;

mote sin fríjol no es sabroso; el fríjol tiene sabor y el 'cacha' es el más sabroso y sobre todo verde, los bichecitos (tiernos) se comen con cáscara", dice un informante de Calderas.

El fríjol lo comen en sancocho. Una vez hervidos suficientemente los fríjoles echan plátano descascarados y en pedazos, arracacha, descascarada, lavada y pedaceada, yuca, en igual forma que la arracacha, cebolla picada y azafrán. Agregan carne o manteca si poseen. Esta comida, dicen, que es "sabrosa". El fríjol también lo comen revuelto con mejicano. Ponen a hervir primero el fríjol y cuando ya consideran suficiente agregan mejicano menudamente pedaceado y, mucho después, agregan maíz molido. Cocido todo esto, comen sin sal, manifestando que es tan sabroso como el arroz con leche de los "blancos". El mejicano también lo comen con mote y fríjol debidamente cocidos y queda muy sabroso si a esto se le agrega patas de res.

Las coles las cultivan en las huertas y casi nunca faltan a través de todo el año; se comen diariamente, pedaceadas en el menú del día. En las fiestas religiosas acostumbran a cocer las coles en rama, es decir con su respectivo tallo, y servirlas como plato especial. Los repollos cultivan muy poco y por lo mismo su consumo es casi nulo. Los pocos que cultivan en la parte fría de San Andrés se destinan para la venta.

El plátano lo comen preferentemente en sancocho y el consumo es intenso en el clima templado. También lo comen asado y en tal caso lo prefieren con carne o vísceras. La papa, especialmente en *Mosoco*, la comen en caldo, plato favorito para atender a los visitantes "blancos" o civilizados. Esta comida la preparan con agua, leche, huevos, cebolla y carne. Las papas peladas y bien lavadas. En Calderas la consumen también en esta forma, pero le agregan, además, fríjoles.

El trigo en general se cultiva para molerlo y venderlo. A veces, lo comen en arepa y en tal caso, la masa se prepara con agua y panela. También hacen sopa con harina de trigo, sin extraer el salvado, con coles, fríjoles y sal.

La batata consumen en poca cantidad. La lavan, la cocen y la comen sin sal y con ají. El ají lo preparan cociéndolo en una olla (una jigrada, dice el informante) y agregándole cebolla, cilantro y sal. Este condimento queda espeso y dura más o menos un mes.

El chachafruto se cocina con fríjoles o en la sopa, pero se come solo y despellejado. Sabe muy bien.

La caña de azúcar sirve únicamente para extraer el jugo y fermentarlo. Con el guarapo se calma la sed, se hace mingas, se efectúa los "cuidos", las fiestas religiosas y, en general, hacen una vida social. Del jugo de caña, debidamente fermentado, extraen también bebidas alcohólicas. Del maíz hacen chicha, pero no es corriente.

Muelen el maíz y la harina la cocinan con bastante agua, este líquido lo sacan y lo ponen a fermentar en una canoa por varios días agregándole panela. Esta chicha, dicen que es más sabrosa que el guarapo, pero que no embriaga ni se trabaja a satisfacción, sirve únicamente para calmar la sed, como la "cola" (bebida gaseosa) de los "blancos".

Consumen duraznos y manzanas en las regiones donde se produce, también naranjas, pero, en general, el consumo de frutas es muy bajo.

El cuy lo comen cuando la familia desea carne. Lo matan desnucándolo, luégo lo mojan en agua fría, para volcarlo en seguida en el rescoldo del fogón para ablandar el pelo y pelarlo; lo lavan, le sacan las vísceras, lo lavan nuevamente y luégo lo ponen a cocer en la olla de sancocho, mote "sango", o sopa de masitas de maíz; unos consumen las vísceras, mientras que otros no. Consideran que el cuy es "sabroso".

Con la gallina se cuida a los amigos preferenciales, a los compadres, se hace mingas. En la fiesta de San Juan en Calderas es costumbre comer gallinas. Una vez pelada, le sacan las vísceras, la lavan y la ponen a cocer en la olla de sancocho o mote. Los indígenas consideran que la pierna es la mejor presa y, por lo mismo, es la que brindan a los mayores (compadres, padres, hijos mayores); a los demás reparten un pedazo de pechuga y cualquier otra presa. La cabeza queda para el dueño. Las vísceras lavadas y cocidas, también se reparten entre todos. En la misma forma preparan y consumen los pavos o los patos.

Del cerdo algunos órganos se comen asados: páncreas, riñón, intestinos y la carne del espinazo; el tocino se guarda para sazonar las comidas; lo demás se come cocido. Cuando matan cerdo con el simple deseo de aprovechar la carne reparten raciones a los "mayores" de la familia (suegros, padres, etc.), lo cual sucede también cuando matan vacunos. De éstos aprovechan la carne, la piel, los cuernos para hacer silbatos que suenan cuando están construyendo habitación en el poblado y cuando arrastran

la madera; la leche no aprovechan, excepto en *Mosoco*, donde hemos visto que verdaderamente la consumen.

Los calderunos dicen que la oveja la comen mucho en las regiones templadas tales como Avirama y San Andrés, pero en Calderas la consumen poco; unos dicen que la oveja da la lana para el vestido: "para qué va a comer, si da la ruana" y otros manifiestan que comer oveja trae mala suerte, porque es como si se comiera al papá.

Cuando hay visitas de "mayores" tales como compadres, hermano mayor, suegros o los propios padres se los atiende ("cuida") con comidas distintas a las ordinarias, a base esencialmente de aves de corral y de huevos. Si tienen carne cocinan un pedazo considerable. Los compadres llevan como regalo, a su vez, arepas (unas 15), huevos (unos 10) y muchas veces gallinas.

Para los niños no existe dieta especial, comen exactamente lo mismo que los adultos. Diferencias de dietas por sexos únicamente se presenta cuando la mujer acaba de dar a luz. Entonces, le dan maíz molido, arracacha, yuca, plátano maduro, gallina ponedora ("éstas son bien gordas") y carne de oveja. Les está proscrito el mejicano porque entra "frío" en el estómago y duele mucho; cebollas porque da una enfermedad en el estómago y pudre los intestinos; la carne de cerdo y el fríjol bueno, por esta misma razón. El ají también es tabú para las parturientas.

Para los trabajos fuertes consideran que es bueno comer mote, con coles, fríjol bueno y bien salado, porque da resistencia para la faena diaria; comiendo esto mismo ("una buena comida") pero sin sal, dicen que a medio día ya da hambre.

Como alimentos afrodisíacos se consideran el "sango" preparado con maíz bien molido y cernido y los huevos crudos.

De los alimentos que consumen consideran que la chicha y el agua se convierten en sangre y el maíz, la papa, el fríjol, la arracacha, en carne.

Para engordar consideran que es menester, antes que dieta especial, comer y no trabajar.

Los indígenas se enflaquecen —dice un informante— porque primero comen abundante y bueno y después no consiguen qué comer y, claro, se enflaquecen. En los tiempos de escasez ("hambruna") comen fríjol cacha y la hoja tierna del mismo en igual forma que la hoja de mejicano; la col la recogen hoja por hoja, pues en esta época son menos abundante. Cuando ya no hay nada más que comer matan una vaca y se alimentan con carne; cazan

torcazas o guacharacas, las cocinan y toman el caldo con sal. También hacen chicha y los viejos se emborrachan todos los días; el consumo de coca se acentúa: "las gentes mascan y mascan para que no dé mucha hambre"; los pequeños sí padecen hambre porque no saben mascar, comen mejicano que no necesita de sal, la cual procuran ahorrarla. Por último terminan saliendo a las fincas de los "blancos" a ganar la comida, la coca y unos pocos centavos.

Cuando no trabajan efectúan una comida a las tres p. m. y otra a las seis p. m. Después de la primera comida se acuestan y dicen "estamos haciendo estancia", es decir digeriendo y nutriéndose. El maíz pelado, con azafrán, gallina, plátano y ají da más "estancia".

El maíz sin pelar que lo cocinan como mote comen apenas lo suficiente, pero comen hasta en exceso, por ser agradable el sancocho de papa con fríjol bueno. Nadie se come una gallina entera. Se reparte. De ser así consideran que la gallina es robada. El mejicano produce a algunos vómito, porque están enseñados a comer carne y éstos sólo pueden ser los ladrones.

En general todos comen un plato únicamente; si comen dos no pueden andar. Los médicos comen poco para poder pasar la noche en vigilia dedicado a sus actividades; consumen siempre huevos y evitan comer ají, para poder sentir las "señas" (31).

Los indios apetecen la carne, pero manifiestan que comen cualquier clase de comida; consideran que los "blancos" comen mejor, porque los indios no pueden comer carne todos los días, ni gastan dinero en manteca o carne. Se alimentan únicamente de los productos que cultivan.

Los indios realizan dos comidas al día: una al amanecer y otra en la tarde cuando el sol está en pleno ocaso. Las mujeres y los niños realizan una comida al mediodía, de la que sobró de la mañana. La comida principal y abundante se cocina en la noche. Las mujeres antes de acostarse cuelgan de un gancho de madera o de hierro o de un alambre la olla con mote o fríjoles y avivan el fuego por lo menos tres veces en la noche; a las cuatro de la mañana agregan los productos fácilmente cocinables y comen con los primeros albores del día.

Los indígenas entre sí son generosos y hospitalarios; tan pronto entra un visitante a una casa lo atienden con lo primero que tengan disponible: chicha o comida.

(31) Bernal Villa, S. Magia y Medicina entre los Paeces, p. 248.

En la parcialidad de *Mosoco*, en pleno proceso de aculturación, la dieta está variando visiblemente y el horario de la comida ha cambiado fundamentalmente. Se consumen regularmente café, panela, tocino, carne y arepas.

Comercio

Exceptuando la parcialidad de *Mosoco*, los indígenas producen primordialmente para el consumo interno; pero el autoabastecimiento es incompleto puesto que padecen algunos meses de escasez. Consecuencialmente el comercio tiene necesariamente que ser restringido y de escaso volumen. En Calderas, *Suin*, *Chinas*, los animales ordinariamente se cambian entregando vacunos grandes y gordos por novillas de menor tamaño, flacas, fértiles y algunos pesos de encima. El caso ya lo hemos referido ampliamente al tratar de la ganadería. También hemos visto cómo la única industria destinada exclusivamente al comercio, la cera de laurel, era patrimonio de San Andrés, Calderas, *Tambichukue*, *Lame*, *Suin* y *Chinas* y que la baja del precio constituyó un golpe mortal para la industria. Aparte, pues, del café, la papa, el trigo y los ajos, que se destinan casi totalmente al comercio, no quedan más que pequeñas cantidades de yuca, arracachas, plátano, cebollas, coles, cebada y huevos con los cuales no es posible sostener un comercio regular. Los indios compran sin excepción la sal y también adquieren sombreros, camisas, pantalones, machetes, palas, barretones, hachas, cuchillos, calderos de aluminio, tazas, platos de hierro, cucharas, velas, jabón y aguardiente. Con menos frecuencia pañuelos grandes de vistosos colores para los niños, pinzas y collares para las mujeres.

San Andrés es un pequeño poblado indígena que, desde que se creó el área de población, está habitado por los "blancos". Allí existen tres tiendas que expenden algo de mercancía, algo de drogas, cerveza, aguardiente y pan. Dos de ellas poseen gramófonos. También existen otras dos tiendas que expenden chicha y aguardiente exclusivamente. Los miércoles se realiza un pequeño mercado. En la acera de una de las casas cacharreros y comerciantes de otras partes extienden su mercancía; en la placita se levanta un toldo de una indígena aculturada, para vender comida y más allá una tarima para el expendio de la carne. Al amanecer empieza a moverse el mercado. Los indígenas sacan pequeñas cantidades de yuca, arracacha, repollos, huevos, café y cebollas

que son compradas inmediatamente por los "blancos". En seguida el matancero comienza a vender la carne generalmente de dos en dos libras que es lo que compran los indígenas. Los escharreros venden algunas baratijas y mercaderías. A las nueve a. m. comienzan a moverse los estanco. A las diez de la mañana se ha terminado el mercado y al mediodía y en la tarde no se observa más que indígenas borrachos. Entonces son frecuentes las riñas entre sí y no son pocas las veces, en que la agresividad indígena se canaliza contra los "blancos", manifestando que ellos son los verdaderos dueños de la tierra y del poblado. Los indígenas acostumbran vender sus artículos (café, huevos) únicamente a personas conocidas, no importa que otros puedan pagárselos a mejores precios.

Los miércoles también hay mercados en Guaduatejo *(Toguisa)* y *Turmiá*: los viernes en Valencia y los sábados en Inzá y Belalcázar. Los de Belalcázar y Valencia, por estar comunicados con vía carreteable con La Plata (Huila), son más concurridos y de mayor movimiento comercial. Al mercado de Belalcázar afluye una gran cantidad de indígenas de diferentes parcialidades del municipio e inclusive de Calderas. Los vendedores ambulantes son numerosos en Tierradentro y varios andan a pie por las parcialidades ofreciendo sus mercancías. No son muchos los artículos que expenden. Los negociantes también hacen correrías por las parcialidades en consecución primordialmente de ganado vacuno que les deja pingües beneficios. Pero también hay quienes van de casa en casa comprándoles sus artículos agrícolas. Un negociante de *Mosoco*, mestizo, bilingüe, se ufana de su amistad con los indígenas y de las correrías que hacía, hasta hace unos cuatro años, por *Suin*, *Chinas*, Calderas, *Asirama*, *Lame*, distribuyendo ("regando") dinero adelantado por maíz, fríjol, cera de laurel, azafrán y ganado vacuno. "Deuda con indio no se pierde" afirma categóricamente, para resaltar la honradez de los indios. En las épocas de cosecha volvía nuevamente a recoger los productos comprados y los sacaba directamente a Silvia. Igualmente manifiesta que de San Andrés llevaba mensualmente de 100 a 200 arrobas de panela para expenderla en *Mosoco*. Ultimamente, dado lo intransitable de los caminos de Inzá, ha abandonado este negocio.

La parcialidad de *Mosoco* y, en general toda la hoya hidrográfica del río Moras, que comprende las parcialidades de San José, *Mosoco*, *Vitonó*, *Lame*, *Suin* y *Chinas*, comercia con el municí-

pio de Silvia, situado en las vertientes occidentales de la Cordillera Central. Allá va toda la producción agrícola: papa, maíz, trigo, cebada, duraznos, ajos, habas y ullucos. Solamente cuando los precios de los artículos agrícolas están bajos en Silvia, los conducen a Belalcázar y Valencia. Pero sucede raras veces. De Silvia traen, en cambio, toda su herramienta, su ropa, drogas y vajilla. Las mujeres mosoqueñas son compradoras principales de los rebosos de lana (rebosos de Castilla), de vistosos collares, aretes de oro y prendedores del cabello; los hombres de los sombreros finos de paño, de los géneros para sus pantalones y las camisas.

Los caminos de herradura de aquella región sorprenden por su buena conservación. Cada año, por el verano, todos los vecinos se encargan de los arreglos convenientes y evidentemente contrastan con los caminos de herradura del municipio de Inzá. Los mosoqueños tienen numerosas recuas para atender el movimiento de importación y exportación, en el que participan también los Guambianos (con sus caballerías) denominados por los mosoqueños *kasukos* a quienes consideran como buenos amigos y no muy diferentes de ellos mismos. Lo cierto es que viven juntos, trabajan juntos y comercian mancomunadamente.

Las relaciones entre los "blancos" e indígenas en *Mosoco* parecen ser cordiales y de mutuo respeto.

Economía familiar

La familia Páez constituye, esencialmente, una unidad económica. Está formada por los padres y los hijos y representa un círculo cerrado pero efectivo. No rebasan en ninguna manera sus propios límites, si bien que las mingas y la distribución de primicias de las cosechas se hacen especialmente con parientes consanguíneos y políticos.

La manera como funciona esta unidad económica y como colaboran sus miembros puede apreciarse claramente en la distribución de las actividades por sexos. La dirección suprema de la economía familiar descansa en las manos del hombre; él es quien posee la tierra, la habitación, las herramientas y los animales domésticos. Su brazo no ha aprendido a manejar más que el machete, el hacha o la pala. Es el dueño de los cultivos y quien determina dónde, cómo y cuándo se debe trabajar. Su actividad primordial está fuera de la casa: en la misma tierra. La mujer, en

cambio, permanece dentro de la vivienda y su actividad básica se refiere a la administración y elaboración de los productos que le entrega el hombre. La culinaria y los tejidos son su especialidad. Es cierto que la mujer se contrata como jornalera en las fincas de los "blancos" y que en algunas parcialidades tal como en *Mosoco*, interviene directamente en la preparación de la tierra y las desyerbas de los cultivos pero éste es un fenómeno relativamente nuevo y todavía aún sin aquiescencia universal entre los indígenas.

En términos generales, el incentivo primordial de la actividad económica referente a alimentos es la satisfacción de las necesidades básicas del individuo y la supervivencia del grupo familiar. Es la seguridad que proporciona el tener qué consumir. La abundancia de guarapo y de maíz les produce, indudablemente, excelentes gratificaciones. Con estos productos en abundancia, las fiestas religiosas, las mingas y los "cuidos" son buenos, dicen los indígenas y comentan largamente las incidencias de su desarrollo.

Mas, a pesar de que se reconoce la capacidad de trabajo individual; la posesión de animales domésticos da cierta prestancia dentro del grupo; y, la abundancia de comida y guarapo, produce gratificaciones, el ciclo agrícola permanece estacionario en los lineamientos del tiempo, de los sistemas de trabajo y de la cantidad de siembra. Producen esencialmente para el consumo. No existe el estímulo del prestigio. En muchas parcialidades los hábitos de economía capitalista son abiertamente combatidos por los brujos (32). Sin embargo, hemos tenido ya la oportunidad de exponer que la introducción del cultivo del café (zona templada), el desarrollo de la ganadería y del cultivo de la papa en *Mosoco* y la creación de áreas de población en el corazón mismo de las parcialidades indígenas, está modificando aceleradamente todas las instituciones de la cultura Páez. La economía familiar de autoabastecimiento y de pequeñas operaciones de trueque van transformándose sensiblemente en economía puramente dineraria. Del mismo proceso de la producción va desapareciendo la monótona rutina y siendo reemplazada por nuevas técnicas de trabajo, mayor cantidad de producción y superior movimiento comercial.

En las parcialidades de *Mosoco*, *Lame* y San Andrés hemos realizado una investigación de ingresos y egresos familiares co-

(32) Bernal Villa S. op. cit., p. 256.

rrespondientes a 1953, en base de los cuestionarios elaborados por la Comisión de Planeamiento de la Seguridad Social Campesina del Ministerio del Trabajo, cuestionarios que fueron llenados por nosotros para dicha comisión en lo tocante a Tierradentro.

Son 48 familias investigadas de las cuales 25 corresponden a *Mosoco*, 8 a *Lame* y 15 a San Andrés. Ellas están especificadas por los números de orden.

Las fuentes de ingresos monetarios están dadas por la agricultura especialmente por la papa, trigo, ajos y café; por la ganadería, o sea la venta de animales, incluyendo los derivados como la leche y quesos, así como también las aves de corral; por los negocios, comprendiendo como tal la reventa de los productos agrícolas y ganaderos producidos por los indígenas; por los jornales incluyendo algunos contratos de trabajo; por la artesanía que comprende manufacturas (cobijas, alfombras, chumbes, jigras, costuras, cerámica y elaboración de teja) y molinos hidráulicos; por los fletes, o sea la utilidad proveniente del alquiler de bestias de carga; por los ahorros del año anterior; y, por los préstamos.

Resalta a primera vista la agricultura como fuente principal de los ingresos familiares, correspondiendo específicamente la papa, el trigo y el ajo para *Mosoco*, la cera de laurel y la papa para *Lame*, y el café para San Andrés. Pero en la parcialidad de *Mosoco* la ganadería es no solo complementaria sino tan importante como la misma agricultura. Aún más. En nueve de las 25 familias investigadas, la ganadería equilibra el presupuesto familiar, cuyo déficit se debió a la pérdida de las cosechas. Observamos también, que el alquiler de las bestias de carga constituye un factor importante de los ingresos familiares; un incipiente desarrollo de la industria familiar que representan fuentes de ingresos monetarios; y, finalmente, los ingresos por jornales en la parcialidad son bastante limitados. En las parcialidades de *Lame* y San Andrés, en cambio, la ganadería ocupa un lugar secundario y el complemento de ingresos familiares, cuando la agricultura produce desequilibrios, lo da, especialmente, el trabajo a jornal.

El negocio es actividad primordialmente de los "blancos", de igual manera que las industrias de elaboración tales como panela y quesos. Respecto del negocio encontramos el caso de una familia "blanca" incrustada en una parcialidad, cuya fuente única de ingresos a lo largo de toda la vida no ha sido otra cosa que las utilidades dejadas por el negocio.

Los cuadros estadísticos de ingresos que presentamos a continuación nos demuestran con números los argumentos de nuestros acertos, a la vez que nos permiten verificar comparaciones de los ingresos de las familias de las tres parcialidades indígenas y nos dan una idea clara del proceso de aculturación que se está efectuando en la parcialidad de *Mosoco*.

NOTA: El signo de pesos ($) indica el total de ingresos monetarios, y % indica el porcentaje de ingresos de una actividad en relación con los ingresos totales.

(38) El Alférez le ha comprometido con un préstamo de $ 600,00, lo que equivale al 12,5% de los ingresos totales.—(34) Debe-le comprometido con $ 60,00 abonados en 1952, o sea el 8,0% de los ingresos. (35) Debe-le comprometido con $ 300,00 abonados en 1952, o sea el 51,1% de los ingresos.—(36) Debe-le comprometido con $ 250,00 abonados en 1952, o sea el 11,0%. de los ingresos. (37) Debe-le comprometido con $ 120,00 abonados en 1952, o sea el 25,5% de los ingresos totales.—(38) Debe-le comprometido con $ 60,00 abonados en 1952, o sea el 14,1% de los ingresos.

En el cuadro estadístico de los egresos lo que a primera vista observamos en las tres parcialidades son las escasas sumas de dinero destinadas a los capítulos de Drogas, Servicio Médico, Impuestos y Educación.

La defensa de la salud de adultos y de niños es fundamental entre los Páez. La mortalidad infantil es de un elevado porcentaje y la parasitosis, las diarreas y la tuberculosis son casi endémicas. Pero el cuidado de la salud y la conservación de la vida, en la cultura Páez, descansa en manos del *tê ea* (médico bueno) y del *nasa jûki* (brujo); el primero defiende a las personas de las enfermedades y de los maleficios del segundo; el brujo puede con su poder mágico privar de la vida a las personas. Por otra parte, los *tê ea* combaten abiertamente la utilización de las drogas y del servicio médico de los "blancos". Estas dos instituciones gozan todavía de una gran fuerza y en el fondo casi regulan toda la vida institucional de los Páez. En *Mosoco* siete jefes de familia han destinado pequeñas sumas de dinero a la compra de drogas.

Su importancia resalta si comparamos con la parcialidad de San Andrés donde existe un Centro de Salud debidamente atendido por una enfermera graduada y, además, a no muy larga distancia, cuentan con el Centro de Higiene de Inzá, atendido por un médico y un grupo de enfermeras cuyos servicios son gratuitos y distribuyen también gratuitamente las drogas, no obstante esto, los indígenas no siempre acuden a los mencionados centros prefiriendo sus propios médicos y más comúnmente los *té eu* de Calderas.

Acerca de los impuestos hemos expresado ya que los inmuebles de las comunidades indígenas están exentas de esta clase de gravámenes; de allí que la columna destinada a esta clase de erogaciones se halla vacía. Las pocas cifras que en ella figuran son pagos de inmuebles comprendidos dentro del área de población y para alguno que otro el pago de impuesto por el ejercicio del comercio en diferentes plazas del municipio de Inzá.

Las sumas dedicadas para la educación de los hijos son ínfimas si exceptuamos las de los informantes "blancos", algunos de los cuales tienen sus hijos en colegios de bachillerato, en Normales Rurales y hasta en la Universidad. En las parcialidades de San Andrés y *Lame* prácticamente son nulas. Los niños de San Andrés asisten a la escuela desprovistos, en general, de útiles escolares, portando en sus jigras el avió para el almuerzo consistente en yucas y plátanos cocidos, en mote, maíz tostado, pues las habitaciones están situadas a varios kilómetros de distancia de la escuela con caminos pésimos y accidentados. Los Restaurantes Escolares y la donación de útiles escolares son más que indispensables en estas regiones. Estos niños asisten irregularmente a la escuela y no cursan más de dos años; la enseñanza la reciben en el idioma castellano y por lo general el aprovechamiento es mínimo. Las mujeres asisten en menor proporción que los varones; los adultos consideran que las mujeres no tienen necesidad de aprender a leer y escribir. Esta situación cambia en *Mosoco*. Los niños de ambos sexos asisten y procuran asistir regularmente a la escuela, recorriendo muchas varios kilómetros diariamente; los padres de familia tienen interés porque sus hijos aprendan a leer, escribir y contar y, por lo mismo, procuran ya de dotarlos de algunos útiles para sus trabajos de aprendizaje.

El consumo de la coca ha desaparecido casi completamente en Mosoco; los pocos datos de erogaciones que en el cuadro estadístico aparecen pertenecen exclusivamente a informantes ancianos.

En *Lame* y San Andrés, por el contrario, el consumo es general y se destinan sumas considerables, comparadas con los ingresos totales, para la adquisición de este artículo. En San Andrés, las erogaciones por este concepto serían mayores si en cada huerta no se tuviera un determinado número de árboles de coca. Los dineros invertidos en las mejoras de inmuebles y de la ganadería son frecuentes en *Mosoco* mientras que en las otras dos parcialidades están prácticamente ausentes. Aquello implica ya un verdadero proceso de capitalización, actividad desconocida para la mayor parte de la población indígena de Tierradentro.

Las mayores y constantes erogaciones están dadas en su orden, por la alimentación, el vestido, las diversiones y la adquisición de velas y jabón.

Referente a la alimentación en *Mosoco* aparecen en todas las veinticinco familias las compras de panela, café, manteca (cebo) y sal; las compras de maíz y arroz aparecen en doce familias. Con alguna frecuencia compran también chocolate, pan y plátanos. No consumen yucas. En las ocho familias de *Lame* aparecen las compras de panela, sal y café y en alguno que otro las adquisiciones de arroz, manteca, yuca, plátanos y carne. En San Andrés los artículos de mayor demanda para el hogar son carne, panela y sal, que aparecen en más de la mitad de las familias investigadas, pero también figuran con alguna frecuencia las compras de maíz, manteca, papas, yucas y plátanos. Al hacer el análisis del cuadro estadístico de egresos de las tres parcialidades hallamos las coincidencias, bastante singulares, que existen entre los mayores porcentajes destinados a la alimentación y las deficiencias de producción agrícola sea por las pérdidas de las cosechas o por la escasez de la siembra. En el caso primero, que se refiere primordialmente a *Mosoco*, hemos visto ya que el desequilibrio presupuestal se compensa con la venta de animales domésticos, especialmente vacunos y en el caso segundo, que se refiere a las otras dos parcialidades, la baja producción se compensa con la venta de la fuerza de trabajo.

Las prendas de vestir de mayor demanda son pantalones, camisas, sombreros, ropa interior, reboso y chumbes (*Mosoco*), pañolones (*Lame y San Andrés*) y batas para los niños. También se compran con alguna frecuencia ruanas. En *Mosoco* los aretes de oro constituyen adornos apetecidos por las mujeres, hecho éste que contrasta con las demás parcialidades donde el oro es con-

siderado como tabú. Los indígenas no usan ni alpargatas ni calzado. Cabe observar también que los anacos de las mujeres no se compran sino que se manufacturan en la propia casa; mientras que *Mosoco* la compra del reboso de Castilla es muy frecuente y signo de elegancia en las otras parcialidades compran pañolones. Si comparamos las cifras correspondientes a la alimentación y al vestido los porcentajes de ingresos destinados a la primera en *Mosoco*, salvo dos excepciones, son superiores a los destinados para el vestido. En *Lame* y, sobretodo, en San Andrés los porcentajes de alimentación y del vestido tienden a equipararse y muchas veces los de èste superan a los de aquél. El fenómeno no es raro si tenemos en cuenta que en estas dos parcialidades se cultiva más para el consumo interno que para el expendio. Tocante a las "diversiones", aunque en ellas se han incluído gastos varios, se refieren básicamente a los gastos por concepto de bebidas alcohólicas y fermentadas. Desde luego, las erogaciones son necesariamente mayores, como lo veremos después. En cuanto al alumbrado si bien que en San Andrés y Lame las fabrica de la cera de laurel silvestre también compran velas esteáricas y en *Mosoco* se compran siempre. Jabón compran todos los indígenas.
En la columna correspondiente a la sección de ahorros observamos que únicamente 6 de las 48 familias investigadas no tienen cifras que lo denoten. Y para hacer algunas deducciones nos permitimos hacer un análisis de los ingresos de las 48 familias estudiadas:

Parcialidad	Menores de $ 100.00	De $ 100.00 a $ 500.00	De $ 500.00 a $ 1.000.00	De $ 1.000.00 a $ 2.000.00	De $ 2.000.00 a $ 5.000.00	Más de $ 5.000.00
Mosoco.	—	2	12	9	1	1
Lame	—	4	2	--	2	—
San Andrés.	2	6	2	—	4	1
Totales.	2	12	16	9	7	2

Observamos, pues, que 28 de las 48 familias estudiadas, o sea el 78,3%, tienen ingresos menores de mil pesos, con los cuales, prácticamente, no puede existir ahorros. Aún con la familia mosoqueña señalada con el número 18 que tiene en la columna de Ahorros la suma de $ 1.034,24 pudimos comprobar que este va-

lor era netamente nominal y que el jefe de familia había recurrido a la Caja Agraria a solicitar un préstamo de $ 500,00, para atender a las mejoras de su finca, préstamo que efectivamente lo obtuvo; por informaciones indirectas pudimos saber que aquel valor que figura como ahorros fue posiblemente invertido en los gastos de un pleito por tierras que sostiene un cuñado suyo. Los ahorros de las familias "blancas" son verídicos y también los de algunas contadas familias indígenas, pero, en términos generales, lo que nosotros contabilizamos como ahorros pueden adscribirse a la columna de las "diversiones"; los indígenas viven al orden del día. El espíritu de ahorro no existe o es mínimo. Hemos tenido oportunidad de constatar que no existe prudencia en los gastos cuando reciben sumas considerables, tales como por ejemplo, las provenientes de la venta del café. Las modestas economías de los indígenas se esfuman en las cantinas, en los pleitos por tierras o en las fiestas religiosas. Estos argumentos están confirmados, por otra parte, en el cuadro estadístico de los ingresos en el que únicamente cinco familias indígenas de las tres parcialidades compensaron los déficits presupuestales del año pasado con sumas ahorradas en 1952.

Economía y aculturación

Antes de finalizar el presente trabajo queremos dejar planteado, a *grosso modo*, el proceso de aculturación vigente actualmente en algunas parcialidades Páez.

El material de la cultura Páez que hemos publicado y el que estamos elaborando actualmente lo hemos recogido en las parcialidades situadas en la margen derecha del río Páez, prescindiendo de aquellas situaciones en la margen izquierda del mismo río, debido, más que todo, a factores de orden público que desde hace varios años, han estado pertubando la tranquilidad de las mismas.

Las comunidades indígenas de San Andrés, Santa Rosa, *Togoima*, *Calderas*, *Avirama*, *Suin*, *Chinas*, *Lame*, *Vitoncó*, *Huila*, *Toez* y *Tálaga*, son más tradicionalistas, viven conforme a las instituciones de la cultura y, por lo mismo, las consideramos como más "primitivas". En cambio, la comunidad de *Mosoco*, recogida en las propias vertientes de la Cordillera Central y que se extiende hasta el corazón mismo del páramo de Moras, está en pleno proceso de transformación.

6: Bernal Villa SC15 Paez

Nuestras investigaciones las iniciamos en la parcialidad de Calderas, aislada, por razones de índole geográfica, de los principales centros de población "blanca" y cuyos habitantes han defendido a toda costa su independencia y se han manifestado hoscos a la convivencia con los "blancos" (39). De aquí procede la mayor parte de nuestros materiales. Pero hemos realizado investigaciones sistemáticas también en San Andrés, Santa Rosa, *Togoima, Lame, Vitoncó, Tálaga* y, últimamente en *Mosoco.*

Para nuestro planteamiento de la aculturación entendemos como difusión la *trasmisión cultural conseguida* y como aculturación la *trasmisión cultural en marcha*, conceptos expuestos por el Profesor Melville J. Herskovits en su libro El Hombre y sus obras.

Dentro de la cultura Páez están ampliamente difundidos, hasta el punto de constituir parte integrante del corpus cultural, los siguientes elementos de tipo económico de procedencia extraña y más concretamente de procedencia europea:

Todos los animales domésticos a excepción del cuy, el banano, la caña de azúcar (la variedad conocida con el nombre de "criolla"), el trigo, la cebada, los ajos, el café, los duraznos, manzanas y naranjas, las herramientas agrícolas, los molinos hidráulicos, los trapiches, la guadua y algunas especies de pastos tales como el orejuela, el kikuyo y el poa.

A través de las páginas del presente trabajo hemos hecho resaltar con especialidad los procesos culturales en marcha, es decir, el fenómeno de la aculturación. Es evidente que este fenómeno se ha presentado, con mayor o menor intensidad, en las parcialidades donde se han creado áreas de población, dentro de las cuales se han radicado un determinado número de familias "blancas". Pero la intensidad del fenómeno aculturativo no depende de este hecho simplemente ni del número de familias que viven con las normas de la cultura occidental. San Andrés, por ejemplo, tiene su área de población establecida prácticamente en 1928 y cuenta actualmente con más de veinte familias "blancas", con la proximidad de la población de Inzá y, desde hace cerca de tres lustros, con el Parque Arqueológico de Tierradentro, centro de un relativo movimiento turístico, y, sin embargo, el proceso de aculturación es mínimo y jamás se puede comparar con la intensidad del mismo fenómeno de *Mosoco*, donde el área de pobla-

(39) Vernal Villa, S. Mitología y cuentos de la parcialidad de Calderas, Tierradentro, p. 289 sgts.

ción fue creada en 1923 y en la actualidad no cuenta con más de doce familias de "blancos". *Mosoco* tiene otra circunstancia: el camino de herradura que une al municipio de Belalcázar con el de Silvia, camino que ya existía desde los tiempos de la pre-conquista. *Mosoco* ha sido y continúa siéndolo aún el lugar de hospedaje obligatorio. Además esta parcialidad ha tenido contactos acentuados con el grupo Guambiano y el grupo Páez del otro lado de la Cordillera, de hecho más aculturados. Todas estas circunstancias han permitido la extensificación de los cultivos de ajos, del trigo y, sobre todo, de la papa, así como también la extensificación e intensificación de la ganadería, lo cual, a su vez, ha dado origen a una serie de fenómenos, actualmente en pleno proceso de desenvolvimiento, tales como la modificación de las pautas de trabajo y de los ciclos agrícolas, la regularización del comercio y del transporte, surgimiento del hábito de capitalización y del aprovechamiento del crédito, utilización de alambre de púa para las cercas, repoblación forestal a base de eucaliptus, incremento de las industrias caseras, modificación de la dieta alimenticia y de los horarios de comida, adaptación de determinados objetos de adorno por parte de las mujeres (aretes de oro), desaparecimiento del consumo de coca (deculturación para utilizar el neologismo de Fernando Ortiz), estratificación social, socavamiento de las instituciones del *té eu* y del *nasa jihi*, apaciguamiento de la agresividad real y mágica contra los "blancos", intensificación de la educación primaria, mayor convicción en los credos religiosos.

En la zona templada en general y en San Andrés en particular el cultivo del café está en pleno auge y las consecuencias de este hecho económico empiezan a vislumbrarse. El sombrero de pindo, muy común en la parcialidad de Calderas, se observa poco entre los andresunos, quienes están adoptando el sombrero de paño de los "blancos", algunos usan ya alpargatas o zapatos e igualmente se está extendiendo el uso de la ruana y del saco de manufactura extraña a la cultura; las herramientas agrícolas se están enriqueciendo de la misma manera que la vajilla moderna; aunque el sistema de trabajo más extendido en la parcialidad es el de las mingas, algunos ya pagan jornales para el trabajo de sus labranzas; el consumo de carne y panela es bastante frecuente cuando hay cosechas de café. Es singular también que en toda la parcialidad solamente existan dos *té eu* sin mayor crédito si bien que utilizan los servicios de los *té eu* de Calderas. .

La "criolla" es la variedad de caña de azúcar más extendida y la que ha sido totalmente aceptada por los indígenas hasta el punto de considerarla como propia, pero se están introduciendo otras variedades nuevas tales como la "java", por ejemplo, que aunque los indígenas dicen que es "brava", no obstante denotan su valor y recomiendan su cultivo.

Tales son los lineamientos generales de la aculturación en algunas parcialidades de Tierradentro.

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguex*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.

[2] Cieza de León, 1922; Aguado, 1916; Simón, 1623-82; Oviedo y Valdés, 1851-55; Velasco, 1841-44.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguez* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the
174 ethnology of the present-day peoples.[3] It is also possible to trace the
177 acculturation during the Colonial Period, when new European usages were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

12/ A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

13/ The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

[3] For the languages, see especially Jijón y Caamaño, 1940-41; Castillo I Orosco, 1878; and Castellví, 1934. For ethnology, see Douay, 1900; Pittier de Fábrega, 1907; Ortiz, 1938; Guerra F., 1942; Jijón y Caamaño, 1936-38 Otero, 1938; Albis, 1934. See also Languages, pp. 921-922.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Parto SC17

The area of this study is delimited on the west by the valley of the Patía River and by the Cuembi, Nambi, and Cuaiquer Rivers, and on the east by the divide between the rivers running to the Pacific Ocean and those flowing eastward into the Caquetá and Putumayo Rivers. P 133 121

All this region is cool to temperate throughout the year, the extremes being at Túquerres, which lies at 3,104 m. (9,433 feet) elevation and has a mean temperature of 11° C., and Ancuyá at 1,358 m. (4,380 feet) with a mean temperature of 21° C. The greater part of the population lives between 2,890 m. (about 9,470 feet) with 12° C., as at Ipiales, and 2,020 m. (about 6,630 feet) with 18° C., as at Buesaco. P 132 P

Farther north, the Cordillera Central forms a great mountain mass at the sources of the Cauca and Magdalena Rivers, the latter delimiting the Cordillera Oriental, which extends toward the northeast, entering Venezuela and stopping at the Atlantic Coast. In the Department of Cauca, the native peoples occupied the altiplanos and the mountain slopes of the central portion of the Andes and of the Cordillera Central and Cordillera Oriental. Some of the mountains are snow-capped, like Coconucos (4,800 m.; 15,746 feet) and such volcanoes as Puracé (4,908 m.; 16,102 feet) and Sotará (4,580 m.; 15,026 feet). There are high páramos, swept by icy winds, where only the frailejón (*Espeletia hartwegiana*) and certain grasses grow. Below these heights, the topography is hilly and grandiose, with a succession of hills, terraces, altiplanos, ravines, cañons, and valleys. 133 P

Some tribes, like the *Coconuco* and *Moguex*, live in the cold mountain spurs toward the Cauca River; others, like the *Páez* and *Guanaca*, in the high páramos with a climate like that at Moras (3,670 m.; 12,040 feet), Guanacas (3,518 to 3,750 m.; 11,541 to 12,303 feet), Las Delicias, and other places to the east. The *Popayanense* occupy the temperate Valley of Pubén. The *Pijao* lived in the last mountains of the Cordillera Central toward the Magdalena River, which, like the valley of this river, is low and warm, and extended to the Cauca Valley in the neighborhood of Buga. 101 361 PO [101] [361] P

The country inhabited by the *Popayanense* at the Conquest has an altitude of 1,760 m. (5,775 ft.) and a mean temperature of 18° C.; the *Páez* in Tierradentro, 1,650 to 2,620 m. (5,774 to 8,595 ft.) and 13 to 17° C.; the *Moguex*, 2,521 m. (8,270 ft.) and 14° C. at Silvia; the *Andaquí* in the region of San Agustín, 1,695 m. (5,561 ft.) and 18° C.; the *Yalcón* and *Timaná*, 1,100 m. (3,608 ft.) and 24° C.; and the *Pijao*, 873 m. (2,864 ft.) and 25° C. at Carnicerías, and 1,700 m. (5,577 ft.) and 18° C. at Pijao (Caldas). 133 132 PO [133] [132]

Such differences in climate with the consequent differences in flora and fauna contributed to the variations in economy and culture. The high peaks of the cordilleras and the deep rivers were frontiers between the tribes, clearly separating them from one another—the *Moguex* P 101 131

7:Hernández de Alba E-5,1(no date) 1946 SC15 Paez SC15

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
131 of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,600 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisaica*); and large fish from the rivers.[4]

---

[127] [4] The scientific names of the plants were taken from Cortés, 1919. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

Pasto SC17

TRIBAL DIVISIONS

Captain Sebastián de Belalcázar was the first conquistador who went north from Quito and entered the Andean region of what is today Colombia. He passed through the territory of the Pasto and Popayán Rivers to reach the region of Neiva and beyond in 1535–36.

At the time of their discovery, the native peoples north of Ecuador were very numerous, but the chroniclers, for example Cieza de León, who crossed this region in 1545 and is its outstanding historian, gave their locations and designations in a very confused manner. The historians classified the aboriginal peoples either according to small villages or groups of houses, slight differences of dialects, or slight cultural variations, so that the true classifications are very difficult to make.

Modern ethnological studies and a critical interpretation of the chroniclers somewhat clarify the cultural panorama of these regions, however, and it is now possible to list the following tribal divisions which existed just before the Conquest [5] (map 7):

Pasto.—The *Pasto* (*Koaiker*, *Cuaiquer*, *Quayquer*, *Coaiquer*,[6] etc.) (Jijón y Caamaño, 1936–38), who had a uniform language and culture throughout their villages, were distributed from the town of Tuza between the Mira and San Juan Rivers northward throughout the mountains to the valley of the Patía River and toward the northeast to the southern boundary of the present Department of Cauca. Eastward, they extended to the country of the *Quillacinga*, which began at the Guáitara River (Cieza, 1880, ch. 33). In the west, they occupied the western portion of Nariño, but accurate information is lacking on some tribes, which like the *Abades*, *Masteles* (Juán López de Velasco *in* Guerra, 1942) and *Patía* of the lower Patía River, lived toward the Pacific Coast region. The Angasmayo River in *Pasto* territory was the limit of the conquest of the *Inca* Guaynacapa (Cieza, 1880, ch. 37). Ortíz locates this river southeast of Nariño but other authors identify it with the Mayo River farther to the north.

There was a large number of native groups or villages within this area. Among these Cieza mentions the *Ascual*, *Mallama*, *Túcurres*, (*Tulcan*), *Zapuys*, *Iles*, *Guaimatal*, *Funes*, *Chapal*, *Males*, *Piales*, *Pupiales*, *Turca*, some of which are south of the Colombia-Ecuador border, *Cumba*, and others, and adds that, "All these peoples and chiefs had and have the name of *Pastos*" (Cieza, 1932, ch. 33). Guerra gives other names of small groups (parcialidades).

Quillacinga.—East and southeast of the *Pasto* lived the *Quillacinga*. Padre Velasco (1841–44, vol. 3) identified them with the *Pasto*, but cultural and linguistic differences between these tribes leave no doubt that Cieza de León (1880, ch. 33), was correct in considering them a

[5] Castelvi, 1894; Guerra, 1942; Jijón y Caamaño, 1940–41; Ortiz, 1937 d, 1938 c; and Otero, 1938, 1939.

[6] The *Coaiquer* are sometimes treated as a subgroup of the *Pasto*. (See this volume, pp. 927–936, 957–968.)

hHernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Pasto SC17

Po 101 361 distinct people. The present city of Pasto was founded in *Quillacinga* territory in the valley of Atris, which was occupied by several small groups: the *Isancales*, *Paguanes*, *Zacuampues*, *Chorros* (Velasco, 1841–44, 2:153), *Mocondino*, *Bejendino*, *Buyzaco*, *Guajanzangua*, *Mocozonduque*, *Guacuanquer*, and *Macazamata* (Cieza, 1932, ch. 33). *Quillacinga* territory extended from the frontier of the *Pasto* on the west, i. e., the Guáitara River, eastward to the mountain ridges from which flow the Caquetá and Putumayo Rivers. Its northern and northeastern limits are the high páramo of the Letrero and the sources of the Cauca River. Recent investigations show that it extends south to the district of Puerres (Guerra, 1942). (See also Ortiz, this volume, p. 911.)

Po 101 **Popayanense.**—North of the *Quillacinga* in the province of the *Popayanense*, which is well delimited by the Cauca River valley and by the first spurs of the Cordillera Oriental and Cordillera Central, were numerous peoples who had the same general culture, although some of the first historians differentiate them. These tribes, which may Po collectively be called *Popayanense*, perhaps included the *Puracé*. The [622] many small groups so lacked political unity, however, that Cieza said "That there were no men among them who were feared," i. e., they P lacked chiefs.

101 **Coconuco, Moguex, and Páez.**—In the hills and small valleys of the eastern slopes of the Cordillera Central were groups of distinctive and strongly organized people. The *Coconuco*, the *Moguex* (*Guambía*), and the *Páez* lived on the eastern slope of the Cordillera, and the P *Guamza* (*Guamsa*), *Malausa*, *Polindara*, *Palace*, *Tembio*, *Colaza*, *Zotara*, and *Guachicone* on the western slope of the Cordillera (Cieza, [97] 1932, ch. 32). Linguistically and culturally,[7] these tribes were very homogeneous. There were three important subgroups: (1) the *Coconuco*, *Cotara* (*Zotara*), and *Colaza;* (2) the *Moguex* (*Guambía*), *Totoró*, and *Polindara;* (3) the *Páez*, with groups on both slopes of the Cordillera Central. (See also Lehmann, this volume, p. 969.)

Andaquí and neighboring tribes.—The *Andaquí* lived in the mountains from the source of the Magdalena River to near Timaná and south to the high ridges which form the watershed between the upper P Magdalena River and the Fragua and upper Caquetá Rivers (Velasco [172] in Ternaux Compans, 1840, pp. 167–68; Pérez, 1862). This zone contains the important archeological remains known as San Agustín (Arroyo, 1907). The territory of the *Yalcón* (*Cambi*) was between the headwaters of the Río de la Plata and the Magdalena River (Simón, 1882–92, vol. 4, Noticia cuarta, ch. iii). The *Timaná* were found by the conquistadors to the southeast of this region, between the Guarapas and Magdalena Rivers centering around Timaná (Velasco, in Ternaux Compans, 1840, 3:26). The *Páez* lived to the north of the

[7] Jijón y Caamaño, 1936–38, 2:186; Otero, 1938.

7:Hernández de Alba E-5,6 (no date) 1946 SC15 Paez SC15

Yalcón and *Timaná* in an area delimited by the high crests of the Cordillera Central on the west, the snowcapped peak of Huila on the north, the valley of the Páez River on the east, and the region of the Río de la Plata and the Moscopán River on the South (Cieza, 1932, ch. 32), although some groups lived in the valley of the Cauca River bordering the Cordillera on the west (Otero, 1939). |4|

Pijao.—The *Pijao* (*Pinao*) were the strongest and most warlike neighbors of the *Páez*. They inhabited the eastern slopes of the Cordillera Central from La Plata to Ibagué, which included the region of the Río de la Plata and the left side of the Páez River, but extended to near Buga on the western slope of the Cordillera Central. The Páez River formed their frontier with the *Páez* and was their southwestern limit. They extended northward to the territory of the *Quimbaya*, and one of their divisions lived in the Cauca Valley, near Buga. (Simón, 1882–92, vol. 3, ch. 53, p. 330; vol. 4, ch. 24, p. 156; Ordoñez de Ceballos, 1938, chap. 28.) The *Pijao* were bordered on the north by the *Quimbaya* and *Panche*, on the east by the peoples occupying the hot valley of the Magdalena River, on the south by the tribes of the upper Putumayo and Caquetá Rivers, and on the west by the peoples already mentioned and by the *Gorrón* and *Lile*, near the Pacific Ocean. Near them in the Huila Plains were the *Tama*.

LANGUAGES

P 197 175 Ever since the chroniclers wrote of the Conquest, the problem of the native languages in this part of Colombia has been extremely complicated. One writer affirmed, "It is certain that there are more languages differing from another than there are leagues in the whole province" (Jijón y Caamaño, 1936–38, 2: 179–82). According to the "Relación de los Sucesos de Pedrarias Dávila," by Governor Andagoya, the Spaniards ascending the Cauca Valley found within 2 leagues east of Cali:

> There are other peoples with a different language from that of the *Lili*. In the ten leagues of the road toward Popayán there is another people of another language . . . toward the other cordillera of the mountains in the eastern part . . . the language of Popayán extends some ten leagues toward the south. And from the top of the mountains toward the valley of Timaná is another different language and ten leagues beyond [from Popayán] from one cordillera to the other there are other different languages all the way to Quito. [Cuervo, 1894, 2:112.]

P 197 But modern linguistic studies in this region have classified the languages spoken at the time of the Conquest as follows:

Chibchan family
- *Chibcha-Aruaco* group
  - *Aruaco* subgroup
    - *Andaquí* (Castellví, 1934)
- *Talamanca-Barbacoa* group
  - *Páez* subgroup
    - *Páez, Paniquitá, Quilla*
    - *Totoró, Polindara, Moguex* (*Guambia*), *Coconuco*, and *Guanaca*
    - *Pijao, Panche, Quimbaya, Paniágora**
- *Cochean* (*Kamsá*) family
  - *Quillacinga* subgroup (Castellví)
- *Tucanoan* family
  - *Pasto* subgroup†

Po [197]

*Castellví, 1934; *Jijón y Caamaño*, 1936; and Otero, 1938.
†Rivet cited by Guerra. Jijón y Caamaño classifies the *Pasto* or *Cosiquer* language in the *Talamanca-Barbacoa* group of the *Chibchan* family.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Pasto SC17

P 197 Po [197]

All the region of Popayán and of the *Páez* in the Cordillera Central thus spoke closely related and very similar dialects which were often grouped. For example, the dialects of the *Pijao*, *Páez*, *Timaná*, and *Yalcón* were classed together. In the south, an area of the *Pasto* language extended to Ecuador. Between the *Pasto* and *Páez*, bordering also on the *Pijao*, the native peoples spoke *Quillacinga* and *Andaquí*.

Of all these languages, there survive today only *Páez*, which is spoken in Tierradentro, and its dialect, *Paniquitá*, on the western slope of the Cordillera Central in Toribío, Caldono, Jambaló, and in parts of Silvia and Totoró. *Moguex* and the related *Totoró* and *Polindara* are spoken in Silvia and in the regions of Totoró and Polindara, according to Otero. *Andaquí* is spoken by only a few scattered groups surviving in the lower region of the Caquetá River.

HISTORY

P 175 648

After Don Sebastián de Belalcázar founded the City of Quito, he sent Diego de Tapia on a voyage of exploration toward the north in 1535 (Otero d'Costa, 1935 a). This expedition discovered the new lands of the Cordillera as far as the large Quillacinga River, today the Carchi River. This river became the point of departure for important travels in the same year by Pedro de Añasco, and in 1536 by Belalcázar, who founded Cali and Popayán, both key points for future expeditions and discoveries. These were the first White contacts with the Andean tribes of southern Colombia. In 1538, Belalcázar undertook a second expedition from Quito, crossing the Cordillera through *Páez* territory and then passing among the *Pijao* Indians. Both tribes resisted him with their feeble arms. He continued toward the east until he met the expeditions of Jiménez de Quesada and Federman at Bogotá. With the foundation of outposts by Jiménez de Quesada in the lands called the New Kingdom of Granada, Añasco was sent back to found Timaná in the territory of the *Timaná* and *Yalcón*. This city was to be the base for communications between Perú, Quito, Popayán, and Santa Fé de Bogotá.

Po 175 648 [411]

The *Pasto* and *Quillacinga*, after a few encounters with the Spanish soldiers, in which they always suffered bloody defeats because of the weakness of their weapons (arrows, lances, wooden swords, and sometimes slings) and because the Spaniards used horses and hunting dogs, began to surrender. The inhabitants of the Valley of Popayán, who were poor warriors, also ceased to struggle. These tribes had previously suffered the *Inca* invasion, which had extended north to the Angasmayo River, which washed their lands. But the *Páez*, *Moguex*, *Andaquí*, and *Pijao*, thanks to the rugged mountains in their territory and to their more bellicose character and better organization, presented a serious obstacle to the Spaniards' ideal route, which had been drawn

P 175 648

[75 648 [266] [727] by Belalcázar between the Kingdom of Quito and Bogotá. Few Spaniards wished to adventure through these wild lands where the Indians were strong and ambushed them. The founders of Timaná were constantly attacked, and the frightening legend of cannibalism began to spread. It was said that Spaniards were the preferred victims, and that the Indians considered the flesh of enemies the finest morsels in their great victory feasts. The soldiers collected some gold in the so-called penetrations (entradas) of the country—attacks really made to kill the natives, to destroy their crops, and to burn their houses. All of this made the Indians resist more strongly, but it was necessary to clear the road to Santa Fé, and the war of extermination went on without respite. Belalcázar himself returned to *Páez* territory and was defeated at the rocky cliff of Talagá in 1541, only to return with more than 200 soldiers, of whom 100 had horses, and spread blood and fire among the Indian villages. But the Indians made reprisals. They assailed Timaná and killed its mayor, after putting out his eyes and leading him through the market places with a cord passed through his face. This act of vengeance was to satisfy Gaitana, a valiant warlike Indian woman who had formed various Indian alliances against the Spaniards because they burned her son. In 1543, the *Pijao* destroyed the town of Los Angeles, recently founded in the Neiva Valley. They continually attacked the area surrounding Ibagué, but many of them were defeated and killed in 1556 in the plains of Chaparral by Francisco de Trejo's troops. Both Spaniards and Indians were stubborn in their struggles, the Indians being unwilling to make peace as long as they were being killed and their crops destroyed.

The struggle was rekindled in 1562 when Captain Domingo Lozano, having requested the privilege of conquering the Indians, organized an army and entered *Páez* territory. He founded the town of San Vicente de Páez near Huila Mountain in order to ensure Spanish domination of the heart of the country. But the Indians ambushed his soldiers and gradually killed off the cavalry, the Spaniards' strongest troops. Eventually, they destroyed San Vicente and again controlled their own rugged lands. The *Pijao*, meanwhile, fought to the death. They destroyed Villa Vieja or Neiva in 1569 and, allied with the *Páez*, took San Sebastián de la Plata in 1577, killing all its inhabitants and burning the houses. They finally put an end to and avenged the Spaniards' exploitation of a silver mine which had been discovered in *Moscopan* and *Yalcón* territory in 1551.

Fleeing Spanish pressure which extended from Timaná toward the heart of the Andes, the *Andaquí*, exhausted by the wars, followed the high hills to the east, and began in 1564 to descend toward the Caquetá River.

?:Hernández de Alba E-5,4(no date) 1946 SC15 Paez SC15

The King of Spain, receiving word of the troubles in this region, ordered Don Juan de Borja, his Governor at Santa Fé, to carry out the "pacification of the province," meaning the extermination of its inhabitants. The decisive war started in Chaparral in 1605 and ended in 1608 when a Spanish witness wrote of this territory, where the *Páez* had remained free for so many years, that the provinces "were so desolated that the troops could not find Indians to fight, houses to plunder, or roots or grain to eat, and, if some Indian remained, instead of daring to plant boldly, he sowed four handfuls of grain here, two more there in the shadows and cover of the trees . . . they went about harrassed, thin, and emaciated until life was ended, for the soldiers saw corpses of people dead of hunger or sickness at every step" (Simón, 1882–92, Septima Noticia, ch. 49, vol. 5, pp. 314–15). A document in the ecclesiastical archives of Páez, dated July 17, 1638, states that in the lands adjoining the *Páez* there lived a *Pijao* Indian named Ambrosio, who had said that Captain Andrés de Zúñiga could now well enjoy this country because there were *Pijao* but not *Páez* Indians in it and because the *Pijao* saw themselves doomed and the land had no proprietor. 175 648

The *Guanaca*, who, because their chief was an enemy of the *Páez* chief, had allied themselves with the Spaniards in order to attack the *Páez*, were the first to surrender and join a Spanish colony. The first road between Popayán and Santa Fé passed through their territory, where the Spaniards established a hostelry for traders. This district was given to the Jesuits, who established the Church of Guanacas and, later, a town of the same name. But the Indians felt another lethal force of European origin—disease which they were unable to withstand. In 1790, a smallpox epidemic so reduced them that they abandoned their town, and the few survivors retired to the narrow mesa, where the modern town of Inza is situated. Here they gradually disappeared altogether. [797] [177] [164] [731]

The *Páez* continued to resist and defend their lands against Spanish missionization, so that the road to Guanaca never became secure. The extinction of the *Pijao*, the lack of important quantities of gold in the area, and the difficulty of the terrain, which was such that the Chronicler Pedro de Aguado said "to travel through *Páez* territory is to go up and down," caused the Spaniards to abandon interest in dominating these peoples. They were content to establish the Guanacas mission, and, a little later, the parish of Tálaga. Subsequently, as these Indians, who were isolated in their high mountains, were allowed to retain their customs and beliefs without interference, they did not protest when small groups of Whites peacefully occupied certain places in their lands. 175 648 797

Thus began the true Colonial Period for those tribes which survived the wars of the Conquest. The encomienda system was inaugurated, 175 648

?:Hernández de Alba E-5,+(no date) 1948 SC15 Paez SC15
Pasto SC17

P 175 648 in which a Spaniard held a territory occupied by Indians. The natives, under a chief who was protected by the White authorities and P [652] who made contact between the master, or encomendero, and his sub- [651] jects, had to give a certain number of days' work and a specified P tribute in products of the lands, animals, gold, or manufactures. The [177] encomiendas made no effort to Hispanicize the Indians, but continued to loot and massacre them. The Indians, reduced to utter misery, gave up all their artistic and industrial activities, and devoted the greater part of their time to the service of the master or to seeking products to pay the obligatory tribute. To remedy this situation, the Spanish Crown decreed the native "parcialidad," giving surviving P groups reservations and prohibiting their employment in transporting [623] men and goods over the highways. This reform was never entirely carried out, however, and the Indians, in spite of having their own government, the cabildo or Indian council, continued in servitude P or debt slavery.

[621] The native Indian government consisted generally of a governor, [631] a first mayor (alcalde mayor), a second mayor (alcalde segundo), a trustee (sindico or fiscal), and constables (alguaciles), the last a kind of police who transmitted to the people the orders which the Whites gave through the governors or mayors, and who carried out penalties P of imprisonment, of placing in stocks, and whipping, which the P 175 first Spaniards introduced into the punishment of the natives. At the 648 same time, the Christianization of the Indians began. It succeeded 797 in an imperfect way, however, for the Indian attended Masses, ar- 438 ranged and participated in processions, and did not miss the solemn 273 ceremonies a single Sunday largely because on the same day he brought his own products to the pueblo for sale, bought salt or meat which he P needed, and devoted himself to drinking chicha, the traditional drink 175 which he had always taken on religious or social occasions.

648 The Indians of Nariño, descendants of the *Pasto*, lost their language Po and many of their customs during the Colonial Period, although they continued to live as natives on their reservations, which daily became [463] smaller because of the encroachments by the neighboring Whites or [333] Mestizos. They became farmers with small landholdings and, occasionally, masons in the cities. The *Moguez* and *Pdez*, however, P 175 retained their language and the greater part of their customs. Some 648 of them, especially the men who had to deal with the Whites, learned a little Spanish, and they continued throughout the Colonial Period P to defend their lands and their traditions. To religious practices in- [191] troduced by the missionaries, they added such elements as the offer P of food to the souls of the dead. They added to the Colonial council (cabildo) the office of captain, an official who, unlike the rest of the [622] council, was not responsible to civilian authorities but had life tenure, sometimes a hereditary position, and more authority within the group.

?:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Pasto SC17

P 175 648
P [161]

The captain was, therefore, like the aboriginal hereditary cacique, the chief of each aboriginal group.

The decrease of the native population was accelerated until, in the Province of Popayán, according to "Descripción del Reyno de Santa Fé de Bogotá," by Francisco Silvestre (1927), there were in 1789 only 64,463 inhabitants—3,603 families of Whites, 6,022 of Indians, 4,793 of freemen (Negroes), and 3,247 slaves (Negroes), who worked in the mines and haciendas and replaced the Indians, who were disappearing. When the revolution against Spain began, the various groups of Indians in this region behaved very differently, each according to the disposition previously shown. The *Pasto* followed the Spanish troops, forming a royalist unit that was difficult to conquer, whereas the *Páez* took the part of the Republic and were led by the celebrated Indian Chief, Gregorio Calambás, who was shot by Warleta, and thus became a martyr of Colombian Independence.

Po [175] [648]

With the consolidation of the Republic, the laws of Colombia established reservations for the Indians, but the neglect and exploitation characteristic of the Colonial Period continued, and there were only a few missions. There has not been contemplated until now any economic, cultural, or sanitary betterment of these natives. Most of them finally have disappeared, vanquished by diseases, by economic want, which the new necessities created and contact with civilization aggravated, and by the shrinkage of their reservation lands through the ambition of those who made it a policy to break up the native communities through official subdivision of their lands.

THE CULTURE OF THE PASTO, COAIQUER, QUILLACINGA, AND POPAYANENSE

The *Pasto* or *Coaiquer*, the *Quillacinga*, and the *Popayanense* formed a culturally homogeneous group at the time of the Conquest and later experienced very similar acculturation.

SUBSISTENCE ACTIVITIES

Farming.—Subsistence was based on intensive horticulture. Each family had its own small fields and grew potatoes and other tubers, xíquimas, a grain which Cieza calls cebada, quinio or quinoa, and maize, of which there was little in *Pasto* territory but much elsewhere.

A simple, pointed stick is used today in Nariño for planting.

The historians do not mention communal work in agriculture, but probably it was carried out in the form of labor loans (minga) between individuals, as today in Nariño and Cauca. The beneficiary of help in harvesting crops has to give each helper a basketful of the produce, a form of compensation called "chindé." He is also obligated to give similar help to the others. This communal labor is more solemn when the Indians work and plant the lands of the

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

Today the special industry is the extraction of oil from the "mil pesos" palm. Hunting and war are the principal occupations of the men. They involve very important rites conducted by the captain or cacique, assisted by a deputy or second in command of a group. These rites are performed as follows (Albis, 1934):

In preparing for an attack on the *Wiloto*, the deputy captain takes his men to hunt animals, while the women prepare chicha and "caguana." Upon their return, the hunters adorn themselves, dance, and drink chicha, and then go to their houses. The following day they catch "conga" ants, whose bite causes fever, and place them in a palm-leaf mat so that their heads stick out. The captain's wife picks up the mat and lets the ants bite her husband on his legs to make him strong, on his breast to make him brave, on his face to prevent him from sleeping, and on the chin to make him silent. The captains then make the ants bite the back and legs of the women, so that young *Wiloto* prisoners will be diligent helpers. Afterward the captains each eat three ants mixed with water. If they have pains, the hunt will be successful. After this, the captain, carrying a turtle shell, speaks to the women, admonishing and scolding them, and then retires to a separate house, where he holds a conference with his men, forecasting the probable outcome of the fight and exhorting the men to avenge those who may be killed by the *Wiloto*. That night they hold ritual dances and mimic animals. Two balsa-wood images are placed at the door of the main building and two Indians must pierce them with their spears while running. These two Indians are whipped after their feat by all those present. At dawn they plant a pole in the middle of the yard or square, pour water around it, and dance there until they have made mud, and then spend the day gathering food for the departing warriors. In order to be strong and to capture many young *Wiloto*, each warrior has to place an arm in a bag full of "yuco" ants until it is thoroughly bitten. Upon departing, the captain gives his wife a knotted hemp cord (a kind of quipu). She unties a knot every night and thus knows when to expect him back and on what day the fight will take place. The day of the battle she remains in the hut where the hunters stayed the first day; otherwise they will be unable to capture any *Wiloto* children. With other women she waits there 3 days for the men to return and then, after leaving there an "araraita," a palm branch, the women return to their homes to prepare more chicha. If the expedition is successful, the men return with great demonstrations of joy, but if it fails, they hit everything and bemoan their luck. The captain's principal wife upbraids her husband. After a community meal, all go home and resume their occupations.

Menstruating women throughout this area remain in a special house weaving hemp. They may have no visitors. At the end of the period, they bathe and return to their dwellings.

At childbirth, a woman must remain at home 3 months, while her husband stays in his hammock, refraining from labor and dieting lest his child die. After 3 months the parents anoint themselves and child with "jagua" fruit and resume normal life.

THE CULTURE OF THE MOGUEX AND PÁEZ

Although the *Moguex* and *Páez* have distinct territories and different dialects, their ethnology may be described together because of the great similarity of their economy with its agricultural basis, their social organization, and their general culture.

7:Hernández de Alba E-54(no date) 1948 SC15 Paez SC15
Moguex

SUBSISTENCE ACTIVITIES

241 **Farming.**—The main subsistence of these tribes was and still is based on the cultivation of potatoes, which grow in great quantities in the higher portions of the territory known as Tierradentro, and maize, which is acclimated to the temperate and cold zones. There are three varieties of maize: sweet, soft, and hard. Additional crops were and are yuca or manioc, sweet potatoes, auyamas, ullucos, purutos, frijoles, arracacha, and various other vegetables, and a variety of fruits, including bananas, guayavas, avocados, papayas, [178] pineapples, and passion fruit. Today the *Páez* and *Moguex* are be- [433] ginning to grow wheat, coffee, which is an important item in their [273] economy, and sugarcane, from which is made a coarse sugar and molasses for their fermented drink, guarapo.

241 The men and women of each family generally cultivate the family 476 plot, but for large-scale maize or coffee planting, and for cultivation of the lands of the Church or saint, they work communally, and have meetings called "mingas." Communal work for any particular [782] individual is truly loaned labor, with obligatory recompense. The [273] beneficiary must feed his helpers, generally sacrificing a pig and preparing great quantities of chicha for the libations and nocturnal dances after the work. All adults must participate in working the Church lands, but each brings his own food.

241 Implements of cultivation are the digging stick, or macana, for 412 making holes for planting, machetes and axes for destroying vege- 407 tation, and picks and shovels for removing earth, except where re- 492 placed by plows pulled by animal traction.

Domesticated animals.—Domesticated animals include chickens, 231 turkeys, some pigs, dogs, and a few horses and cows. All but the [177] turkeys are of European origin. These animals are rarely sold or killed for food, except for feast days, magical ceremonies, meetings, [438] and visits of relatives, friends or distinguished White men. But [251] sometimes the Indians buy meat in the weekly market and hang it over the hearth, where it is preserved by the smoke.

A custom which has persisted since the beginning of the Colonial 574 Period is that of always giving a guest the "camarico" or "cariño" 431 (affection), a present varying from an egg to a chicken, together with some potatoes, vegetables, and coffee beans.

262 Formerly, meat was obtained from wild rather than domesticated 136 animals—boars (zaínos), guaras, guatines, birds, and guinea pigs, the 231 last being true domesticated animals kept in some numbers in the native houses.

252 **Food preparation.**—Food was cooked in pottery ollas, but metal and [415] enamel ware is now often used. The *Páez* make "mute," a soup of [177] boiled maize, cabbage, squash, and potatoes, and "cocido," a soup

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

of manioc, arracacha, potatoes, beans, sweet maize, and pieces of meat. Meat is sometimes roasted. Maize, the staple, is made into tortillas or soup, or is roasted on the ear. Coffee, much of which is consumed, is roasted in a pottery vessel, ground, and made into an infusion sweetened with coarse sugar. 252 [272]

Kitchen utensils include pottery ollas and vessels, and a footless elliptical stone metate with a central concavity, which lies directly on the floor or is supported on sticks driven in the soil. Meat is kept smoked over the fireplace, and other food is stored on shelves of cane woven into the roof sticks or in hanging hemp bags or gourds. Each gourd has a broad half-gourd suspended above it, open side down, so that a rat descending from above slides off the gourd onto the floor. 415 251 [353] [825]

The first daily meal is taken at daybreak and consists of "mute." There is no noonday meal, but the evening repast resembles breakfast. Between meals, the Indians chew coca two or three times to sustain their strength and allay hunger. For refreshment and stimulation, they drink guarapo, carrying it to work in gourds. 264 [276] [273]

They cultivate pepper (ají) for a condiment, but purchase salt in the weekly market. The latter is so scarce that instead of mixing it with food they pass a lump around, each person licking it. Before the Conquest, three salt deposits were exploited in this territory, the most important being that near the modern municipality of Belalcázar or Páez. Here the local chief had the salt water boiled down to obtain blocks of salt, which he traded with other tribes for diverse products, or with which he bought help in his wars against the neighboring *Pijao*. Sometimes he permitted other *Páez* to exploit the deposit. Near the present-day Indian center of Ricaurte on the Ullucos River is another salt works that was much used in ancient times, but today is abandoned. Another source of salt was at Huila, where, during the Conquest, the Indians ambushed the Spaniards who sought it, and killed their horses. 317 263 [244] [439] [648]

HOUSES AND VILLAGES

Each *Páez* and *Moguex* family has its own house, located on a point or flat place in the mountains some distance from its neighbors. The aboriginal house seems to have been rectangular, which still is the only form. It was so lightly constructed of cane and sticks with thatched roof that the Spanish soldiers during the foundation of San Vicente de Páez "carried some Indian houses to their barracks because they were small and suited to it" (Aguado, 1931, vol. 3, book 16, ch. 9). Some distance from the dwelling, they always built a small woman's house. Under Spanish influence, some houses were divided into rooms, and built more solidly of "bahareque" construction, i. e., walls consisting of two faces of sticks with mud and rocks between (pl. 185). 342 [361] 177 342

7:Hernández de Alba E-5,W(no date) 1946 SC15 Paez SC15
Moguex

342 [177] Some had wooden doors and windows, and were built with nails and wires, though most were still made with vegetable materials.

The modern *Moguex* house has two rooms. The main one, entered through a small door, serves as storeroom for goods to be sold, reception hall, dancing place, and a room in which to keep watch over the dead. The other is a pantry for provisions and drinks; here are kept kitchen utensils. In the center is the fireplace and around it dried cowhides or platform beds made of horizontal poles tied to stakes driven in the ground. One's neighbors aid him to build his house, transporting heavy timbers over light rollers and singing rhythmically as they heave together. If the owner of a new house is a man of means, he pays for a feast of benediction or consecration carried out with a Catholic priest, a godfather, and a godmother.

[354] [352] [476] [461] [554] [778]

The *Páez* does all this and in addition puts some pieces of silver money under his house to assure his good fortune. In the main house he places the metate on stakes, and in a secondary house, the press for extracting wax from laurel, one or more troughs or hollowed trunks, and large jars for chicha and guarapo. From the roof frame hang bags, or "mochilas," of netted hemp for belongings. There is also a bamboo candlestick, the wooden feast drum, sometimes a tiple or small guitar, and, nailed to the wall, a spindle. Outside, the loom stands against the wall Beyond it is the sugarcane mill, which is made of a section of tree trunk with a hole above a projection on which the cane is pressed by hand with a rod which crosses the hole. Some mills consist of two or three wooden cylinders rotated by animal power.

352 [415] [353] [354] [524] [283] 404 286 249

In each maize field is a small, temporary house and a high platform where a watchman frightens the parrots and parakeets with periodic cries and motions.

243 342

Each *Páez* group today has its communally built pueblo, with "bahareque" buildings grouped around a rectangular plaza: a church, with its arched portico and small tower in imitation of Colonial architecture, a house for the priest, a school, and two or three large houses for meetings and fiestas, where they dance, sing, and sleep during fiesta days. But ordinarily, the people remain at their distant houses and fields, and do not live at the pueblo, the only permanent inhabitants of which are a few Whites and Mestizos.

177 361

ENGINEERING WORKS

The Spaniards found bridges which they described as "weak and flexible bridges of bamboo" and "bridges of vines." A territory so broken and crossed with so many rivers and canyons naturally stimulated the *Páez* in the construction of bridges and the laying out of roads. Today they make four kinds of bridges: (1) A simple vine or cable stretched across the river; (2) a kind of wooden stairs placed

491 499

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

obliquely across the rocks; (3) an arched bridge of bamboo floored 491
with spaced sticks, equipped with a hand rail on each side, and sup- 499
ported with stones, bamboo braces, and vines (pl. 185, *bottom, right*);
and (4) a covered bridge with thatched roof, built of heavy logs sup-
ported by sticks and stones and floored with boards—a marvel of
calculated strength, which, like the third type, is made entirely of
vegetable materials yet can support loaded animals. To build an 499
arched bridge, two groups of Indians approach opposite sides of the
river and each plants a long, strong pole sloping out over the stream.
The chief of each group then climbs out his pole until his weight bends
it down to meet that from the opposite side, whereupon, clinging with
one hand, they lash the ends together with creepers. This constitutes the main element of the bridge which is then completed by the other Indians.

TRANSPORTATION

Some Indians now have horses and use them for traveling and for 489
transporting large burdens, but, in general, transportation is by foot, 492
objects being carried on the back or in netted sacks hung by a strap, 492
especially when visiting markets. A woman carries not only a heavy
load but her small child suspended on her back in a blue woolen
blanket held with a broad woven band, or "chumbe." Peculiarly
Andean is the custom that the man travels on horseback while the
woman follows on foot with a large burden.

DRESS AND ORNAMENTS

The *Moguex* and *Páez* formerly wore only small cotton blankets 291
(mantas), although most of them "went about naked even on the cold
mountains" (Rodríguez, 1684, bk. 2, ch. 1). They painted their 302
bodies with bixa, using, according to Del Castillo i Orozco, stamps
to apply the color. The paint also protected them against the strong [757]
sunlight and insects. They went barefoot, as all the natives in [825]
Colombia. According to one chronicler, their hair was "shorn" [291]
(Robledo, in Jijón y Caamaño, 1936–38). They wore breast and
nose ornaments of pure gold or a gold and copper alloy, and necklaces 301
of small figures, beads, small stones, and snails.

Soon after the beginning of the Conquest, the Indians commenced 291
to use wide, long shirts of a very crude weave and hats which were so 177
closely woven that they would hold water. The latter, which the
Spaniards called "tacillas de Páez" (Páez bowls), are still in use.
The Spanish encomenderos required that the Indians working on
their haciendas near Popayán be dressed. This was the origin of the
characteristic garment worn today, which combines the old small
blanket (manta) with European dress. *Moguex* men wear short linen
pants, and a blue flannel sash which covers them to their knees.

7:Hernández de Alba E-5 (no date) 1948 SC15 Paez SC15
Moguex

291 177 They protect the upper part of the body with a black poncho tied at the belt, or a shirt with a poncho over it. Women wear two skirts, the under skirt being black and the outer one white or gray. Both are held at the waist by a sash woven with figures. They cover their busts with two blankets which are fastened at the shoulders with [293] wood, copper, or silver pins. Both sexes carry pouches woven of [415] hemp which, like these Indians, are called "guambías." Their straw hats are dish-shaped, with small brims hardly distinguishable from the shallow crowns. The hats, always too large for their heads, are held on by two cords, one passing under the chin and the other behind the neck, around the hair. The women also wear woolen shawls, silver earrings, rings, and heavy necklaces of glass, shells, and silver. For festivals they prefer hats with the brim divided into two parts, front and back. These are lined with dark-blue cloth, with red and yellow on the brim.

When working, the *Páez* wear short linen pants or long woolen ones and a large woolen poncho tied at the waist. When going to market, they wear an additional poncho and a woolen pouch for coca. When [292] traveling on the páramos, they wear a knit hemp cloak covered with large, thin leaves of *Gynerium saccharoides*, which protects them from the rain. The women wear a narrow woven cotton band, passed between the legs and tied at the waist, one, two, or more black or gray woolen skirts gathered at the waist and held by a woven sash, [482] and two small mantas, like those of the *Moguex*. In traveling, a [854] shawl is worn for covering and to carry the child. They adorn themselves also with strings or necklaces of glass or other beads, or white chaquiras, and sometimes are added silver pendants of Colonial origin. [292] During festivals the women wear brightly colored blouses of imported fabrics and the men linen shirts.

MANUFACTURES

285 **Basketry.**—The *Páez* and *Moguex* make a few twilled baskets of cane strips and two kinds of hats. The hats are woven with the coiled or sewed technique. The spiraled warp in one kind consists of a thin bundle of rush or straw, and in the other of a braid made with seven [462] strands. The latter is more common. Both are made by men who [292] prepare materials while resting at home or traveling on the road. Weaving also includes waterproof capes made by tying sheaves of [824] leaves or straw to a net of hemp cord.

Cordage.—Rope making is practiced extensively. Hemp (fique) 283 is the raw material, and is made into cords for fishing nets, bird trap nets, bags or pouches for carrying belongings and products, foundation nets for the leaf rain capes, and cordage for various other purposes. The sisal or hemp (fique) leaves are scraped over the sharp edge of a board to loosen the fibers, which are then washed, dried, and twisted

with the right hand over the naked thigh. Two strands are similarly twisted together until the desired thickness is obtained. 283

Gourds.—Gourds are still widely used. They are picked when ripe, cleaned out, and dried. With small openings, they serve as containers for beverages and powdered lime. Some are made into bowls and others are cut up to make spoons. Today these objects are undecorated, but formerly in Timaná they were painted with a resin varnish very similar to that used in Pasto. (See p. 930.) Before the Spanish domination, gourds were also used as frames over which were stretched the prepared skin of the heads of their enemies killed in war. 415 824 [314] [727]

Metallurgy.—The metallurgy of these Indians was the same as that practiced throughout most of Colombia. The metals were gold, copper, and an alloy of the two (tumbaga). It is recorded that the Indians "worked gold," but the processes are not described. Specimens found recently in the territory, however, show molding, casting, and hammering. Metal objects included nose ornaments, parrot-shaped breastplates, necklaces with small animal figures, and some anthropomorphic idols. Gold occurs in this territory, particularly on the upper Páez or the Suin River. 325 [301] [532] [135]

Ceramics.—These tribes made and still make coiled pottery. Modern vessel forms include large jars for storing beverages and poorly shaped, crudely decorated containers for preparing and serving food. There is no individual specialization in this task, women making pots for their own family and not for trade. 323

Stone and wooden artifacts.—The native Indians made stone axes of a simple design, but stonework disappeared during the time of colonization, when the Indians could obtain manufactured iron weapons and utensils such as machetes, axes, hoes, shovels, etc. The manufacture of wooden objects—weaving, cooking, and farming implements and weapons—was furthered by the use of metal tools, and now is well developed, as exemplified by the trapiche (cane mill), a true machine made of wood. 324 182 179 322 249 179

Weaving.—Weaving, little practiced before the Conquest, developed with the post-Contact need for wearing more clothes and with the introduction of sheep, whose wool was used in addition to cotton. Weaving was and is exclusively the work of women (pl. 186). They prepare fine, uniform yarn with a common spindle, which they handle as they walk along the road (pl. 187, *top*). The loom is vertical, made of two horizontal rods fastened to two uprights. The warp runs vertically with a continuous thread. The horizontal weft is pressed down with a wooden sword. They also weave hemp bands on the loom. Woolen blankets are woven in natural colors, but some sashes have bright colors made of imported wool or of home-dyed wool. For red, they use one of the Rubiaceae (*Relbunium hypocarpium*), and for 286 [177] [462] [386]

?:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Moguex

286 [386] blue, the fruit of the jagua palm (kii), probably *Genipa* sp. A woven fabric is made black by burying it for several days with clay and branches of a *Phyllanthus* which they call "sal."

[531] They make woolen bags by hand, using a kind of crochet technique without needles, and decorate them with rectangular and rhomboid figures. Some bags are made of hemp (fique), in which case the stitches are larger and the article has greater elasticity.

411 **Weapons.**—For weapons, the *Páez* used large, thick lances of black [824] or chonta palm, 20 to 25 palms or more long, clubs or macanas, stones [171] thrown with slings, large rocks rolled down from heights, spear throwers like those used by the *Chibcha*, and shields of jaguar, puma, or [177] bear skin. The *Páez* quickly adopted iron arms from the Spaniards, and in the last wars of the Conquest they used steel swords and knives. [172] In a recently discovered grave were copper bells, a golden breastplate, shield bars of tumbaga, a Spanish dagger, and a curved knife of the Arabian or north African type used by the conquistadors.

[223] Today the *Páez* use the club or macana, ordinary guns, machetes, knives, and, for killing birds, the blowgun.

354 **Fire making.**—Fires are generally made today with flint and steel, [372] but some Indians use modern matches. For both heating and cook- [177] ing, the fire is made on the ground in the main house, surrounded by stones which help support the pots. It is covered at night, and almost never goes out.

354 Illumination is provided not only by the fire but by candles made of 824 wax from the wax palm and from seeds of a wild laurel. The latter are cooked and pressed in a bag so that the wax drips into a half [388] calabash or pot to form a semispherical lump. It is melted to make candles with cotton wicks. The *Páez* use these themselves and also sell them, for they are superior to candles made of animal tallow. A cruder means of lighting consists of transfixing a large number of "higuerilla" seeds on a long, thin bamboo splinter. When the splinter is laid horizontally and lighted, the first seed burns strongly, after which the flame passes from seed to seed, lasting some 15 minutes and throwing a fair light a few feet around.

COMMERCE

438 Each week a market is held in the municipio or in some of the small 439 native villages (pls. 190, 191). The Indians sell vegetables, tortillas, eggs, chickens, and laurel wax, and buy salt, brown sugar, and espe- [435] cially lime (mambe) to be chewed with coca. Each product has a price in Colombian money, whether by quantity or weight. The unit [804] of weight is called an "egg," and more or less equals the weight of a [273] chicken egg. After his few customary transactions, paid for either in cash or in terms, in which the future coffee crop is mortgaged to the

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

civilized tradesman, the Indian turns to drinking guarapo or chicha and becomes drunk. Often a heated discussion, always spoken in Spanish and not in *Páez*, leads to insults and perhaps to blows and injuries. A man's wife usually maneuvers him from the village and, if he falls asleep on the road, she sits by him warding off dangers.

SOCIAL AND POLITICAL ORGANIZATION

Political structure.—The *Moguex*, *Páez*, *Guanaca*, *Timaná*, and *Yalcón*, despite their great similarity in language and culture, formed separate groups at the time of the Conquest. Each was divided into several communities (parcialidades), of which those of the *Páez* were the most numerous. The *Guanaca* were split between two principal caciques, one of whom, Anabeima, joined the Spaniards against the *Páez* of Avirama. The other cacique was Esmisa, Anabeima's brother-in-law. Each *Páez* community had its own chief, but the communities were grouped into three great divisions. One consisted of the *Páez*, *Tálaga*, *Simurga*, and *Taravira*, on the shores of the Páez River. The chiefs of three of these groups were brothers; that of the fourth was their sister, whose name was Taravira. Another group was headed by Suin, and his son, Esmisa. In the third group, Avirama was joined by other neighboring chiefs of less importance.

Each community (cacicado) consisted of several polygynous families under a male chief (pl. 185, *top, left*). Each family had its own house, located some distance from its neighbor's. All the members of a community gathered for general work, and all or several of the communities united for war, either against the *Pijao*, their feared neighbors, or against the Spaniards.

The place of a cacique's residence was a sort of focal point and meeting place, and today most of such places are Indian villages with the same names, such as Suin, Tálaga, Avirama, Togoima (formerly Toboima), etc. The present *Páez* Indian reservation of Tierradentro is divided politically into two municipios—Páez or Belalcázar and Inzá—with 22 communities, each governed by its own councils (cabildos, of Colonial origin) and by the municipal authorities. The cabildo is elected annually. The Indians, however, are jealous defenders of their traditions, and insist on a captain and síndico, each with life tenure, to act as their own leaders and as true representatives of the cacique. Their duties are moral and fiscal and carry a certain divine authority, as they are inaugurated in the local church. The cabildo, on the other hand, has only administrative and police powers; it divides the land, orders work to be done, and executes the municipal orders. The members of a cabildo hold office for 1 year and receive no remuneration. They are elected on the first of December by all the male adults, or "macaneros," that is, the Indians who participate in the communal work according to a

7:Hernández de Alba E-5/(no date) 1946 SC15 Paez SC15
Moguex

631 list presented by a council composed of former governors, the cap-
666 tain, and the síndico. The meeting may object to the list, but gen-
[651] erally accepts it. On the following January 1, the cabildo-elect must appear at the office of the municipal mayor to receive the staffs, their insignia of office, and to assume their duties and responsibilities. The offices are: Governor and alternate, commissioner, two mayors (alcaldes), two constables (alguaciles), and three prosecutors (fiscales), one of whom is a young man assigned to learn the ways of government. The mayors, constables, and prosecutors are something like bosses or policemen, and execute orders issued by the Governor or by the captain or the municipal authorities to a community through the Governor.

423 **Property.**—The Indians today do not own any real property in the usual sense. The land assigned to an entire community is allotted
[651] to each adult for his use when he becomes a macanero, that is, capable
[554] of giving one day's work each year for the collective planting for the benefit of the saint and as many days as may be required by the cabildo for the repair of roads, bridges, etc., or for work in the village. The right to the use of the land may pass to the heirs, wife and children, in the absence of which it reverts to the community or the cabildo.

422 The house was formerly typical personal or movable property, which could be easily abandoned, dismantled, or destroyed. The same holds today for fragile cane dwellings. There are few houses so solidly built that they constitute real or immovable property.
[764] Other personal property, such as utensils, clothes, weapons, adorn-
[428] ments, and jewels, was formerly buried with the owner. These things and livestock, planted fields, and crops are now inherited by the
[177] members of the deceased's family. In general, Colombian law is
[692] being implanted by the judges and municipal mayors, although the cabildo judges some minor offenses and punishes the offenders by
[623] whipping, imprisonment, or stocks (cepo), a form of torment retained
[681] from Colonial times.

Although the Indians' communities have in most cases titles of
691 limits of their lands dating from Colonial times, there are still liti-
648 gations on boundaries. An interesting case is the struggle of the Indians to dislodge a settlement of Negroes from the old salt works
[423] in Ambostá, where they were abandoned many years ago by a rich Popayán family who took them there to work the mines. The female Indian chief (cacica) of this territory allowed the Negroes to live on a hill, called "the hill of the fifteen Negroes." The Negroes are not organized under a cabildo, but have a chief who represents them. They all contribute to a special religious feast in the municipio, and provide means to continue the suit for the possession of the hill against the Indians.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Moguex

The *Páez* family is completely under the authority of the father, whose wife and children obey him implicitly and may be punished by him. Nonetheless, the father must obtain his wife's permission to sell or exchange goods she produced, such as bags for coca, sashes, etc. Precise etiquette is maintained between fathers and godfathers (compadres). Whenever a man meets his father or his godfather, he must kneel to receive his blessing. The fathers and godfathers must embrace whenever they meet. In one case a young man was the godfather of his father's new son by another wife, so that in meeting his father the young man had to kneel bareheaded, and then stand with his hat on and embrace his father as a godparent. The father did not call him "son" but "compadre." 594 [425] 608 576

LIFE CYCLE

Childbirth.—A very old custom among these peoples is that at childbirth the mother should retire to a special house or go to the mountains. If she was delivered in the home, she and the baby were bathed, and then the family left the hut and built a new one elsewhere. 844

Today both the *Moguex* and *Páez* have a special hut for childbirth. The day after the child is born, the mother is placed in a hole up to her head and bathed with an infusion of leaves of "moquita," after which she washes the clothes and objects worn during delivery. She then returns to work and lives again at home. In the special hut, a *Páez* woman is assisted in childbirth by another woman, or, as a last resort, by her husband, who must bathe immediately afterward. Two days later, the mother circumcises her son or destroys the virginity of her daughter. Four or five days after the birth and after the first bath, the father takes the child to the sacristan of the community for baptism with water, and then returns it to the mother. The afterbirth must be buried or burned at the place of the birth. About 15 days later, the mother takes a bath and washes her child and her clothes and objects, and returns home. Later, the child is baptized with oil in the church by the priest with the godparents present. This is an occasion for general dancing and drunkenness. 846 [757] [345] [844] [304] [851] [844] [851] [608]

Puberty.—At puberty a girl was formerly taken by her parents to a hill, placed in a hole, and bathed. Each Indian then took her a gift. Pittier de Fábrega (1907) notes that at a later period a girl's puberty was celebrated with the "Itsa-kó" dance, the girl, bathed with chicha, remaining in the hole. Today, a woman must retire during her menstrual periods to a special hut, where other women bring her food and build a fire to warm her. Afterward, she bathes, washes her clothes and objects, and then returns home. 881 [431] [535] 841 343

Men, until recently, underwent a sort of initiation, in which they were taken to the shores of the sacred lagoon of Juan Tama or to the 881

7tHernández de Alba E-5/(no date) 1948 SC15 Paez SC15
Moguex

881 heights of Cuetando, where they built a hut and planted a miniature field as proof of their masculine aptitude.

797 **Education.**—Today the Indians are educated principally by their
871 parents in the customs and tasks pertaining to each sex. Some boys
[868] and a few girls are sent to the few missionary schools, where they are given religious instruction and are taught Spanish, arithmetic, geography, the history of Colombia, and modern embroidery or light
[562] basketwork. The *Páez* are reluctant to send their daughters to the schools because they feel that women should keep the traditions of
[177] their people. The missionary schools strive to change the native language and the cultural traditions which have given the Indian community social cohesion.

595 **Marriage.**[11]—Formerly polygyny was prevalent, but now Catholi-
[77] cism has imposed monogamy. The Indians continue, however, to
583 practice trial marriage (amaño). A marriage is arranged as follows:

584 The bride is selected by the young man's parents or by himself. His parents and two witnesses or godparents then visit her house to request her for the groom. They also serve as advisors to the young woman, in case she disapproves the marriage. The visitors carry half-filled bottles of rum (aguardiente) and some special garments for the girl. The young man's father offers the girl's father a half-bottle, acceptance of which means, as usual among the *Páez*, that the second party is well disposed toward the proposal and the negotiations may proceed. If the girl's mother agrees, the boy's mother presents her a half-bottle of liquor. The godfather or witness gives another half-bottle to the girl's father and the
583 godmother gives one to the mother. The visitors now leave, taking the girl, who then begins a year of trial marriage, during which the young man seeks proof that the girl is able to bear children, is active, cooks well, can weave, and
585 can cultivate the land. After the trial period, the man may return the girl to her parents or they marry in the Catholic Church, holding a feast which, like all
527 such celebrations, is called a "cuido." The couple and their parents and godparents are accompanied by an orchestra (chirimía) to the house where the feast is to be held. Here the bride puts on a modern dress, a ribbon on her hair, necklaces, and earrings, while the groom is with his godfather. As the guests arrive, chicha is distributed frequently, music is played, and then there is a feast of thick soup, generally with chicken, cooked yuca, arracacha, and roast or baked meat. In the afternoon, after more music and chicha drinking, the "refresco," really a banquet or social communion, is served. Six bottles of wine made from cane molasses, cinnamon, and cloves, and cake are given to the bride, groom, godmother,
[782] and godfather, who give some to everyone present. A prayer, led by the head of
[775] the house, then asks the souls of the dead to bless the marriage and give permission to dance. First, the godfather dances with the bride, then the godmother with the groom, after which everyone dances. The feast lasts 5 days, depending on the wealth of the family. Chicha is served and accepted with the phrase, "May God pay you, compadrito, for accompanying us. Accompany us more."

764 **Death.**—At a death, the family formerly buried the deceased inside the house with his possessions, and abandoned it. Some communities, however, preferred to cremate the body or dry it over the fire. The

[114] [727]

[11] I thank my wife and companion, Helena Ospina de Hernández, for her research in 1936 on matrimonial matters.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

The graves were "large and deep," and chiefs were buried with some of their wives and with food and chicha (Cieza, 1932, ch. 32). 764 766

In Colonial times, according to Del Castillo, the *Páez* removed a dying person from his hut but burned the house if anyone died in it. They had given up cremation, however, and buried in the earth, building a fence around the grave. Today, they cover the corpse with a white shroud and place it in the middle of the house with candles and flowers. Here it is watched over one night by relatives and friends, and then buried in a cemetery, where each relative tosses some earth into the grave saying, "Go with God." The mourners then bathe in the river without disrobing, and in the evening hold a banquet with chicha, sancocho (vegetable stew), meat, and tortillas. For 9 days a cross, a container of water, and a candle must be kept on the deceased's bed, the water being kept there so that the soul may drink. The relatives pray every night. A month after the death, a shaman purifies the house. The relatives and friends kill a pig, cut it lengthwise in two halves, one for the shaman, the other for the ceremonial banquet. The shaman sweeps the house floor with the pig's legs and some special branches, which are later buried. He chews coca, says some unintelligible words, and spits leaves on the house walls. The residents and guests then enter the house for the final proof of purification. The shaman, standing in the center of the house, gives a dog half a tortilla. If the dog does not die, he divides the other half among those present. He does the same with a piece of cooked meat, and if the dog still does not die, he blows chicha in all directions in the hut, and then divides what remains with those present. The hut and food are then declared clean The food is then eaten and much chicha drunk.

178 764 [763] 765 764 765 756 783

The modern burial customs of the *Moguex* differ somewhat from those of the *Páez*. The former dance for 9 days before and after burying a dead child. Because of the special ceremonies for adults, young Indians gather and prepare wood to be burned at their own funerals. When an adult dies, relatives and friends bring wood, food, and money to the house, and work for his family, who pray and weep for 3 days over the body. On the fourth day, they carry the body in a procession to the cemetery. Upon passing a house or inn where the deceased was accustomed to take chicha, they stop and drink. The burial procedure is like that of the *Páez*. Back at the house, they purify the objects used by the deceased over the fire, and leave his clothes and the hide he used as a bed at the river 9 days, after which they may be used. Meanwhile, the guests remain with the deceased's family, helping them. On the 9th day, they extinguish all lights and go to the nearest hill to mourn, while a shaman remains in the house to catch the soul of the deceased. He chews coca, spits it in all directions, and beats around with sticks to make the soul come out. Then he lights

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Moguex

756 787 775 784 the fire and turns on the lights, and everyone returns to examine a layer of fine ashes placed beforehand at the door. If the ashes shows the footprints of an angel, they believe that the soul is saved, but if the footprints are those of a bird, they believe that the soul is condemned to hell. In some cases they ascertain the fate of the soul by the kind of bird prints.

WARFARE

726 The *Páez* and *Moguex* were particularly warlike. Their attacks were staged in the morning, accompanied by yells and the sound of trumpets, horns, sea shells, and drums. They were generally armed [411] with great spears or pikes, spear throwers, and slings. When fighting, they would first hurl javelins with their spear throwers, then use their slings, the missiles for which they carried in a pouch, and finally pick up their spears or pikes for man-to-man struggle. They also formed closed squadrons, men with clubs alternating with spearmen. The former would step forward to wield their clubs, and then draw back to their positions for protection. Their best defense was on high ridges, from which they rolled large stones on their enemies. They perfected these natural defenses by cutting or camouflaging paths on which they prepared ambushes. They built trenches or pitfalls, which caused the attacking Spaniards much trouble.

628 The principal enemies of these peoples were the *Pijao* and the Span- [648] ish soldiers. The *Páez* remember the *Pijao* well, and call the stone [532] statues in their territory "portraits of Pijaos," and the painted tombs, [764] "houses of Pijaos." They are afraid to see the statues or visit the tombs.

To insult an enemy killed in war, they cut off his penis and placed it 727 on the road.

266 Some historians ascribe cannibalism to the *Páez* and the *Moguex*, which seems to have no basis in fact. They kept trophy heads and stuffed the skins of their enemies, but did not eat their foe. There are, however, numerous historical references which state that in the wars [175] against the Spaniards, the *Páez* left the bodies of dead enemies for the [648] *Pijao* to eat, and that they cremated their own dead or dried them [764] over a slow fire, which Friar Pedro Simón (1882–92, ch. 23) mistook for a means for preserving the flesh so that it could be eaten later.

[114] As war trophies, they kept enemy heads, which they preserved with resins, and the skins of their entire bodies, which they filled with ashes 727 (Aguado, 1931, vol. 3, book 16, ch. 3). They even preserved the [314] heads of the Spaniards' horses. They carried these trophies to wars, meetings, and feasts.

Moguex

ESTHETIC AND RECREATIONAL ACTIVITIES

Art.—Arts included sculpture, small, cast gold idols and figures, and painting. Their best known art objects are those decorated with lacquer or resin, found in the Timaná region, and the stylized representations of beings which women still weave on cotton sashes. 532 [3/4]

Music.—These tribes formerly played on trumpets, drums, large sea shells called "fotutos," cornets, and cane flutes. These instruments were played not only to accompany dances but also when going into battle. The sea shell trumpet was used during the Colonial Period but has been abandoned. The drums are made of hollowed trunks, and the drumheads of animal skins The flutes are made of cane, and vary in length and thickness. They are capable of such variation in tonality that the musical combination is pleasant to the ear. 534

A kind of orchestra, known as a "chirimía," today consists of a large drum to beat time, a small drum to play a rhythmic roll, and flutes to carry the tune. Each community has its orchestra, but every Indian is a flute player and loves to play his instrument when traveling over the hills. The music is nearly always sad and has absorbed some of the regional Colombian popular airs. It has few variations, and changes to a solemn tone on funerals. The *Páez* love their own music so much that, instead of using the Gregorian music of the Catholic rites, they have imposed their own music on the religious ceremonies. Thus, at Mass, they play the special music used when an animal is to be killed and eaten. Other music accompanies the bursting of skyrockets and firecrackers. There is music for the Elevation, for the Creed, and for the Requiem Mass. Certain musical pieces are called simply "bambuco" (local airs), though they have some variations. 533 [177]

Native songs narrated the triumphs and feats in war, but none have been collected, and all are now forgotten. Today the Indians sing only some modern Colombian airs or religious songs. [177]

Dances.—Dances were very important to these Indians, being held for war, for religious ceremonies, for weddings, and for sexual initiation. During Colonial times, Del Castillo i Orozco reported the following dances; most of which, as their names show, apparently had not suffered any change under Spanish influence: 535

Gueyo coo, a dance to ask for money.
Vito coo, a dance of the rod or stick.
Xeita coo, a dance of sea shells or of the armadillo. It was accompanied by two sea shells of different tones.
Onsa coo, a dance of rats.
Imegnuei coo, a dance of the sparrow hawk.
Ech covi coo, a dance of the phantom's flutes.
Bel covi coo, a dance for great festivities.
Quimb coo, a dance of the drum.
Itsa bó, added by Pittier de Fábrega, a dance of girls' puberty.

7:Hernández de Alba E-5/(no date) 1946 SC15 Paez SC15
Moguex

535 There is much dancing today. The sexes perform in couples or separately. Among the *Moguex*, some of the expert dancers are paid to dance with all couples in a sort of "bambuco." Dancing is always a part of *Páez* ceremonies for the death of children, baptismals, weddings, saint holidays, and meetings for collective work (mingas) held in the evening when people return from their plantations.

Dancing, as other social events, is subject to a special ceremony [585] or etiquette, strongly connected with religious beliefs. For example, in the wedding celebration, a prayer is first said in which the souls of [608] the dead are asked permission to dance, or "scrape the floor," as they call dancing. Only the godparents and the bride and groom may [527] dance at the beginning.

The *Páez* do not masquerade, but the *Moguex* always masquerade 526 during the period of carnival preceding Holy Week.

[524] **Games.**—Games do not hold an important place among these peoples. The children amuse themselves by imitating the activities [857] of their elders. The only game recorded is simulated warfare, performed as a part of a rite in honor of the dead after a communal [769] feast. Two teams under their captains or caciques attacked and shot arrows at each other. Even if some contestants were killed or wounded, no one bore a grudge.

276 **Narcotics.**—The *Páez* and the *Moguex* chewed coca leaves mixed in the mouth with lime powder. Coca chewing is widespread among [756] men, but very little practiced by women. It is used especially by the shaman when he is practicing. In Colonial times the use of coca [177] spread to the rural population of Mestizos and Whites in Nariño, Cauca, and Huila.

273 **Alcoholic beverages.**—These Indians formerly made chicha of maize, but today they ferment it with sugarcane molasses. They also have [178] fermented sugarcane juice (guarapo), and a sort of rum (aguardiente). The latter is distilled clandestinely in their huts from guarapo and certain herbs fermented together in earthenware crocks. The Indians drink guarapo every day, but restrict the use of chicha and the stronger guarapo and aguardiente to market days, religious feast days, burials, weddings, mingas or meetings for work, and witchcraft [462] ceremonies. Guarapo and chicha are made by women, who sometimes chew the maize to increase its fermentation. They are stored in large, hollowed tree trunks and in large earthen jars, which are kept in a special place in the hut. There is never a lack of these beverages for home use and for welcoming an unexpected visitor.

RELIGION

175 The early Spaniards had little understanding of the religion of these 771 people. They reported that the Indians had but few idols and no temples or places of worship. Castillo mentions that they wor-

7tHernández de Alba E-5,4 (no date) 1948 SC15 Paez SC15
Moguex

Castillo mentions that they wor-
shiped the sun, in whose honor they met and danced in places called "Itaqui-finó," i. e., the place where the sun revealed its mysteries; and that they venerated a kind of culture hero called Guequiau. It was he who instructed shamans (mohanes). 175 771 776 [756]

This hero has a counterpart in the religious legend of Juan Tama, the Son of the Star. One day when the Morning Star shone very brightly, some Indians found a child in a gorge—ever since called the Gorge of the Star. This was Juan Tama. They picked him up and entrusted him to a woman to nurse, but he nursed so much that her milk dried up. He was given to another woman, whom he also made very weak. They then said that he could not be nursed by a woman, and gave him food. After he grew up, he married the female chief of Huila, Doña María Mendiguagua, and became chief of all the Indians. He instructed people and explained to them how to keep the land for themselves and not mix with White people. He pronounced them invincible and summoned a chief from Pitayó, called Calambás, whom he appointed his manager. Calambás rebelled,[13] but was defeated by Juan Tama, who pardoned him on account of his bravery, and conferred on him and his heirs the right to rule the *Páez* in Bitoncó. As death approached, Juan Tama went to the lake on the páramo of Moras and sank into the waters. He had come out of this place and returned to it, leaving no heirs.[14] 773 776

In the neighborhood of Bitoncó there is a rock with what appears to be human footprints. When the Indians pass it, they uncover their heads and say, "The Holy One came this way." Another remnant of the cult of Juan Tama is the custom that each member of the council spends one week at the shores of the lake before the end of his term to render an account to Juan Tama of his actions in office. Likewise, newly elected officers, as soon as they receive their staffs or insignia of authority, spend a week at the lake. They toss silver coins into it, wash their staffs, and pray for strength to rule well. This ceremony, performed with the greatest secrecy, is called the "curing of the staffs." Recently, however, the Indians have stopped "curing" their staffs in the lake, for they say that Juan Tama is angry, and whenever they approach the lake, it rains and storms badly. 776 823 [623] [621] [631] [821]

In the Guanacas section there was another sacred lagoon, called Tumbachí, which was recently drained because a snake that lived there attracted girls and kept them for a whole year, and then returned them when they were about to become mothers.

These tribes believed that the soul comes back to life. 775

Witchcraft was strongly developed among these Indians, who still believe in most of its practices, in spite of the catechization forced upon them by the missionaries. 754 177

[13] During the War of Independence, as well as in subsequent revolutions, the Indians of the family named Calambás distinguished themselves as warriors. [669]

[14] We are indebted to Father David González for this legend, told to him by an old Indian in Lame. [114]

7:Hernández de Alba E-5/(no date) 1948 SC15 Paez SC15
Moguex

754 upon them by the missionaries. The power to do evil is not limited to the witches, but is possessed by anyone who entertains a momentary feeling of envy, and to women, who may not walk over a stick or a cord [841] stretched on the ground. Contact with women during their men- [846] struation or during the days following childbirth causes the "mokokoy" [753] to persecute the men and make them ill.

825 Animals possess the power to prognosticate evil. A document 787 written in 1730 [14] tells that an Indian killed a rooster because he had 763 crowed before daybreak, and said, "Rooster, you are forecasting my death, but I shall kill you first." They believe the same thing when certain birds sing. For example, the call of an owl at midnight brings death to someone. And certain small birds called "ulchik" and others called "bich" warn whomever hears their singing that he will meet with disaster. The box turtle follows people warning them that they are going to die.

825 Del Castillo says that the Indians will not strike white dogs, so that 775 they will not be bitten by them when they enter the future life.

The belief in spirits (kl'iumb) is quite general. Among these 776 spirits is the "pitsuala" which persecutes people, makes them ill, and 753 even kills them. The rainbow, or "Etskituns," causes a rash to break [821] out all over the body of anyone who ventures out while the rainbow shines, and the drizzle that generally accompanies the rainbow will harm a person who gets wet in it if he does not bathe immediately. When the rainbow appears, they stay indoors, and blow or spit tobacco in its direction.

776 They believe that the lagoon on the snowcapped peak, Huila, is [823] charmed, and that if they try to go near it wind and hail storms rise. [821] Supernatural evil forces are supposed to be present during many social activities, such as dancing, meetings, funerals, house building, [491] and bridge construction. When a bridge is built, two Indians beat [331] the water constantly to drive away evil spirits. When traveling on the mountains they place small stones or coins on top of some large [484] natural rock to assure a successful trip and to avoid angering the [782] spirit of the mountain.

[825] Sometimes these spiritual forces assume a bodily form, as in the [753] case of the fireflies, which bring diseases or which may be wrapped in [754] Santa María leaves and placed in the path of an intended victim. Most feared are the ghosts of the dead, which consequently are the 782 most propitiated. The *Moguex* and the *Páez* ask their permission to 769 dance, and honor them in a special rite, which blends old beliefs with [775] new religious concepts. Thus, offerings are made to the souls during the first days of November, or whenever the curate is able to visit the Indian village. Each person offers some products from his farm, in-

[14] Statement made by Javier de Oroseo y Cuellar in a lawsuit by the Indians of Tobolma for the possession of land. From the ecclesiastical files of Belalcázar, or Páez.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

cluding vegetables, cornbread, eggs, and chicha, which he piles on the church floor, together with wax candles—one if the person does not have anyone in particular to remember, two for each deceased relative. When Mass begins, they throw flowers on the presbytery, as an offering to the souls of children. Afterward, they go to the cemetery in procession, and the souls of the departed come down to the empty church to take the food. Later, the people sell whatever the souls left or failed to eat. Everyone buys something, the captain's assistant collecting the money, while the constables of the council, raising their whips and shouting insults, prevent frauds in the general disorder. The money from the sale is given to the priest to pay him for the work in the rites. As each person leaves the church, he kisses a crucifix held by the sacristan at the church door. They kiss it once for each dead person whom they wish to remember and pay a cent each time. In addition to offering food at the church, the *Moguex* cover their tables at home with food, which is also intended for the souls of their dead, and at the end of 2 or 3 days they eat the food, saying that they are eating what the souls have left.

769 782 [624] [625]

Christmas and Holy Week are both great occasions for the Indians, who celebrate them with music and some of their ancient rites. Even though a priest may not be present, they conduct the rites in a manner that dates from Colonial days, when a *Páez* Indian named Undachí tried to combine Catholicism with their own religion. The man claimed to be able to see God, who used to come among the Indians and talk to him in his own *Páez* language. The new religion included a chapel, Mass, and candle and flower offerings.

796 771 177 [781]

Sickness.—Sickness was always thought to be caused by witchcraft or by someone's will. The evil force entered the body and made it impure; it had to be expelled or "cleansed," lest death ensue. If a delirious person told who was killing him, the individual mentioned was thought guilty; or, if, after a death, the face of the deceased should appear to somebody, the person was considered responsible. These beliefs are still in force today, and the Indians avoid the causes of sickness, such as having sexual intercourse with a menstruating woman, exposing the body to bad weather while there is a rainbow, and neglecting to bathe after a burial or to purify a house where a death occurred.

753 754 [787] 753 178

To fight disease they still have shamans. *Moguex* shamans use tobacco, coca, plants known as yacuna and chundar, and rum in their practice. After remaining shut up in a dark room for a night, they either confess their inability to cure the sick person or proceed to administer the traditional medicines. Sickness is conceptualized as an animal, which enters the stomach, head, or other part of the body. In former times, the shaman fasted with the sick person, abstaining from salt and fats and taking only coca and chicha. Today, he requires that only the patient fast.

756 [753] [785]

7:Hernández de Alba F 5,4(no date) 1948 SC15 Paez SC15
Moguex

requires that only the patient fast. He spits coca juice on various parts of the sick man's body, and at night performs a ritual to "take out the dirt," i. e., the cause of the disease. In the course of his treatment, the shaman goes out to a hill to gather fireflies. He places them in a vessel and buries them, as they are supposed to be the harmful evil spirits sent by the person who caused the sickness. They are thought to turn against the person who sent them, whom the shaman identifies by his shadow, which he detects in the darkness of the night.

THE CULTURE OF THE PIJAO

Despite 48 expeditions prior to 1611 against the *Pijao*, one of the most fearsome and savage people in Colombia, the Spaniards learned little about their culture. Friar Pedro Simón collected the most details regarding their usages and customs.

SUBSISTENCE ACTIVITIES

Pijao food was very similar to that of the peoples previously described. The most common cultivated plants were maize, yuca, arracacha, beans, potatoes, and other roots and tubers; and many fruits, such as avocados (cura), papayas, plums, pineapples, and uchuva (a kind of cherry). The Indians got many fish from the rivers, especially the Magdalena River, and on the mountains they hunted pumas and "ocumares," a sort of anteater. They cultivated vegetables, but not fruit trees, in fields which the Spaniards always sought to destroy and burn.

HABITATIONS

Dwellings were spacious and high. They had walls of wood and mud (bahareque) whitewashed with clay or white earth, and were provided with furnishings, such as wooden chairs. The conquerors found the chief, Carlacá or Calarcá, sitting in state in one of those chairs in his house. Some people lived temporarily under the shelter of trees and palms, perhaps only while farming.

DRESS AND ORNAMENTS

The *Pijao* generally went entirely naked, hence the name "Pinao" (men of large sex) given by the Spaniards, a word which soon became "Pijao." They painted their bodies with the substance obtained from the seeds of the arnotto tree, and some groups wore small cotton blankets (mantas). Men and women protected their heads and long hair with hats, not unlike bonnets, woven of palm leaves. They adorned their bodies with many feathers in a manner which the Spaniards described as "quaint and odd liveries made of feathers in various and pleasant colors," and wore some gold ornaments. They

[pp. 957 ff Not processed]

cabildo--a community council
captain--a community chief
egg--a unit of weight which is more or less equivalent to a chicken's egg
macanero--the name given to one who is required to give one day's work each year for the collective planting for the benefit of the saint and as many days as may be required by the cabildo for repair of roads, bridges, etc., or for general work in the village
mingas--meetings for collective work
mohanes--shamans

600 Bases for the Study of the Social Organization of the Páez

By
Segundo Bernal Villa.

/Page 166 is blank./

124 /167/ The material for the study of the kinship system of
128 the Páez was collected in the month of May, 1953, thanks to the
[114] enthusiastic collaboration of Victoriano Piñakué, 18 years of age,
[115] bilingual, and a native of the parcialidad /a village and the lands
belonging to it/ of Calderas. With this material we made an
analysis of the kinship system, which we present below without
any major modifications. It was later discussed with several na-
tive men of the parcialidad of San Andrés, who found it to be
correct. At the end of May, 1954, we had the opportunity to
discuss it again in Mosoco with two male informants of the lo-
[197] cality. They found practically no phonological differences, in
spite of the fact that the Páez spoken in that parcialidad showed
some different nuances in relation to that spoken in the other
124 parcialidades. They made only one fundamental observation,
128 which we accepted, since we consider it to be convincing. It
601 refers to the terms used to designate the sons and daughters of the
brothers and sisters of EGO. According to Piñakué, they are
designated with the Spanish terms: sobrino and sobrina /nephew
and niece/. Jorge Mulcué (Mosqueño /a person from Mosoco/
58 years old) affirmed that they are designated with the words kué
or wásak (son and daughter) preceded by the possessive my (anji).

601 Men and women use the same terms for both the paternal
and the maternal line, with certain exceptions, subordinating the
real degree of kinship to the generation. The Páez system of
kinship terminology is, therefore, classificatory and bilateral.

/167 cont./

601 Seemingly there is no terminology for designating the older and younger brothers of the generation of EGO, although in practice this distinction stands out. EGO is obliged to greet older brothers and the older members of the community in general, and there also exists the obligation of being greeted by the younger brothers and, in general, by all the younger members of the community.

Among the adults of both sexes, married and with children, the use of teknonymous forms is general.

114 /168/ The only two studies of kinship systems made in Colombia are from the pen of Professor Gerardo Reichel-Dolmatoff working among the Iroka and the Kogi. That of the Iroka was [104] done with the collaboration of Alexander L. Clark. With the intention of facilitating subsequent comparative studies on the subject, we have adopted his system for presenting the materials, especially the abbreviations of the kinship terms in the Spanish language /the English equivalents for the abbreviations of the Spanish terms are given on p. 10 /.

127 Before finishing with this brief introduction, we wish to
128 place on record our sincere thanks to Señor Víctor Bedoya for his voluntary transcription of unpublished documents from the Archivo Nacional relating to the Páez, and to Professor Marcos Fulop for his valuable observations and opportune suggestions which brought much light to obscure sections of our work.

Analysis of Kinship Terms

601

Consanguineous Relatives

A--EGO's Generation:

a) Masculine EGO: Brothers and sons of uncles and aunts, paternal and maternal, are grouped in a single category and classified as brothers (iaktê).

b) Sisters and daughters of uncles and aunts, paternal and maternal, are grouped in a single category and classified as sisters (Pesh).

601
[104]

/168 cont./

Sh = the French ch (chaise); ch = the Spanish ch (chicha); j = the French j (jardin); h = the Spanish j (rojo).

c) Feminine EGO: sisters and daughters of uncles and aunts, paternal and maternal, are grouped in a single category and classified as sisters (iaktẽ).

d) Brothers and sons of uncles and aunts, paternal and maternal, are grouped in a single category and classified as brothers (jish).

B--First Ascendant Generation:

a) For father and mother, separate words are used (tãta and mãma). /Figs. 1 and 2 appear here./

/169/

b) The brothers and sisters of the father and the sons and daughters of the brothers and sisters of the father of the father (grandfather) are grouped in a single category and classified as uncles and aunts (ñuk and pẽsuts, respectively).

c) The brothers and sisters of the mother and the sons and daughters of the brothers and sisters of the mother of the mother (grandmother) are grouped in a single category and classified as uncles and aunts (kãhka and pẽñuk, respectively).

C--Second Ascendant Generation:

a) One term is used for both grandfathers (ishí) and one term for both grandmothers (penshí).

b) The brothers and sisters of the grandparents, for both the paternal and maternal lines, are grouped in a single category and classified as grandfathers and grandmothers (ishí, penshí).

D--Third Ascendant Generation:

a) The great-grandfathers are designated with one term (ishí wãla) and the great-grandmothers with another one (penshí wãla).

E--First Descendent Generation:

a) The sons, the daughters, and the sons and daughters of brothers and sisters, real or classificatory, for both the paternal and maternal lines, are grouped into a single category and designated as sons and daughters (kuẽ or jik and wãsak or nis, respectively).

60/

Fig. 2. Kinship, Feminine Ego.

601

Fig. 2. Kinship, Feminine Ego.

/169 cont./

60/ F--Second Descendent Generation:

a) Sons and daughters of sons and daughters (grandchildren), the same as sons and daughters of brothers and sisters, are grouped into a single category without distinction as to sex and are designated as grandchildren (nson).

G--Third Descendent Generation:

a) The children of sons and daughters of sons and daughters (great-grandchildren) are grouped without distinction as to sex into a single category and designated with the same term used for grandchildren (nson).

/170/

Additional Differences

1--Sex: Sex is distinguished terminologically in all generations except in the second and third descendent generation.

2--Age: For brothers and sisters, real and classificatory with respect to the relative age of EGO, it is not differentiated terminologically, although there is discrimination with regard to it in the patterns of conduct, since EGO greets those older than himself, but is himself greeted by those who are younger.

3--Kinship:

a) Masculine EGO: Brothers are not distinguished terminologically from the sons of uncles and aunts, paternal and maternal, and the term with which they are designated does not indicate to which line they belong.

Sisters are not distinguished from the daughters of uncles and aunts, paternal and maternal, and the term with which they are designated does not specify to which line they belong.

Feminine EGO: Brothers are not distinguished terminologically from the sons of uncles and aunts, paternal and maternal, and the term with which they are designated does not specify to which line they belong.

Sisters are not distinguished terminologically from the daughters of uncles and aunts, paternal and maternal, and the term with which they are designated does not specify the line to which they belong.

/170 cont./

601 b) First ascendant generation:

The father and his brothers are distinguished terminologically from the brothers of the mother; the latter and her sisters are distinguished terminologically from the sisters of the former.

c) Second ascendant generation: there are no kinship distinctions.

d) First descendent generation: no kinship distinctions are made between real or classificatory sons.

In-law Relatives

1--a) Masculine EGO: The brothers of the wife, the husbands of the sisters and the husbands of the daughters of the brothers and sisters of the parents are designated with one term (sum).

/171/

b) The sisters of the wife, the wives of the brothers, the wives of the brothers of the wife, and the wives of the sons of the brothers and sisters of the parents are designated with one term (sub).

c) One term is used to designate the husband of the sister of the wife. In general, the husbands of the sisters of the wife are designated among themselves with the same term that is used to designate among themselves the wives of the brothers of EGO (iakté).

d) Feminine EGO: The brothers of the husband, the husbands of the sisters, the husbands of the sisters of the husband, and the husbands of the daughters of the brothers and sisters of the parents are designated with one term (sub).

e) The sisters of the husband, the wives of the brothers, and the wives of the sons of the brothers and sisters of the parents are designated with one term (chinás).

/171 cont./

601 2--a) Father-in-law and mother-in-law are designated with separate terms (táta, máma).

b) The husbands of the daughters and the wives of the sons are designated with different terms (ndó, nukué miyú, respectively).

Application of Kinship Terms

A--Masculine Ego (see Fig. 1)

1 — *Táta* . . . . . p; p-d-co
2 — *Máma* . . . . m; m-d-co
3 — *Ishi* . . . . . p-d-p; p-d-m; hno-d-p-d-p; hno-d-p-d-m; hno-d-m-d-m; hno-d-m-d-p.
4 — *Pénshi* . . . . m-d-p; m-d-m; hna-d-p-d-p; hna-d-m-d-m; hna-d-m-d-p; hna-d-p-d-m.
5 — *Ishi wála* . . . p-d-p-d-p; p-d-m-d-m; p-d-m-d-p; p-d-p-d-m.
6 — *Pénshi wála* . m-d-p-d-p; m-d-m-d-p; m-d-p-d-m; m-d-m-d-m.
7 — *Ñuk* . . . . . hno-d-p; ho-d-hno-d-p-d-p; ho-d-hna-d-p-d-p; co-d-hna-d-p.
8 — *Káhka* . . . hno-d-m; ho-d-hno-d-m-d-m; ho-d-hna-d-m-d-m; co-d-hna-d-m.
9 — *Pésuts* . . . . hna-d-p; ha-d-hno-d-p-d-p; ha-d-hna-d-p-d-p; co-d-hno-d-p.
10 — *Péñuk* . . . . hna-d-m; ha-d-hno-d-m-d-m; ha-d-hna-d-m-d-m; co-d-hno-d-m.
11 — *Kuá* (o *jik*) . ho; ho-d-hno; ho-d-hna; ho-d-ho-d-hno-d-p; ho-d-ho-d-hna-d-p; ho-d-ha-d-hno-d-p; ho-d-ha-d-hna-d-p; ho-d-ho-d-hno-d-m; ho-d-ho-d-hna-d-m; ho-d-ha-d-hno-d-m; ho-d-ha-d-hna-d-m.
12 — *Wásak* (o *nis*) ha; ha-d-hno; ha-d-hna; ha-d-ho-d-hno-d-p; ha-d-ho-d-hno-d-p; ha-d-ha-d-hno-d-p; ha-d-ha-d hna-d-p; ha-d-ho-d-hno-d-m; ha-d-ho-d-hna-d-m; ha-d-ha-d-hno-d-m; ha-d-ha-d-hna-d-m;
13 — *Niyú* . . . . . co
14 — *Ndó* . . . . . co-d-ha
15 — *Nukué Miyú* . co-d-ho
16 — *Nson* . . . . . ho-d-ho; ha-d-ho; ho-d-ha; ha-d-ha; ho-d-ho-d-hna; ha-d-ho-d-hna; ha-d-ha-d-hna; ho-d-ha-d-hna; ho-d-ho-d-hno; ha-d-ho-d-hno; ho-d-ha-d-hno; ha-d-ha-d-hno.
17 — *Iakté* . . . . hno; ho-d-hno-d-p; ho-d-hna-d-p; ho-d-hno-d-m; ho-d-hna-d-m; co-d-hna-d-co.
18 — *Pesk* . . . . . hna; ha-d-hno-d-p; ha-d-hna-d-p; ha-d-hno-d-m; ha-d-hna-d-m.

601 19 — *Sum* . . . . . hno-d-co; co-do-hna; co-d-ha-d-hno-d-p; co-d-ha-d-hna-d-p; co-d-ha-d-hno-d-m; co-d-ha-d-hna-d-m.

20 — *Sub* . . . . . hna-d-co; co-d-hno-d-co; co-d-hno; co-d-ho-d-hno-d-p; co-d-ho-d-hna-d-p; co-d-ho-d-hno-d-m; co-d-ho-d-hna-d-m.

B--Feminine Ego (see Fig. 2)

1 — *Nemi* . . . . . co.

2 — *Iakti* . . . . . hna; ha-d-hno-d-p; ha-d-hna-d-p; ha-d-hno-d-m; ha-d-hna-d-m; co-d-hno-d-co.

3 — *Jish* . . . . . hno; ho-d-hno-d-p; ho-d-hna-d-p; ho-d-hno-d-m; ho-d-hna-d-m.

4 — *Sub* . . . . . hno-d-co; co-d-hna-d-co; co-d-hna; co-d-ha-d-hno-d-p; co-d-ha-d-hna-d-p; co-d-ha-d-hno-d-m; co-d-ha-d-hna-d-m.

5 — *Chinás* . . . . hna-d-co; co-d-hno; co-d-ho-d-hno-d-p; co-d-ho-d-hna-d-p; co-d-ho-d-hno-d-m; co-d-ho-d-hna-d-m.

The remaining kinship terms are common for masculine and feminine EGO.

Additional Observations

193 601 A father, in referring to his children of both sexes, places the possessive my (anji) in front of the kinship term, thus:

Anji kué (my son); anji jikuesh (my sons).
Anji wásak (my daughter); anji wasakuesh (my daughters).
Anji nson (my grandson); anji nsonmuesch (my grandsons).

A mother, in referring to her children of both sexes, places the possessive my (uk) in front of the kinship term, thus:

Uk kué (my son); uk kuémuesh (my sons).
Uk wásak (my daughter); uk wásakuesh (my daughters).
Uk nson (my grandson); uk nsonmuesch (my grandsons).

/175 cont./

193 In like manner, the children, in referring to their
601 parents, place in front the possessive anji or uk, according to whether the speakers are male or female, respectively.

Anjí téwesh (my parents, male speaker).
Uk tewesh (my parents, female speaker).
Anji ishiwesh (my grandparents).
Uk ishiwesh (my grandparents).

/176/

557 Non-relatives designate the grandparents: nesh wála.
576 When a speaker is younger than the person referred to, and
609 that person is a father, the correct way to speak of him is "the father of so-and-so," for example: if our informant Victoriano Piñakué (18 years old) wants to refer to Cerveleón Guagás (55 years old), he does not simply mention him by name, because this is a "grosería" /rudeness/, but he says "the father of Alfonso" (who is his eldest son), Pons nei, or Marcelo nei if he refers to the father of Marcelo. If the first-born is dead, he would say unás nei, father of the deceased. If the speaker is older than the person referred to, he may simply call him by name, but only when there is familiarity between the two; otherwise he must use the form previously mentioned. Thus, for example, Vicente Puche, who is older then Julián Piñakué (father of our informant), and since he is familiar with him, simply calls him Kilián; if he were not, he would say Vit nei (father of Victoriano). The identical form is followed for a woman older than the speaker, for example: Pons nihi (mother of Alfonso); Vit nihi (mother of Victoriano); Unás nihi (mother of the deceased).

If our informant Piñakué wishes to express this thought, "Cerveleón, I want something," he must say, "Father of Alfonso, I want something" (Pons nei tech yugüe guau wet). He may call him simply Cerveleón, but far away from him and when he is among people who are not relatives, but, he adds, this is not respectful. If Cerveleón heard this said, he would be annoyed.

/176 cont./

551 In referring to a grandfather, for example, Alfonso's,
609 one would say, Pons nei, if the speaker is well known to Alfonso; otherwise he would say Liõn nei (father of Cerveleõn), especially if he were in the presence of the grandfather.

In referring to the paternal uncle of Alfonso, one would say: Pons niñuk.

In referring to the maternal uncle of Alfonso, one would say: Pons nekãhka.

In referring to the paternal aunt of Alfonso, one would say: Pons nsuts.

In referring to the maternal aunt of Alfonso, one would say: Pons nihiñuk.

Relations between Relatives

603 As we have seen, general respect is owed to older persons
[188] by younger persons. Patterns of conduct between grandparents and grandchildren are governed by emotional factors, these being more or less affectionate, according to their mutual comportment. If the grandparents /177/ are kind to their grandchildren, they are given their love and consideration; if the contrary is the case, the attitude is one of cold respect. If the grandchildren say "what an old pig he is," the grandfather will not love them.

604 It is affirmed that with the paternal and maternal uncles
551 an identical pattern of conduct is observed. They cannot be designated solely by name. Thus, if Victoriano Piñakuẽ addresses his uncle by his name, the latter will reply that he has no manners, for he should show respect. "You must say uncle," he advises. His mother will scold him: "you are rude to speak like
604 that, say uncle." Greater respect is owed to Ego's older uncles than to uncles younger than he is. To the former he gives a blessing as he does to his parents. One should not mention "cosas feas" /ugly things/ in their presence or joke with them. If the uncle wishes to joke with the nephew, the latter should

/177 cont./

604 laugh, but nothing more. The uncle's wife is to be called aunt and she receives the nephew's blessing because she is older. He may not joke with her. Should she become a widow (echui), the nephew may not marry her because he must respect her. We have not been able to find any information that might make one suspect avuncular or amitate relations.

605 Cousins of the first degree, paternal and maternal, respect each other and avoid aggressive attitudes among themselves. Between male cousins presents of harvest produce may be made, which is not done with the female cousins, for they live with their respective husbands.

602 The parents of married couples call each other compadre (compale). There is no difference of comportment between them; the greeting is given by the first one to see his compadre.

606 Sexual relations between father-in-law and daughter-in-law are [835] prohibited, just as between son-in-law and mother-in-law. There are cases in which the parents-in-law do not care for their son-in-law, and also in which the parents-in-law do not care for their daughter-in-law.

607 Following the general standards of conduct, EGO shows more respect toward his older brothers-in-law than toward the younger ones. A man may not cohabit with the wife of his brother, which is characterized as "mucha grosería" /great rudeness/. The husband may cohabit with the sister of his wife, [587] but it is characterized as "muy feo" /very ugly/. The marriage of a man to the widow of his brother or that of a woman to the widower of her sister is also regarded as wrong. Relations between brothers-in-law are cordial; "they respect each other as though they belonged to the same family."

The brothers and sisters of the husband treat the brothers and sisters of the wife as compadres. They may marry each other.

[602] /178/ The sons of the brothers and sisters of the father are nothing to the sons of the brothers and sisters of the mother. They do not speak to each other.

/178 cont./

The Family

594 361 The social group par excellence in Páez culture is the nuclear family. Its importance stands out if we consider that 175 the Páez live dispersed within their geographic area. Both the 594 chroniclers and the parish priests who concerned themselves 361 with them emphasize this characteristic. In 1751 the priest of Tálaga, Licenciado Eugenio del Castillo y Orozco, wrote in his report to Don Juan Francisco de Eguizaval, Governor and Captain General of the city of Popayán and its provinces, "that by command of his Illustrious Lordship Don Francisco José de Figueredo y Victoria on the Council of His Majesty, currently Bishop of this Diocese, I reported to the Governor previous to your Lordship, stating that since the year 1719, when I was in these Provinces assisting as interpreter for the Very Excellent Don Pedro Felipe García, then inspector for them, and afterwards in 1731 the same for Dr. D. Francisco Gómez Constantino, I learned that the Indians of this province had been inclined to live dispersed at various distances and only sat together at drinking parties in the homes of their Caciques or Capataces when they came from some Riria (which they call Necue) or to celebrate the first menstruation of a woman (which they call Izacó) or for another cause for vain observance, and, after finishing, they again separate" (3). Multiple efforts were made by the

parish priests and by the governors of the colonial period to " "reducirlos a vida sociable" /reduce them to a social life/, but the "bárbara naturaleza" /barbarous nature/ of these natives made their efforts fruitless. And this cultural trait is still

/178 cont./

177 effectively maintained (4). In each house, scattered over the
797
361

4. Bernal Villa, S. "La fiesta de San Juan en Calderas Tierradentro /The fiesta of San Juan in Calderas, Tierradentro/," 1953, p. 182.

In each house, scattered over the
594 ruggedness of the prominences, live a pair of adults of the op-
[361] posite sex and their children. It is this nuclear family that cares for and maintains its old parents and attends to their burial when they die, that completes the religious festivals with traditional pomp and rigor (5), that defends its /179/ interests from the

5. Ibid., pp. 192 ff.

attacks of strangers, that in former times celebrated the "Riria" (which they call Necue) (6) or the first menstruation of a woman

6. In the Vocabulario Páez-Castellano /Spanish-Páez Vocabulary/ of del Castillo y Orozco there is the word Nécue, which has the following textual definition: desafío; pelea que es un desafío solemne tan antiguo como el jentilismo entre los páeces, de dos campeones cada uno con el común de su bando /competition, a fight that is a solemn competition as old as paganism among the Paez, of two champions, each one with the community of his faction/.

(which they call Izacó), and, finally, that manufactures its troughs for chicha ("another cause for vain observance," of which del Castillo y Orozco speaks) in order to carry out the "bebezones"
594 /drinking parties/ with all who seek to participate. It is this
574 nuclear family that "cuida" /takes care of/ relatives who arrive,
609 that offers hospitality to the native traveler and that shows cold silence toward the visitor from Western culture.

/179 cont./

594 Associated with the nuclear family primordially are the functions of reproduction, the rearing of children, and the education of the latter. On procreation depends also the importance of economic functions.

581 The orientation of the sexual instinct is a secondary end.
589 Indeed, Páez culture demands that every individual form a
[183] family, once he has acquired the capacity for procreation. In
[842] the parcialidad of Calderas they look upon children as a blessing
[775] from God, regarding celibates "como violadores de la cruz" /as violators of the cross/(marriage); celibacy is condemned, in the rationalization that the person who dies celibate goes to the
[754] Nevado del Huila, considered by them as hell. The celibacy of a woman is exceptional, and when it occurs they believe that she becomes a witch. They think something similar about some
581 widows. One woman of some fifty years of age says that
589 "marriage is fundamental and obligatory, for the grandfathers
775 used to say that to a woman who is not married the devil gives a black dog for a husband in hell" (7). Another woman declared

[825] 7. They regarded white dogs as companions and guides in the future life and fear that "if molested they will come out and bite them at the entrance to the future abode."

that at times she feels sorrow for the death of an unmarried daughter, "because the devil would give her a husband."

581 The culture considers it an obligation of parents to marry
183 off their daughters even if they are very young. Furthermore
[582] the young men aspire to "build their house, marry, produce children, have animals, coca in abundance, and sugar cane
[842] for their chicha" (8). The incentive to marry is to have children,

8. Bernal Villa, S. 1953, op. cit., p. 183.

for which purpose it is necessary to have assurance /180/ that the woman is fecund,

842 /180 cont./
583 the woman is fecund. For this the culture offers the institutional
581 device of "amaño," by which the man lives with the woman for a
183 time before legalizing the marriage. And we are given clear
175 and precise information about this by Licenciado Eugenio del
595 Castillo y Orozco and his brother, Licentiado Isidro del Castillo
583 y Hrozco /sic/, in their respective reports which they gave to the Governor and Captain General mentioned above: "that they followed the evil custom of living in intimate relations for a long time with the woman whom they were to marry, and if after the marriage they had no offspring they would leave her and seek another woman who might be fecund and whom they thought they might marry if they were not married to their own wives (as Manuel Bolza, an Indian of this village (9), wished

9. Tálaga.

to do), and as was done by Antonio Cofongo (an Indian of San Antonio de las Chinas), from whom he learned not to break up the legitimate religious marriage, which could be prohibited, and who suggested that they get out of the difficulty by any false means, even to arranging for others, from the lowest Indian to the highest, to testify to a lying statement, and if anyone dissented from it and would not follow the wish of the Cacique or Moján, fear caused the dissenters to escape to other parts; some fled with their concubines when they were not acceptable to her parents or relatives, others to avoid work, and others from necessity" (10) ..."and that they flee from all their vices and

10. Archivo Nacional de Bogotá, op. cit., Folio 228.

sins, which are: witchcraft, drunkenness, and concubinage" (11).

11. Archivo Nacional de Bogotá, op. cit., Folio 230.

/180 cont./

583 In Paris on the first of March, 1877, Esequiel Uricoechea
[175] wrote in his introduction to the Vocabulario: "Marriage in the sense in which we accept it today did not exist among the Páeces: two people lived a married life for some time and the marriage was not legalized without the previous certainty that
[192] the woman was fecund. It is natural then, that we find among the Páeces, as among the Peruvians, two verbs (imi and iyó) which indicate respectively the woman accepts the man and the man takes the woman. The woman was obliged to give clothing to the husband, and he "to provide sustenance for the family" (12).

12. Castillo y Orozdo, E. del. Vocabulario Páez-Castellano /Paez-Spanish Vocabulary/, 1877, p. XIV.

Our informants from Calderas confirm the effectiveness of this custom, some justifying it by the need of the future husband /181/ to obtain the money to pay the expenses of the wedding, others in order to "catear" /sample, find out/ if the woman is honest, a worker, and faithful, and there was no lack of those who clearly stated that this trial marriage "is customary because if the woman should turn out to be machorra /barren/ there is no marriage." When such occurs the man returns the woman to her parents without any problem standing in the way, which would not be the case if they were married by the Church, in which case the return is not possible.

162 Our investigations concerning the frequency of the "amaño"
583 in the established families of some parcialidades of Tierradentro
595 showed the following results:
184 Calderas: 42 families (28% of the approximate total of Calderun families). 57.1% of these families practiced the amaño: 42.9% were married first by the Church.

San Andrés: 13 families (6.5% of the approximate total of San Andrés families). 92.3% were married first by the Church; 7.7% practiced the amaño.

/181 cont./

162 Lame: 8 families (6.2% of the approximate total of Lame
583 families). 87.5% were married first by the Church; 12.5% prac-
595 ticed the amaño.
184 Mosoco: 26 families (10.4% of the approximate total of families in Mosoco). 88.1% followed the Catholic law; 11.6% practiced the amaño.

Although the percentages for the parcialidades of San Andrés and Lame may not reflect fully the real situation concerning the custom owing to the paucity of data, one can clearly see the vigor that it still has in Calderas, a parcialidad less acculturated,
581 of course, than the others. Once the man is convinced of the
594 fertility of his mate, the marriage is legalized at the altar of the
[585] Catholic Church. Then the economic co-operation of the spouses, initiated at the beginning of their married life, is stabilized and gains strength, and the marriage becomes, as one of our informants remarked, an association for the "mutual benefit of the contracting parties, to serve each other, without in any way
594 being a burden to either of them." The man enlarges his clear-
462 ings in order to take care of "the sustenance of the family," plants sugar cane and coca in order to obtain chicha and narcotic for holding mingas /work parties/, in order to celebrate religious festivals, in order to "cuidar" his relatives and to relax with his friends; he hires himself out as a peon /182/ in order to acquire money and to buy shawls for his wife, wool and cloth that the woman makes into camisas for herself, her husband, and her sons, and trousers for these last, begins to build his house, if he does not have one, on the lot that his father has assigned to him, to make a home for his family. The woman, on her part, administers the products that her husband brings to her, weaves the ruana /poncho/ and kuetand-yaha (mambe pouch /a bag for the ingredients of chews/) for the husband and children, prepares the food, raises hens and pigs, and cares for her children less than three years old (13). In this manner, among the Páez, marriage,

13. For the division of activities according to sex, see our work "Economía de los Páez /Economy of the Paez/," /published in the

/182 cont./

462 13. (cont.)
594 Revista Colombiana de Antropología, Vol. III, 1954.

361 In this manner, among the Paez, marriage,
182 family, land, and house form an intimate unit, indissoluble and
594 in part explaining the above-mentioned phenomenon of the re-
581 luctance to live grouped in towns or cities.

423 Basically the residence of the nuclear family is patrilocal-
591 neolocal. When the man, accompanied by his escort, goes to
[584] ask for his future consort, and, after certain definite formalities are fulfilled, the future parents-in-law hand her over, she is taken to live in the house of his parents (when he has not built
591 his own). In it he arranges a separate room with a kitchen for
596 cooking, a cowhide to sleep on, and space in which to keep their provisions, their kitchen utensils, and work tools. The new
[583] spouses are independent of their respective parents. The man assists in the work of his parents-in-law and the woman in the work of hers, but in neither case does it constitute an obligation
[594] for them. When a bachelor, the man works to take care of his own needs and to assist in the support of the paternal economy; once married he works to support his family.

582 The man chooses his wife within the parcialidad, although
177 he may marry women from other parcialidades. But neither men nor women may marry persons from Western culture ("whites"). In Calderas there was a case of a possible marriage between a native woman and a "white." The cabildo removed this possibility, obliging the native woman to marry a member of the parcialidad. If it is a man who wishes to try to marry a "white" woman, he must leave the village. They consider that when the "whites" enter the community, they invariably appropriate their land.

582 The selection of spouses within the parcialidades is /183/ determined by the laws of incest. Unions between parents and children and real brothers and sisters are incestuous and severely prohibited. Also relations between cousins of the first degree of both lines and those of uncles and nieces are condemned, although not

proscribed.

/183 cont./

605 proscribed. With respect to relations between cousins, they
835 state that whoever has them cannot pass the Páramo /crests of the cordilleras/ (Guanacas, Delicias, Moras), because the tiger will eat them. They add, however, that nothing will happen to them if such unions take place without any prelude, laughter, or merriment.

582 In deciding upon the spouses there exists a very singular
551 cultural trait. A man never chooses his future wife from among women bearing his own surname. Thus, a Muse does not choose a Muse for his wife, although she may live in another parcialidad. They believe that there may be kinship relations
551 between them. Cases in which a husband and wife do have the
582 same surname are very rare, and when that happens the husband
851 endeavors to introduce his wife by her mother's name. A case that we were able to observe unexpectedly was during the baptism of a baby girl solemnized in the church at Inzá. For elementary reasons we are concealing the names of the actual parents, and we shall suppose that the father is called Manuel Kiguasú and the mother María Kiguasú. In order to register the baptism of the child, the priest asked for the name of the parents. "Manuel Kiguasú," answered the father of the child, but upon being asked the name of his wife, he did not say that she was called María Kiguasú, as in reality she was, being the legitimate daughter of a Kiguasú, but María Vitechi, a name inherited from her mother. The case acquires more importance if one takes into account the fact that the so-called Manuel Kiguasú is a mestizo
551 who lives among the "whites" and deals with them. We found
582 the same situation in the genealogical record of the family of Nicanor Guagás of the parcialidad of Calderas. Rosario Ido, widow of Nicanor Guagás, bears the name of her mother, a native of the parcialidad of Cuetando, and not that of her father, Agustín Guagás, she being a legitimate daughter. Although in the same records Nicolasa Guagás does not conceal her surname in mentioning that of her deceased husband, Manuel José Guagás, a marriage authorized by the Church, for Nicolasa states that she is her husband's niece. The name of the nuclear family, that is to

/183 cont./

557 say, the surname, is transmitted through the paternal line. The
582 wife retains it throughout her life, but does not transmit it to her children. A son of hers will bear only the father's surname.
604 According to an /184/ informant from Calderas a man respects his paternal uncles and aunts in the same manner as the maternal uncles, but not the maternal aunt, because "she is not a real relative;...she is a woman and not a man ... the men (older) have to be respected the same as the old women" and, generalizing, adds: "of the uncles and aunts one respects the men more than the women and the paternal uncles more than
601 the maternal ones." Although the terms for designating the
604 uncles and aunts of EGO differentiate sex and specify the line to which they belong, EGO considers the relationship of the paternal uncles and aunts to be closer than that of the maternal ones, and although the uncles call the sons of their brothers "sons," there does not exist among the present-day Páez a clear concept of parallel uncles and cross uncles and, consequently, of parallel and cross cousins. Masculine EGO calls paternal and maternal male cousins Iakté, paternal and maternal female cousins pesh, making them equal with his own sisters and brothers, and feminine EGO calls paternal and maternal female cousins Iakté, paternal and maternal male cousins Jish, making
601 them equal also with her own brothers and sisters. But logically
604 such a distinction must have existed, to judge from the conduct
582 observed in the selection of mates and in the respect that EGO pays to his uncles and aunts, this being more pronounced for the paternal than for the maternal ones and greater still for the men.
114 Eugenio del Castillo y Orozco corroborates our argument. In
60 his Vocabulario he states that the mother-in-law is called by the
582 same term as the one designating the father's sister (pezoz), and the father-in-law by the same term as the one for designating the mother's brother (cacca). This means that in the eighteenth century in-law kinship specified the origin of the spouses, clearly showing marriage between cross cousins.

60 All these traits make us think that possibly there were
614 patrilineal exogamous clans, now manifested by some types of
174 stereotyped conduct,

/184 cont./

stereotyped conduct. It should nevertheless be stated that the present-day Páez surnames were still given names in the eighteenth century, chosen capriciously by the mother and not transmissible to the descendants (14). The adoption of surnames and

14. Castillo y Orozco, E. de., op. cit., p. 75.

their heritability through the paternal line is the result of the doctrinal work of the Catholic missionaries, and their assimilation and integration into Páez culture must have been carried out in accordance with certain aspects of a sociological nature existing previously. The same /an unpaginated genealogical chart appears here/ /185/ present-day monogamy of the Páez appears to be the result of a strong Catholic Christian influence, since in pre-Colombian times they were polygamous (15).

15. Hernández de Alba, Gr. "The Highland Tribes of Southern Colombia," 1946, p. 948.

The supreme authority in the nuclear family rests with the father; when he is missing, with the mother; and, when both are missing, with the most intelligent of the group. The husband orders, the woman only asks. The woman is always under the control of the man: the father, the brother, the husband. She has no liberty of movement. The cabildo has authority over orphaned women, including that of having them marry. One of our informants in Calderas was a fatherless orphan and had been brought up in Avirama in the company of her stepfather. Being of age, an Avirameño asked for her in marriage, but the cabildo of Calderas stopped the marriage, brought her back to the parcialidad, made her spend the night in the quarters of the cabildo, and on the following day made her marry a lad of 14 whom she did not know. Since she resisted, they beat her, admonishing her at the same time that if she did not do it, she would be married to a black dog in the future life. "There being

623 no other solution, I had to marry, "reflected the informant," for
736 such was the law. The cabildo finds husbands for female orphans
562 (guaiches). Any youth could ask the cabildo for an orphan for a
583 wife and it would give her."

The husband may punish his wife. We were able to ob-
593 serve the case of a native Calderuno who with tears in his eyes
[586] asked for the help of the priest to get back his wife who had abandoned him because he had given her some blows with the flat of a machete, injuring her. The complaining husband explained that the maltreatment given to his wife had not been of any importance, and, anyway, she had cost him twelve pesos, meaning by this the amount paid to the priest to celebrate the
593 nuptials. They punish the wife when on returning from work
684 they find her drunk and without food prepared for eating. Likewise they whip her or cuff her in cases of infidelity. Absolute
[837] fidelity is demanded from both spouses, and transgressions from this standard seem to be infrequent.

Such cases as present themselves are settled by the cabildo,
593 as we were able to observe in Mosoco, where a husband, through
623 the suggestion of his own mother, accused his wife of infidelity.
684 The cabildo /186/ in session went to the house of the plaintiff
692 to establish responsibility in the presence of the interested parties. According to an informant from Calderas, when a married man has a child by an unmarried girl, his wife complains before the cabildo. If it finds the girl guilty, it punishes her with lashes and authorizes the complainant to cut the hair of her rival.
[848] The child born in this way, said the informant, dies of the plague.
[753] Cases of infidelity on the part of the husband a number of times arouse violent reactions on the part of the wife, up to the point of liquidating her rival in a barbarous and merciless manner, as occurred in San Andrés where out of jealousy a woman practically quartered the body of the other woman, and whose penal judgment was given in the city of Popayán not many months ago.

/186 cont./

837 Should an unfaithful wife conceive a child by a man
851 racially white and the husband not be aware of it, the latter considers it his child even if it should inherit the characteristics of its progenitor. He will simply observe, "Why do my children come like this?" His wife answers him, "I don't know; it may
581 be echi or Pijao." In general marriages are well established and
593 stable, in spite of the fact that occasional tensions may arise between spouses. Divorce is unknown among the Páez. Extinction
586 of marriages by separation or the abandonment of one of the spouses is rare. In Calderas they can count on the fingers of one hand the cases where a man has abandoned his wife. "This is very ugly in a person, it should never happen," comments a woman. Cases in which a woman abandons the husband are much rarer still, being bitterly criticized when they occur.

594 The mother has the obligation to feed and care for her
854 children up to when they can leave home. Labor which she
[853] truly performs with love and care. The children suckle until they are two years old and even up to three, a period during which she never leaves them at any time. She cradles them on her breast or in the hammock and carries them on her shoulders,
594 attending to them lovingly whenever they cry. The father looks
867 after his boys from the time that they gain complete mastery of
[593] the biped state, without this making him less loving toward his daughters. Then he begins to take his sons everywhere.

During religious festivals they sit at his side, participate in the conversation of their elders, and are served food and
[273] drink in the same way as their elders. In Calderas and in /187/ San Andrés we had the opportunity to observe children five years old reeling under the effects of chicha and aguardiente. At this age, when they begin to take part in the economic life of the family group, the father teaches them to chew coca. The father conscientiously performs this labor of endoculturation.

597 We have not come across any cases of adopted children.
736 When both parents die, the children stay in the home of the nearest relative.

593 The conduct of the children toward their parents is that of deep respect. Nevertheless, in Calderas we witnessed the verbal

593 and de facto (with a machete) aggression of a married son (23 years old) against his parents, and the situation calmed down when the father succeeded in disarming the aggressor.

Brothers and sisters respect each other. They avoid aggression, and when they are little they play together. The younger brothers greet the older ones, and when the latter marry, they receive, kneeling, the blessing of the former.

[241] The fruits of the harvests are shared among the brothers,
[476] just as they also mutually help one another in the arduous agricultural work. According to an informant, men care more for their brothers than for their sisters, because the latter, upon marrying, leave the home. Nevertheless they show affection in their conduct with both sexes. Relations between sisters and the mother are intimate, as they live together under the same
[855] roof and intermingle in performing the same work. The older ones help to bring up the younger brothers and sisters. The latter call the eldest brother and eldest sister táta and máma, names that they abandon when they have reached adulthood.
[627] In case of a fight involving one of the brothers, the others go to his assistance and take vengeance if anyone has been injured,
[623] but this is not an obligation. Quarrels between brothers may
[692] arise over the distribution of land. In the greater number of such cases the cabildo settles the differences.

602 Relations between the families united among themselves by blood ties are intimate. They visit one another frequently and are shown painstaking treatment.

593 Mingas[1] are organized more readily among brothers, who
[476] "cover up their poverty." In the religious festivals they mutually
[651] back one another and during occasional meetings they endeavor
[796] to drink and eat together.

Bases para el Estudio de la Organización Social de los Páez

Por

SEGUNDO BERNAL VILLA

[p. 165]

[p. 166 is blank]

El material para el estudio del sistema de parentesco de los Páez fue recogido en el mes de mayo de 1953, gracias a la colaboración entusiasta de Victoriano *Piñakué*, de 18 años de edad, bilingüe y oriundo de la parcialidad de Calderas. Con estos materiales realizamos el análisis del sistema de parentesco, que sin mayores modificaciones, presentamos más abajo. Posteriormente fue confrontado con algunos indígenas varones de la parcialidad de San Andrés, quienes lo hallaron correcto. A fines de mayo de 1954 tuvimos la oportunidad de confrontarlo nuevamente en *Mosoco* con dos informantes varones de la localidad. Prácticamente no hallaron diferencias fonológicas, a pesar de que el Páez hablado en aquella parcialidad ofrece algunos matices diferenciativos en relación con el hablado en las otras parcialidades. Una sola observación fundamental hicieron, que la hemos aceptado por considerarla convincente. Es la referente a los términos usados para designar a los hijos e hijas de los hermanos y hermanas de EGO. Según *Piñakué* se los designa con los términos castellanos: sobrino y sobrina. Jorge *Mulcué* (mosqueño de 58 años) afirma que se los designa con las palabras *kué* o *wásak* (hijo e hija) anteponiéndoles el posesivo mi *(anji)*.

Hombres y mujeres utilizan, tanto de la línea paterna como materna, salvo algunas excepciones, los mismos términos subordinando el grado real de parentesco a la generación. El sistema de terminología de parentesco de los Páez es, pues, clasificatorio y bilateral.

Al parecer, no existe terminología para designar a los hermanos mayores y a los menores de la generación de EGO, bien que en el comportamiento resalta esta distinción. EGO está en el deber de saludar a los hermanos mayores, y a los mayores en general de la comunidad, en tanto que existe el deber de ser saludado por los hermanos menores, y, en general, por todos los menores de la comunidad.

Entre los mayores de edad, de ambos sexos, casados y con hijos es general el uso de formas tecnonímicas.

Los dos únicos estudios de sistemas de parentesco realizados en Colombia se deben a la pluma del Profesor Gerardo Reichel-Dolmatoff efectuados entre los Iroka y los Kogi. El de los Iroka fue realizado con la colaboración de Alexander L. Clark. Con el ánimo de facilitar posteriores estudios comparativos sobre esta materia, hemos adoptado su sistema de presentación de materiales, especialmente las abreviaturas de términos de parentesco de la lengua castellana.

Antes de finalizar con esta breve introducción queremos dejar constancia de nuestros vivos agradecimientos al señor Víctor Bedoya por su espontánea transcripción de documentos inéditos del Archivo Nacional referente a los Páez, y, al Profesor Marcos Fulop por sus valiosas observaciones y oportunas sugerencias que dieron muchas luces a partes oscuras de nuestro trabajo.

ANALISIS DE TERMINOS DE PARENTESCO

Parientes consanguíneos

A—GENERACION DE EGO:

a) EGO masculino: Hermanos e hijos de tíos y tías, paternos y maternos, se agrupan en una sola categoría, clasificándose como hermanos *(iakté)*.

b) Hermanas e hijas de tíos y tías, paternos y maternos, se agrupan en una sola categoría, clasificándose como hermanas *(Pesh)*.

c) EGO femenino: hermanas e hijas de tíos y tías, paternos y maternos, se agrupan en una sola categoría, clasificándose como hermanas *(iakté)*.

d) Hermanos e hijos de tíos y tías, paternos y maternos, se agrupan en una sola categoría, clasificándose como hermanos *(jish)*.

B—*PRIMERA GENERACION* ASCENDENTE:

a) Para el padre y la madre se utilizan términos aislantes *(tóta y máma)*.

Sh= a la ch francesa (chalet); ch= a la ch española (chicha); j= a la J francesa (jardin); h= a la J española (rojo).

[P.168-B]

Figure 2 PARENTESCO EGO FEMENINO

[P.168-C]

Figure 2 PARENTESCO EGO FEMENINO

[P.168-D]

b) Los hermanos y hermanas del padre y los hijos e hijas de los hermanos y hermanas del papá de papá (abuelo) se agrupan en una sola categoría clasificándose como tíos y tías (*fuk* y *pézuts*, respectivamente).

c) Los hermanos y hermanas de la madre y los hijos e hijas de los hermanos y hermanas de la mamá de mamá (abuela) se agrupan en una sola categoría clasificándose como tíos y tías (*kákka* y *péñuk*, respectivamente).

C—SEGUNDA GENERACION ASCENDENTE:

a) Se utiliza un término para ambos abuelos *(ishi)* y un término para ambas abuelas *(penshi)*.

b) Los hermanos y hermanas de los abuelos, tanto por la línea paterna como por la materna, se agrupan en una sola categoría clasificándose como abuelos y abuelas *(ishi, penshi)*.

D—TERCERA GENERACION ASCENDENTE:

a) Los bisabuelos se designan con un término *(ishi wála)* y las bisabuelas con otro *(penshi wála)*.

E—PRIMERA GENERACION DESCENDENTE:

a) Los hijos, las hijas y los hijos e hijas de hermanos y hermanas, reales o clasificatorios, tanto por la línea paterna como materna, se agrupan en una sola categoría y se designan como hijos e hijas (*kué* o *jik* y *wásak* o *nis*, respectivamente).

F—SEGUNDA GENERACION DESCENDENTE:

a) Hijos e hijas de hijos e hijas (nietos) lo mismo que hijos e hijas de hermanos y hermanas se agrupan en una sola categoría sin distinción de sexo y se designan como nietos *(nson)*.

G—TERCERA GENERACION DESCENDENTE:

a) Los hijos de hijos e hijas de hijos e hijas (bimietos) se agrupan sin distinción de sexo, en una sola categoría y se designan con el mismo término usado para los nietos *(nson)*.

DIFERENCIAS ADICIONALES

1—Sexo: Terminológicamente se distingue el sexo en todas las generaciones, salvo en la segunda y tercera generación descendente.

2—Edad: Hermanos y hermanas reales y clasificatorios con respecto a la edad relativa de EGO, no se diferencia terminológicamente, aunque sí se la discrimina en los patrones de conducta, pues EGO saluda a quienes son mayores que él en tanto que es saludado por los menores.

3—Parentesco:

a) EGO masculino :Terminológicamente, los hermanos no se distinguen de los hijos de los tíos y tías, paternos y maternos, y el término con que se designan no hace referencia a qué línea pertenecen.

Las hermanas no se distinguen de las hijas de los tíos y tías, paternos y maternos, y el término con que se designan no hace especificación a qué línea pertenecen.

EGO femenino: terminológicamente, los hermanos no se distinguen de los hijos de los tíos y tías, paternos y maternos, y el término con que se designan no especifica a qué línea pertenecen.

Terminológicamente, las hermanas no se distinguen de las hijas de los tíos y tías, paternos y maternos, y el término con que se designan no especifica a qué línea pertenecen.

b) Primera generación ascendente:

El padre y los hermanos se distinguen, terminológicamente, de los hermanos de la madre; ésta y sus hermanas se distinguen, terminológicamente, de las hermanas de aquél.

c) Segunda generación ascendente: no existen diferenciaciones de parentesco.

d) Primera generación descendente: no hacen diferenciaciones de parentesco entre hijos rales o clasificatorios.

PARIENTES POLITICOS

1—a) EGO Masculino: A los hermanos de la esposa, a los esposos de las hermanas y a los esposos de las hijas de los hermanos y hermanas de los padres se designan con un término *(sum)*.

b) A las hermanas de la esposa, a las esposas de los hermanos, a las esposas de los hermanos de la esposa y a las esposas de los hijos de los hermanos y hermanas de los padres, se designan con un término *(sub)*.

c) Se utiliza un término para designar al esposo de la hermana de la esposa. En general, los esposos de las hermanas de la esposa se designan entre sí con el mismo término que sirve para designarse entre sí las esposas de los hermanos de EGO *(iakté)*.

d) EGO femenino: A los hermanos del esposo, a los esposos de las hermanas, a los esposos de las hermanas del esposo y a los esposos de las hijas de los hermanos y hermanas de los padres se designan con un término *(sub)*.

e) A las hermanas del esposo, a las esposas de los hermanos y a las esposas de los hijos de los hermanos y hermanas de los padres se designan con un término *(chinás)*.

2—a) Suegro y suegra se designan con términos aislantes *(táta, máma)*.

b) Los esposos de las hijas y las esposas de los hijos se designan con términos diferentes (*ndó, nukué miyú*, respectivamente).

TERMINOS DE PARENTESCO

APLICACION DE TERMINOS DE PARENTESCO

A - Ego Masculino (V. Fig. 1)

1 — *Tóto* . . . . . p; p-d-co
2 — *Máma* . . . . . m; m-d-co
3 — *Ishí* . . . . . p-d-p; p-d-m; hno-d-p-d-p; hno-d-p-d-m; hno-d-m-d-m; hno-d-m-d-p.
4 — *Pínshí* . . . . m-d-p; m-d-m; hna-d-p-d-p; hna-d-m-d-m; hna-d-m-d-p; hna-d-p-d-m.
5 — *Ishí wála* . . . p-d-p-d-p; p-d-m-d-m; p-d-m-d-p; p-d-p-d-m.
6 — *Pínshí wála* . m-d-p-d-p; m-d-m-d-p; m-d-p-d-m; m-d-m-d-m.
7 — *Ñuk* . . . . . hno-d-p; ho-d-hno-d-p-d-p; ho-d-hna-d-p-d-p; co-d-hna-d-p.
8 — *Kúkha* . . . hno-d-m; ho-d-hno-d-m-d-m; ho-d-hna-d-m-d-m; co-d-hna-d-m.
9 — *Píuts* . . . . hna-d-p; ha-d-hno-d-p-d-p; ha-d-hna-d-p-d-p; co-d-hno-d-p.
10 — *Píúuk* . . . . hna-d-m; ha-d-hno-d-m-d-m; ha-d-hna-d-m-d-m; co-d-hno-d-m.
11 — *Kuá* (o *jík*) . ho; ho-d-hno; ho-d-hna; ho-d-ho-d-hno-d-p; ho-d-ha-d-hna-d-p; ho-d-ha-d-hno-d-p; ho-d-ha-d-hna-d-p; ho-d-ho-d-hna-d-m; ho-d-ho-d-hna-d-m; ho-d-ha-d-hno-d-m; ho-d-ha-d-hna-d-m.
12 — *Wúuk* (o *nia*) ha; ha-d-hno; ha-d-hna; ha-d-ho-d-hno-d-p; ha-d-ho-d-hno-d-p; ha-d-ha-d-hno-d-p; ha-d-ha-d hna-d-p; ha-d-ho-d-hno-d-m; ha-d-ho-d-hna-d-m; ha-d-ha-d-hno-d-m; ha-d-ha-d-hna-d-m;
13 — *Nlyá* . . . . . co
14 — *Ndá* . . . . . co-d-ha
15 — *Nakuá Mlyá* . co-d-ho
16 — *Naca* . . . . ho-d-ho; ha-d-ho; ho-d-ha; ha-d-ha; ho-d-ho-d-hna; ha-d-ho-d-hna; ho-d-ha-d-hna; ho-d-ha-d-hna; ho-d-ho-d-hno; ha-d-ho-d-hno; ho-d-ha-d-hno; ha-d-ha-d-hno.
17 — *Ishtá* . . . . hno; ho-d-hno-d-p; ho-d-hna-d-p; ho-d-hno-d-m; ho-d-hna-d-m; co-d-hna-d-co.
18 — *Pesh* . . . . . hna; ha-d-hno-d-p; ha-d-hna-d-p; ha-d-hno-d-m; ha-d-hna-d-m.

19 — *Sum* . . . . . hno-d-co; co-do-hna; co-d-ho-d-hno-d-p; co-d-ho-d-hna-d-p; co-d-ho-d-hno-d-m; co-d-ho-d-hna-d-m.

20 — *Sub* . . . . . hna-d-co; co-d-hno-d-co; co-d-hno; co-d-ho-d-hno-d-p; co-d-ho-d-hna-d-p; co-d-ho-d-hno-d-m; co-d-ho-d-hna-d-m.

B.—EGO FEMENINO (V. Fig. 2).

1 — *Nemé* . . . . . co.

2 — *Iskté* . . . . . hna; ho-d-hno-d-p; ho-d-hna-d-p; ho-d-hno-d-m; ho-d-hna-d-m; co-d-hno-d-co.

3 — *Itsh* . . . . . hno; ho-d-hno-d-p; ho-d-hna-d-p; ho-d-hno-d-m; ho-d-hna-d-m.

4 — *Sub* . . . . . hno-d-co; co-d-hna-d-co; co-d-hna; co-d-ho-d-hno-d-p; co-d-ho-d-hna-d-p; co-d-ho-d-hno-d-m; co-d-ho-d-hna-d-m.

5 — *Chinés* . . . . hna-d-co; co-d-hno; co-d-ho-d-hno-d-p; co-d-ho-d-hna-d-p; co-d-ho-d-hno-d-m; co-d-ho-d-hna-d-m.

Los demás términos de parentesco son comunes para EGO masculino y femenino.

OBSERVACIONES ADICIONALES

Un padre al referirse a sus hijos, de ambos sexos, antepone el posesivo mi *(anji)* al término de parentesco, así:

Anji kué (mi hijo) *anji jikuesh* (mis hijos).

Anji wásak (mi hija); *anji wasakuesh* (mis hijas).

Anji nson (mi nieto); *anji nsonmuesch* (mis nietos).

La madre al referirse a sus hijos, de ambos sexos, antepone el posesivo mi *(uk)* al término de parentesco, así:

Uk kué (mi hijo) *uk kuémuesh* (mis hijos).

Uk wásak (mi hija) *uk wásakuesh* (mis hijas).

Uk nson (mi nieto) *uk nsonmuesch* (mis nietos).

En igual forma los hijos al referirse a sus padres anteponen el posesivo *anji* o *uk*, según que los hablantes sean hombres o mujeres, respectivamente.

Anji téwesh (mis padres, hablante masculino).

Uk tewesh (mis padres, hablante femenino).

Anji iskiwesh (mis abuelos).

Uk iskiwesh (mis abuelos).

Los no parientes designan a los abuelos: *nesà wála.*

Cuando un hablante es menor que la persona referida y siendo éste padre, la forma correcta de mencionarlo es el padre de fulano, así por ejemplo: si nuestro informante Victoriano *Piñakué* (18 años) quiere referirse a Cerveleón *Guagás* (55 años) no lo menciona simplemente por su nombre, puesto que es una "grosería", sino que dice el padre de Alfonso (que es su hijo mayor): *Pons nei,* o *Marcelo Nei,* si se refiere al padre de Marcelo. Si el primogénito es muerto diría: *unás nei,* padre del finado. Si el hablante es mayor que el referido puede llamarlo sencillamente por su nombre, siempre y cuando exista confianza entre los dos, pues de lo contrario, tiene que usar la forma antes mencionada. Así por ejemplo, Vicente *Puche,* es mayor que Julián *Piñakué* (padre de nuestro informante) como tiene confianza le dice simplemente *Kilián;* si no la tuviera diría *Vit nei* (padre de Victoriano). En idéntica forma se procede con una mujer mayor que el hablante, ejemplo: *Pons nihi* (madre de Alfonso); *Vit nihi* (Madre de Victoriano) *Unás nihi* (madre del finado).

Si nuestro informante *Piñakué* quiere expresar este pensamiento: "Cerveleón yo quiero una cosa", debe decir padre de Alfonso yo quiero una cosa *(Pons nei tech yugüe guau wet).* Puede denominarlo simplemente Cerveleón pero lejos de él, y cuando está en medio de gente, no parientes, pero, agrega, esto no es de respeto. Si oyera Cerveleón decir así, se enojaría.

Al referirse a un abuelo, por ejemplo, el de Alfonso, se dirá: *Pons nei,* si el hablante es muy conocido de Alfonso, de lo contrario se dirá: *Lión nei* (padre de Cerveleón), máxime si se está delante del abuelo.

Al referirse al tío paterno de Alfonso, se dirá: *Pons niñuk.*

Al referirse al tío materno de Alfonso, se dirá: *Pons nekáhka.*

Al referirse a la tía paterna de Alfonso, se dirá: *Pons nsuts.*

Al referirse a la tía materna de Alfonso, se dirá: *Pons nihiñuk.*

RELACIONES ENTRE PARIENTES

Como hemos visto es general el respeto que deben los menores hacia los mayores. Los patrenes de conducta entre abuelos y nietos están regulados por el factor emocional, siendo más o menós afectuosos según el comportamiento entre ambos. Si los abue-

los son buenos con sus nietos son acreedores a la consideración y cariño de éstos, de lo contrario la actitud es de frío respeto. Si los nietos dicen: "que viejo tan puerco" el abuelo no los quiere.

Se afirma que con los tíos paternos y maternos se observa idénticos patrones de conducta. No se los puede designar únicamente por su nombre. Así, si Victoriano *Piñakué* llama a su tío por su nombre, éste le replica que no tiene consejo, pues debe respetar. "Usted tiene que decir tío", aconseja. La madre lo reprende: "grosero para qué dice así, diga tío". A los tíos mayores de Ego se les debe mayor respeto que a los tíos menores de éste. A los primeros les dará el bendito como a los padres. No se debe hablar de "cosas feas", delante de ellos ni tampoco chancearse con los mismos. Si el tío quiere chancearse con el sobrino, éste ríe y no más. A la esposa del tío también se le llama tía y recibe del sobrino el bendito porque es mayor. No puede chancearse con ella. En el supuesto que enviudara *(echui)* el sobrino no puede casarse con ella porque hay que respetarla. No hemos encontrado datos que pudieran hacer sospechar relaciones avunculares o amitades.

Primos de primer grado, maternos y paternos, se respetan y evitan actitudes agresivas entre ellos. Entre primos varones pueden obsequiarse con los productos de las cosechas, lo que no hacen con las primas, pues ellas viven con sus respectivos esposos.

Los padres de los cónyuges se llaman entre sí compadres *(compale)*. No existe diferencia de comportamiento entre ellos, el saludo lo da el que primero ve a su compadre. Relaciones sexuales entre suegro y nuera están prohibidas lo mismo que entre yerno y suegra. Se dan casos en que los suegros no quieren a su yerno y también en que los suegros no quieren a su nuera.

Siguiendo las pautas generales de conducta, EGO respeta más a sus cuñados mayores que a los menores. Un hombre no puede cohabitar con la esposa del hermano, se califica de "mucha grosería". El esposo puede cohabitar con la hermana de la esposa, pero se califica de "muy feo". También se mira mal el matrimonio de un hombre con la viuda de su hermano o el de una mujer con el viudo de su hermana. El trato entre concuñados es cordial; "se respetan como si fueran de la misma casa".

Los hermanos y hermanas del esposo se tratan con los hermanos y hermanas de la esposa como compadres. Pueden casarse entre ellos.

Los hijos de los hermanos y hermanas del papá no son nada para los hijos de los hermanos y hermanas de la mamá. No se dicen nada entre ellos.

LA FAMILIA

El grupo social por excelencia, en la cultura Páez, es la familia nuclear. Su importancia resalta si se tiene en cuenta que los Páez viven diseminados dentro de su ámbito geográfico. Tanto los cronistas, como los curas doctrineros, que se ocuparon de ellos, hacen resaltar esta característica. En 1751, el cura de *Tálaga*, Licenciado Eugenio del Castillo y Orozco, escribía, en su informe rendido al señor don Juan Francisco de Eguizaval, Gobernador y Capitán General de la ciudad de Popayán y sus Provincias, "que por mandado de su Señoría Ilustrísima, el señor don Francisco José de Figueredo y Victoria en el Consejo de su Majestad, Obispo actual de este Obispado hice informe al señor Gobernador anterior de vuestra Señoría, y representando que desde el año de mil setecientos diecinueve, que estuve en estas Provincias asistiéndole de intérprete al Excmo. don Pedro Felipe García, visitador que fué de ellas y después en el de mil setecientos treinta y uno de lo mismo al Dr. D. Francisco Gómez Constantino supe que los indios de esta provincia avían sido inclinados a vivir separados en diversas distancias y solo asentarse en algunos bebezones en casas de sus Caciques o Capataces cuando venían de alguna Riria (que llaman Necue) o a celebrar el primer menstruo de la mujer (que llaman Izacú) o por otra causa de vana observancia, y acababa, volverse a separar" (3). Múltiples fueron los esfuerzos de los curas doctrineros y de los gobernantes de la época colonial para "reducirlos a vida sociable", pero la "bárbara naturaleza" de estos naturales hacía infructuosos sus esfuerzos. Y este rasgo cultural se mantiene vigente aún (4). En cada casa, diseminada en las rugosidades del relieve, se aloja una pareja de adultos de sexo opuesto y sus hijos. Es esta familia nuclear la que cuida y mantiene a sus ancianos padres y efectúa el entierro cuando aquellos fenecen; la misma que acaba las fiestas religiosas con la pompa y rigor tradicionales (5); la que defiende los

(5) Ibid., p. 192 y sgts.

propios intereses del ataque de extraños; la que en tiempos anteriores celebraba la "Riria (que llaman Necue) (6) o el primer menstruo de la mujer (que llaman Izacó)" y en fin, la que fabrica sus canoas de chicha ("otra causa de vana observancia" que habla del Castillo y Orozco) para efectuar las "bebezones" con todos los que llegan en su demanda. Es esta familia nuclear la que "cuida" a los parientes que llegan, la que brinda hospitalidad al transeúnte indígena y la que muestra un silencio áspero al visitante de la cultura occidental.

A la familia nuclear están asociados primordialmente las funciones de reproducción, la crianza de los niños y la educación de los mismos. De la procreación depende también la importancia de las funciones económicas.

La orientación del instinto sexual es un fin secundario. En efecto, la cultura Páez exige de cada individuo, una vez que ha alcanzado la capacidad de procrear, forme una familia. En la parcialidad de Calderas ven en los hijos una bendición de Dios, considerando a los célibes "como violadores de la cruz" (matrimonio); el celibato se condena en la racionalización de que la persona que muere soltera se va al nevado del Huila, considerado por ellos como el infierno. Es excepcional el celibato de una mujer y cuando tal sucede piensan que se convierte en bruja. Algo semejante piensan de algunas viudas. Una mujer, de unos cincuenta años, manifiesta que "el matrimonio es fundamental y obligatorio, pues los abuelos decían que la mujer que no se casa, el diablo le da un perro negro por marido en el infierno" (7). Otra mujer manifiesta que, a veces, tiene pesar por la muerte de una hija soltera, "porque el diablo le pondría marido".

La cultura considera que es obligación de los padres casar a sus hijas así sean muy jóvenes. Por otra parte, los muchachos aspiran a "levantar su casa, casarse, crear hijos, tener animales, coca en abundancia y caña para su chicha" (8). El incentivo del matrimonio es tener hijos para cuyo fin es menester cerciorarse

(6) En el *Vocabulario Páez Castellano* de del Castillo y Orozco existe la palabra Nécue que da la siguiente definición textual: desafío; pelea que es un desafío solemne tan antiguo como el jestilismo entre los páezes, de dos campeones cada uno con el común de su bando.

(7) A los perros blancos los consideraban como compañeros y guías en la otra vida y tienen el temor de que "molestándolos salen a morderlos a la entrada de la morada futura".

(8) Bernal Villa, S. 1953, *op. cit.* p. 183.

si la mujer es fecunda. Por eso, la cultura ofrece la herramienta institucional del "amaño", según el cual, el hombre convive por un tiempo con la mujer antes de legalizar el matrimonio. Y de esto nos dan claras y precisas noticias el Licenciado Eugenio del Castillo y Orozco y su hermano el Licenciado Isidro del Castillo y Horosco en sus respectivos informes que rindieron al Gobernador y Capitán General arriba mencionado: "que ussaban la corruptela de hazer por mucho tiempo experiencia de la mujer con quien se avían de cassar, y así después de cassada no tenía prole, la dejaban y buscaban otra que fuesse fecunda y que creían se podían cassar con ella si no estaban velados con su propia mujer (como lo quiso ejecutar Manuel Bolza, indio de este pueblo) (9) y la ejecutó Antonio Cofongo (indio de San Antonio de las Chinas) y que por éste avía observado no dividir el cassamiento de las velaciones sino que fuesse tiempo prohibido o instasse sacarlos en mal estado y que este lo celaban haciéndose alto unos a otros y otros a los otros desde el menos indio hasta el principal, testificando un dicho con una mentira general en la qual si alguno discordaba y no seguía la mente del Cacique o Moján de miedo huía a diversas partes; y que otros se huían con las mancebas quando no eran a beneplácito de los padres o parientes de ella, otros de pereza y otros de necesidad". (10)... "y que huyesen de todos sus vicios y pecados como son: brujerías, borracheras y amancebamientos" (11).

El primero de marzo de 1877, en París, Ezequiel Uricoechea escribía en su introducción al *Vocabulario*: "El casamiento, en el sentido que lo tomamos hoi, no existía entre los Páeces: Vivían vida marital dos personas por algun tiempo i no se perfeccionaba el matrimonio sin que antes hubiera certidumbre de que la mujer era fecunda. Natural es pues, que encontremos entre los Paeces, como entre los Peruanos, dos verbos *(imi* e *iyó)* que indican respectivamente aceptar hombre la mujer i tomar mujer el hombre. La mujer tenía la obligación de dar de vestir al marido i éste la de dar el sustento a la familia" (12). Nuestros informantes de Calderas confirman la vigencia de esta costumbre justificándola unos por la necesidad que tiene el presunto esposo de

(12) Castillo y Orozco, E. del *Vocabulario Páez-Castellano* 1877, p. XIV.

conseguir dinero para pagar los costos del matrimonio, otros para "catear" si la mujer es honrada, trabajadora y fiel y no faltó quien dijera claramente que esta convivencia matrimonial "es costumbre, pues si la mujer resulta *machorra* no hay matrimonio". Cuando así sucede, el hombre devuelve la mujer a sus padres, sin que esto implique problema alguno, lo que no sucede cuando están casados por la Iglesia, en cuyo caso ya no es posible la devolución.

Nuestras investigaciones acerca de la frecuencia del "amaño" en familias constituídas de algunas parcialidades de Tierradentro, arrojaron los siguientes resultados:

Calderas: 42 familias (28% del total aproximado de familias calderunas). El 57.1% de estas familias practican el amaño; el 42.9% casaron primero por la Iglesia.

San Andrés: 13 familias (6.5% del total aproximado de familias de San Andrés). El 92.3% casaron primero por la Iglesia; el 7,7% practicaron el amaño.

Lame: 8 familias (6.2% del total aproximado de familias de *Lame*). El 87.5% casaron primero por la Iglesia; el 12.5% practicaron el amaño.

Mosoco: 26 familias (10.4% del total aproximado de familias de *Mosoco*). El 88.1% siguió la ley católica; el 11.6% practicó el amaño.

Si bien que los porcentajes correspondientes a las parcialidades de San Andrés y *Lame*, no reflejan a cabalidad la situación real de la costumbre por lo escaso de los datos, bien puede verse del vigor que goza todavía en Calderas, parcialidad desde luego menos aculturada que las otras. Convencido el hombre de la fertilidad de su cónyuge se legaliza el matrimonio en el altar de la Iglesia Católica. Entonces, la cooperación económica de los cónyuges iniciada desde el principio de su vida marital, se estabiliza y cobra fuerza y el matrimonio se constituye como dice un informante en una asociación para "beneficio mutuo de los contrayentes, para servirse del uno al otro, sin que de ninguna manera sea una carga para cualquiera de los dos". El hombre amplía sus rozas para atender "al sustento de la familia", siembre caña de azúcar y coca para obtener chicha y narcótico para realizar mingas, para celebrar fiestas religiosas, para "cuidar" a sus parientes y recrearse con sus amigos; se contrata como peón

para adquirir dinero y comprar pañolones para su esposa, lana y telas que la mujer convertirá en camisas para sí, para su esposo y sus hijos y pantalones para estos últimos, comienza a construír su casa, si es que no la tiene, en el lote que le ha asignado su padre, para dar un hogar a su familia. La mujer, por su parte administra los productos que le entrega el esposo, teje la ruana y *kuetand-yaha* (jigra de mambe) para el esposo y los hijos, prepara los alimentos, cría gallinas y cerdos y cuida de sus menores de tres años (13). De esta suerte entre los Páez matrimonio, familia, tierra y casa forman una unidad íntima, indisoluble y explica en parte el fenómeno arriba mencionado de la renuencia a vivir agrupados en pueblos o ciudades.

Básicamente la residencia de la familia nuclear es patrilocal-neolocal. Cuando el hombre, acompañado de su séquito, va a solicitar a su futura cónyuge, y después de llenadas determinadas formalidades, los presuntos suegros se la entregan, se la lleva a vivir a casa de sus padres (cuando no ha construído la propia). En ella establece un cuarto aparte con su cocina para cocinar, cuero de res para dormir, espacio para guardar sus provisiones, sus utensilios de cocina y herramientas de trabajo. Los nuevos esposos son independientes de sus respectivos padres. El hombre ayuda a trabajar a sus suegros y la mujer a los de ella, pero en ningún caso constituye una obligación para ambos. Cuando soltero el hombre trabaja para atender a sus propias necesidades y para coadyuvar al sostenimiento de la economía paterna; casado ya, trabaja para sostener a su familia.

El hombre escoge su esposa dentro de la parcialidad, si bien que puede casarse con mujeres de otras parcialidades. Pero ni hombres ni mujeres pueden casarse con personas de la cultura occidental ("blancos"). En Calderas se dio el caso de un posible matrimonio entre un indígena y un "blanco". El cabildo cortó de plano esta posibilidad obligando a casar a la indígena con un miembro de la parcialidad. Si es el hombre quien pretende casarse con una "blanca" debe abandonar el lugar. Consideran que al entrar los "blancos" a la comunidad, se apropian irremediablemente de sus tierras.

La escogencia de cónyuges dentro de las parcialidades está

(13) Para la repartición de actividades según el sexo véase nuestro trabajo *Economía de los Páez*, publicado en Revista Colombiana de Antropología. Vol. III, 1954.

determinada por las leyes del incesto. Son incestuosas las uniones entre padres e hijos y hermanos y hermanas reales y están severamente prohibidas. También se condenan, aunque no están proscritas, las relaciones entre primos de primer grado de ambas líneas y las de tíos y sobrinas. Respecto a las relaciones entre primos manifiestan que quienes las tuvieren no pueden pasar el Páramo (Guanacas, Delicias, Moras) porque se los come el tigre. Sin embargo, agregan, que nada les sucedería si tales uniones se verifican sin preludio, risas, ni chanzas.

En la determinación de los cónyuges existe un rasgo cultural muy singular. Un hombre no escoge su futura cónyuge entre mujeres que llevan su propio apellido. Así, pues, un *Muse* no escoge a una *Muse* por esposa, así sea que esta viva en otra parcialidad. Consideran que entre ellos pueden existir relaciones de parentesco. Casos en que un esposo y una esposa lleven el mismo apellido son muy raros y cuando tal sucede el esposo procura presentar a la esposa con el apellido de la madre de ésta. El caso pudimos observarlo desprevenidamente en un bautizo de una niña efectuado en la Iglesia de Inzá. Por razones elementales ocultamos los nombres de los verdaderos padres y suponemos que el padre se llama Manuel *Kiguasú* y la madre María *Kiguasú*. Para sentar la partida de bautismo de la niña el sacerdote preguntó por el nombre de los padres, "Manuel *Kiguasú*" repuso el padre de la niña, pero al ser inquirido por el nombre de su esposa no dijo llamarse María *Kiguasú*, como en realidad se llamaba por ser hija legítima de un *Kiguasú*, sino María *Vitechi*, apellido heredado de la madre de ésta. El caso tiene más importancia si se tiene en cuenta que el supuesto Manuel *Kiguasú* es un mestizo que vive entre los "*blancos*" y comercia con ellos. El mismo caso lo encontramos en el cuadro genealógico de la familia de Nicanor *Guagás*, de la parcialidad de Calderas. Rosario *Iko*, viuda de Nicanor *Guagás* lleva el apellido de la madre, oriunda de la parcialidad de *Cuetando*, y no el del padre Agustín *Guagás*, siendo hija legítima. Bien que en el mismo cuadro Nicolasa *Guagás*, no oculta su apellido al mencionar el de su finado esposo, Manuel José *Guagás*, matrimonio autorizado por la Iglesia, pues, Nicolasa dice ser sobrina de su esposo. El nombre de la familia nuclear, es decir, el apellido se trasmite por la línea paterna. La mujer lo conserva por toda la vida pero no lo trasmite a sus hijos. Un hijo de ésta únicamente lleva el apellido del padre. Según un

informante de Calderas, un hombre respeta a los tíos y tías paternos, del mismo modo que a los tíos maternos, pero a la tía materna no, porque "no es bien pariente; ....es mujer y no es hombre.... a los hombres (mayores) hay que respetar lo mismo que a las viejitas" y generalizando aclara: "de los tíos se respeta más a los hombres que a las mujeres y más a los tíos paternos que maternos". Si bien que los términos para designar a los tíos de EGO hacen diferencia de sexo y especifican la línea a la cual pertenecen, EGO considera más estrecho el parentesco de los tíos y tías paternos que maternos, y, que los tíos llaman hijos a los hijos de los hermanos, no existe un claro concepto, entre los Páez actuales de tíos paralelos y tíos cruzados, y, consecuencialmente, entre primos paralelos y primos cruzados. EGO masculino llama *Iakté* a los primos paternos y maternos, *pesh* a las primas paternas y maternas, equiparándolos con sus propios hermanos y hermanas y EGO femenino denomina *Iakté* a las primas paternas y maternas, *Jish* a los primos paternos y maternos, equiparándolos también con sus propias hermanas y hermanos. Pero lógicamente debió existir tal distinción a juzgar por la conducta observada en la escogencia de los cónyuges y en el respeto que EGO tributa a sus tíos, siendo más acentuado para los paternos que los maternos, y mucho más aún para los varones. Eugenio del Castillo y Orozco corrobora nuestros argumentos. En su *Vocabulario* dice que a la suegra se le denomina con el mismo término que se designa a la hermana del padre *(pezoz)* y al suegro con el mismo término con que se designa al hermano de la madre *(cacca)*. Esto quiere decir que en el siglo XVIII el parentesco político especificaba la procedencia de los cónyuges evidenciándose claramente el matrimonio entre primos cruzados.

Todos estos rasgos nos hacen pensar que posiblemente existieron clanes patrilineales exogámicos manifiestos ahora en algunos tipos de conducta estereotipada. Cabe advertir, no obstante, que los apellidos Páez de ahora, eran todavía nombres propios en el siglo XVIII, elegidos caprichosamente por la madre y no trasmisibles a los descendientes (14). La adopción de apellidos y su heredabilidad por línea paterna es obra de la labor doctrinera de los misioneros católicos y la asimilación e integración en la cultura Páez debió haberse efectuado de conformidad con algunos aspectos de índole sociológica existentes anteriormente. La misma

Genealogía de la familia de Nicanor Guagás, parcialidad de Calderas. Incluye varias familias nucleares que viven en distintos sitios de la Parcialidad.

SC15 Paez

monogamia actual de los Páez parece ser el resultado de una fuerte influencia cristiana católica, pues en tiempos precolombianos eran polígamos (15).

La suprema autoridad de la familia nuclear descansa en el padre; cuando falta éste, en la mujer, y, no existiendo ambos, en el más inteligente del grupo. El marido manda, la mujer solo pregunta. La mujer está siempre bajo el control del hombre: el papá, el hermano, el esposo. No tiene libertad de movimiento. Sobre las mujeres huérfanas tiene derecho el cabildo, el cual, inclusive, las hace casar. Una de nuestras informantes de Calderas era huérfana de padre y se había criado en *Avirama* en compañía de su padrastro; siendo mayor la solicitó un aviramеño para matrimonio, pero el cabildo de Calderas impidió el enlace, pues la regresó a la parcialidad, la hizo amanecer una noche en la casa del cabildo y al día siguiente la obligaron a casarse con un mozo de 14 años a quien no conocía. Como opusiese resistencia, la azotaron, amonestándola al tiempo, que si no lo hacía, en la otra vida se casaría con un perro negro. "Sin otra solución tuve que casarme, reflexiona la informante, pues las leyes eran así. El cabildo busca esposo a las huérfanas *(gusiches)*. Cualquier mocito podía pedir al cabildo una huérfana para esposa y éste se la concedía".

El marido puede castigar a la mujer. Pudimos observar el caso de un indígena Calderuno que con lágrimas en los ojos solicitaba la ayuda del sacerdote para recuperar a su esposa que lo había abandonado porque aquél le había propinado unos planazos con el machete alcanzándola a lesionar. El quejumbroso esposo aclaraba que no había sido gran cosa el maltrato propinado a su mujer y en cambio le había costado doce pesos, dando a entender con esto el valor pagado al cura al celebrar las nupcias. Castigan a la mujer cuando al regresar del trabajo la encuentran borracha y sin alimentos preparados para comer. Asímismo la vapulan o le dan de puños en los casos de infidelidad. Se exige absoluta fidelidad de ambos esposos y las transgresiones de esta norma parecen ser poco frecuentes.

Los que se presentan los dirime el Cabildo, tal como lo pudimos observar en *Mosoco*, donde un esposo, por sugerencia de su propia madre, acusó a su esposa de infidelidad. El Cabildo

(15) Hernández de Alba, G: *The Highland Tribes of Southern Colombia*, 1948, p. 948.

se trasladó en pleno a la casa del demandante para establecer responsabilidad en presencia de los interesados. Según un informante de Calderas cuando un hombre casado tiene un hijo en una mujer soltera, la esposa de aquél se querella ante el Cabildo. Si éste la encuentra responsable la castiga con azotes y autoriza a la querellante para que le corte el cabello a su rival. El hijo habido en esta forma, dice el informante, su muere con la peste. Casos de infidelidad del esposo provoca muchas veces reacciones tremendas de la esposa llegando hasta el caso de liquidar en forma bárbara e inmesericorde a su rival, como aconteció en San Andrés donde una mujer por celos prácticamente descuartizó el cuerpo de otra y cuyo juicio penal se falló en la ciudad de Popayán no hace muchos meses.

Si una esposa infiel concibe un hijo de un hombre racialmente blanco, sin que el esposo se entere, éste lo considera como su hijo, así sea que herede las características de su progenitor. Unicamente observa: "¿por qué salen mis hijos así?" La esposa le contesta: "No sé; será *echi* o pijao". En general los matrimonios son bien constituídos y estables a pesar de que pueden surgir tensiones entre esposos. El divorcio es desconocido entre los Páez. Extinción de matrimonios por separación o abandono de uno de los cónyuges son raros. En Calderas cuentan con los dedos de la mano los casos en que el hombre haya abandonado a su mujer. "Esto es muy feo en una persona, no debe ser así", comenta una mujer. Los casos en que una mujer abandona al marido son mucho más raros todavía, siendo criticados acremente cuando se presentan.

La madre tiene la obligación de alimentar y cuidar a sus hijos hasta que estén en capacidad de abandonar la casa. Labor que la cumple, verdaderamente con cariño y esmero. Los hijos lactan hasta los dos años y aún hasta los tres, lapso en el cual no los abandonan en ningún momento. Los mecen en su seno o en la hamaca y los portan en sus espaldas, atendiéndolos con solicitud cada vez que lloran. El padre se ocupa de sus hijos varones desde el momento en que han logrado el dominio completo de la bipedestación, sin que por ellos deje de ser cariñosò con sus hijas. Entonces empieza a llevar a sus hijos a todas partes.

En las fiestas religiosas los sientan a su lado, participan de la conversación de los mayores, de la comida y bebida siendo servidos en la misma forma que los mayores. En Calderas y en

San Andrés hemos tenido oportunidad de observar menores de cinco años trastabillar bajo los efectos de la chicha y el aguardiente. En esta edad, cuando empiezan a participar en la vida económica del grupo familiar, el padre les enseña a mambear. Esta labor de endoculturación la cumple el padre a conciencia.

No hemos encontrado casos de hijos adoptivos. Cuando mueren ambos padres los niños quedan en la casa del pariente más cercano.

La conducta de los hijos para con los padres es la de un profundo respeto. Sin embargo en Calderas presenciamos la agresión verbal y de hecho (con machete) de un hijo (23 años) casado hacia sus padres y el caso se apaciguó cuando el padre logró desarmar al agresor.

Los hermanos y hermanas se respetan. Evitan la agresión y cuando pequeños juegan juntos. Los hermanos menores saludan a los mayores y cuando éstos se casan reciben el bendito arrodillados de aquellos. Entre los hermanos varones se participan de los frutos de las cosechas, así como también se ayudan mutuamente en las arduas labores agrícolas. Según un informante el hombre quiere más a sus hermanos varones que a sus hermanas, porque éstas al casarse abandonan la casa. No obstante, demuestran afecto en el comportamiento de ambos sexos. Las relaciones entre hermanas y la mamá son estrechas, pues conviven juntas, bajo el mismo techo y compenetradas en la realización de un mismo oficio. Las mayores ayudan a criar a los hermanos menores. Estos designan como *téta* y *máma* al hermano mayor y la hermana mayor, nominación que abandonan cuando han alcanzado la mayor edad. En casos de riña de uno de los hermanos los otros salen en su ayuda y cobran venganza si alguno ha sido agredido, pero esto no es una obligación. Riñas entre hermanos pueden suscitarse por el reparto de tierras. La mayor parte de las veces el Cabildo zanja estas diferencias.

Las relaciones de familias unidas entre sí por lazos de sangre son estrechas. Se visitan frecuentemente, recibiendo trato esmerado. Las mingas se realizan más fácilmente entre hermanos que "disimulan la pobreza". En las fiestas religiosas se respaldan mutuamente y en los encuentros ocasionales procuran beber y comer juntos.

5. Folklore

*539 The present fund of tales of the Paez is neither rich nor varied. Here, too, a certain impoverishment has undoubtedly taken place, as may be seen from fragments of larger complexes of myths. Among these there are the "Story of the Woman from Whose Body Useful Plants Come Forth," stories about transformed animals and human beings, as well as stories about werejaguars. [171] The story of the ghostly human head that comes rolling by is also extraordinarily widespread in North and South American legends [176] and has a manifold lunar-mythological meaning. In contrast to this, the complete absence of typical stories about the forest spirit (gĕlyŏmp) is noteworthy, although the latter plays an important role in the religious conceptions of the Paez. Animal and transformation tales are only very dull and colorless.

114 Unfortunately, the reluctance of the Paez to communicate 609 is particularly frustrating in the recording of the myths. It is *539 primarily the old people who can tell stories. But they are the [887] very ones who are particularly standoffish toward the stranger. The chroniclers and early reporters tell us nothing about the folklore of the Paez, and even the most recent travelers of the 'thirties report only the story of Juan Tama or deny that the Paez have any mythology at all.

● 12 The stories collected by S. Bernal Villa and by myself could 609 surely be augmented with better acquaintance among the old *539 people. The unpopularity of our interpreter, especially among [554] the old people, was sometimes so great an obstacle that Victoriano had to ask suitable informants for some of the stories told about his father or uncle.

*539 The themes of the stories chiefly consist of tales about Thunder (Nos. 1-12), mostly under his names of Juan Tama, Llivan, Chauté, or Juan Chiracol. In the myths he is the first shaman and teacher of the present-day shamans (see under "Religion" /see pp. 176 ff. /) and considerably more powerful than human beings. He is not an exalted, numinous figure, however. On the contrary, people in olden days /293/ sometimes treated him quite badly, threw poisonous herbs in his lagoon,

Foreword by the Editor

124 This second volume of our series of studies contains a portion of the research which my collaborator, Dr. Horst Nachtigall, was able to carry out in 1952/53 in Colombia. The volume testifies to the fact that our scientific work at the Institut für Völkerkunde of the University of Mainz is not limited to desk research. Rather, we endeavor, in keeping with the scope of the problems in our field, to gather new observations in various parts of the world through fieldwork and in this way to help fill the large gaps in our knowledge of peoples living close to nature. Such research must necessarily also extend to the prehistoric evidence of human culture in the areas visited. Thanks to his extensive preoccupation with the special field of pre- and ancient history, Dr. Nachtigall was in a position to obtain the present material from the Colombian archeological province of Tierradentro.

Being occupied myself at the present time with ethnographic work in another corner of the world, I am particularly happy about the publication of this first volume of results from the fieldwork of our Mainz Institut für Völkerkunde. I thank [122] our publisher, Dr. H. Wyss, and the Deutsche Forschungsgemein- [128] schaft for their kind understanding and their active help, which have made this publication possible.

Gilgit, Pakistan, May 23, 1955. Adolf Friedrich

/9/

Words of Thanks by the Author

The description of the archeology and ethnology of Tierradentro presented in the following represents the first part of the scientific results of the Colombian journey undertaken with my wife, which was instigated by the Director of the Institut für Völkerkunde of the University of Mainz, Herr Prof. Dr. Adolf Friedrich, and carried out through his negotiations with German and Colombian authorities. The course of the journey and the preliminary summary of scientific results have already been published elsewhere.

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive T [563] fashion with wooden pans, the workers standing up to their knees in water. The Paez do not generally intermarry with the Negroes, [186] but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 361 563 b) The Paez who north of the Rio Ullucus have settled both banks of the Rio Paez as far north as Nevado del Huila. They have in part intermarried with the white and mestizo colonist P [103] population. The /106/ places inhabited by them are: Araujo, Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

T 162 103 P 114 121 P 181 648 101 c) The pure Paez villages of Calderas, Chinas, Huila, Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez of Calderas have preserved their cultural individuality most purely. We worked primarily among them, and the present material, insofar as nothing is said to the contrary, refers to the culture of the Paez of Calderas. The Calderun, as the inhabitants of Calderas are known in the country, are by far the most unapproachable of all the Paez. They have best kept to this day the three laws of Juan Tama, the mythical hero of the Paez, which were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

IV. Spiritual Culture

1. Language

121 According to A. v. Humboldt, languages are differentiated by the elements of content and form, and, accordingly, languages are divided into three groups, which in the following period were erroneously interpreted as stages of the development of language. According to this, the oldest stage was represented by the isolating languages, which express form elements by means of independent words with the meaning still recognizable as far as content is concerned. Their words, as in Chinese, are monosyllabic, isolating. The second group is made up of the agglutinative languages, in which the element of form is added to the element of content, the stem, through clearly recognizable affixes. The Ural-Altaic and the Bantu languages in particular are put here. The inflected languages occupy the third stage. In them the form element is expressed by inner changes of the stem or by affixes closely intergrown with the stems, as, for example, in the Indo-Germanic and Hamito-Semitic languages.

Even though this classification of languages was subsequently abandoned as the schema of a sequence of development, it is nevertheless quite applicable as an initial, practical orientation. For the more precise classification of a language, the working out of the phonetics and syntax is required.

197 193 Paez is an agglutinative language. The grammatical forms are built up by a succession of syllables. The pronunciation is difficult for a European. It is similar to Kechua /Quechua/, from which a number of loanwords have been adopted.

175 797 192 193 114 The oldest linguistic reports about the Paez come from P. Eujenio del Castillo i Orosco, who collected his linguistic material around 1735, as a missionary in Tálaga. It was supplemented and published by E. Uricoechea in 1877. The collected data include a catechism, a vocabulary, and a grammar with information about personal pronouns and the conjugations of "to be" and "to write." The grammar and vocabulary contain some forms and word formations that are alien to the original Paez language.

ETHNOGRAPHIC AND LINGUISTIC NOTES ON THE PAEZ INDIANS OF TIERRA ADENTRO, CAUCA, COLOMBIA

By H. PITTIER DE FÁBREGA

Introduction

Very little is known of the ethnology of the aboriginal inhabitants of the western and central cordilleras of Colombia and the intervening broad valley of Cauca. The early historians and chroniclers have left only long lists of more or less confused tribal names, along with the recital of the protracted war of extermination conducted with conscienceless and selfish cruelty by the conquistadores. With few exceptions modern writers have found little or no opportunity to deal with what is left of these interesting people. 121

With special reference to the Paez Indians, who are the subject of these notes, our notions have hitherto been derived almost exclusively from the materials collected by Castillo y Orozco about 1735, and published in 1877 with brief analytical notes by the late Colombian scholar, Señor Don Ezequiel Uricoechea.[1] 127

Early in 1906 the writer visited the section of the central cordillera inhabited by the Paez, staying a few days at two of their principal villages, namely, at Tacueyó, at the headwaters of the Palo river on the western side of the mountains, and at Huila, at the junction of the Paez and San Vicente rivers, on the Indian reservation known as Tierra Adentro. The personnel of the expedition, in addition to the author, with a few friends and two servants, consisted of native Indians, so that good opportunities were afforded for becoming familiar with the Paez language and to gain an insight into native manners and customs. 114 [361]

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

Former Occupants. "Plasos de Indios." Huacas

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said [692 they were cannibals. At present their more or less mixed 181 descendants still live in the villages of Las Pavas and Vijes, 162] near Cali; the "Paveños" have become inveterate legal fighters, keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 114 Of the Jamundies I was told that they were indefatigable warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town [103] of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have [135] been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. 172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 The middle *k* of the plural forms is inserted apparently for the sake of euphony.

D.—*The Verb*

[121 114] As explained above, I did not endeavor to collect material for the study of verbs, by reason of the limited time at my disposal. Castillo's data are also very defective, but the paradigms presented by him as examples of conjugations are sufficient to afford an insight into the mechanism of conjugation. We reproduce the principal tenses with the object of showing that the verbal modifications referring to person, mode, and time, consist of a combination of the verbal root with the copulative or substantive verb and a suffix or ending that expresses the person. Our spelling differs somewhat from that used by [114] Friederich Müller,[1] who had no practical experience with the language:

(1) To be:

	Singular	Plural
	Præsens	
1st p.	*anki-t*, I am;	*ku-k-ueł ta-u*, we are;
2d p.	*inui-ng*	*ik-ueł ik-u*
3d p.	*kinâ-a*	*kinâ-(g-)ueł i-a.*
	Perfectum	
1st p.	*anki-kit*, I was;	*ku-k-ueł ta-u iâ*, we were;
2d p.	*inui-ng-iâ*	*ik-ueł nek-u iâ*
3d p.	*kinâ-k-iâ*	*kina-g-ueł ta iâ.*
	Futurum	
1st p.	*anki-net*, I shall be;	*ku-k-ueł net-ka-u*, we shall be;
2d p.	*inui-neng*	*ik-ueł nek-u*
3d p.	*kinâ-nen*	*kina-k-ueł pat-in.*

(2) To write, or to paint, *fis*:

	Præsens	
1st p.	*anki fis-ats-t*, I write;	*kuł-k-u-fis-ats-ta-u*, we write;
2d p.	*inui fis-ats-eng*	*ik-ueł fis-ats-ku-a*
3d p.	*kina fis-ats-k*	*kina-g-ueł fis-ats-tâ.*

/337 cont./

423 communal land, since they have a right to it and anyone can do so. Those who come from elsewhere have a right to the communal land provided that they have grown up there. In Calderas there are people from Lame who own their land because they have cleared the montaña. Nowadays there are no more montañas [591] to clear, and thus persons from elsewhere cannot come in. If a [582] Calderuno marries a woman from another parcialidad, his father-in-law or brothers-in-law must give land /338/ to his wife and the spouse thus enters the community. Thus spoke the informant.

Distribution of implements, stock, and crops

●121 We are basing the distribution of implements, stock, and crops on the research carried out in the parcialidades of Mosoco, Lame, San Andrés, and Calderas.

162 The parcialidad of Mosoco has, approximately, some 250 families with an average of 4 children; Lame, some 130 with an average of 3 children; San Andrés, some 200 with an average of 4 children; and Calderas, some 150 families with 3 children on the average also. In Mosoco we studied 25 families, or 10% of the total; in Lame, 8 or 5.3%; in San Andrés, 15 or 7.5%, and in Calderas 55 or 36.6%. In the first parcialidad listed there is one family of a mestizo and another of a white, which are equivalent to 8% of the total families investigated; in the second, two families of whites are represented, equivalent to 25% of the total families investigated; in the third, 26.6% of the total families investigated are represented by two families of whites and two families of mestizos. No family of "whites" lives in Calderas.

/347 cont./

427 earning a small daily wage (the maximum daily wage that they
466 earn is two pesos, but this is exceptional; ordinarily the men
465 earn one peso and the women 80 centavos); not to work on other fincas; to sell the surplus from their crops to the owners of the hacienda themselves, especially if it is coffee; to divide in half or distribute in equal parts with the owner the panela obtained /348/ from the ovens of the hacienda; the wife and children of the tenant farmers are also obliged to work on the hacienda. They have the right to plant any crop except coffee. They earn nothing on Sundays or on religious or national holidays, nor do they receive any remuneration for extra hours of work. They do not get any social services. When the owner is good, he gives them salt and, ordinarily, one "spot" of plantain (a ration of cooked plantains).

427 Many are sons of tenant farmers born on the hacienda itself.
466 Others have suffered in this servitude for more than ten years. Although a few have freed themselves from this situation, most of them resist giving up their rancho and their garden when the owners want to dispossess them. One tenant-farmer informant, when questioned as to whether his situation was good or bad, said: "I have to be satisfied, what else can I do if from childhood I have been here" (on the hacienda). Besides, he figures that if the owner wants to remove him, he will have to pay him
[423] for the improvements in his garden. Here and there a tenant farmer with more than 20 years of usufruct from his piece of land has already refused to pay his rent.

One tenant farmer who has worked for several owners recalls that some were good, but most of them were bad, ambitious, exploiters, who had their laborers work too hard, cheated in the wages, and one even gave them beatings.

Alimentary diet

262 We wish to note that most of the notes concerning the diet
● [121] were gathered in the parcialidad of Calderas.

/357 cont./

261 that is provided by having what is to be consumed. An abundance
594 of guarapo and maize undoubtedly gives them great gratification. When these products are abundant the religious fiestas, mingas, and "entertainments" are good, the natives say, and they describe at great length the incidents as they unfold.

178 But, in spite of the fact that the work capacity of the in-
241 dividual is acknowledged, that the possession of domestic animals
433 lends a certain prestige within the group, and that the abundance
[554] of food and guarapo brings gratification, the agricultural cycle
[231] remains stationary within the lineaments of time, of the systems of labor, and of the quantity of seed. They produce essentially
178 for consumption. The stimulation of prestige does not exist. In
433 many parcialidades, the habits of a capitalistic economy are openly
[754] combated by the sorcerers (32). Nevertheless, we have already

32. Bernal Villa, S. op. cit., p. 256.

had the opportunity to state that the introduction of the cultivation of coffee (temperate zone), the development of livestock-raising and of the cultivation of potatoes in Mosoco, and the creation of settlement areas in the very heart of the native parcialidades are rapidly modifying all of the institutions of Páez culture. The family economy of self-provisioning and of small barter operations is changing perceptibly into a purely money economy. By the same process the routine monotony is disappearing from production and is being replaced by new techniques of work, a greater quantity of production, and a greater volume of trade.

434 In the parcialidades of Mosoco, Lame, and San Andrés, we
● 121 made an investigation of familial income and expenses /358/ for
124 the year 1953, on the basis of questionnaires prepared by the Comisión de Planeamiento de la Seguridad Social Campesina of the Ministerio del Trabajo, questionnaires that were filled out by us for the said commission with reference to Tierradentro.

/358 cont./

434 There were 48 families investigated, of which 25 were
● [121] from Mosoco, 8 from Lame, and 15 from San Andrés. They are identified by numbers in order.

The sources of monetary income are provided by agriculture, especially by potatoes, wheat, garlic, and coffee; by livestock-raising, that is to say, the sale of animals, including derivatives such as milk and cheeses, as well as barnyard fowl; by business transactions, including the resale of agricultural and livestock products produced by the natives; by daily wages, including some contract work; by crafts, which include manufactures (blankets, rugs, sashes, pouches, sewing, ceramics, and tile-making) and hydraulic mills; by freightage, that is to say, the profit from renting beasts of burden; by the previous year's savings; and by loans.

At first sight agriculture stands out as the principal source of family income, corresponding specifically to potatoes, wheat, and garlic for Mosoco, laurel wax and potatoes for Lame, and coffee for San Andrés. But in the parcialidad of Mosoco livestock is not merely complementary, but as important as agriculture itself. Even more so. In nine of the 25 families investigated, livestock-raising balances the family budget, which the deficit
[427] was due to the loss of harvests. We also observed that the renting of beasts of burden is an important factor in the family income; an incipient development of family industry that represents sources of monetary income; and, finally, the income from daily wages in the parcialidad is rather limited. In the parcialidades of Lame and San Andrés, on the other hand, livestock-raising occupies a secondary position, and the family income is complemented, when agriculture produces an imbalance, chiefly by day labor.

434 Trade is primarily an activity of the "whites," and so are
563 industries of elaboration such as panela and cheese. In regard to
[439] trade we found one case of a "white" family established in a parcialidad, whose only source of income through life has been nothing but the profits from trade.

/364 cont./

in the cantinas, in lawsuits over land, or for religious fiestas. These arguments are confirmed, on the other hand, by the statistical table on income in that only five native families in the three parcialidades made up the deficits in their budgets of last year with sums saved in 1952.

Economy and acculturation

Before closing the present work we wish to describe in broad outline the process of acculturation which is now going on in some Páez parcialidades.

The material on Páez culture which we have published and that which we are now elaborating on were collected in the parcialidades located on the right bank of the Paez River, leaving aside those located on the left bank of this river, owing above all to factors of public order which have been disturbing their peace for several years.

The native communities of San Andrés, Santa Rosa, Togoima, Calderas, Avirama, Suin, Chinas, Lame, Vitoncó, Huila, Toez, and Tálaga are more traditionalistic, live in accordance with the institutions of the culture, and for this reason we regard them as more "primitive." On the other hand, the community of Mosoco, suspended on the slopes of the Central Cordillera itself and extending into the very heart of the Paramo de Moras, is fully in the process of transformation.

/365/ Our research was begun in the parcialidad of Calderas, isolated, by reasons of a geographical nature, from the principal centers of the "white" population and whose inhabitants have defended their independence at all costs and have been hostile to living with the "whites" (39). From here comes the greater part

39. Bernal Villa, S. "Mitología y cuentos de la parcialidad de Calderas, Tierradentro /Mythology and tales from the parcialidad of Calderas, Tierradentro/," pp. 289 ff.

of our materials. But we also carried out systematic investigations in San Andrés, Santa Rosa, Togoima, Lame, Vitoncó, Tálaga, and, lastly, in Mosoco.

/365 cont./

177 For our outline of acculturation, we understand by diffusion
[121] achieved cultural transmission, and by acculturation cultural trans-
[127] mission in process, terms expounded by Professor Melville J. Herskovits in his book, El Hombre y sus obras /Man and his Works/.

Within Páez culture there is widely diffused, to the point of constituting an integral part of the cultural body, the following economic elements of alien origin and, more concretely, of European origin:

[231] All of the domestic animals with the exception of the
[137] guinea pig, bananas, sugar cane (the variety known as "criolla"), wheat, barley, garlic, coffee, peaches, apples, and oranges; the agricultural implements, the hydraulic mills, sugar mills, the guadua bamboo, and some varieties of pasture grass, such as orejuela /Alchemilla pectinata/, kikuyu, and poa.

177 Throughout the pages of this work, we have emphasized in
361 particular the cultural developments in process, that is to say, the
563 phenomenon of acculturation. It is obvious that this phenomenon has appeared, with greater or lesser intensity, in those parcialidades where there have been created areas of settlement, within which a specific number of "white" families have settled. But the intensity of the acculturative phenomenon does not rest merely on this fact or on the number of families who live by the norms of Western culture. San Andrés, for example, had its settlement area established for all practical purposes in 1928 and now reckons with more than 20 "white" families, with its nearness to the settlement of Inzá, and, for nearly 15 years, with the Parque Arqueológico of Tierradentro, to some extent a tourist attraction, and yet the process of acculturation is minimal and cannot be compared with the intensity of the same phenomenon in Mosoco, where the settlement area /366/ was created in 1923 and where
177 nowadays there are not more than 12 families of "whites." In
[487] Mosoco there is another factor: the riding path that joins the
[491] municipio of Belalcázar with that of Silvia, a road that has existed since pre-conquest times. Mosoco has been and still
[628] continues to be the mandatory stopping place. In addition, this parcialidad has had intensive contacts with the Guambiano group and the Páez group from the other side of the Cordillera, who are more accutturated.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the
174 ethnology of the present-day peoples.[3] It is also possible to trace the
177 acculturation during the Colonial Period, when new European usages were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

12/ A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

13/ The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

[3] For the languages, see especially Jijón y Caamaño, 1940-41; Castillo i Orosco, 1878; and Castellví, 1934. For ethnology, see Douay, 1900; Pittier de Fábrega, 1907; Ortiz, 1935; Guerra F., 1942; Jijón y Caamaño, 1936-38; Otero, 1938; Albis, 1934. See also Languages, pp. 921-922.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Pasto SC17

The area of this study is delimited on the west by the valley of the Patía River and by the Cuembi, Nambi, and Cuaiquer Rivers, and on the east by the divide between the rivers running to the Pacific Ocean and those flowing eastward into the Caquetá and Putumayo Rivers. P 133 121

All this region is cool to temperate throughout the year, the extremes being at Túquerres, which lies at 3,104 m. (9,433 feet) elevation and has a mean temperature of 11° C., and Ancuyá at 1,358 m. (4,380 feet) with a mean temperature of 21° C. The greater part of the population lives between 2,890 m. (about 9,470 feet) with 12° C., as at Ipiales, and 2,020 m. (about 6,630 feet) with 18° C., as at Buesaco. P 132 P 133

Farther north, the Cordillera Central forms a great mountain mass at the sources of the Cauca and Magdalena Rivers, the latter delimiting the Cordillera Oriental, which extends toward the northeast, entering Venezuela and stopping at the Atlantic Coast. In the Department of Cauca, the native peoples occupied the altiplanos and the mountain slopes of the central portion of the Andes and of the Cordillera Central and Cordillera Oriental. Some of the mountains are snow-capped, like Coconucos (4,800 m.; 15,746 feet) and such volcanoes as Puracé (4,908 m.; 16,102 feet) and Sotará (4,580 m.; 15,026 feet). There are high páramos, swept by icy winds, where only the frailejón (*Espeletia hartwegiana*) and certain grasses grow. Below these heights, the topography is hilly and grandiose, with a succession of hills, terraces, altiplanos, ravines, cañons, and valleys.

Some tribes, like the *Coconuco* and *Moguex*, live in the cold mountain spurs toward the Cauca River; others, like the *Páez* and *Guanaca*, in the high páramos with a climate like that at Moras (3,670 m.; 12,040 feet), Guanacas (3,518 to 3,750 m.; 11,541 to 12,303 feet), Las Delicias, and other places to the east. The *Popayanense* occupy the temperate Valley of Pubén. The *Pijao* lived in the last mountains of the Cordillera Central toward the Magdalena River, which, like the valley of this river, is low and warm, and extended to the Cauca Valley in the neighborhood of Buga. P 101 361 PO [101] [361]

The country inhabited by the *Popayanense* at the Conquest has an altitude of 1,760 m. (5,775 ft.) and a mean temperature of 18° C.; the *Páez* in Tierradentro, 1,650 to 2,620 m. (5,774 to 8,595 ft.) and 13 to 17° C.; the *Moguex*, 2,521 m. (8,270 ft.) and 14° C. at Silvia; the *Andaquí* in the region of San Agustín, 1,695 m. (5,561 ft.) and 18° C.; the *Yalcón* and *Timaná*, 1,100 m. (3,608 ft.) and 24° C.; and the *Pijao*, 873 m. (2,864 ft.) and 25° C. at Carnicerías, and 1,700 m. (5,577 ft.) and 18° C. at Pijao (Caldas). P 133 132 PO [133] [132]

Such differences in climate with the consequent differences in flora and fauna contributed to the variations in economy and culture. The high peaks of the cordilleras and the deep rivers were frontiers between the tribes, clearly separating them from one another—the *Moguex* P 101 131

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

Today the special industry is the extraction of oil from the "mil pesos" palm. Hunting and war are the principal occupations of the men. They involve very important rites conducted by the captain or cacique, assisted by a deputy or second in command of a group. These rites are performed as follows (Albis, 1934):

In preparing for an attack on the *Witoto*, the deputy captain takes his men to hunt animals, while the women prepare chicha and "caguana." Upon their return, the hunters adorn themselves, dance, and drink chicha, and then go to their houses. The following day they catch "conga" ants, whose bite causes fever, and place them in a palm-leaf mat so that their heads stick out. The captain's wife picks up the mat and lets the ants bite her husband on his legs to make him strong, on his breast to make him brave, on his face to prevent him from sleeping, and on the chin to make him silent. The captains then make the ants bite the back and legs of the women, so that young *Witoto* prisoners will be diligent helpers. Afterward the captains each eat three ants mixed with water. If they have pains, the hunt will be successful. After this, the captain, carrying a turtle shell, speaks to the women, admonishing and scolding them, and then retires to a separate house, where he holds a conference with his men, forecasting the probable outcome of the fight and exhorting the men to avenge those who may be killed by the *Witoto*. That night they hold ritual dances and mimic animals. Two balsa-wood images are placed at the door of the main building and two Indians must pierce them with their spears while running. These two Indians are whipped after their feat by all those present. At dawn they plant a pole in the middle of the yard or square, pour water around it, and dance there until they have made mud, and then spend the day gathering food for the departing warriors. In order to be strong and to capture many young *Witoto*, each warrior has to place an arm in a bag full of "yuco" ants until it is thoroughly bitten. Upon departing, the captain gives his wife a knotted hemp cord (a kind of quipu). She unties a knot every night and thus knows when to expect him back and on what day the fight will take place. The day of the battle she remains in the hut where the hunters stayed the first day; otherwise they will be unable to capture any *Witoto* children. With other women she waits there 3 days for the men to return and then, after leaving there an "araraita," a palm branch, the women return to their homes to prepare more chicha. If the expedition is successful, the men return with great demonstrations of joy, but if it fails, they hit everything and bemoan their luck. The captain's principal wife upbraids her husband. After a community meal, all go home and resume their occupations.

Menstruating women throughout this area remain in a special house weaving hemp. They may have no visitors. At the end of the period, they bathe and return to their dwellings.

At childbirth, a woman must remain at home 3 months, while her husband stays in his hammock, refraining from labor and dieting lest his child die. After 3 months the parents anoint themselves and child with "jagua" fruit and resume normal life.

THE CULTURE OF THE MOGUEX AND PÁEZ

Although the *Moguex* and *Páez* have distinct territories and different dialects, their ethnology may be described together because of the great similarity of their economy with its agricultural basis, their social organization, and their general culture.

/8/

Foreword by the Editor

124 This second volume of our series of studies contains a portion of the research which my collaborator, Dr. Horst Nachtigall, was able to carry out in 1952/53 in Colombia. The volume testifies to the fact that our scientific work at the Institut für Völkerkunde of the University of Mainz is not limited to desk research. Rather, we endeavor, in keeping with the scope of the problems in our field, to gather new observations in various parts of the world through fieldwork and in this way to help fill the large gaps in our knowledge of peoples living close to nature. Such research must necessarily also extend to the prehistoric evidence of human culture in the areas visited. Thanks to his extensive preoccupation with the special field of pre- and ancient history, Dr. Nachtigall was in a position to obtain the present material from the Colombian archeological province of Tierradentro.

Being occupied myself at the present time with ethnographic work in another corner of the world, I am particularly happy about the publication of this first volume of results from the fieldwork of our Mainz Institut für Völkerkunde. I thank [122] our publisher, Dr. H. Wyss, and the Deutsche Forschungsgemein- [128] schaft for their kind understanding and their active help, which have made this publication possible.

Gilgit, Pakistan, May 23, 1955. Adolf Friedrich

/9/

Words of Thanks by the Author

The description of the archeology and ethnology of Tierradentro presented in the following represents the first part of the scientific results of the Colombian journey undertaken with my wife, which was instigated by the Director of the Institut für Völkerkunde of the University of Mainz, Herr Prof. Dr. Adolf Friedrich, and carried out through his negotiations with German and Colombian authorities. The course of the journey and the preliminary summary of scientific results have already been published elsewhere.

/9 cont./

114 Our stay in Colombia lasted a year, from August 8, 1952,
[10] to August 12, 1953. During this time I worked first under the direction of Herr P. Pedro José Ramirez Sendoya as Investigador at the Instituto Etnológica Nacionál, beginning September 20, 1952, as Jefe de Arqueología at the Instituto Colombiano de
[126] Antropología. After several weeks of inventorying the antiquities in the region of San Agustín we traveled to Tierradentro where we collected the field material of the present publication during the period from December 24, 1952, to April 24, 1953.

● 122 The scientific work in Colombia was financed by the Ministerio de Educación and the Instituto Colombiano de Antropología. On this occasion I should also like to express my sincerest thanks to the then Minister of Education, Herr Dr. Lucio Pabón Nuñez, and to the Director of the Instituto Colombiano de Antropología, Herr Dr. Antonio Andrade Crispino, for the help rendered. Here I should also like to thank the Vice-President of the Academia de Ciencias Naturales, Herr Prof. Dr. P. Enrique Perez Arbelaez, who, during the early period of my stay in Colombia, smoothed many paths for me. I am no less grateful to the colleagues of the Institute for the scientific help given to me, as well as to the workers in Tierradentro for their diligence in the difficult and, at the beginning of the rainy period, quite unpleasant work of digging.

126 For the research and travel equipment, a number of firms
122 generously put material at our disposal. For the photographs published in this book I had the use of a Leica III f with Elmar /10/ 1:3.5 and accessories, as well as a Rolleiflex with Tessar 1:3.5. For special photographic purposes Rodenstock-Heligon 1:2.8 wide-angle lens, a Steinheil-Culminar 1:2.8 telephoto lens, and Proximeters I and II from H. Schneider & Co. were used with the Leica, and with the Rolleiflex the Rolleikin equipment with the Rolleinars 1 and 2. The interior shots of the grave holes and the native houses were taken with Osram SO and Philipps Pf 45 flash bulbs, as well as with Seuthe flash capsultes. Adox KB 17 and R 18, as well as Perutz Perpantic film, served as negative material for the photographs.

/10 cont./

128 [114] For assistance in drawing up the manuscript, I should like first of all to thank my wife, who accompanied me on all my trips in Colombia, recorded the field research there stenographically, and has attended to transcribing the manuscript. I thank Herr Prof. Dr. E. L. Rapp, Mainz, for his friendly advice with regard to the transcription of the Paez language, and Herr Prof. Dr. Wilhelm Geilmann, Mainz, for the roentgenographic examination of the prehistoric teeth and bones available from the grave chambers of Tierradentro. Here, too, I should like to thank the artist of the Institut für Vor- und Frühgeschichte of the University of Mainz, Fräulein Margot Kunzmann, for the technical drawings and maps, and the Herrn. cand. phil. Wolfgang Lindig for proofreading.

● 122 [128] The Deutsche Forschungsgemeinschaft, which had already financed my journey both ways and granted a considerable allowance for working up the scientific results, also assumed part of the printing costs for this publication. For this I should like to express my respectful gratitude to the President of the Deutsche Forschungsgemeinschaft. For public and private financial and moral support I must thank Herr Ministerial Director Prof. Dr. Hans Becker and Ministerial Counselor Dr. Otto Wegner of the Ministry of Public Worship and Education /Kultusministerium/ of the Rhineland-Palatinate, the Chief Burgomaster of the city of Mainz, Herr Franz Stein, the Curator of the University of Mainz, Herr Fritz Eichholz, and the Chairman of the Supervisory Council of the Dykerhoff Portland-Zementwerke AG., Herr Consul Alexander v. Engelberg.

Mainz, October 1, 1954. H. N.

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguex*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.

/106 cont./

648 it was impossible for the Spaniards to conquer Tierradentro and
[101 181] subjugate the Paez.

Even today the Paez love their independence above all. And even though they cannot accomplish anything by force against the "whites," by which they mean the colonists and the Colombians in general, they nevertheless hate them with impotent fury. "Muiska pešu" (*), "white robber," is what they call the

* Concerning the transcription and phonetics of Paez words, cf. pp. 154-156.

colonists who took their land from them. The latter, however, more industrious than the Paez, need land for their numerous children. They cannot see why the best and virgin soil should remain unused in the hands of the Paez.

361 The rivers arising in the heights as a result of the water flowing down in the mountainous country form enclosed valley basins, each of which contains a village politically. These are, however, not villages in our sense, since the houses do not lie together, but separately, scattered on the slopes of the entire
● 123 valley basin as individual farms. This decentralized position of
361 a village rendered the ethnological work considerably more difficult, since one cannot keep an eye on "his" village and survey all the inhabitants together. Hence it is very difficult to become acquainted with all the people of the village, since in each case one must go great distances from one house to another and at the same time usually very laboriously climb a slope. How often it happened that the inhabitants were not at home at the moment or did not want to be seen or spoken to. For, at first, the Calderun did not by any means care to see us, and even after months of life and visits among them, the old people looked back with nostalgia on the times when /107/ all intruding whites were killed.
123 Today, moreover, not only whites, but even foreigners come to
[177] Calderas. "If we speak to them and treat them well," they said, "then more and more whites will come here." How often it happened that we visited one of the old men, who, I was told,

/107 cont./

● 123 knew tales he could tell, and to whom we gave tobacco and salt and a few other small gifts, a knife, a hoe, or an aluminum cup. At the moment he had a headache, he said. I gave him a few tablets, and we agreed that I would come back the next morning and he would tell me a few tales. When we arrived the next day, after hours of tramping, his wife told us that her husband had gone into the mountains very early that morning in order to cut wood.

115 Our first visit in Calderas took place in the company of the interpreter, Marcos Antonio Penkue, a Paez about 40 years old from San Andrés, who regarded himself as very civilized and who had reached a certain position of wealth. He served as a [191] soldier on the Brazilian border and speaks Spanish well. On his [245] finca /see the glossary, p. 249/ he has about 2,000 coffee trees, [439] whose yield he sells in Inzá on the market. He also carries on [464] other business there by functioning as an interpreter and middleman for the non-Spanish-speaking and generally unbusinesslike Paez. During our work in Calderas he combined business with his services. [233] The Paez are ardent cattle-raisers, albeit not in our economic sense, but purely for sport and the pleasure of numbers. A cow-calf is much more valuable to them than a full-grown bull, for [437] it will produce another calf and increase the herd. Thus, Marcos Antonio exchanged calves for bulls in Calderas and, indeed, bought [434] some cattle himself. These business transactions bring him about 200 to 250 pesos profit per head, since among themselves the Paez ask only low prices, about 50 pesos for a bull. His selling 115 price on the market in Inzá amounts to about 300 pesos. He re- 124 garded the work with us as highly troublesome, but he knew what he was worth to us. His fee rose from three pesos a day at the beginning to ten pesos. Translations that seemed to him too complicated or explanations that were too long for him he would give "in essence" in a few words, after which my counterquestions obviously annoyed him. One day when I had planned some important work, but he some important business, he hid our horses and calmly let us look for them all day long, while he, under the pretext of searching for the horses, carried on his business until he "found" them in the evening.

/109 cont./

124 One day, at the sight of a freshly cleared field on the
423 highest mountain slopes, I asked a Paez working there to whom this land belonged and whether the person concerned had always owned it. He answered that he himself was the owner and that previously the parcel had been ownerless. He said that he had cleared it for himself and only recently built his house here in order to live here. In answer to my question as to whether there was any more ownerless land, he explained to me that the highest and inaccessible mountain peaks which are still covered with big trees and have never been cleared do not belong to anyone and that any Paez could clear a piece on them, which would then become his property. Later I called Victoriano to task, saying that actually there still was ownerless land. "Yes," he then answered me, "of course there is still ownerless land, but it is so poor that it has no value."

157 Far from their village, on the way to market, and generally in /110/ places away from home, the Paez, if they
[123] are alone or in the minority, are timid and reserved. If they are together in large numbers, however, or, even better, in
[522] their own house, they are usually quite bold and impudent and loudly made their jokes at our expense. Indeed, jocularity is a
157 prominent characteristic of the Paez. No talk, no conversation,
521 be it ever so unimportant, is begun without joking -- often of
522 an erotic nature. The importance of conducting such a light,
[831] idle conversation is shown by the fact that serious-minded girls are scarcely ever married.

123 They made fun of my wife in particular, for they found
522 it altogether ugly that she wore long pants. Numerous jokes
157 were made about this, which we, of course, did not understand, and for this reason we, in turn, had to take the initiative by making a joke which was then acknowledged gratefully and usually
609 with quick-wittedness. On the whole, respect toward strangers
522 inside their dwelling is unknown to them. In larger groups they
159 make their asides even in a strange environment, accompanied by much laughter. Since one does not understand them, one
[797] easily gets the impression that they are silly. In their own houses they also mimic the visiting mission priest by repeating

/110 cont./

609 parts of the Mass, as they have understood it, in an exaggeratedly
522 dramatic fashion. The priest has a difficult office in any case.
797 They do not understand his sermons and teachings in the church,
159 conducted in the Spanish language. If he speaks their own language, his inevitable mistakes are commented upon amid loud laughter.

123 On our first visit to Calderas, a man about 30 years old met us at the boundary of the village and asked us in a gruff tone whether we did not know that this land was only for the Paez. No white man had any business here. We should turn back, for no one wanted our visit. Marcos Antonio intervened and explained that we had only come to bring gifts to the Calderun and that we had no intention of settling down in Calderas. We would surely leave again the next day. The man let this pass and warned us upon departure not to dare try to steal any land.
[223] Even later we never obtained permission from the cabildo, the village council, to remain in the village more than a week at a time. Our reputation among the younger people of the village improved from week to week, on the one hand because we offered a cigarette to each man and each woman with whom we had an opportunity to talk, but even more because -- as we were told later -- we were friendly to everyone and always /111/ laughed.
[648] As a matter of fact, it would never occur to any of the white or mixed-colored colonists to favor a Calderun even with a glance. On the contrary, in the houses lying along the road, the dogs are trained to attack the Indios. True, these dogs are all undernourished and generally very cowardly. The Paez man need only raise his machete or a club in order to ward off the dog. We were the first whites who did something completely out of the ordinary in that we were always friendly, without any mental reservations, and always greeted them first, in their language. And this not only in Calderas, but also in Inzá and on the roads to the market. This friendliness was taken in good part on all sides. Then later, after we were able to show and to give them the first photographs of themselves, they were definitely pleased to be photographed and now and then offered us an egg or a bowl of chicha /see the glossary, p. 248/ when we photographed them.

/117 cont./

342 761 783 [78] [773] [628] 961 783 123 Anyone may build himself a house of whatever size he wishes on his own land in the mountains, as well as on the above-mentioned community land in the valley, but he must first ask the shaman acting for him whether any bones of the Pijao are in the ground on the piece of land in mind. As comes out in the myths, the Pijao in ancient times were the frightful and militarily cleverer enemies of the Paez. Their bones (eč ndyít Pijao) contain "pest." This pest is a very complex and significant concept among the Paez (cf. under "Religion" /see p. 191/), and the pest of the Pijao bones is capable of killing the people living above them. How very much our interpreter Victoriano, one of the most enlightened Paez, was affected by this fear came out when he worked with us in the archeological park in San Andrés. For lack of space he had to sleep in the tool room, where, however, he felt very comfortable and, with a camp bed and mattress, had built himself probably the best bed of his life. One day we opened a large prehistoric grave-chamber, which contained more than 80 bone-urns with the remains of cremations. Since we could not accommodate such a large number of urns in our living room, which at the same time served as our museum, we had to put a number of them in the tool room. I left the skeletal remains in several of them in order to save them for a later examination. Weeping, Victoriano begged me please not to put in his tool room any urns containing bones, because the bones might have come from the Pijao, who would surely kill him. Even the washed and cleaned urns, he assured us, contained very much "pest," so that at the next opportunity he wanted to go to Calderas and have himself "purified" by his home shaman. He failed to do this, and when after a few days he had a toothache, he traced this back to the action of the pest from the burial urns previously filled with bones.

342 761 783 756 787 /118/ The shaman's testing of the ground proposed as the building site is not done by digging or sampling the ground; rather, the one who wishes to build goes to the house of the shaman in the evening with coca, tobacco, and brandy, tells him of his wish, and then both sit down on the ground next to each other

/172 cont./

623 title of gobernador. In Paez this corresponds to the designation tõtens. At his side, in Calderas, stands the gobernador suplente as his representative; other functionaries are the alcalde /see the glossary, p. 248 / (in Paez ka'nas), of whom there are two in Calderas, the alcalde mayor and the alcalde menor, furthermore two fiscales, three comisarios, and one comisario escolar, as well as an alguacil. The composition of the cabildo in Santa Rosa is the following: a gobernador, an alcalde, a fiscal, a comisario escolar, and an alguacil. In Lame there are a gobernador, a gobernador suplente, two fiscales, one comisario, and one alguacil. The cabildo in Togoima consists of the gobernador, the gobernador suplente, two alcaldes, two fiscales, three comisarios, one comisario escolar, and one alguacil. Aside from the double and triple occupancies, the composition of the cabildo is the same in the four villages. It should be noted that there are Paez words only for the gobernador and the alcalde; Spanish designations are used for the rest of the functionaries.

623 554 The authority of the gobernador as the leader of the village rests more on his personal prestige than on official means of power. He must therefore be very cautious with his regulations and instructions. He has the collectively conceived decisions of the village council carried out with respect to road or bridge building or the repair of the church, the school, or the com-
[626] munity house. While his regulations remain within the scope of what the great majority of the village also regards as good, the collectivity exerts strong pressure on those who stand apart. In flagrant instances of apartness, however, he has quite drastic measures at his disposal, which, though they are today no longer as strictly wielded as formerly, can nevertheless be very effective in the hands of an energetic gobernador. It is taken for granted, however, that the gobernador acts neither unjustly nor arbitrarily, sets a good example in all undertakings, and is active first and
123 last in the communal work. How little the gobernador is in a
623 position to issue arbitrary orders within his village may be illus-
554 trated by the following example: One Saturday the gobernador

/172 cont./

123 of Calderas came from the weekly market in Inzá and visited
623 me in San Andrés. When in the course of the conversation I
554 mentioned that I would be coming to Calderas on the following
Monday, he suggested that I arrive there early. He said that
he already knew that I was interested in everything concerning
[476] his village and on Monday /173/ I could be present at a com-
munity project for all the men of the village in clearing a field.
Since my interpreter was not free until Monday, I could not set
out on Sunday in order to be present in time for the field work
on Monday. I begged him to postpone the communal project
for a day or two. That would be impossible, he replied, since
this work had been decided upon for Monday by the cabildo and
123 he was not in a position to change the date independently. I
623 offered him as a gift a very handsome travel-machete with a
554 sheath, in case he might be in a position to postpone the work.
411 Generally the Paez own only the heavy, broad work-machete for
felling trees, which they can drag along with them on the way to
[435] market only with difficulty. As a weapon for traveling, therefore,
the lighter, chrome-plated machetes are greatly coveted, but
on account of their high price of 12 pesos no Calderun has here-
123 tofore been able to afford one. I had put this gift aside for the
623 gobernador some time before, but had never found the proper
554 reason for presenting it. This time the occasion seemed very
favorable and really worthwhile. The gobernador, although he was
extremely anxious to be the first Calderun to possess the imple-
ment, explained that my request could not be fulfilled, since
all the men had already been notified for Monday. I pointed out
that he surely had enough messengers to inform his people that
the work would not take place until a few days later. He could
not make the decision to do this; he kept explaining that in
addition the men would be angry. I proposed to him that I would
treat them, at my expense, to ten pesos' worth of chicha to
placate them, an amount that they had hardly ever had before.
He could not make a decision; he finally said that he would try
and would speak to his people on Sunday, and he hoped, in view
of so much chicha, that he would succeed, but he could not

/173 cont./

123 promise it. When I arrived in Calderas on Monday I found that
623 the men of the village had not wanted to meet a second time and
554 that they had indeed begun the work.

623 The alcaldes and the alguacil are the messengers of the
[203] cabildo; they notify the people when communal projects are
[696] necessary. Moreover, the alguacil administers corporal punish-
[203] ment. The three comisarios are likewise messengers and help
[794] the gobernador carry out and supervise public projects. It is the duty of the fiscales -- together with the gobernador -- to decorate the church. They provide candles and help the priest. According to C. Cuervo Marquez (Vol. II, p. 183), the fiscales formerly also had the duty of defending the interests of the /174/
871 village against the encroachments of the colonists. The comisario
623 escolar, finally, is responsible for the school attendance of the
[797] children. The mission sisters, as the teachers, turn to him and
[875] he is supposed to get the children to school, by force, if necessary.

It should not remain unmentioned that Calderas -- and ap-
621 parently this village only -- is divided into four parts, each of
623 which occupies roughly a cardinal point and has about 50 houses.
[361] An alcalde, alguacil, fiscal, and comisario are each an equal representative of a quarter in the cabildo. At present the alcalde is the representative of the western region of Yocashí, the alguacil the representative of the northern region of Puélche, the fiscal that of the eastern region of Aépel, and the comisario that of the southern Bishók. I was told that the connection between an office and the representation of a village quarter is arbitrary, depending on where the occupant of the post happens to live. The official position within the cabildo is first assigned, and today it is the more important. Four of them take over the representation of a village quarter each. Thus, the comisario, if he lives there, may be the representative from Yocashí, and the alcalde the representative of Aépel. The present gobernador, for example, was fiscal ten years ago. Since he lives in the village section of Puélche, he was at the same time the representative of this quarter.

3. Customs during the Course of Life and of a Day

182 The Paez generally give the impression of being contented
593 human beings, and it seems that marriage and family life are
[159] better than average. Of course, the observations on this are very
[114] scanty, for, on account of the remote location of the individual dwellings, the research worker always has only a brief glimpse of family conditions at any one time. This very solitude, however, and the consciousness of greater dependence on one another within the family favors its cohesion, even as it reduces the conflict and irritation which arise through women's gossip when people live too closely on top of one another.

842 Basically every family wants a great many children -- at
[123] any rate so said all the men questioned. Two Calderun women, however, /184/ confided to my wife that there was a remedy -- which they and other women, too, naturally did not use! -- that
[825] would with certainty prevent conception: One must eat some of
[237] the spittle of a mula (the female, infertile cross between horse and donkey), and then one would no longer have children. They said that a woman does this only when she has already given birth to a great many children. In general every girl desires a great

In general
842 /184 cont./every girl desires a great
[581] many children, for this is the chief requirement for being married. Moreover, the percentage of barren women -- in childless marriages,
[162] they say, the fault is always the woman's -- is not small. According to inquiries, it comes to about 10 per cent. Men generally want boys; the women, girls, in order to have help in the house-
845 hold. Twin births are rare, but they are not regarded as anything special; rather, people are happy about them as they are about other children. Deformities at birth are said not to occur; however, I saw several persons with cleft palates. They seem to be ashamed of this, for in conversations with us they always held
847 their hands over their mouths. Infanticide does not occur. To
● 123 inquiries about this, there was always the completely horrified counterquestion as to whether that was the case in my country.
165 Overpopulation is not to be feared, even with a larger number
[163] of children -- the average is three to four living children per family -- since infant mortality comes to more than 50 per cent.
[164] Whooping cough is the most frequent cause of death among small children.

a) Birth and Childhood

843 The parents' concern for the child begins even before birth. The husband of a pregnant woman expecting her first child must sleep with her very frequently, for otherwise the child would be very weak. In the case of subsequent children this is no longer
[783] required so often after the beginning of pregnancy. The pregnant woman may not leave the house or eat pork for two months before the birth, since this causes "pest" and she would have stomach
[822] pains; this would be very detrimental to the child. For the same reason she may not eat beans and onions, and no fish because it comes from the cold element, water, and because a pregnant woman must not become cold.

843 According to one informant, the pregnant woman retires
343 to the menstruation hut (dúyat) two to three weeks before the
124 birth. During this time her mother or another female relative cooks for the family. According to another informant, the
000 /185/ woman does not retire to the dúyat until the birth. In any

/200 cont./

46/ On one day, for example, a portion of the field is cleared of weeds, on the next the sugar-cane mill is repaired, on the day after that a neighbor is helped with housebuilding or milling sugar cane, then nothing is done for days because of drinking, and not until several days later is the weeding begun again. Once they have planned or begun a project for the day, however, they [123] will not let themselves be interrupted. Several times it happened that I would visit a family in the evening, in order to plan something which would be not at all unpleasant for them for the next day. But if they had already planned something else, I was obliged to come back on the day after that. In the fields, too, the men are not to be diverted, or only with difficulty. During the sowing, weeding, clearing, or other work on the field, they let themselves be drawn into conversation only during the coca pauses; at other times one could scarcely disturb them at these and similar tasks which are accomplished in a very even tempo -- provided that enough coca is available. It is different with the women. They let themselves be easily diverted from their daily, little varied household tasks. They are the ones who really do the most work within the family, for, as soon as they are married, they are never able to sleep through the night, /201/ but must stir the fire anew every two hours. Furthermore, they get up earlier in the morning, and they cannot go to bed until later at night. To rest a bit during the day is completely unknown. Nonetheless, they are satisfied with their lot and work happily, since all the women work in the same fashion and they have known nothing else for generations. There are, of course, tasks which are done willingly and others which are done less willingly. The goal of the necessary occupation seems to be decisive, for all the tasks necessary for nourishment are done willingly. Thus, the men, for example, like to work in the field, "since it is for food," like to plant sugar cane or build a sugar mill, "since it produces something to drink"; and the women, too, like to drag in firewood, [296] "since it is for meals." Washing clothes is one of the decidedly [499] unpleasant tasks of the women, as bridge-building is among the [462] men. In the examples sketched here, the tastes of all the Paez seem to be alike.

/204 cont./

556 special sociological role within their community, for they are elected neither more frequently nor more rarely to the village offices. They have simply "always" been considered wealthy, though it should be noted that in the language of the Paez there [192] is no word at all for "rich" or "poor." The word used for "poor," "pōre," comes from the Spanish (povre), and the word used for "rich," "čačanas," at the same time means "strong" in the physi-
556 cal sense. Despite this apparent unimportance of wealth, how-
626 ever, it is jealously seen to that no other industrious man of a poor family will become rich and possibly put his wealth -- by means of Colombian dress or something similar -- on display. The evil shamans would put a spell on him or poison him, /205/ and the neighbors would devastate his fields by driving their cattle there. He would be cut by everyone, and people in a state of intoxica-
115 tion would start a fight with him in order to kill him. At any
556 rate, this is what happened and is happening to our interpreter,
626 Victoriano. He does not come from a wealthy family, but he wants to acquire money and livestock through diligence and [291] ability. From the money he earned among the whites he has [177] already bought himself the clothing of the whites, which he now proudly displays, and at festivals he sells wax candles and sweets. His fellow-villagers hate him on that account. The priest has had to protect him several times already from the machetes of drunken men who had started a fight with him; and in our presence, too, when we visited various houses with him, he was occasionally very rudely heckled by drunken men. Not least because, in the opinion
115 of the Calderun, he is not working. Again and again I tried to ex-
● 123 plain to the people that they, too, could "go walking" with me and
556 earn money if they were able to speak Spanish. Since this was
626 not the case, there was nothing else for me to do but always work with Victoriano. Nothing helped; Victoriano became more and more unpopular, and I, too, was regarded as a do-nothing. A
123 drunken man who, instead of the one cigarette he was given, vainly demanded an entire pack as a present abused me, too, as an "alko," a dog, who is always going from house to house and does not work.

/205 cont./

578 I acted as though I did not understand the words, but observed the
[123] same thing as on other occasions of disputes among Indios, namely, that two who are quarreling are not separated by a third stepping in. Rather, a dispute is regarded as an affair of the participants and as an interesting diversion in the monotonous daily existence, and the outcome is observed with obvious interest. Apart from the native word "alko," the Paez, interestingly enough, have no abusive word in their own language. The only term of abuse, but used very frequently, is the Spanish "carajo!"

f) Division of Labor between Men and Women

462 As we have seen from what was said above, the individual left to his own resources cannot exist in the Paez communities. The men's work is supplemented by the women's work, and vice versa. Both men and women are dependent upon each other to make a living /206/ and rely on each other for their most primitive vital needs. A man needs a woman who weaves clothes for him, and a woman cannot clear a field -- to cite but one example. The traditional tasks in relation to the sexes may be
[177] summarized once again here. Transitions toward newer ways of life are noticeable, as these have been taken over from the surrounding colonists.

In his opinion, one cannot
/261 cont./
756 learn how to become a shaman; rather, this is a hereditary gift.
[827] He himself has no son and no pupils.

The tepits Francisco Cuskue is about 40 years old, married, and has four daughters and one son. Two children died. He has neither /262/ cows nor pigs, horses or sheep, and is very poor. He learned from childhood on, for his father and grandfather were also shamans. He wants his son to become a shaman, too. The latter, about ten years old, has not yet begun the apprenticeship, [123] however. In reply to my question as to whether I, too, as a stranger, might become a shaman, he asserted that this would be possible, but said that the training is very long and difficult. One has to learn from childhood on, until one is about 25 or 30 years old. I, in my case, am already too old to begin.

The tepits Cerbeleón Niunda (Ill. 153 /see p. 267/), who lives near the shaman Francisco, is the son of a shaman, was taught by his father, and had the "signs" when he was only ten years old. He is now, as an estimate, 55 years old (no Paez knows how old he is) and had ten children, six of whom died. In the way
756 of possessions he has neither horse nor cow nor sheep. Whereas
312 all Paez divert the mountain brooks so that a small ditch flows past their houses and they always use only flowing water, the shamans Francisco and Cerbeleón have a small joint reservoir below a spring, from which they drink and into which, before drinking, they place one of their medicinal herbs, ˇsũ. When questioned, both stated that they did not do this for any special reason and could not find out about anything in the reservoir, neither sickness nor the future.

754 Just as the good shaman was chosen by a vision, this also ap-
787 plies for the evil sorcerer. It is regarded as an omen that he is to become a nyiç if, for example, in a dream he sees a bird that in its beak holds a donkey, into whose open mouth flies are
754 crawling, or simply if he dreams about pigs. The prospective nyiç may have his vision during the day or at night; it is said that people who are abroad a great deal during the night are the most susceptible to evil sorcery, since at this time they have the

SC15 Paez SC15

They represent the primitive type of habitation, the agglomerations being the result of the efforts of the missionaries. 342 [177]

The villages are generally in the open grazing districts at the bottom of the valleys, on side plateaus, or on broad ridges. They are not compact in the common sense of the word, but consist of isolated groups of houses, the approximate common center of which is often indicated by the whitewashed thatch-roofed church (plate v). 361

The walls of the permanent houses are made of a kind of *bajareque*, i. e., a skeleton of canes filled in with clay. In the better homes the interior is divided into two or more rooms, usually very small, with a hearth in the middle; but oftener there are no interior partitions, the dwelling consisting of a single square apartment. In every case that came under my observation the interior was very untidy. 342 353 [354] [356]

The Indians openly objected to our entering their houses, hence I could gain only casual glimpses of their domiciles, the furnishing of which seems to be an imitation of that of the dwellings of the few Spanish people living among them or in the immediate neighborhood. 352 123 177

Outside the houses they generally have a cane-crusher of primitive type, with horizontal smooth cylinders moved by means of levers at each end. A loom and a grinding stone are also seen occasionally under an adjacent shelter (plates iv,[1] 2, and vi).[2] 407 286 412

There may often be seen, either about or inside the housse, very large jars used as receptacles in the elaboration of the chicha. These utensils seem to be almost the only survival of the ancient earthenware industry. The smaller pottery vessels which were seen occasionally had been taken from old graves. 415 [192]

Each group of houses, in which several generations of a single family dwell, is surrounded by a small enclosed field, planted with sugar-cane, plantains, oranges and other fruits, and greens and roots of daily use. The garden enclosure is formed by a ditch, inside of which is a wooden fence or a stone wall, the latter often crowned by a hedge of maguey (*Furcræa*), lechero (*Euphorbia*), borrachero (*Solanum*), and other bushes. 351 [592] [247]

[1] [See plate facing P. 317 — Analyst]

[2] [See plate facing P. 320 — Analyst]

/178 cont./

133 several leagues around were supplied for a long time with the
175 salt extracted from the three salt deposits that still exist in
3/7 Segovia. Across from these and on the other side of the Ullucos, in Vivorá, another salt deposit was also exploited.

114 At the confluence of the small stream called El Escaño
172 and the Pisimbalá, on the right bank of the latter and at the
[133] foot of the ridge of Aguacate, the Archeological Park of /179/ Tierradentro, a branch of the Instituto Colombiano de Antropología, is located on an alluvial terrace covering an area of two hectares. Founded some 15 years ago, it is in charge of the care and conservation of the archeological monuments, which have been known to the scientific world since 1936, but to which reference was made as early as around the penultimate decade of the last century, when Dr. Carlos Cuervo Márquez carried out his explorations through the "lands of the Paez and much of the Nevado del Huila." Subterranean necropolises with columns, colonnades and niches, black and red geometric painting on a white background, statuary very similar to the Augustinian, ceramics and metalwork are the principal exponents of this culture hardly known in descriptive form.

The Archeological Park of Tierradentro has served as the center of operations for the scientific expeditions which the national government has sponsored, fostered, and supported during the last 15 years.

II

Over the Zigzags of the Road

491 In order to travel on winding roads one needs horses re-
• 123 sistant to fatigue; a dashing spirit must yield to a solemn
484 step, firm tread, and steady pace.
492

/179 cont./

123 At 11 o'clock in the morning we left the Park, bound for
484 Calderas. The road climbs through the Pisimbalá valley, at
491 first on its right bank and soon on the left, after crossing a wooden bridge with a plank roof; from this bridge to the pueblo of San Andrés, three streams have to be crossed: Chapequís, La Virgen, and the cemetery stream. Along this short distance and at the edge of the road we counted ten houses, all of them thatched except one of masonry, tiles, oil paint, modern manufacture; the others have white washed walls, painted doors, and are generally clean and orderly. They are the houses of mestizos and colonists settled on their respective fincas.

At 11:30 we left the settlement and took the path that leads to Calderas; the road goes ever upward, in slow and slippery
123 zigzags. As we go along, we see houses with graphite-colored
342 roofs and walls which are black when made of mud or (and these are in the majority) yellow when they are of maize stalks; they lie as if submerged /180/ in the plantings of bananas, sugar cane, and yuca; bluish smoke rises vertically in thick columns from the openings.

123 At 12 o'clock we came out on the Mesón, Supok in the
133 Paez dialect, a small plateau oriented from north to south
[361] and bounded on the east and west by great depressions. Many native huts stand there.

[137] The beautiful valley of the Pisimbalá torrent comes into view in its entirety; contracted at times, then widening more, extensive in length and generally narrow, it descends in a gentle slope in pursuit of the noisy Ullucos; covered with thriving vegetation, it looks like a carpet of living green blending in its tones the stateliness of the cachimbos /búcare, Erytrina umbrosa/, cedars, guamás, gadua bamboo, and yarumos /Cecropia peltata/, and the splendor of the plantings of sugar cane and bananas and the pastures of the herders.

[131] An hour later we reached the Yukaichí ridge, the boundary of the parcialidades /territorial divisions/ of San Andrés and

/180 cont./

/23 Calderas, and the water divide of the Kukiyú river and the
/33 Pisimbalá torrent, the former a deep gorge, the latter an
[131] elongated basin. Toward the north, the outline of another ridge bounds the horizon and divides the parcialidades of Suin and Chinas. Prominent along it, the Vichaguau peak, the hill Dondotá with the double crests, between which, when the sky is clear, one can see Huila with its eternal snows, where the golden rays of the sun break into a silvery radiance. Toward the east one sees the hills of Chindavá and Potrerito, the heights of Togoima, and the canyon of the Páez. Toward the south stand the mountain ranges of Pangok and El Aguacate, which separates the valleys of the Pisimbalá and the Ullucos; the tablelands of Pedregal, Turminá, and Inzá; the sharp peak of Trueno /Thunder/, the "Kapich" of the natives, a summit
823 of silence, lightning, thunder, and storms. In the place where
173 the sun sets, there rises, stately and challenging, the sharp
649 peak of Hipinjí (1), on which, according to some Indians, lie
[133]
[104]

1. H = the English h.
   J = the French j.
   Sh = the French sh.

the images of saints, the bells, the clothing, the gold, and the silver which the Paez army carried away from San Sebastián de la Plata after murdering all of its white inhabitants, setting fire to the town, and filling up the famous silver mines which had given the town its name and brought large numbers of ad-
/73 venturers and not a few misfortunes to the Indians. This legend
823 has fired the imagination of the whites and has led not a few to search for them. It is said that several whites went to the Hipinjí in search of the legendary treasure. At the /181/ /illustration appears here/ top of the peak a white flag was waving. One day there appeared on it the following mysterious order: "At 12 o'clock you may clear out this opening." Their enthusiasm was renewed, their fatigue forgotten, and they went to work eagerly. One worker was rewarded by blind

/311 cont./

243 Wheat is cultivated with special emphasis in the areas of Lame, El Cuartel, La Troja, and Vitoncó. It is destined primarily for sale. It is planted along with maize, although there are already clearings intended exclusively for its cultiva-
[412] tion. They reap it with knives, rarely with sickles. They do not bind it into sheaves, but make bundles and hang it from the eaves or beams of the house. When dry, they thresh it with wooden clubs /masas/ and separate out its husks by exposing it to the
[256] wind. They grind it at once in hydraulic mills built by them themselves and take it to market. They have no sifters to separate the bran.

128 Below /see pp. 25-33 / we present a statistical table on
241 the production of the various species cultivated by 25 families
433 of Mosoco, 8 of Lame, and 15 of San Andrés including that of
[563] some mestizos and whites, marked with an asterisk, in order to make some comparisons and to estimate the volume of production. We specify the percentage of the production intended for sale. For obvious reasons, we have omitted the names of the family heads, identifying them solely by number in order. The statistical data correspond to the production in the year 1953.
[124] In spite of the fact that this type of investigation presents some
[123] difficulties, owing to the reluctance of people to reveal the data on their production they are in general completely trustworthy, since they were collected after a firm interpersonal relationship had been established between the investigator and the person investigated. In addition, they appreciably agree with our observations noted in "General observations" on Páez agriculture.

/312/ Potato cultivation in Mosoco

244 We have deliberately omitted anything about the cultivation of potatoes in order to deal with it more thoroughly.

The methods of cultivation differ somewhat from those commonly practiced in the other parcialidades. The soil is prepared in beds that follow the direction of the slope. The

/107 cont./

123 knew tales he could tell, and to whom we gave tobacco and salt and a few other small gifts, a knife, a hoe, or an aluminum cup. At the moment he had a headache, he said. I gave him a few tablets, and we agreed that I would come back the next morning and he would tell me a few tales. When we arrived the next day, after hours of tramping, his wife told us that her husband had gone into the mountains very early that morning in order to cut wood.

115 Our first visit in Calderas took place in the company of the interpreter, Marcos Antonio Penkue, a Paez about 40 years old from San Andrés, who regarded himself as very civilized and who had reached a certain position of wealth. He served as a [191] soldier on the Brazilian border and speaks Spanish well. On his [245] finca /see the glossary, p. 249 / he has about 2,000 coffee trees, [439] whose yield he sells in Inzá on the market. He also carries on [464] other business there by functioning as an interpreter and middleman for the non-Spanish-speaking and generally unbusinesslike Paez. During our work in Calderas he combined business with his services. [233] The Paez are ardent cattle-raisers, albeit not in our economic sense, but purely for sport and the pleasure of numbers. A cow-calf is much more valuable to them than a full-grown bull, for [437] it will produce another calf and increase the herd. Thus, Marcos Antonio exchanged calves for bulls in Calderas and, indeed, bought [434] some cattle himself. These business transactions bring him about 200 to 250 pesos profit per head, since among themselves the Paez ask only low prices, about 50 pesos for a bull. His selling price on the market in Inzá amounts to about 300 pesos. He re- 115 124 garded the work with us as highly troublesome, but he knew what he was worth to us. His fee rose from three pesos a day at the beginning to ten pesos. Translations that seemed to him too complicated or explanations that were too long for him he would give "in essence" in a few words, after which my counterquestions obviously annoyed him. One day when I had planned some important work, but he some important business, he hid our horses and calmly let us look for them all day long, while he, under the pretext of searching for the horses, carried on his business until he "found" them in the evening.

/108 cont./

115 Victoriano likes to parade his outward standing of higher
156 culture openly. He possesses soap, a toothbrush, a small brush
554 for grooming his eyebrows, and perfume. He uses all these
[598] toilet articles very frequently. He is not afraid of the jealousy of his Calderun fellow-villagers; he always carries his machete /see the glossary, p. 249/ with him in order to defend himself. He wants to marry a "white" woman outside of Calderas (cf. also "The Course of a Day" /see p. 133 /).

● 124 /109/ In the work an attempt was made as a matter of
286 principle to observe all the activities of the Paez ourselves;
386 when this was not feasible, two different informants were questioned if possible. Two examples will show, however, that errors can creep in, even with the most careful work: I had the dyeing process for the black-dyed fabrics explained to me by the interpreter Marcos, according to whom they are first boiled with certain leaves, and then all of this is placed in black humus earth for two days. When the same question was put to Victoriano, he stated that the black coloring occurs if the fabric is placed in black humus earth for two days. At my suggestion that the fabric first had to be boiled with leaves, he delightedly agreed with me. When called to account as to why he had not told me that, he replied: "Well, you did not ask me about that; you only wanted to know how the material becomes black!"

124 One cannot speak sufficiently often and again and again
423 in different ways about the same subject, for to the Paez the necessity or the meaning of explanations for things self-evident to them is usually incomprehensible. Thus in the case described there was as little ill-intent or even mere carelessness as in the following case: In roaming over boundary lines, I inquired as to which fields were private property and which were community property. We came to the general conclusion that the lowlands were community property and the mountain slopes the private property of the man or family who had first cleared the land. I asked Victoriano several times as to whether there were any pieces of land that at present had no owner. He stated emphatically that all the land had been disposed of and there was no longer any ownerless land.

/109 cont./

124 423 One day, at the sight of a freshly cleared field on the highest mountain slopes, I asked a Paez working there to whom this land belonged and whether the person concerned had always owned it. He answered that he himself was the owner and that previously the parcel had been ownerless. He said that he had cleared it for himself and only recently built his house here in order to live here. In answer to my question as to whether there was any more ownerless land, he explained to me that the highest and inaccessible mountain peaks which are still covered with big trees and have never been cleared do not belong to anyone and that any Paez could clear a piece on them, which would then become his property. Later I called Victoriano to task, saying that actually there still was ownerless land. "Yes," he then answered me, "of course there is still ownerless land, but it is so poor that it has no value."

157 Far from their village, on the way to market, and generally in /110/ places away from home, the Paez, if they [123] are alone or in the minority, are timid and reserved. If they are together in large numbers, however, or, even better, in [522] their own house, they are usually quite bold and impudent and loudly made their jokes at our expense. Indeed, jocularity is a 157 prominent characteristic of the Paez. No talk, no conversation, 521 be it ever so unimportant, is begun without joking -- often of 522 an erotic nature. The importance of conducting such a light, [834] idle conversation is shown by the fact that serious-minded girls are scarcely ever married.

123 They made fun of my wife in particular, for they found 522 it altogether ugly that she wore long pants. Numerous jokes 157 were made about this, which we, of course, did not understand, and for this reason we, in turn, had to take the initiative by making a joke which was then acknowledged gratefully and usually 609 with quick-wittedness. On the whole, respect toward strangers 522 inside their dwelling is unknown to them. In larger groups they 159 make their asides even in a strange environment, accompanied by much laughter. Since one does not understand them, one [797] easily gets the impression that they are silly. In their own houses they also mimic the visiting mission priest by repeating

Among the Paez, fishing with

/145 cont./

226 poisonous plants is done once a year, in the dry season, as com-
824 munity fishing with weirs. For this purpose -- it was explained to me -- a dam of stones and earth is first made by the men. The herbs, which only grow high in the mountains and contain a poisonous substance, and which have been pulverized with stones, are tossed into the pool thus partitioned off. These herbs are called yũkse or kẽse. The fish are said to die from them immediately. /146/ They are caught only by the men. But since the poisonous herbs are so far away and are to be found only with difficulty, the men are said to catch the fish sometimes unpoisoned at the weirs with their bare hands.

f) Weapons

411 The weapons of the Paez are limited to hunting weapons
[726] and children's toys, since wars are no longer fought. The only important hunting weapon today is the shotgun. As children's
[524] playthings there are the stone-sling (ísot), blowgun (pãt), and in in recent times the elastic sling (káučéro).

[824] In former times, in the battles with the Spaniards, the
[714] Paez were said to have used lances 25 handspans long made from the wood of the chonta palm, as well as plaited shields or shields
[237] of tapir skin (Pittier, p. 327). I could find no confirmation for the
[124] present-day or even earlier use of lance and shield; my informants
[175] were familiar with neither the word nor the object. From the chroniclers, however, it is reported that the Paez, as well as other mountain peoples of this region, had learned from their battles with Spanish horsemen to defend themselves with long lances. There is, however, absolutely no foundation for a pre-Spanish use
714 of this type of lance. It is not unlikely that the Paez originally had plaited shields (opimb). The word for skin shield (himba-kat) is interesting; its present literal meaning is "horse skin." Whether himba meant "tapir" in pre-Spanish times cannot be ascertained.

In general
842 /184 cont./every girl desires a great
[581] many children, for this is the chief requirement for being married. Moreover, the percentage of barren women -- in childless marriages,
[162] they say, the fault is always the woman's -- is not small. According to inquiries, it comes to about 10 per cent. Men generally want boys; the women, girls, in order to have help in the house-
845 hold. Twin births are rare, but they are not regarded as anything special; rather, people are happy about them as they are about other children. Deformities at birth are said not to occur; however, I saw several persons with cleft palates. They seem to be ashamed of this, for in conversations with us they always held
847 their hands over their mouths. Infanticide does not occur. To
123 inquiries about this, there was always the completely horrified counterquestion as to whether that was the case in my country.
165 Overpopulation is not to be feared, even with a larger number
[163] of children -- the average is three to four living children per family -- since infant mortality comes to more than 50 per cent.
[164] Whooping cough is the most frequent cause of death among small children.

a) Birth and Childhood

843 The parents' concern for the child begins even before birth. The husband of a pregnant woman expecting her first child must sleep with her very frequently, for otherwise the child would be very weak. In the case of subsequent children this is no longer
[783] required so often after the beginning of pregnancy. The pregnant woman may not leave the house or eat pork for two months before the birth, since this causes "pest" and she would have stomach
[822] pains; this would be very detrimental to the child. For the same reason she may not eat beans and onions, and no fish because it comes from the cold element, water, and because a pregnant woman must not become cold.

843 According to one informant, the pregnant woman retires
343 to the menstruation hut (dúyat) two to three weeks before the
● 124 birth. During this time her mother or another female relative cooks for the family. According to another informant, the
000 /185/ woman does not retire to the dúyat until the birth. In any

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of the Paez from Pitayó collected by French missionaries.

197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic classification of Paez within the language groups of Colombia and classified it in the southwestern group of the six Chibcha language groups. (These Chibcha-speaking tribes correspond neither archeologically nor ethnologically to the true Chibcha (Mwiska) of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic recording lay, aside from the brief time at our disposal, in the lack of grammatical training of the interpreter, who otherwise spoke Spanish very well, but who, during dictation or in translations, often said the same sentence entirely differently when repeating it; possibly because he could translate it better this way. When his attention was called to this, the stereotyped answer was: "One can say it that way, too" or "that is the way we speak." Another thing was that the interpreter was able to summon up the unusual mental concentration for linguistic recording for only two or at most three hours daily, distributed over the forenoon and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collection of ethnological data, the following word list was also made with my Calderun interpreter, Victoriano Piñakuẽ.

In the Paez alphabet the complete palatal range, which includes all consonants, is noteworthy. Almost as numerous are the consonant combinations with the English "w." In the

/224 cont./

193 no one: tečanyópa; tečanyópa máhiméta, "no one is working";

several, various: ko; ātya ko hímba hipt, "I several horses have";

many: tak; tak nása, "many people";

little: wé; very little: táwala wéha.

193 114 Verbs: The infinitive forms of the verbs end in -ya. The only data thus far published about the conjugation system are to be found in Castillo i Orosco, who conjugates the verb "to write" [177] in all paradigms according to Latin grammar. The word formation of the model verb and the conjugation are artificial and set [797] up for teaching at the mission schools. People do not speak that way in Calderas.

193 124 177 The conjugations of a few verbs given in the following do not represent all the conjugation possibilities, since -- as was mentioned -- the interpreter lacked a knowledge of Spanish grammar. Hence the schema of the paradigms is largely theoretical. Everyday speech is different, and especially in storytelling the interpreter used forms which he reproduced in Spanish with participial constructions. Nevertheless the forms reproduced here are /225/ "correct" in the sense that one "can" speak this way and be understood while using the forms.

193 [124] Besides the four tenses reproduced here (present, future, and two forms of the perfect), there are probably also forms corresponding to the conjunctive, which, however, the interpreter neither understood nor was able to reproduce in Spanish. The forms of the future are not always used. Very often the present is used with the addition of "tomorrow" or "later," for example, ātya gwágwan kúskay, "I speak tomorrow," instead of ātya gwágwahípt, "I shall speak." The forms of the two past tenses are apparently used arbitrarily. To my questions on this point I always merely received the answer: "one can say it this way and also that way." Here, too, the addition of ónna, "yesterday" (in context: ónnaha), or esé, "some time ago," is customary.

[126] The abstract, consecutive listing of the forms of a conjugation is hardly possible for the Paez. I always had to make

/258 cont./

754 Afterward his throat began to dry out and he could breathe only with difficulty, until he finally died.

754 The evil shamans are not generally known publicly. Men
756 as well as women, however, may be teyu and nyic. In fact, the
[562] most famous and clever teyu whom we met was an old woman,
[753] Felisa Ipia in Santa Rosa, who at the same time, however, is re-
[623] garded as the most evil sorceress who ever existed. All the sick-
[683] ness and misfortune in Santa Rosa are ascribed to her acts. For this reason the cabildo once burned all her medicinal herbs and broke her shaman's staff. But people no longer dare to undertake anything serious against her, since they fear her, as they do all evil sorcerers. In former times the convicted nyic were always very severely punished, but since many members of the cabildo have died as a result of sorcery, no one any longer dares to accuse the well-known nyic today.

754 /259/ With regard to the problem of male and female shamans,
756 a teyu from Calderas explained that women as such had an excellent
562 sense of feeling and therefore the best talent as shamans. Since they are more crafty and cunning than men, however, the female shamans can transform themselves into an evil sorceress at any time. And that is precisely what makes them so dangerous and hence unfit for the calling of a good shaman.

754 The border between teyu and nyic, therefore, is flexible.
756 Both aspects of shamanism may be united in one person, or a teyu may become a nyic and vice versa. In the following, therefore, the teyu form of manifestation of shamanism will be described. In spirit the nyic are based on the same foundation. They never show their herbs and remedies and allow no one to take part in
[124] their ceremonies. The teyu, on the other hand, on closer acquaintance were quite willing to give information about their knowledge and to let us take part in their séances.

/274 cont./

774 (u = nasal) and taff, with which everyone is familiar, although
776 they are not sure about the distinction between the two. The
753 shamans Francisco and Cerbeleón said that the two were the same; but both of them also said that ũns or taff, if they had left the person in his dream and were abroad, could be caught by tũs, eč, or nyiç without the person's becoming aware of this immediately, but rather he still went on living. To my objection that in this case ũns and taff were probably different, they did not know how
[775] to answer; Cerbeleón stated that if a person dies, his ũns goes to heaven and the person himself becomes taff. He and other teyu
756 were able to catch the ũns of a human being. Thus, for example,
774 if someone had been robbed, he would come to Cerbeleón. The
754 latter takes coca, tobacco, and brandy, and then he can bring forth the ũns of the thief, seize it, and kill it. The thief must
[783] then die. In order to get the ũns in his power, he must first cleanse
[824] his hands with the herbs šũ and vitubítskwe, as well as with brandy.
[276] The ũns has the form of a small animal, he explained; it can fly and glows and is about three centimeters long. It is very similar to a firefly in appearance, but different from eč.

554 Having reached this point in his explanation, Cerbeleón grew
754 silent, and our interpreter Victoriano said that we should now have
756 to depart, but quickly. With that he left the house in positive
[124] flight, and we were obliged to follow. Outside he explained to us that Cerbeleón was a "mal brujo," a nyiç, which, to be sure, he had always suspected before, but just now Cerbeleón had given himself away inasmuch as he had said that he could catch and
[682] kill the ũns of human beings. The people of Calderas also say that he possessed herbs that he could put in eggs, chicha, or other food, whereupon people would eat them and then die. One of the sons of Cerbeleón was a thief and had died in the following manner: The one who was robbed had prayed to the Virgen Santisima /Holy Virgin/, and God had punished the thief with death. The father himself, that is, the shaman Cerbeleón, is also a thief and kills people out of envy for their possessions.

The mission sisters confirmed this statement insofar as Cerbeleón had several times attempted to kill them by sprinkling

/286 cont./

182 no new harvest may be undertaken until the teyu has first cleansed
756 of the pest the building site or the crops, respectively.

/287/ He is, however, not only the protector of the individual or the individual family, but is also responsible for the beneficial [773] co-existence of the members of the whole village. Thus, it is not surprising that it was the shamans -- besides Thunder under his various names -- who were the war leaders in the mythical tradi- [926] tions. Thanks to their magical gifts and strength, they successfully led their people against the Pijao and the Spaniards. Several times the elders of the various villages told us that one day Thunder will again drive the white intruders out of the Tierradentro of the [648] Paez and kill them. And it is only logical that, as late as 1952, [789] on the occasion of an impending attack by an armed group of white revolutionaries, the shaman of Santa Rosa, as the successor of the mythical Thunder, should spit his magic herbs on the road leading to the village, in order to destroy them. Old Felisa Ipia is behaving in a similar manner when she keeps the souls of all the village inhabitants gathered together in the threads of her shaman's staff, in order to be able to protect them better against evil, magical influences.

756 On account of these certain supernatural abilities of theirs, the
554 effects of which no one in the community can evade, the teyu
[815] have a certain unofficial authority. In addition, they are all at least 30 to 40 years old and thus, by their very age, fulfill one of the natural prerequisites for recognition by the community. Not a few of them feel honored by this, set apart from the great mass of people, but many assured me that they were shamans only unwillingly, that though they were called by their ability to receive signs, they were nevertheless oppressed by the weight of the burden of their responsibility.

756 During times of epidemics of disease or inexplicable, "super-
124 natural" deaths, they are the focal point of the community, to
[182] which no one appeals in vain. And in conversations with them we generally had the distinct impression of facing unselfish, helpful human beings. They make no secret of their activity, and they tried, as best they could, to tell us about their experiences and knowledge which they use for the good of the community.

115

124

[For information on the informants and interpreters used by the author in collecting specific examples of mythological tales from the Parcialidad of Calderas, see category 116, pp. 10-32.]

[Parcialidad of Calderas]

/289 cont./

142 The Calderuno /native of Calderas/ is rather tall, with a light copper skin, straight black hair, a straight nose somewhat flattened and broad at the base, slightly prominent cheekbones, dark brown eyes reminiscent of the Mongolian eye, a broad forehead, long and robust extremities, a slightly pentagonal face; many have mustaches, and, on the whole, the 157 features are rather /290/ handsome. On the other hand, he is talkative, communicative, deeply traditionalistic, proud [361] of himself, and has a deep love of the land. Isolated as they [177] are from the other parcialidades by natural accidents and far removed from the urban centers of Inzá and Belalcázar, they are shy, sullen, and withdrawn with the white, stubbornly opposed to contact with him, and, as a result their institutions have suffered less from the impact of cultural mestization. 797 Not even the very church that has worked so persistently for the 177 catechization of these tribes, especially in this century through the Lazarist missionaries active since 1905, has been able to penetrate fully into the soul of these people.

114 I have carried out my research in this parcialidad since 773 the month of August of last year, with several interruptions. [124] The myths and tales which I now present were gathered with patient labor after much waiting, for the natives, when questioned about these themes, nearly always reply with the word himeto ("I don't know"). There is no need to stress the importance of mythology as an institution in the so-called "primitive" cultures. Nor is it my intention to theorize on the subject. It is enough to say, in the words of Herskovits, that "mitología es como la carta constitucional de las creencias y presta sentido a la conducta ritual que se deriva de sus consagraciones /mythology is the constitutional charter of beliefs and gives meaning to the ritualistic behavior that is derived from its consecrations/" (1). The chroniclers tell

1. Herskovits, p. 409 /see the bibliography in the foreign text, p. 309/.

* /224 cont./
756 the assisting spirit. It is not enough to know whether certain
755 medicines correspond to certain signs. The té eu must /225/
divine which remedies will be useful for the particular case.
This is why the curer always carries a pouch with all the known
remedies. He takes one out and consults. If the signs do not
circulate, the remedy is useless; he takes out another and waits.
When they are felt insistently, then the remedy is appropriate.
Since the signs are given by the assisting spirit, it is he who
cures.

* 756 The signs may contribute to the discovery of a vocation.
463 If a man engaged in a manual task that does not imply motion
787 (the making of firecrackers, plates for cooking, pottery)
suddenly feels the movement of the signs, he must seek out a
teacher so that he will instruct him in the art of curing. He
cannot disobey them or he would go mad.

* 756 Even the curers themselves must practice the signs. If,
787 for example, no sick clients have come for two days, the
755 té eu must visit his Kachí (2) and practice the signs; otherwise,

2. See below, "Divination sites" /see p. 9 /.

they may drive him insane. For this reason, the curer must
[888] practice his profession until old age begins. Old men lose the
signs because they cannot travel to go to the Kachí and practice
the signs.

* 756 All the informants affirm that signs on the left side signify
787 something bad, while those on the right indicate something
827 good. As a rule, the signs that are given in a certain part of
755 the body have a specific meaning. Minor differences may be
noted in the information provided by the curers, but they are
● [124] matters of form rather than substance. There follows a table
of the symbolism of the signs, gathered from many profane
informants and curers from the Parcialidades of Santa Rosa,
Calderas, Togoima, Avisame, and San Andrés.

/255 cont./

754 It is said that one who is to become a sorcerer does not need a teacher; he will discover the remedies and the evil spirits. Nevertheless, in the Parcialidad of Santa Rosa it is said that the most dangerous sorceress in the place teaches people how to do witchcraft.

754 *756 The té eu can easily become sorcerers, if they show interest in becoming familiar with their remedies. A sorcerer can be a good curer and cure people, but nevertheless he will demand better provisions.

754 *[756] As a rule, it is unusual for a té eu to be universally acknowledged as such, for many people, and the sorcerers among them, commonly designate them as nasa jihi (evil person).

[787] They may have the visions from a very early age, but the practice of sorcery begins in adulthood and is perfected with maturity. The sorcerers who are publicly acknowledged are about 35 years old, most of them being elders.

/256/ Sorcerers never show their remedies; much less is it possible to attend one of their sessions. This is a concealed activity. One knows who the sorcerers are by public identification. All the information obtained about them is provided by the people and sometimes by the curer himself. Nevertheless, none of them confesses practicing this activity; rather, on the contrary, they protest their innocence and claim to be the best persons in the community.

● [124] [156]

[623] [692] The remedies that the sorcerers possess are said to be well hidden, for if the cabildo were to find them, they would punish them irremediably.

[513] The sorcerers cast their spells at night. The natives say that they do not sleep. No sooner has night fallen than they are chewing coca and tobacco. They sleep during the day. They prefer the dark of night for performing their activities, although they do not have special days or specific hours.

The sorcerers do not introduce objects into the body (toads, hair, etc.), nor can they turn into animals.

/311 cont./

243 Wheat is cultivated with special emphasis in the areas of Lame, El Cuartel, La Troja, and Vitoncó. It is destined primarily for sale. It is planted along with maize, although there are already clearings intended exclusively for its cultiva-
[412] tion. They reap it with knives, rarely with sickles. They do not bind it into sheaves, but make bundles and hang it from the eaves or beams of the house. When dry, they thresh it with wooden clubs /masas/ and separate out its husks by exposing it to the
[256] wind. They grind it at once in hydraulic mills built by them themselves and take it to market. They have no sifters to separate the bran.

128 Below /see pp. 25-33 / we present a statistical table on
241 the production of the various species cultivated by 25 families
433 of Mosoco, 8 of Lame, and 15 of San Andrés including that of
[563] some mestizos and whites, marked with an asterisk, in order to make some comparisons and to estimate the volume of production. We specify the percentage of the production intended for sale. For obvious reasons, we have omitted the names of the family heads, identifying them solely by number in order. The statistical data correspond to the production in the year 1953.
[124] In spite of the fact that this type of investigation presents some
[123] difficulties, owing to the reluctance of people to reveal the data on their production they are in general completely trustworthy, since they were collected after a firm interpersonal relationship had been established between the investigator and the person investigated. In addition, they appreciably agree with our observations noted in "General observations" on Páez agriculture.

/312/ Potato cultivation in Mosoco

244 We have deliberately omitted anything about the cultivation of potatoes in order to deal with it more thoroughly.

The methods of cultivation differ somewhat from those commonly practiced in the other parcialidades. The soil is prepared in beds that follow the direction of the slope. The

/The commas in the figures are to be read as points in the translation to English./

Domestic animals

231 The Páez have bovine, equine, porcine, and wool-bearing livestock, turkeys, chickens, dogs, and cats. The guinea pig is the only American domestic animal that is raised in many homes.

231 An accurate investigation of the livestock would present serious
● 124 difficulties, in view of the suspicion of the natives. In the parcialidad of Calderas, information on the subject is almost invariably distorted, whether direct or indirect methods of investigation are employed. Acquiring data of this nature would be problematical even for the mestizo traders with a relatively high standing among the natives and very familiar with them. In our investigating zeal we visited almost all the households in this parcialidad, covering the entire territory on foot. In the shade of thickets, in the fields and pastures, a goodly number of bovines, equines, and wool-bearers are seen grazing. Once in a while one comes upon herds of swine feeding on grasses and roots. In the communal llano of Calderas /320/ about 36 head of cattle ordinarily graze. In all of these households

/320 cont./

231 chickens were not lacking. But it was impossible to obtain trust-
● 124 worthy information about this wealth. A mestizo trader very familiar with the region estimates that in Calderas there must be no fewer than about 350 head of cattle, a figure that is well
[162] deserving of credit. This parcialidad has approximately 150 families. In the statistical table that we present below 55 families are represented, for many of which the data are incomplete and others have an approximate value, deduced from information by third parties and from direct observation. The statistical tables for the parcialidades of Mosoco, Lame, and San Andrés correspond to reality.

233 Lands intended exclusively for pasture do not exist, with
[311] the exception of that which, on account of its rugged topography and deforestation, covered with grasses that become green again in winter, cannot be used for anything except for pasture, with the risk, of course, that the animals might wander away. In general the animals graze in the stubble, in the communal pastures, in the shade of the brush and thickets. In Calderas, for example, most of the livestock is hidden from strangers' eyes. They eat the branches and grasses that grow on lands that were once fields. In this way they grow wild and shy, but fat and exempt from disease. To catch these animals is equivalent to going on a real hunting expedition in that trained dogs participate, and 10 or 15 men outfitted with their respective lassos and suitably distributed in especially good places for lassoing, detaining, deflecting, or directing the progress of the animal being chased by the dogs. This work is done preferably on Sundays, at the special invitation of the cattleowners, either to brand the calves or to catch a cow intended for trade, sale, or slaughter. When the work is done, a good amount of chicha is consumed. Only the livestock that grazes on the communal llano is visible to strangers and relatively tame.

232 Everyone prefers females for reproduction. The males
439 are consumed, sold, or traded for young females and, rarely, for
231 other articles. Often there is a lack of breeding bulls. In such cases the cows do not calve and are regarded as sterile, a fact that is duly exploited by the white and mestizo traders in order to

propose 'trades'.

/357 cont./

261 that is provided by having what is to be consumed. An abundance
594 of guarapo and maize undoubtedly gives them great gratification. When these products are abundant the religious fiestas, mingas, and "entertainments" are good, the natives say, and they describe at great length the incidents as they unfold.

178 But, in spite of the fact that the work capacity of the in-
241 dividual is acknowledged, that the possession of domestic animals
433 lends a certain prestige within the group, and that the abundance
[554] of food and guarapo brings gratification, the agricultural cycle
[231] remains stationary within the lineaments of time, of the systems of labor, and of the quantity of seed. They produce essentially
178 for consumption. The stimulation of prestige does not exist. In
433 many parcialidades, the habits of a capitalistic economy are openly
[754] combated by the sorcerers (32). Nevertheless, we have already

32. Bernal Villa, S. op. cit., p. 256.

had the opportunity to state that the introduction of the cultivation of coffee (temperate zone), the development of livestock-raising and of the cultivation of potatoes in Mosoco, and the creation of settlement areas in the very heart of the native parcialidades are rapidly modifying all of the institutions of Páez culture. The family economy of self-provisioning and of small barter operations is changing perceptibly into a purely money economy. By the same process the routine monotony is disappearing from production and is being replaced by new techniques of work, a greater quantity of production, and a greater volume of trade.

434 In the parcialidades of Mosoco, Lame, and San Andrés, we
121 made an investigation of familial income and expenses /358/ for
124 the year 1953, on the basis of questionnaires prepared by the Comisión de Planeamiento de la Seguridad Social Campesina of the Ministerio del Trabajo, questionnaires that were filled out by us for the said commission with reference to Tierradentro.

100 Bases for the Study of the Social Organization of the Páez

By
Segundo Bernal Villa.

/Page 166 is blank./

124 /167/ The material for the study of the kinship system of
128 the Páez was collected in the month of May, 1953, thanks to the
[114] enthusiastic collaboration of Victoriano Piñakuĕ, 18 years of age,
[115] bilingual, and a native of the parcialidad /a village and the lands
belonging to it/ of Calderas. With this material we made an
analysis of the kinship system, which we present below without
any major modifications. It was later discussed with several na-
tive men of the parcialidad of San Andrés, who found it to be
correct. At the end of May, 1954, we had the opportunity to
discuss it again in Mosoco with two male informants of the lo-
[197] cality. They found practically no phonological differences, in
spite of the fact that the Páez spoken in that parcialidad showed
some different nuances in relation to that spoken in the other
124 parcialidades. They made only one fundamental observation,
128 which we accepted, since we consider it to be convincing. It
601 refers to the terms used to designate the sons and daughters of the
brothers and sisters of EGO. According to Piñakuĕ, they are
designated with the Spanish terms: sobrino and sobrina /nephew
and niece/. Jorge Mulcuĕ (Mosqueño /a person from Mosoco/
58 years old) affirmed that they are designated with the words kuĕ
or wásak (son and daughter) preceded by the possessive my (anji).
601 Men and women use the same terms for both the paternal
and the maternal line, with certain exceptions, subordinating the
real degree of kinship to the generation. The Páez system of
kinship terminology is, therefore, classificatory and bilateral.

/9 cont./

114 [101] Our stay in Colombia lasted a year, from August 8, 1952, to August 12, 1953. During this time I worked first under the direction of Herr P. Pedro José Ramirez Sendoya as Investigador at the Instituto Etnológica Nacionál, beginning September 20, 1952, as Jefe de Arqueología at the Instituto Colombiano de Antropología. After several weeks of inventorying the antiquities [126] in the region of San Agustín we traveled to Tierradentro where we collected the field material of the present publication during the period from December 24, 1952, to April 24, 1953.

122 The scientific work in Colombia was financed by the Ministerio de Educación and the Instituto Colombiano de Antropología. On this occasion I should also like to express my sincerest thanks to the then Minister of Education, Herr Dr. Lucio Pabón Nuñez, and to the Director of the Instituto Colombiano de Antropología, Herr Dr. Antonio Andrade Crispino, for the help rendered. Here I should also like to thank the Vice-President of the Academia de Ciencias Naturales, Herr Prof. Dr. P. Enrique Perez Arbelaez, who, during the early period of my stay in Colombia, smoothed many paths for me. I am no less grateful to the colleagues of the Institute for the scientific help given to me, as well as to the workers in Tierradentro for their diligence in the difficult and, at the beginning of the rainy period, quite unpleasant work of digging.

126 122 For the research and travel equipment, a number of firms generously put material at our disposal. For the photographs published in this book I had the use of a Leica III f with Elmar /10/ 1:3.5 and accessories, as well as a Rolleiflex with Tessar 1:3.5. For special photographic purposes Rodenstock-Heligon 1:2.8 wide-angle lens, a Steinheil-Culminar 1:2.8 telephoto lens, and Proximeters I and II from H. Schneider & Co. were used with the Leica, and with the Rolleiflex the Rolleikin equipment with the Rolleinars 1 and 2. The interior shots of the grave holes and the native houses were taken with Osram SO and Philipps Pf 45 flash bulbs, as well as with Seuthe flash capsultes. Adox KB 17 and R 18, as well as Perutz Perpantic film, served as negative material for the photographs.

/143 cont./

224 mountain spirit. We met only a single young man of about 18 who goes hunting alone in the mountains once a week. He told us that, in order to become a good hunter, one must first try to [789] kill a bear (éšwiy). One must then rub its fat into the right [237] lower-arm, which would give him the same powers as the bear. [262] One is not permitted to eat this fat, however, because it would [828] make him insane. After rubbing in the fat, the young hunter [263] continued, one may not eat salt at any meal for a week. There are no further rules and ceremonies of any kind to be observed. [237] We learned, however, that one can also use bear fat as a heal- [752 757] ing remedy, and, to be sure, for bone fractures or sprains one must rub the affected part with bear fat, whereupon the injured limb will heal immediately and will become considerably 224 stronger than ever before. For stalking he wears on his head a 292 cap made of the skin of a reddish-blond hairy monkey (móno), [825] which in the first place protects him from the thorns of the bushes, but which is also supposed to facilitate creeping up on [439] game. He sold it to us for two pesos without hesitation, since, [126] as he said, he was perfectly capable of shooting another monkey 224 for himself. He was not afraid of the gělyómp spirit, but the 776 other men were, for gělyómp screams and makes a noise when human beings enter his area in the mountains, so that they become quite confused and go astray. The mountain spirit cannot do anything to several men together, however, since he could make as much noise as he pleased, but they would not let them- 224 selves be diverted. Of course, the men, even if there are ever so 776 many of them, must not offend the mountain spirit or provoke 515 him unnecessarily, but rather must avoid everything that gělyómp 783 does not like. /144/ For instance, he hates everything impure [296] and filthy. Hence the men always only go hunting well washed; [824] they even wash the entire body, and the ruana, too. In addition, they rub themselves with the cleansing herbs šu and šayuts, which they obtain from the shaman, in order to be really altogether [761] clean in a physical and ritual sense. But if someone has taken part in a burial or has merely seen a funeral procession close by, he has picked up a good deal of "pest" from the dead and must have himself specially purified by the shaman before hunting.

/164 cont./

439 cloth for trousers, and all European clothing. Furthermore, every type of ornament must be bought, such as necklaces, earrings, and finger rings, then cotton, since it is finer and shinier than sheep wool, and aniline dyes for dyeing women's belts and coca bags, since they are more brilliant and clearer than the native vegetable dyes. The trip to market and the necessary trade, however, are not undertaken because of an inclination for business, pleasure in bargaining or in underbidding or outbidding, but out of the necessity to procure an [438] article that they cannot make themselves. If it is at all [797] possible, one tries to buy the required things in the village, for example, from the missionaries, and the purchase with money or the trip to market is, so to speak, the ultima ratio. 437 They do not bargain. The man -- /165/ and it is almost al- 439 ways he who shops -- asks the price, and if it seems too high -- [462] as in most cases -- he says "too expensive." If the tradesman lowers the price, he usually buys; if not, he goes on to the next stand.

The traders are never Paez, but always white and mestizo colonists. They know, of course, about the disinclination of the Paez to bargain, and they charge too high a price to begin with, so as to ask a still inflated normal price after the obligatory "too expensive." Thus the Paez are naturally cheated. They let themselves be too easily dazzled by an attractive display or packaging, for example, by the polish or the silver paper; also a more expensive green or red comb is preferred over a black one. Fortunately, one might say, they never have much money and can therefore never spend too much.

●126 The way in which I was obliged to acquire the women's 439 colored belts for our collection is characteristic. Since every woman possesses only two at the most, one to fasten her skirt and the other to carry her baby, any attempt to buy them was [101] always useless. I had therefore bought at the market in Inzá a few women's belts which are made by the Guambiano, the tribe neighboring the Paez on the west, and are sold in Inzá. [184] They are made of cotton, the white color of which in the freshly

/165 cont./

126 worked state is considerably more brilliant than the somewhat
439 yellowish sheep wool. Moreover, their aniline dyes gleam much
184 more brightly than the vegetable dyestuffs of the Paez dyes.
126 Unfortunately, they are shorter than the Paez belts. Neverthe-
439 less, the trade was most happily made. The coca pouches of
437 our collection, too, we acquired entirely by way of barter, for example, for a pair of scissors at the Bogotá price of 50 centavos. At the market in Inzá such a pair costs about a peso. The Paez know this. Nevertheless, the same persons who had previously refused a sale for five pesos exchanged a pouch for a pair of scissors. It was the same with eggs. They would not sell them for 20 centavos, but traded them for a wax candle which was available everywhere for five centavos.

43 In the case of their own products, there is no trade from village to village. Nor is there any exchange of certain specialties outside the village, since the initiative for special achievements or the unusual always comes from the colonists or foreign traders. In general the Paez do not buy and sell among themselves, but only barter, since money is used very unwillingly among them. Their idea that an article sold, /166/ for example, an egg, may bring misfortune to the part retained, in this case the chicken, may play a role in this. Moreover, even today paper money is scarcely ever accepted, first because they usually do not have a special pocketbook, but put the bills in their coca pouch, where they may be easily torn, and, secondly, because many are in the habit of burying their money or hiding it somewhere. In this way the bills soon become moldy, whereas hard money lasts a long time. The latter is therefore extremely rare in the entire Tierradentro area.

435 In the barter of foodstuffs there are certain rates that every-
437 body knows. Since, furthermore, they always make an effort to furnish only satisfactory goods, there are no exaggerated claims or any reason for bargaining or haggling. It is simply: either-or, especially since market phenomena have no effects, and the barter rates are in no way increased in times of shortage or want. Thus, at the time of my visit, sheep and therefore wool were very

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of the Paez from Pitayó collected by French missionaries.

197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic classification of Paez within the language groups of Colombia and classified it in the southwestern group of the six Chibcha language groups. (These Chibcha-speaking tribes correspond neither archeologically nor ethnologically to the true Chibcha (Mwiska) of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic recording lay, aside from the brief time at our disposal, in the lack of grammatical training of the interpreter, who otherwise spoke Spanish very well, but who, during dictation or in translations, often said the same sentence entirely differently when repeating it; possibly because he could translate it better this way. When his attention was called to this, the stereotyped answer was: "One can say it that way, too" or "that is the way we speak." Another thing was that the interpreter was able to summon up the unusual mental concentration for linguistic recording for only two or at most three hours daily, distributed over the forenoon and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collection of ethnological data, the following word list was also made with my Calderun interpreter, Victoriano Piñakuẽ.

In the Paez alphabet the complete palatal range, which includes all consonants, is noteworthy. Almost as numerous are the consonant combinations with the English "w." In the

/224 cont./

193 no one: tĕčanyópa; tĕčanyópa máhiméta, "no one is working";

several, various: ko; ãtya ko hímba hipt, "I several horses have";

many: tak; tak nása, "many people";

little: wé; very little: táwala wéha.

193 114 Verbs: The infinitive forms of the verbs end in -ya. The only data thus far published about the conjugation system are to be found in Castillo i Orosco, who conjugates the verb "to write" [177] in all paradigms according to Latin grammar. The word formation of the model verb and the conjugation are artificial and set [797] up for teaching at the mission schools. People do not speak that way in Calderas.

193 124 177 The conjugations of a few verbs given in the following do not represent all the conjugation possibilities, since -- as was mentioned -- the interpreter lacked a knowledge of Spanish grammar. Hence the schema of the paradigms is largely theoretical. Everyday speech is different, and especially in storytelling the interpreter used forms which he reproduced in Spanish with participial constructions. Nevertheless the forms reproduced here are /225/ "correct" in the sense that one "can" speak this way and be understood while using the forms.

193 [124] Besides the four tenses reproduced here (present, future, and two forms of the perfect), there are probably also forms corresponding to the conjunctive, which, however, the interpreter neither understood nor was able to reproduce in Spanish. The forms of the future are not always used. Very often the present is used with the addition of "tomorrow" or "later," for example, ãtya gwágwan kúskay, "I speak tomorrow," instead of ãtya gwágwahípt, "I shall speak." The forms of the two past tenses are apparently used arbitrarily. To my questions on this point I always merely received the answer: "one can say it this way and also that way." Here, too, the addition of óñna, "yesterday" (in context: óñnaha), or esé, "some time ago," is customary.

• [126] The abstract, consecutive listing of the forms of a conjugation is hardly possible for the Paez. I always had to make

/225 cont./

193 inquiries with reference to examples that were easily comprehensible.
126 If these lay outside of the context just discussed, I was often requested to provide the appropriate form myself, which I always succeeded in doing with the help of my examples, to the joyful surprise of the Paez. Their confirmation in each case, that "one can say it that way, too," permits me to set down the following
193 paradigms. Phonetic discrepancies are purposely retained, for
128 example, in the second person singular the endings -eg and -eng, in the third person plural the endings -yin or -yen. In the present, the first and third persons singular are generally the same. The personal pronouns for all forms are placed before the verb. In the model verbs the feminine form of the first person singular and the various forms of the second person singular were omitted in favor of the simple masculine forms.

193 ōpya, "to live"

Present:	ātya ōpon		Future:	ātya apohípt	
	inç ōponeng			inç opohípeneng	
	kya ōpon			kya opohípa	
	kweš ōpontkaw			kweš opohíptaw	
	kyáñweš ōpotyin			kyáñweš opohíptyin	
Perfect:	ātya ōpokot		or:	ópnast	(óñnaha)
	inç ōpoing		or:	opnásing	(óñnaha)
	kya ōpok		or:	ópnasa	(óñnaha)
	kweš ōpotaw		or:	ópnastaw	(óñnaha)
	kyáñweš ōpotç		or:	ópnastyin	(óñnaha)

5.	*Tats*	*tats*
6.	*Sanki*	*tesets, tesekẓ*
7.	*Ens-sanki*	
8.	*Tek-sanki, puki-pans*	
9.	*Pans-sanki*	
10.	*Kose-pemba*	*ksemba*
20.	*Ens-kose-pemba*	
30.	*Tek-kose-pemba*	
40.	*Pans-kose-pemba*	
100.	*Pasats-tla, vite-pasak*	
1000.	*kose-pemba-pasàts-tla*	

As indicated by the above examples, the Paez Indians formerly counted upon their fingers, so that their numeration was necessarily decimal. It is difficult, not to say impossible, to determine the meaning of the word *sanki*, for 'six,' but it seems to have been, as Castillo expresses it, a base for the series between five and ten. Thus *ens-sanki*, means the 'second six'; *tek-sanki*, the 'third six'; *pans-sanki*, the 'fourth six.' We also find that *puki-pans*, a second expression for *eight*, means the 'return of four.'

Kose-pemba, ten, means 'the hands completed,' an expression similar to that found in many other primitive languages. At present this system is found only in a mutilated form, including the numerals one to six, and ten. For other numbers Spanish is used. *Vitetß* has become reduced to *tetß*; and another expression, meaning apparently 'second one' (*tetß-ens?*), has been substituted for *sanki*.

IV. — Vocabulary

192
[126]

The following vocabulary includes all words collected by the author and not found in Castillo's work, and also expressions of the latter that complete families of words with a common root. *H* means Huila, and *T* Tacueyó, villages in which words were collected. *Cast.* signifies Castillo; *Span.*, Spanish.

a, an (*anl, atl?*)	mine, my; our, ours
a-enẓ (T), *ia-enẓ* (H)	eye — Cast.: *ia-ß*
à-enẓ (T), *guà-gua* (H)	*Inga edulis*, a tree
alko (Kithua word)	dog

/103 cont./

127 We know little about the other Indian cultures of southern Colombia existing at the time of the Conquista. The conquistadors had tasks other than drawing up scientific ethnographic descriptions of their cruel enemies. Nevertheless, working with subtle methods, modern ethnological and linguistic research in the old sources has produced outstanding results.

114 Our knowledge is very inadequate with regard to the Paez, 127 who, with approximately 25,000 persons, constitute the largest [161] non-Spanish-speaking population group within Colombia, next to the Goajiro, the inhabitants of the Guajira Peninsula in the northern part of the country. The oldest dates come from [797] Eugenio Castillo i Orosco, who, from 1735-1755, was active as a missionary in Tálaga -- often at the risk of his life, as he reports -- and wrote down a vocabulary, a grammar, and some cultural data about the Paez. This manuscript was printed in 1877. Further ethnological data are given by the Colombian general, Carlos Cuervo Marquez, who, on his extensive journeys, also traveled through the Tierradentro region from north to south and produced the first reports about its archeological cultures. The next one, in terms of time, to report on the Paez was the American ethnologist, Henri Pittier de Fábrega, who in 1906, coming out of the central part of the Cauca Valley from the northwest by way of Corinto and Toribió, spent a few days in Tacueyó and Huila. Georg Bürg, who first investigated the archeological objects of Tierradentro more thoroughly, likewise lived for a time among the Paez and gives a few ethnographic notes in his report. In his comprehensive survey of the highland tribes of southern Colombia, Gregorio Hernandez de Alba also reports about the Paez, with whom he became acquainted in connection with his own research. Graciliano Arcila Velez undertook a blood-group examination on 303 Paez. The first thorough special study of Paez culture from the standpoint of the religious and social life was made at the time of our stay in Tierradentro by the Director of the Archeological Park of San Andrés, Segundo Bernal Villa.

[127]

Since, therefore, a total description of the culture of the Paez does not yet exist, a tribal monograph on the Paez is herewith presented in the following, in which, besides the data from my own investigations, the results of the earlier investigators have been incorporated. Much will have escaped me -- as a result of the short time at my disposal and the inaccessibility of the population -- much that was part of the domestic economy /104/ of Paez culture has already been destroyed as a result of advancing civilization and is therefore lost forever. In the following description of the cultural heritage of the Paez a division has been made, for working purposes, with regard to material and spiritual culture and with regard to the description of social forms. In practice a sharp line of demarcation cannot normally be drawn within a culture between these aspects of it, since these three areas do not lead a separate existence, but are closely bound up with the acting human being as the creator and bearer of culture. This is true to a greater extent for primitive peoples, where all areas of human activity are much more closely linked together, than in modern high culture where the individual sectors of activity are specialized to a high degree and accordingly may be treated and investigated separately. Thus if, for practical reasons, in the following tribal description the form of settlement is described under material culture and shamanism under spiritual culture, nevertheless both factors are also of great importance from the sociological point of view. Conversely, family organization, for example, as part of the description of society, is also very closely bound up with the economy and techniques in the primarily material realm, and also with religion.

2. Demography

Altogether the Tierradentro area embraces about 5,000 square kilometers, of which about 3,000 square kilometers fall in the region north of the Rio Ullucus. Its 18 villages are divided into two municipios (administrative districts) /see the glossary, p.249 /, the southern one of which includes three villages with Inzá as the seat of the administration, while the northern one

/263 cont./

756 fact, even the visionary sight of Thunder are worthless by them-
787 selves, if the shaman does not receive any signs. By means of them
278 the teyu discovers the cause of sickness and the means to be employed for healing it, which always consist of the dispensing of herbs. For this reason every shaman always has his fiber bag with all his medicinal herbs with him, in order to have them at hand
[753] and to be able to apply them at any time. Since, however, an illness does not have a physical cause, according to the opinion of the Paez, the herbs used for healing are not applied in accordance with the medical experiences of the shaman, but solely in accordance with his signs.

756 The herbs used by the shamans are the following (*):
278
137
[127]

*I am taking these, as well as some other data on the shamanism of the Paez, from the excellent summary by S. Bernal Villa (III) /see the bibliography in the foreign text, p. 323/.

ǎndúr, eš (Erythroxylon coca), bičač (Hevea?), čulko (Oxalis, sp.), čáyuts (Scutellaria racemosa Per.), čuwét, fisa, ečyútse čime (Labiada?), /264/ gwepekas (Urera boccifera L.), kwése (Lonchocarpus?), limonsflyo (Cymbopogon citratus), nyika, nyundayuskey, šu (Spagnum sp.), šuwés (Peperomia sp.), šulápe, šupenyí (Peperomia sp.), tátse, táyuske (Peperomia sp.), ul níny (Hibiscus abelmoschus L.), umsim (Myricia acuminata DC. Vell, aff.), vitubítskwe, wáhi (Nicotiana tabacum L.), yakúma, yúskay (Scleria cattarinensis Boeck).

755 Most of these herbs are first chewed by the shaman and then
756 spat over the affected part. If a person is dying and his soul leaves
278 his body from the heart by way of the upper arms, the pulse of the
[774] lower arms, and the finger tips, the herb čáyuts, for example, is spat by the shaman from the finger tips in the direction of the armpits, in order to check the departure of the soul. Only rarely is a tea brewed from the leaves.

SC15 Paez SC15

ETHNOGRAPHIC AND LINGUISTIC NOTES ON THE PAEZ INDIANS OF TIERRA ADENTRO, CAUCA, COLOMBIA

By H. PITTIER DE FÁBREGA

Introduction

Very little is known of the ethnology of the aboriginal inhabitants of the western and central cordilleras of Colombia and the intervening broad valley of Cauca. The early historians and chroniclers have left only long lists of more or less confused tribal names, along with the recital of the protracted war of extermination conducted with conscienceless and selfish cruelty by the conquistadores. With few exceptions modern writers have found little or no opportunity to deal with what is left of these interesting people. 121

With special reference to the Paez Indians, who are the subject of these notes, our notions have hitherto been derived almost exclusively from the materials collected by Castillo y Orozco about 1735, and published in 1877 with brief analytical notes by the late Colombian scholar, Señor Don Ezequiel Uricoechea.[1] 127

Early in 1906 the writer visited the section of the central cordillera inhabited by the Paez, staying a few days at two of their principal villages, namely, at Tacueyó, at the headwaters of the Palo river on the western side of the mountains, and at Huila, at the junction of the Paez and San Vicente rivers, on the Indian reservation known as Tierra Adentro. The personnel of the expedition, in addition to the author, with a few friends and two servants, consisted of native Indians, so that good opportunities were afforded for becoming familiar with the Paez language and to gain an insight into native manners and customs. 114 [361]

824 The plants marked with an asterisk were identified by the
[128] Herbario Nal. Colombiano, in particular by Dr. Jesús M.
[137] Idrobo.

[127] For the others, we were guided by the work, Plantas Utiles de Colombia /Useful Plants of Colombia/, by Dr. E. Pérez Arbeláez, published by the Imprenta Nacional de Bogotá in 1947.

75 The té eu and the community. In every culture, medicine
182 performs an eminently humanitarian function. Its nature is
171 sociological. No matter what its methods may be, its purpose is to save human lives. It combats illness, but also prevents it.

75 Among the Paez, medicine cures and prevents. The
182 community and the family perform special ceremonies intended to achieve these two purposes of medicine.

755 When the pest (epidemic) has spread through the com-
*756 munity, threatening its subsistence, the authorities (cabildo)
182 invite the curer to conjure away the danger by performing the
[731] wé ká.

When the illness prevails in a single family, markedly decreasing its members, the eldest invites the curer to perform
[765] the ut ká. After every burial the people must remove the ptans
[783] from their bodies and from the house where the death occurred. The curer is the only one who can do this.

241 The first fruits of plantings made on new lands not culti-
*756 vated before cannot be consumed until the curer has performed
783 the cleansing ceremonies. Thus, it is the curer who defends
182 the family -- preservation of the species -- who purifies the
789 harvests -- preservation of the individual -- and who also defends the community, warding off by means of his conjurations
*756 the epidemics and the individuals who threaten it. In 1952,
789 before an imminent attack by subversive armed groups on the
182 Parcialidad of Santa Rosa, the curer warded it off with maní de montaña /literally, "montaña peanut"/, chewed and blown on the path by which they were to come.

/365 cont./

177 For our outline of acculturation, we understand by diffusion
[121] achieved cultural transmission, and by acculturation cultural trans-
[127] mission in process, terms expounded by Professor Melville J. Herskovits in his book, El Hombre y sus obras /Man and his Works/.

Within Páez culture there is widely diffused, to the point of constituting an integral part of the cultural body, the following economic elements of alien origin and, more concretely, of European origin:

[231] All of the domestic animals with the exception of the
[137] guinea pig, bananas, sugar cane (the variety known as "criolla"), wheat, barley, garlic, coffee, peaches, apples, and oranges, the agricultural implements, the hydraulic mills, sugar mills, the guadua bamboo, and some varieties of pasture grass, such as orejuela /Alchemilla pectinata/, kikuyu, and poa.

177 Throughout the pages of this work, we have emphasized in
361 particular the cultural developments in process, that is to say, the
563 phenomenon of acculturation. It is obvious that this phenomenon has appeared, with greater or lesser intensity, in those parcialidades where there have been created areas of settlement, within which a specific number of "white" families have settled. But the intensity of the acculturative phenomenon does not rest merely on this fact or on the number of families who live by the norms of Western culture. San Andrés, for example, had its settlement area established for all practical purposes in 1928 and now reckons with more than 20 "white" families, with its nearness to the settlement of Inzá, and, for nearly 15 years, with the Parque Arqueológico of Tierradentro, to some extent a tourist attraction, and yet the process of acculturation is minimal and cannot be compared with the intensity of the same phenomenon in Mosoco, where the settlement area /366/ was created in 1923 and where
177 nowadays there are not more than 12 families of "whites." In
[487] Mosoco there is another factor: the riding path that joins the
[491] municipio of Belalcázar with that of Silvia, a road that has existed since pre-conquest times. Mosoco has been and still
[628] continues to be the mandatory stopping place. In addition, this parcialidad has had intensive contacts with the Guambiano group and the Páez group from the other side of the Cordillera, who are more acculturated,

?:Hernández de Alba E-5,+(no date) 1946 SC15 Paez SC15

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
131 of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,600 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisaica*); and large fish from the rivers.[4]

[127] [4] The scientific names of the plants were taken from Cortés, 1919. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

Moguex

881 heights of Cuetando, where they built a hut and planted a miniature field as proof of their masculine aptitude.

797 **Education.**—Today the Indians are educated principally by their
871 parents in the customs and tasks pertaining to each sex. Some boys
[868] and a few girls are sent to the few missionary schools, where they are given religious instruction and are taught Spanish, arithmetic, geography, the history of Colombia, and modern embroidery or light
[562] basketwork. The *Páez* are reluctant to send their daughters to the schools because they feel that women should keep the traditions of
[177] their people. The missionary schools strive to change the native language and the cultural traditions which have given the Indian community social cohesion.

595 **Marriage.**[11]—Formerly polygyny was prevalent, but now Catholi-
[77] cism has imposed monogamy. The Indians continue, however, to
583 practice trial marriage (amaño). A marriage is arranged as follows:

584 The bride is selected by the young man's parents or by himself. His parents and two witnesses or godparents then visit her house to request her for the groom. They also serve as advisors to the young woman, in case she disapproves the marriage. The visitors carry half-filled bottles of rum (aguardiente) and some special garments for the girl. The young man's father offers the girl's father a half-bottle, acceptance of which means, as usual among the *Páez*, that the second party is well disposed toward the proposal and the negotiations may proceed. If the girl's mother agrees, the boy's mother presents her a half-bottle of liquor. The godfather or witness gives another half-bottle to the girl's father and the
583 godmother gives one to the mother. The visitors now leave, taking the girl, who then begins a year of trial marriage, during which the young man seeks proof that the girl is able to bear children, is active, cooks well, can weave, and
585 can cultivate the land. After the trial period, the man may return the girl to her parents or they marry in the Catholic Church, holding a feast which, like all
527 such celebrations, is called a "cuido." The couple and their parents and godparents are accompanied by an orchestra (chirimía) to the house where the feast is to be held. Here the bride puts on a modern dress, a ribbon on her hair, necklaces, and earrings, while the groom is with his godfather. As the guests arrive, chicha is distributed frequently, music is played, and then there is a feast of thick soup, generally with chicken, cooked yuca, arracacha, and roast or baked meat. In the afternoon, after more music and chicha drinking, the "refresco," really a banquet or social communion, is served. Six bottles of wine made from cane molasses, cinnamon, and cloves, and cake are given to the bride, groom, godmother,
[782] and godfather, who give some to everyone present. A prayer, led by the head of
[775] the house, then asks the souls of the dead to bless the marriage and give permission to dance. First, the godfather dances with the bride, then the godmother with the groom, after which everyone dances. The feast lasts 5 days, depending on the wealth of the family. Chicha is served and accepted with the phrase, "May God pay you, compadrito, for accompanying us. Accompany us more."

764 **Death.**—At a death, the family formerly buried the deceased inside the house with his possessions, and abandoned it. Some communities, however, preferred to cremate the body or dry it over the fire. The

[114] [11] I thank my wife and companion, Helena Ospina de Hernández, for her research in 1936 on matrimonial matters.
[127]

/167 cont./

601 Seemingly there is no terminology for designating the older and younger brothers of the generation of EGO, although in practice this distinction stands out. EGO is obliged to greet older brothers and the older members of the community in general, and there also exists the obligation of being greeted by the younger brothers and, in general, by all the younger members of the community.

Among the adults of both sexes, married and with children, the use of teknonymous forms is general.

114 /168/ The only two studies of kinship systems made in Colombia are from the pen of Professor Gerardo Reichel-Dolmatoff working among the Iroka and the Kogi. That of the Iroka was [104] done with the collaboration of Alexander L. Clark. With the intention of facilitating subsequent comparative studies on the subject, we have adopted his system for presenting the materials, especially the abbreviations of the kinship terms in the Spanish language /the English equivalents for the abbreviations of the Spanish terms are given on p. 10 /.

● 127 Before finishing with this brief introduction, we wish to
128 place on record our sincere thanks to Señor Víctor Bedoya for his voluntary transcription of unpublished documents from the Archivo Nacional relating to the Páez, and to Professor Marcos Fulop for his valuable observations and opportune suggestions which brought much light to obscure sections of our work.

Analysis of Kinship Terms

601

Consanguineous Relatives

A--EGO's Generation:

a) Masculine EGO: Brothers and sons of uncles and aunts, paternal and maternal, are grouped in a single category and classified as brothers (iaktê).

b) Sisters and daughters of uncles and aunts, paternal and maternal, are grouped in a single category and classified as sisters (Pesh).

1: Nachtigall--1 E-5 (1952-1953) 1955 SC15 Paez SC15

/8/

Foreword by the Editor

121 This second volume of our series of studies contains a portion of the research which my collaborator, Dr. Horst Nachtigall, was able to carry out in 1952/53 in Colombia. The volume testifies to the fact that our scientific work at the Institut für Völkerkunde of the University of Mainz is not limited to desk research. Rather, we endeavor, in keeping with the scope of the problems in our field, to gather new observations in various parts of the world through fieldwork and in this way to help fill the large gaps in our knowledge of peoples living close to nature. Such research must necessarily also extend to the prehistoric evidence of human culture in the areas visited. Thanks to his extensive preoccupation with the special field of pre- and ancient history, Dr. Nachtigall was in a position to obtain the present material from the Colombian archeological province of Tierradentro.

Being occupied myself at the present time with ethnographic work in another corner of the world, I am particularly happy about the publication of this first volume of results from the fieldwork of our Mainz Institut für Völkerkunde. I thank [122] our publisher, Dr. H. Wyss, and the Deutsche Forschungsgemein- [128] schaft for their kind understanding and their active help, which have made this publication possible.

Gilgit, Pakistan, May 23, 1955. Adolf Friedrich

/9/

Words of Thanks by the Author

The description of the archeology and ethnology of Tierradentro presented in the following represents the first part of the scientific results of the Colombian journey undertaken with my wife, which was instigated by the Director of the Institut für Völkerkunde of the University of Mainz, Herr Prof. Dr. Adolf Friedrich, and carried out through his negotiations with German and Colombian authorities. The course of the journey and the preliminary summary of scientific results have already been published elsewhere.

/10 cont./

128 [114] For assistance in drawing up the manuscript, I should like first of all to thank my wife, who accompanied me on all my trips in Colombia, recorded the field research there stenographically, and has attended to transcribing the manuscript. I thank Herr Prof. Dr. E. L. Rapp, Mainz, for his friendly advice with regard to the transcription of the Paez language, and Herr Prof. Dr. Wilhelm Geilmann, Mainz, for the roentgenographic examination of the prehistoric teeth and bones available from the grave chambers of Tierradentro. Here, too, I should like to thank the artist of the Institut für Vor- und Frühgeschichte of the University of Mainz, Fräulein Margot Kunzmann, for the technical drawings and maps, and the Herrn. cand. phil. Wolfgang Lindig for proofreading.

122 [128] The Deutsche Forschungsgemeinschaft, which had already financed my journey both ways and granted a considerable allowance for working up the scientific results, also assumed part of the printing costs for this publication. For this I should like to express my respectful gratitude to the President of the Deutsche Forschungsgemeinschaft. For public and private financial and moral support I must thank Herr Ministerial Director Prof. Dr. Hans Becker and Ministerial Counselor Dr. Otto Wegner of the Ministry of Public Worship and Education /Kultusministerium/ of the Rhineland-Palatinate, the Chief Burgomaster of the city of Mainz, Herr Franz Stein, the Curator of the University of Mainz, Herr Fritz Eichholz, and the Chairman of the Supervisory Council of the Dykerhoff Portland-Zementwerke AG., Herr Consul Alexander v. Engelberg.

128 [127] Since, therefore, a total description of the culture of the Paez does not yet exist, a tribal monograph on the Paez is herewith presented in the following, in which, besides the data from my own investigations, the results of the earlier investigators have been incorporated. Much will have escaped me -- as a result of the short time at my disposal and the inaccessibility of the population -- much that was part of the domestic economy /104/ of Paez culture has already been destroyed as a result of advancing civilization and is therefore lost forever. In the following description of the cultural heritage of the Paez a division has been made, for working purposes, with regard to material and spiritual culture and with regard to the description of social forms. In practice a sharp line of demarcation cannot normally be drawn within a culture between these aspects of it, since these three areas do not lead a separate existence, but are closely bound up with the acting human being as the creator and bearer of culture. This is true to a greater extent for primitive peoples, where all areas of human activity are much more closely linked together, than in modern high culture where the individual sectors of activity are specialized to a high degree and accordingly may be treated and investigated separately. Thus if, for practical reasons, in the following tribal description the form of settlement is described under material culture and shamanism under spiritual culture, nevertheless both factors are also of great importance from the sociological point of view. Conversely, family organization, for example, as part of the description of society, is also very closely bound up with the economy and techniques in the primarily material realm, and also with religion.

2. Demography

Altogether the Tierradentro area embraces about 5,000 square kilometers, of which about 3,000 square kilometers fall in the region north of the Rio Ullucus. Its 18 villages are divided into two municipios (administrative districts) /see the glossary, p.249 /, the southern one of which includes three villages with Inzá as the seat of the administration, while the northern one

193 inquiries with reference to examples that were easily comprehensible.
126 If these lay outside of the context just discussed, I was often requested to provide the appropriate form myself, which I always succeeded in doing with the help of my examples, to the joyful surprise of the Paez. Their confirmation in each case, that "one can say it that way, too," permits me to set down the following
193 paradigms. Phonetic discrepancies are purposely retained, for
● 128 example, in the second person singular the endings -eg and -eng, in the third person plural the endings -yin or -yen. In the present, the first and third persons singular are generally the same. The personal pronouns for all forms are placed before the verb. In the model verbs the feminine form of the first person singular and the various forms of the second person singular were omitted in favor of the simple masculine forms.

773 They are in fact legendary personages who go beyond the
[186] boundaries of legend to enter the territory of myth, not only
[628] by their symbolism, but in their dramatic force, their sociological framework, and their cultural function.

The mythology gravitates around the behavior of the natives, their attitudes toward the whites, the organization of the cabildo, illnesses, and death. Of Juan Chiracol, a 23-year-old informant says: "He warns when the mob is coming, he no longer warns, so." And of Thunder, it is said that he almost killed a padre because he went to the montaña to get wood to board up the school. "Thunder was defending the
538 wood," they say. The tales were always told around the fire,
773 with men, women, and children present, who sometimes laughed, at other times kept silent, but always corroborated, corrected, elaborated, or confirmed. The storytellers sometimes put on a serious face, accompanied their tale with mimicry, and once in a while they would burst into mocking laughter, as if to signify that what they were saying was worthless and they did not believe it. I was soon able to ascertain
115 their sociological and cultural value. The myths and tales
773 were collected with the help of an interpreter, a mestizo from San Andrés, about 35 /292/ years old, tall, muscular, quiet in manner, intelligent, calculating, with great charm and a knowledge of Paez and the Spanish language; he was familiar with the customs of the Calderunos, esteemed by them, and
773 skilled in his questioning. We present below the myths and
• 128 tales collected, leaving the other aspects of the culture for presentation in a complete monograph.

1. Thunder

*539 The old people related that at one time the area was full of Pijao. Thunder lived in Sukafi. In view of the growing number of Pijao, he decided to kill them. He stood on a tall stone that is to be found there, threw his lariat /boleadora/

/241/

824 The plants marked with an asterisk were identified by the
● [128] Herbario Nal. Colombiano, in particular by Dr. Jesús M.
[137] Idrobo.

[127] For the others, we were guided by the work, Plantas Utiles de Colombia /Useful Plants of Colombia/, by Dr. E. Pérez Arbeláez, published by the Imprenta Nacional de Bogotá in 1947.

75 The té eu and the community. In every culture, medicine
182 performs an eminently humanitarian function. Its nature is
171 sociological. No matter what its methods may be, its purpose is to save human lives. It combats illness, but also prevents it.

75 Among the Paez, medicine cures and prevents. The
182 community and the family perform special ceremonies intended to achieve these two purposes of medicine.

755 When the pest (epidemic) has spread through the com-
*756 munity, threatening its subsistence, the authorities (cabildo)
182 invite the curer to conjure away the danger by performing the
[731] wé ká.

When the illness prevails in the single family, markedly decreasing its members, the eldest invites the curer to perform
[765] the ut ká. After every burial the people must remove the ptans
[783] from their bodies and from the house where the death occurred. The curer is the only one who can do this.

241 The first fruits of plantings made on new lands not culti-
*756 vated before cannot be consumed until the curer has performed
783 the cleansing ceremonies. Thus, it is the curer who defends
182 the family -- preservation of the species -- who purifies the
789 harvests -- preservation of the individual -- and who also defends the community, warding off by means of his conjurations
*756 the epidemics and the individuals who threaten it. In 1952,
789 before an imminent attack by subversive armed groups on the
182 Parcialidad of Santa Rosa, the curer warded it off with maní de montaña /literally, "montaña peanut"/, chewed and blown on the path by which they were to come.

[192]
[197]
[128]

1. Generic term with which the natives designate all those who observe the norms of western culture, without any distinction as to race. For convenience we have adopted this usage, putting the term in quotation marks.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[571] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

/299 cont./

245 year. Traders in Silvia sell the crops at up to 14 pesos an arroba.
[439] Lame produces perhaps the best peaches, but they are not suitable for export because they are easily damaged. There are also numerous plantings in Tumbichukue and Calderas, although they do not have much care.

247 Floriculture does not exist among the Páez, and they cannot understand the labor that the "whites" invest in their gardens. They are always of the opinion that food plants should be sown on such lands.

241 Among the cultivated plants, they regard as native maize ("the /300/ Pijao had maize"), the hartón /large-sized/ plantain ("the Pijao also had it"), frijoles, mejicano /squash, Cucurbita pepo/, cabbages, and the cane "criolla" /Creole, native/, while coca, they say, seems rather to have come from the "whites."

241 Species cultivated and zones of cultivation

137 Here is a list of the food plants cultivated by the Páez (5):

192

●[128]

5. We thank the Herbario Nacional Colombiano, especially Dr. Jesús M. Idrobo, for the scientific identification of the plants.

/311 cont./

243 Wheat is cultivated with special emphasis in the areas of Lame, El Cuartel, La Troja, and Vitoncó. It is destined primarily for sale. It is planted along with maize, although there are already clearings intended exclusively for its cultiva-
[412] tion. They reap it with knives, rarely with sickles. They do not bind it into sheaves, but make bundles and hang it from the eaves or beams of the house. When dry, they thresh it with wooden clubs /masas/ and separate out its husks by exposing it to the
[256] wind. They grind it at once in hydraulic mills built by them themselves and take it to market. They have no sifters to separate the bran.

128 Below /see pp. 25-33 / we present a statistical table on
241 the production of the various species cultivated by 25 families
433 of Mosoco, 8 of Lame, and 15 of San Andrés including that of
[563] some mestizos and whites, marked with an asterisk, in order to make some comparisons and to estimate the volume of production. We specify the percentage of the production intended for sale. For obvious reasons, we have omitted the names of the family heads, identifying them solely by number in order. The statistical data correspond to the production in the year 1953.
[124] In spite of the fact that this type of investigation presents some
[123] difficulties, owing to the reluctance of people to reveal the data on their production they are in general completely trustworthy, since they were collected after a firm interpersonal relationship had been established between the investigator and the person investigated. In addition, they appreciably agree with our observations noted in "General observations" on Páez agriculture.

/312/ Potato cultivation in Mosoco

244 We have deliberately omitted anything about the cultivation of potatoes in order to deal with it more thoroughly.

The methods of cultivation differ somewhat from those commonly practiced in the other parcialidades. The soil is prepared in beds that follow the direction of the slope. The

[Mosoco]

/313/

128 244 43 We present below a statistical table on the potato production of 25 families. Nearly all of them have two harvests per year. The first row represents the November planting and the second one that of May and June. For those who have only one harvest a year, the planting is in the month of November.

We establish, in arrobas, the amount planted, the amount harvested, and that intended for sale and for consumption. We specify in Colombian pesos the value received from sales, an estimate of the amount alloted for consumption, the total value of the harvests, and the costs. An arroba of potatoes is sold for four pesos, on the average, at the place of harvest. In Silvia it is quoted at six. The quantity left for consumption is valued [465] at two pesos per arroba, a standard price for everyone. Costs include only the expenses for mingas, wage labor, and contract labor. Family labor is excluded. We also determine the percentage of the total harvest allotted for sale.

/323 cont./

231 There are no animal "pets," and none of the domestic animals serve as playthings or are regarded simply as "pretty." They all have a utilitarian purpose.

[556] The possession of domestic animals is a symbol of wealth. The owner of large tracts of land does not regard himself as rich, while the one who has domestic animals does.

231 There are commercial transactions with animals among the
435 natives. The prices are very low. "The Indian is poor," they
438 say, "he has no silver." For this reason, animals that among the whites would bring 200 pesos or more are sold among the natives for half the price or even less.

233 This state of affairs hardly exists among the natives of the
232 parcialidad of Mosoco. There are already ranches dedicated
[246] solely to livestock-raising. Some are planted with pasture grasses, especially poa. There is a marked tendency to improve the livestock, in quality as well as quantity. They know the excellence of the Norman and Holstein among the cattle and the Merino
231 among the sheep. They have special breeds of hogs and chickens.
[232] Many /324/ own mules and splendid riding horses. Commercial
[438] transactions involving animals bring a just price even among the
[782] natives themselves. Some of them are marvelous traders. They still retain the practice of making an offering to the Duende when
[233] slaughtering cattle or pigs. On the savannas of the Paramo de Moras the natives have magnificent herds. Livestock-raising in Mosoco is thus an industry at the height of development that deserves full attention on the part of the authorities.

23 In the statistical table that we present below one can observe the expansion of the livestock industry in Mosoco and com-
[128] pare it with those of Lame, San Andrés, and Calderas. The owners are natives, except for the whites and mestizos marked with an asterisk.

600 Bases for the Study of the Social Organization of the Páez

By
Segundo Bernal Villa.

/Page 166 is blank./

124 /167/ The material for the study of the kinship system of
128 the Páez was collected in the month of May, 1953, thanks to the
[114] enthusiastic collaboration of Victoriano Piñakué, 18 years of age,
[115] bilingual, and a native of the parcialidad /a village and the lands
belonging to it/ of Calderas. With this material we made an
analysis of the kinship system, which we present below without
any major modifications. It was later discussed with several na-
tive men of the parcialidad of San Andrés, who found it to be
correct. At the end of May, 1954, we had the opportunity to
discuss it again in Mosoco with two male informants of the lo-
[197] cality. They found practically no phonological differences, in
spite of the fact that the Páez spoken in that parcialidad showed
some different nuances in relation to that spoken in the other
124 parcialidades. They made only one fundamental observation,
128 which we accepted, since we consider it to be convincing. It
601 refers to the terms used to designate the sons and daughters of the
brothers and sisters of EGO. According to Piñakué, they are
designated with the Spanish terms: sobrino and sobrina /nephew
and niece/. Jorge Mulcué (Mosqueño /a person from Mosoco/
58 years old) affirmed that they are designated with the words kué
or wásak (son and daughter) preceded by the possessive my (anji).
601 Men and women use the same terms for both the paternal
and the maternal line, with certain exceptions, subordinating the
real degree of kinship to the generation. The Páez system of
kinship terminology is, therefore, classificatory and bilateral.

/167 cont./

601 Seemingly there is no terminology for designating the older and younger brothers of the generation of EGO, although in practice this distinction stands out. EGO is obliged to greet older brothers and the older members of the community in general, and there also exists the obligation of being greeted by the younger brothers and, in general, by all the younger members of the community.

Among the adults of both sexes, married and with children, the use of teknonymous forms is general.

114 /168/ The only two studies of kinship systems made in Colombia are from the pen of Professor Gerardo Reichel-Dolmatoff working among the Iroka and the Kogi. That of the Iroka was [104] done with the collaboration of Alexander L. Clark. With the intention of facilitating subsequent comparative studies on the subject, we have adopted his system for presenting the materials, especially the abbreviations of the kinship terms in the Spanish language /the English equivalents for the abbreviations of the Spanish terms are given on p. 10 /.

127 Before finishing with this brief introduction, we wish to
128 place on record our sincere thanks to Señor Víctor Bedoya for his voluntary transcription of unpublished documents from the Archivo Nacional relating to the Páez, and to Professor Marcos Fulop for his valuable observations and opportune suggestions which brought much light to obscure sections of our work.

Analysis of Kinship Terms

601

Consanguineous Relatives

A--EGO's Generation:

a) Masculine EGO: Brothers and sons of uncles and aunts, paternal and maternal, are grouped in a single category and classified as brothers (Iaktê).

b) Sisters and daughters of uncles and aunts, paternal and maternal, are grouped in a single category and classified as sisters (Pesh).

361 /295 cont./
311 strong political groupings had their principal seats at Tálaga,
643 Suin, and Avirama (3). "The place of residence of a cacique
175
[622]
[103]

3. Hernández de Alba, Gr. "The Highland Tribes of Southern Colombia," pp. 915-960.

constituted a sort of settlement or gathering place, most of which remain today as Indian pueblos and retain their names, such as Suin, Tálaga, Avirama, Togoima," Chitoquez, Cuetando, Yaquivá, Pisimbalá, and Itaibe, all of them located at the
361 temperate thermal level. It is precisely along the course of
311 the Páez River and along the middle and lower courses of its
161 tributaries that the Páez population is now concentrated.

● 13 2. Physiography. Merely a single glance at the wild geography of Tierradentro will give an idea of the pattern of life of the Páez people. The physiography of the entire course of the Páez River, from Irlanda to Itaibe, with nearly all of its tributaries, is compressed into profiled accidents. It might be said that it forms a "thermic chimney," Professor Guhl's expression. It belongs to the temperate thermal level. This is the land of the great slopes covered with natural pastures and of the short, narrow vegas with fertile soils. There are those who speak of the fertility of all the soil of Tierradentro, classifying it, consequently, as a privileged zone. The concept proves to be deceptive, because it does not take into account the physiographic factor. We find the usable vegetal layer /296/ only in the extremely narrow vegas of the rivers, ravines, and streams, and in places
13 where the topography becomes a little smoother. The left bank
241 of the Páez River, from Toez to La Plata, is usable for agricul-
[233] ture and stock-raising only with difficulty, given the brutality of the slopes. Every tributary that enters on this side is a deep ravine isolated by ridges running from northeast to southwest. On the other hand, the left bank has important vegas. It is there that plantains, manioc, sugar cane, coca, arracacha, maize, and lately coffee and guadua bamboo are grown. The soils are essentially acid, and the Gramineae grow in abundance

/296 cont./

13 241 and are of very good quality. The wheat and coffee from the municipio of Inzá enjoy a deserved reputation in the republic for the quantity and quality of their crops.

133 134 The Páez River receives approximately 32 watercourses on the left bank, and 17 on the right. It is easy to imagine the ruggedness of the terrain if we bear in mind the fact that each [241] one of them forms an impassable ravine. It is also easy to imagine the magnitude of the erosion, assisted by factors of a cultural nature, such as the systematic battle against herbaceous vegetation by means of the system of annual fires. The violence of the wild waters denudes and even forms veritable rivers of stone, such as are seen at the place called Vicanenga in the municipio of Páez. The streams and torrents sometimes swell to extraordinary proportions. In 1949 the Topa torrent completely washed away its small tributary valley, on which stood the hamlet known by the name of Brisas, now Valencia, a flood which was repeated in April of this year.

241 133 134 [161] Of course, the extent of the workable land does not keep pace with the increase in population. The physiography of the cold thermal level, on the other hand, spreads out and flattens a little, the horizon broadens, the patches of arboreal vegetation increase, and the plots multiply, like veritable chessboards in Mosoco, San José, and Vitoncó. Their soils nourish maize, wheat, potatoes, ullucos, nasturtium, and garlic. On the dividing lines between the plots there rise, like green walls, the plantings of cabuya.

161 361 311 3. Population density. The growth of the indigenous population in general, and of the "white" one in particular, has compelled the former to utilize lands increasingly more difficult, steep, /297/ and sterile, or to emigrate in search of uncultivated land. As early as the time of the Conquest we find notes on the spread of the Páez people to the western slopes of the Central Cordillera, forming such nuclei as Pitayó, Tacueyó, and San Francisco. Nowadays, we find Páez groups on the eastern slopes of the Western Cordillera in the department of Cauca, in the departments of Huila and Tolima, and in the Cauca Valley, as Páez

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguex*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

P 175 648 P PO [13] PO [648] [177] P [166] P

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.

P [122]

/102 cont./

175 glossary, p. 248/, and, by means of reservation laws, protected
177 the Paez from the gradually advancing colonists. In this way the
648 Paez were able to preserve their language and customs to a con-
[178] siderable extent, in contrast to the other mountain tribes of
Colombia, who have long since been absorbed in the Spanish-
175 Colombian culture. In the struggles for independence from the
648 Spanish crown under Simon Bolivar from 1812 to 1824, the Paez
fought for their liberation on the republican side under Gregorio
Calambás. Their leader was captured and shot. After the
victorious termination of the struggles for independence, Gregorio
Calambás became one of the martyrs of Colombian independence (*).

* According to V. A. Bedoya, P. J. Ramirez Sendoya, and G. Hernandez de Alba (VII).

175 The Pijao perished like the Guanaca. After having oc-
101 cupied, before the Conquista, almost the entire area of the
648 present-day department of Tolima east of the Central Cordillera,
[131] as the eastern neighbors of the Quimbaya, they perished in
countless battles with the Spaniards. As late as the eighteenth
century, remnants of them lived in the valley of the Rio Negro
de Narvaez, as neighbors of the Paez. They, called Bemb by the
Paez, as well as the Guanaca, spoke languages that differed
from the Paez. They could not understand one another.

178 Besides the Paez, the culture of the Guambiano, a
101 neighboring tribe called Mogweš by the Paez, has been preserved
114 to a certain extent up to the present day. The Guambiano in-
habit the west side of the Central Cordillera and today live in
the valley of the Piendamó around Silvia. The life and customs
of his tribe have been recently represented by the Guambiano
Francisco Tumiña Pillumbe in a number of very instructive /103/
drawings, each of which was provided with a brief text by
Gregorio Hernandez de Alba.

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
● 131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaqui/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

173 he said, "the caciques or chieftains, had their messages trans-
202 mitted from valley to valley by means of runners who were
205 stationed at short intervals along the main roads. Each runner kept himself in readiness to start on the arrival of a message, thus insuring rapid transmission." As the "planos" and also the old trails are found on almost every ridge, it is difficult enough to judge of the value of this explanation; but, if I am not mistaken, such a system of communication existed without doubt at a short distance southward among the Incas of Ecuador and Peru, and perhaps extended into the Cauca valley.

172 On our return from Huila, while traveling between Toribió and Tacueyó, I noticed on the left an isolated hill with a part of its ridge separated from the rest by a deep cross-cut, evidently artificial. The top of the separated part looked in the distance as if also isolated by a ditch. My friend, Mr Emile Bizot, a mining engineer of wide experience in these parts, informs me that this is a common feature of the hilly district formerly inhabited by the natives, and that the enclosed surface always contains numerous graves (plate III, 2).

172 The high peaks of the most rugged districts of Tierra
532 Adentro are often crowned by isolated *huacas*, which are especially sought by treasure-hunters. At Tacueyó we had the opportunity of admiring a set of gold objects found in such graves and of which we made the photograph reproduced in plate II, 2. The frogs are of a type quite distinct from those with which I became familiar in Costa Rica. The representative of a human being recalls certain Chibchan idols, or, according to Mr W. E. Safford, Kitšua amulets. As to the thirteen remaining pieces of gold, quite thin and almost uniform in shape, they are perfectly new to me.

Former and Present Distribution

● 131 According to Father Rodriguez[1] the Paez, or Paós, Indians
114 lived on the summit and slopes of the *Cordillera de Guanacas*,
133 "sierra muy fria que llaman el Páramo de las Papas," a defini-

[1] P. Manuel Rodriguez, *El Marañon y Amazonas. Historia de los descubrimientos, entradas y reducciones de Naciones*, Madrid, 1684.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

tion which would correspond pretty well with the explanation given by subsequent authors, except for its last, untranslated member, which seems to imply a lack of geographical knowledge on the part of Father Rodriguez. According to modern maps, indeed, the term "Alto", or "Cordillera", de Guanacas, seems to apply only to the group or node of mountains north of the Coconucos and Puracé volcanoes, and south of the towering Huila. This includes the "Páramo de Moras," which we crossed on our return from Tierra Adentro, but not the *Páramo de las Papas*, which is situated south of the Puracé, at the headwaters of the Cauca, Caquetá, and Magdalena rivers. 131 114 133

If we admit, then, that in Father Rodriguez's description the name Páramo de las Papas is merely a lapsus for Páramo de Moras, the area given by him corresponds pretty well with that which is recognized as such by Uricoechea in his introduction to Castillo's work, excepting that the latter extends this area northward to include the upper Yaguará basin. According to Castillo, this last was probably inhabited by another *parcialidad*, which he calls Bemb, "indios infieles de nación pijaos." At Huila, when pointing northward to the valleys on the eastern slope of the volcano and asking who lived there, the Indians answered, "Los Pijaos", and among the Spanish people it is generally understood that the Paez and the Pijaos are one and the same. This is also the opinion of Reclus,[1] who says: "Among the various tribes that wandered through the thick forests of this [eastern] slope of the [central] Cordillera, the most barbarous were the *Pijaos* or *Paez*, who selected innocent victims to offer to their divinities. The enemy killed in a fight could be only indifferent to the gods; but a woman, a child, an inoffensive stranger, the pure ones, were welcome to the bloodthirsty genii." And these monstrous sacrifices must be repeated at short intervals to insure the permanent good-will of the gods. 131 114 101 [782 727]

The area given on the accompanying map (plate I)[2] corresponds with the above-mentioned description by Rodriguez, 101 103

[1] Reclus, *Géographie universelle*, XVIII, p. 305.

Aspects of Paez Culture
Mythology and Tales from the Parcialidad of Calderas, Tierradentro
by Segundo Bernal Villa

/Page 280 is blank./

/281/ Chapter I

131 Geographic location.--In the northeastern part of the de-
133 partment of Cauca, like a spearhead embedded in the department of Huila, is found the region of Tierradentro, formed by the numerous eastern spurs of the Central Cordillera. It has the shape of a triangle formed by the water divides of the hydrographic basins of the rivers Páez and Yaguará to the east and La Plata and Páez to the south. Toward the west, the Central Cordillera rises like a backbone, along which the paramos of Guanacas (3,518 meters), Las Delicias (3,750 meters), and Moras (3,670 meters) stand out. Toward the north, like a gigantic colossus and dominating the vertex of this geometric figure, stands Nevado del Huila (5,750 meters), the highest in Colombia, except for the Sierra Nevada de Santa Marta.

133 Topography.--Actually, Tierradentro is a complex of mountains running in every direction, although along general lines they are oriented from west to east on the right bank of the Páez and from north to south on its left bank, rugged, steep, with lofty peaks and great gorges, canyons and hills, ravines and valleys, terraces and escarpments, ridges and plateaus, numerous gullies, rivers, and streams with violent
[484] currents and thundering noise. To travel through this region "is to go up or down," as was said by Fr. Pedro de Aguado (1).

1. Cited by Hernández de Alba (Gregorio), p. 925. /See the bibliography in the foreign text, p. 309./

/288 cont./

583 in the church, live together for a period of indeterminate duration, explaining that /289/ the man does not have enough money at hand to marry as soon as he asks the woman, and it is necessary to work in order to obtain it.

771 Religion.--The religion of the Paez is formally Catholicism,
177 but many of their traditions are hidden in it. The principal
[796] fiestas of the natives are religious ones, which acquire true strokes of splendor. The Catholic priest is called upon for the ceremonies of baptism, marriage, and cases of death.

Chapter II

631 Calderas.--Incrusted in the very heart of Tierradentro is the
131 Parcialidad of Calderas, bounded on the north by a high ridge
133 that separates it from Chinas and Avirama; on the east, La Muralla, the very model of a fault, separates it from Avirama, just as a ridge separates it from Togoima; to the south, deep gorges and high peaks separate it from San Andrés and Togoima; to the west, the Quebrada Guacharaca divides it from the Parcialidad of Lame.

133 It is crossed from west to east by the Quebrada Kukiyú,
631 actually a river in terms of the volume and violence of its waters, whose bed is deep, enclosed, and inaccessible. Its
[423] left bank is somewhat softened by a beautiful plateau of about 20 hectares, with fertile lands, abundant waters, and on which the pueblo rises; it belongs to the community, whereas the other lands are private property guaranteed by the fact that the owner either personally cleared the montaña or inherited it from his ancestors who cleared the forest. The right bank is steep, harsh,
[161] rugged. Numerous clearings are to be seen on these sloping
[311] lands, indicating the increase in population that compels them to cultivate lands of low fertility and great danger for the laborer.

/179 cont./

123 At 11 o'clock in the morning we left the Park, bound for
484 Calderas. The road climbs through the Pisimbalá valley, at
491 first on its right bank and soon on the left, after crossing a wooden bridge with a plank roof; from this bridge to the pueblo of San Andrés, three streams have to be crossed: Chapequís, La Virgen, and the cemetery stream. Along this short distance and at the edge of the road we counted ten houses, all of them thatched except one of masonry, tiles, oil paint, modern manufacture; the others have white washed walls, painted doors, and are generally clean and orderly. They are the houses of mestizos and colonists settled on their respective fincas.

At 11:30 we left the settlement and took the path that leads to Calderas; the road goes ever upward, in slow and slippery
123 zigzags. As we go along, we see houses with graphite-colored
342 roofs and walls which are black when made of mud or (and these are in the majority) yellow when they are of maize stalks; they lie as if submerged /180/ in the plantings of bananas, sugar cane, and yuca; bluish smoke rises vertically in thick columns from the openings.

123 At 12 o'clock we came out on the Mesón, Supok in the
133 Paez dialect, a small plateau oriented from north to south
[361] and bounded on the east and west by great depressions. Many native huts stand there.

[137] The beautiful valley of the Pisimbalá torrent comes into view in its entirety; contracted at times, then widening more, extensive in length and generally narrow, it descends in a gentle slope in pursuit of the noisy Ullucos; covered with thriving vegetation, it looks like a carpet of living green blending in its tones the stateliness of the cachimbos /búcare, Erytrina umbrosa/, cedars, guamás, gadua bamboo, and yarumos /Cecropia peltata/, and the splendor of the plantings of sugar cane and bananas and the pastures of the herders.

[134] An hour later we reached the Yukaichí ridge, the boundary of the parcialidades /territorial divisions/ of San Andrés and

/180 cont./

123 Calderas, and the water divide of the Kukiyú river and the
153 Pisimbalá torrent, the former a deep gorge, the latter an
[131] elongated basin. Toward the north, the outline of another ridge bounds the horizon and divides the parcialidades of Suin and Chinas. Prominent along it, the Vichaguau peak, the hill Dondotá with the double crests, between which, when the sky is clear, one can see Huila with its eternal snows, where the golden rays of the sun break into a silvery radiance. Toward the east one sees the hills of Chindavá and Potrerito, the heights of Togoima, and the canyon of the Páez. Toward the south stand the mountain ranges of Pangok and El Aguacate, which separates the valleys of the Pisimbalá and the Ullucos; the tablelands of Pedregal, Turminá, and Inzá; the sharp peak of Trueno /Thunder/, the "Kapich" of the natives, a summit
123 of silence, lightning, thunder, and storms. In the place where
173 the sun sets, there rises, stately and challenging, the sharp
148 peak of Hipinjí (1), on which, according to some Indians, lie
[133]
[104]

1. H = the English h.
   J = the French j.
   Sh = the French sh.

the images of saints, the bells, the clothing, the gold, and the silver which the Paez army carried away from San Sebastián de la Plata after murdering all of its white inhabitants, setting fire to the town, and filling up the famous silver mines which had given the town its name and brought large numbers of ad-
173 venturers and not a few misfortunes to the Indians. This legend
123 has fired the imagination of the whites and has led not a few to search for them. It is said that several whites went to the Hipinjí in search of the legendary treasure. At the /181/ /illustration appears here/ top of the peak a white flag was waving. One day there appeared on it the following mysterious order: "At 12 o'clock you may clear out this opening." Their enthusiasm was renewed, their fatigue forgotten, and they went to work eagerly. One worker was rewarded by blind

XXIV

The Race for the Rooster at Tumbichukue

103 The name of Tumbichukue is familiar to the colonists throughout Tierradentro. It is synonymous with fabulous treasures. In this place, it is said, the Paez buried all the gold and silver that they collected in the ill-fated settlement of Sebastián Quintero destroyed by them.

[131] Tumbichukue is a pass /vereda/ formed by the eastern slopes of the paramo of San Lucas and located between the Kukiyú and the Yusayú gorge (Guacharaca). It belongs to the parcialidad of Lame, and the road that goes from San Andrés [491] to Lame passes precisely there. This road is well traveled, its people more accessible to the whites.

796 On June 24 the men race their horses along the road.
541 It is a custom of Indians and whites "to race on the day of San Juan." The whites say that those who do not race their horses on the day of San Juan get scabies. The small, husky horses pant under the demands of their drunken riders. A wild race and shouts in an unsteady voice: Viva San Juan!

The people of the pass go to a small square along the road, near which lives the capitán of Lame. Indians from
184 San Andrés come to watch the race for the rooster. On the
796 other hand, in spite of the nearness, no Calderun /person from
291 Calderas/ is seen there. The women who are seen are clean,
177 with neatly braided hair; they wear black skirts, navy-blue
301 rebozos, pink blouses, numerous multi-colored necklaces,
541 bright earrings, and cloth hats. The monotonous dark or black necklaces characteristic of Paez apparel are nearly absent among these people. The classic pindo hat worn by the [191] Calderas people is absent. Spanish is spoken more frequently.

796 All the riders are concentrating on the cage and the
541 roosters.

Common Name	Latin Name	Páez Name
241 Pineapple	**Ananas comosus (L) Camargo**	***chahú***
137 Granadilla	**Passiflora Ligularis Jurs.**	***shlal***
Coffee	**Coffea Arabiga L.**	***café***
192 Ground cherry	**Physalis sp.**	***chimbú***
Chachafruto	**Erythrina edukis Triana ex Micheli**	***úsual***
Pepino	**Solanum muricatum Ait.**	***pina***
Yam	**Dioscorea sp.**	***shuá***
Other cultivated plants:		
Coca	**Erythroxylon coca Lam.**	***esh***
Bamboo	**Guadua angustifolia Kuth**	***mum***
Bottle gourd	**Lagenaria vulgaris Serg.**	***tuka***
Calabash tree	**Crescentia cujete L.**	***shiptuka***
Cabuya	**Foucrea cabuya Trel.**	***bats***
Dill	**Anethum graveolens L.**	***llinojo***
Mint	**Mentha viridis L.**	***tachá***
Rue	**Ruta graveolens.**	***luda***

222 In reality, as far as a certain type of frijole that the natives
241 call "kacha" is concerned, as well as the ground cherry, the chachafruto, fruits in general, and all the plants listed under "Other cultivated plants," with the exception of coca, the word "cultivated" is unsuitable, since they are practically in a semiwild state. The natives make use of their fruits, consumption thus being occasional and not always necessary.

133 Although it would appear that the territory of the Páez, at the
241 time of the Conquest, extended up to very close to the Magdalena
361 River, the principal nucleus of the population was located in the
[131] temperate zone and in the cold zone. The thermal levels determine
[101] the zones of cultivation. One of them goes from 1,000 to 2,000 meters and includes the entire valley of the Páez from Huila to La Plata, and the middle and lower courses of its tributaries Símbola, the river Negro de Narváez, Moras, Kukiyú, and Ullucos. Within it are located the capitals of the district, Inzá and Belalcázar, and the following native aldeas: Itaibe, Chitóquez (Ricaurte), Cuetando, Yaquivá, San Andrés de Pisimbalá, Santa Rosa, Togoima, Avirama, Chinas, Suin, Tálaga, Toez y Huila (Byla), as well as Valencia, Topa, Pedregal, and Turminá. They cultivate principally plantains, manioc, maize, sugar cane, frijoles, arracacha, coca, and coffee,

/345 cont./

427 San Andrés is the sole region of Tierradentro, as far as we
161 know, where tenant farmers are found. Although the number of persons sunk in this servitude is no higher than 100, the mere occurrence of this phenomenon already tells us of an excess of population, at least in the parcialidades of San Andrés and Santa
[131] Rosa, from which the tenant farmers came. On the other hand, the scattering of the Páez group through this very department of Cauca, the departments of Huila and Tolima, and even through
[311] the department of the Valle is well known. The colonization of the uncultivated lands in Tierradentro by the natives has been systematic and intensive during recent years. There is the utilization of ever more inaccessible lands for agriculture in the temperate thermal level. All of these are factors that clearly tell us of an excess in the Páez population.

427 Here is what a tenant farmer told us about the phenomenon
241 of tenant farming: As a tenant farmer he has the right to own a
466 house, a garden, and a clearing. The house and garden are contiguous and complementary. His garden occupies one plaza /a Colombian measure with 80 meters to the side/ more or less, and in it he has planted plantains (about 200 trees), oranges (about five trees), onions, arracacha, manioc, sugar cane, sweet potatoes, and some 200 coca trees. He has surrounded the garden with barbed wire provided by the owner in order to avoid damage by the animals of the hacienda. He can lay out his clearing on any site of the hacienda. It changes every year. In his present clearing he has planted 1,500 manioc plants; 200 of arracacha (he could not find more seed); maize; small frijoles /fríjol chiquito/ (in one month he hills the "sprigs," in two months they flower, and in three months he harvests) and large frijoles /fríjol grande/, and, finally, about two loads of sugar-
[433] cane shoots (seed). The produce of the clearing and of the garden is primarily for consumption, but if there is a surplus he may sell it to anyone, even though the owner urges him not
[249] to sell to anyone but himself. The sugar cane is milled in the
[257] /346/ sugar mill of the owner, with the subsequent use of his implements to make panela, half of what is produced being given to him.

7:Hernández de Alba E-5y (no date) 1946 SC15 Paez SC15

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

121 A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

●131 The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian of Bogotá. The country consists of high mountains of the Andean
133 system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

[3] For the languages, see especially Jijón y Caamaño, 1940-41; Castillo I Orozco, 1879; and Castelvi, 1934. For ethnology, see Douay, 1900; Pittier de Fábrega, 1907; Ortiz, 1938; Guerra F., 1942; Jijón y Caamaño, 1936-39 Otero, 1938; Albó, 1934. See also Languages, pp. 821-822.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Pasto SC17

The area of this study is delimited on the west by the valley of the Patía River and by the Cuembi, Nambi, and Cuaiquer Rivers, and on the east by the divide between the rivers running to the Pacific Ocean and those flowing eastward into the Caquetá and Putumayo Rivers. P 133 121

All this region is cool to temperate throughout the year, the extremes being at Túquerres, which lies at 3,104 m. (9,433 feet) elevation and has a mean temperature of 11° C., and Ancuyá at 1,358 m. (4,380 feet) with a mean temperature of 21° C. The greater part of the population lives between 2,890 m. (about 9,470 feet) with 12° C., as at Ipiales, and 2,020 m. (about 6,630 feet) with 18° C., as at Buesaco. P 132 P 133

Farther north, the Cordillera Central forms a great mountain mass at the sources of the Cauca and Magdalena Rivers, the latter delimiting the Cordillera Oriental, which extends toward the northeast, entering Venezuela and stopping at the Atlantic Coast. In the Department of Cauca, the native peoples occupied the altiplanos and the mountain slopes of the central portion of the Andes and of the Cordillera Central and Cordillera Oriental. Some of the mountains are snow-capped, like Coconucos (4,800 m.; 15,746 feet) and such volcanoes as Puracé (4,908 m.; 16,102 feet) and Sotará (4,580 m.; 15,026 feet). There are high páramos, swept by icy winds, where only the frailejón (*Espeletia hartwegiana*) and certain grasses grow. Below these heights, the topography is hilly and grandiose, with a succession of hills, terraces, altiplanos, ravines, cañons, and valleys.

Some tribes, like the *Coconuco* and *Moguez*, live in the cold mountain spurs toward the Cauca River; others, like the *Páez* and *Guanaca*, in the high páramos with a climate like that at Moras (3,670 m.; 12,040 feet), Guanacas (3,518 to 3,750 m.; 11,541 to 12,303 feet), Las Delicias, and other places to the east. The *Popayanense* occupy the temperate Valley of Pubén. The *Pijao* lived in the last mountains of the Cordillera Central toward the Magdalena River, which, like the valley of this river, is low and warm, and extended to the Cauca Valley in the neighborhood of Buga. P 101 361. PO [101] [361]

The country inhabited by the *Popayanense* at the Conquest has an altitude of 1,760 m. (5,775 ft.) and a mean temperature of 18° C.; the *Páez* in Tierradentro, 1,650 to 2,620 m. (5,774 to 8,595 ft.) and 13 to 17° C.; the *Moguez*, 2,521 m. (8,270 ft.) and 14° C. at Silvia; the *Andaquí* in the region of San Agustín, 1,695 m. (5,561 ft.) and 18° C.; the *Yalcón* and *Timaná*, 1,100 m. (3,608 ft.) and 24° C.; and the *Pijao*, 873 m. (2,864 ft.) and 25° C. at Carnicerías, and 1,700 m. (5,577 ft.) and 18° C. at Pijao (Caldas). P 133 132 PO [133] [132]

Such differences in climate with the consequent differences in flora and fauna contributed to the variations in economy and culture. The high peaks of the cordilleras and the deep rivers were frontiers between the tribes, clearly separating them from one another—the *Moguez* P 101 131

?:Hernández de Alba E-5,1(no date) 1946 SC15 Paez SC15

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
● 131 of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,600 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisaica*); and large fish from the rivers.[4]

---

[127] [4] The scientific names of the plants were taken from Cortés, 1919. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

Here the mountain slopes which

/14 cont./

C 311 134 only 70 years ago were still covered with dense tree growth are now cleared to gain pasture areas for stock-raising, thus causing P 361 extensive erosion of the normally already very thin humus covering and a certain sterility of the soil. The situation is different ● 132 in the villages still exclusively inhabited by Indios in northern Tierradentro. They lie in part considerably higher (Mosoco, P [244] Vitoncó, Suin, and Lame about 2,500 meters). Here the nights are already perceptibly cold. Coffee no longer thrives, in its P [233] stead maize and potatoes. It is also the best climate for cattle-raising. The mountain slopes, due to relatively sparse settle- P [311] ment on the part of the Paez, have not all been put to economic [134] use as yet; the /15/ tree growth guarantees natural water conservation throughout the year.

C 132 The two rainy periods of the year are from May to June and October to December. During these times, especially in the rainy period of the first half of the year, it rains in considerable amounts every day, whereas the dry periods are regularly free of precipitation.

C 317 175 Tierradentro's wealth underground has not yet been explored with modern means. In pre-Spanish times, and even [135] after the Conquista /the Spanish conquest; see the glossary, C 175 p. 249 /, numerous salt beds were exploited. The Spaniards 317 brought Negro slaves into Tierradentro as mine workers, whose 563 descendants make up a considerable part of the population of 464 Belalcázar. Today some of them work as gold-washers on the 316 banks of the Rio Paez. In Indian times gold was still obtained C 316 at Tálaga, San Vicente, and Jambaló. In the southern part of C [103] Tierradentro the silver mines were a significant economic factor near the city of La Plata -- so-named because of its important finds.

C 487 From colonial times up to five years ago only the routes passable for human beings and horses (caminos de herradura /bridle paths/) were available for traffic routes. The two chief connections were from Inzá over Paramo de las Guanacas to Silvia and Popayán and into the Cauca Valley, as well as from Inzá via La Plata into the Magdalena Valley.

/112 cont./

142 age the hair seldom becomes white. We met only one woman with slightly graying hair and an old man with a gray, sparse
[302] beard, but dark hair. The beard among men is scant. The beard hair is regularly plucked (see Ills. 148 to 155 /see pp. 265-268/).

143 According to the blood-group analysis of the Paez, among the 303 individuals examined there were 88.78 per cent of blood group 0, 6.93 per cent of blood group A, and 4.29 per cent of blood group B. The blood group A+B is not represented (G. Arcila Velez, pp. 11-14).

229 The racial concept of Indian is foreign to the Paez themselves. To them "Indio" designates a cultural status. My colleague, Segundo Bernal Villa, an Indian from the region of Pasto, was designated as "blanco" because of his European clothing. And when our interpreter Victoriano bought himself "white clothing" (hat, pants, shirt, shoes) with the money he earned, he was called a "white" in his village and accordingly treated with hostility.

161 The population figures for the Paez do not seem either to increase or decrease, as far as the uncivilized Paez are con-
165 cerned, for example, in Calderas. Infant mortality comes to more
164 than 50 per cent. The most common cause of sickness is whooping cough. The health of children who survive their second year, as well as of adults, is -- considering the circumstances -- quite good. True, one scarcely sees old people over 60 (and
[132] those who look that old are probably younger). The most fre-
[362] quent illness of adults is tuberculosis, which claims numerous victims, since the nights are very cold and the cold and wind can
[262] penetrate through the light walls of the houses unhindered. More-
[273] over, no fat of any kind is commonly eaten. Another illness from which many Paez suffer, which, however, is not taken seriously, is stomach trouble caused by the drinking of brandy even during
[254] infancy and the unsuitable diet in childhood. Infants are given
[262] beans, cabbage, and yuca, but no milk, except mother's milk.

500 /120 cont./
354 the simplest possible form. Three rocks provide the lateral sup-
415 port or stand for the pots, of which there are two at most, a
metal one, usually of aluminum, and an earthen one. Very
poor families have only one earthen pot, which is relatively
[417] cheap to buy. The earthen pot cannot be hung up; it is set
between the three fire-stones in such a way that it cannot tip
over, whereas the aluminum pot is hung by its handle on a soot-
covered, angled stick that hangs down from the ridge (Ill. 166
352 /see p. 273/). Above the fire area there hangs a frame made
[251] of maize canes and about one square meter in size, on which
[353] household utensils and, above all, the rock salt for salting food
are stored, airy and dry. Tables, chairs, or stools of any kind
[237] are unknown. One generally sits on the hairy side of an un-
[513] tanned and hence board-stiff cowhide, on which one also /121/
sleeps, or one sits on a beam, a block of wood, or a stone. Paez
[177] who have seen house furnishings in Inzá or in the dwellings of white
colonists have sometimes built for themselves as a bed a sort
of bench 30-50 centimeters high, consisting of sticks or reeds
[513] laid side by side. For sleeping the customary cowhide is spread
on it. These sleeping benches are not used for sitting.

342 The nights in Calderas are generally quite cool, and
362 the light construction of the walls with cracks between the in-
● 132 dividual maize stalks does not in any way prevent the cold wind
from coming in. In a few houses, near the sleeping area, I saw
the walls sealed by means of expressed sugar-cane piled up
462 horizontally. For sleeping, the members of the family lie down
[354] in a circle around the fire area, where the fire must be kept going
[513] all through the night. This, like all housework, is the task of
the woman, who must gather sufficient fuel beforehand and get up
every two hours during the night to stir up the fire. Furthermore,
[264] she must get up an hour earlier in the morning in order to have
the first meal, which is eaten around five o'clock, sometimes
[461] even at four o'clock, prepared on time. In spite of this, the
men think that they are the ones who do the hardest work and that
basically they are the only ones in the village who really work.

/254 cont./

804 The period of a day is subdivided into the day (ẽn) and the
192 night (kos). Early morning is called kosẽ; afternoon at the time when work is at an end, which is reckoned by the position of the sun, is called fí'nze. Other subdivisions of the day are made according to the interval of an ẽšnetc, meaning the time it takes to chew a dose of coca. In translation this designation is used for "hour." The largest period of time is the month, ãte, which is designated by the same word as for "moon." For the period of a year the Spanish word año is used. In former times the word
[221] enzte was used. It is the designation for the large annual com-
[226] munal fishing at the weir during the dry season in February. The
[132] two rainy seasons, called nospá'nye, and the two dry seasons of the year, called sek, are not regarded as time intervals, but as seasons. The latter is at the same time the word for "sun."

823 No large geographical orientations or regional, individual
[491] divisions of any kind could be discovered. Moreover, all of Tierradentro is enclosed by civilized areas -- there is even an auto road leading to Belalcázar -- so that many Paez men have seen the surrounding countryside and even cities with their own eyes.
[101] Only the western bordering mountains of the Central Cordillera,
[186] in the direction of Popayán, are conjectured to be the habitation
123 area of the dreadful man-eaters, the Pijao. Geographical means
484 of orientation are unknown. Traveling is done only during the day, in groups, and in company with a person who knows the way.
821 Of the stars it is only known that there stars that move and fixed ones, without their being distinguished in greater detail or according to constellations.

202 It is amazing that, in spite of their settlement pattern of
[361] individual farms, the Paez do not have any optical or acoustical
[203] means of communication over larger distances. /255/ In case of urgent news or questions, children are sent.

802 There are numbers only from one to six and ten. For the designations seven to nine the corresponding Spanish numbers are used. The Paez word for "ten" (kóse pémba) literally means "no more hands" and indicates that the fingers were used for counting. The toes are not used for counting; anything beyond ten is

The fields are prepared with
/283 cont./
241 machetes and fire. They are the so-called rozas, a barbarous, primitive, and criminal method of agriculture. Burning is a habit of natives and colonists alike and goes so far that even the vegetation of the cliffs, crags, and escarpments is burned, where obviously no practical use can be derived and in addition it leaves the denuded rock at the mercy of the agents of erosion.

136 Fauna.--The fauna consists of a few classes of ophidians and small mammals: tinajos, coatis, pacas, armadillos, porcupines, foxes, deer, tapirs, sloths, and rabbits. Bears, ocelots, and pumas are found in the virgin montañas. Birds, such as wild pigeons and chachalacas, abound.

● 132 Climate.--There are no data on the rainfall, temperatures, /284/ and winds of this zone. The climate on the whole is temperate, or, to put it better, it is a coffee-growing climate.

361 Owing to the unevenness of the terrain, the natives inhabit
133 a region that extends from 1,000 meters (Itaibe) up to 2,500
132 meters above sea level (Suin, Mosoco, Vitoncó, and Lame). According to Dr. Gregorio Hernández de Alba, at the time of the Conquest the Paez peoples of Tierradentro inhabited "altitudes and climates between 2,620 meters with 13 degrees centigrade and 1,650 meters with 17 degrees centigrade on the average" (1).

1. Hernández de Alba (Gregorio), p. 917 /see the bibliography in the foreign text, p. 309/.

132 The atmospheric humidity and the rainfall increase as the cordillera becomes higher and snow-capped Huila draws nearer, with two summers and two winters, influenced, of course, by the topography, the vegetation, and proximity to the summit. There is an intense summer during the months of January and February, and another in July, August, and September. The winters are intense during the months of March-June and, on a smaller scale, in October-December. Snow-capped Huila

/284 cont./

132 gives rise to cold local winds that blow through the valley of the Páez, affecting chiefly the areas of Vitoncó, Suin, Chinas, San José, Mosoco, and also the parcialidad /a territorial division/ of Calderas itself. The variation in temperature is noticeable in these zones sometimes having hot days and very cold nights. Nebulosity is almost constant, especially in the northern zones.

241 Economy.--The topographic and climatic characteristics permit the cultivation of various plants, such as maize, beans, bananas, sugar cane, yuca, arracacha, and gourds in the temperate zones, and in the cold ones potatoes, maize, ullucos, [433] beans, gourds, and cabbage. The produce barely leaves a [439] surplus for trade with the parcialidades and urban centers of [438] Belalcázar, Inzá, and Valencia. The potato crops of Mosoco, Vitoncó, and San José serve for an active trade with the Paez of the western slope of the cordillera, across the Páramo de Moras.

433 Coffee and the production of panela are important lines 245 in the economy of the colonists and also of numerous groups 249 of acculturated natives. The coffee of Tierradentro is con- 177 sidered one of the best in the country, owing to the quality and mildness of the bean.

231 /285/ The raising of livestock flourishes among the civilized 437 groups. For the natives it serves for maintaining a barter trade with their neighbors, the white and mestizo colonists.

311 On the whole, native production is relatively scant, 433 giving rise to times of "hambruna" /ravenous hunger/ when [731] the summers or winters are rather harsh. The workable land lies in the small plains and valleys of rivers and streams, on the alluvial terraces, and on the plateaus. Comparing the size of Tierradentro with that of its arable land, the latter appears scant, a problem that is aggravated by the increase in population and the habitual burning.

101 Population.--Tierradentro is the country of the Paez, 361 who at the time of the Conquest were settled to the north of

/303 cont./

241 relatively recent times, has fertile and humid soils. The harvests
433 are large and of excellent quality. It produces profitable yields.
244 The real production of Mosoco potatoes is there. They them-
[492] selves designate it as the principal harvest. During the months of April and May, when the potatoes are being harvested, numerous droves of pack animals carry the produce daily to the market
[435] in Silvia. The profits from this crop are dependable. The cultivators state that even selling at four pesos per arroba it gives a profit. Normally an arroba of potatoes is quoted at six or seven pesos. The planting of potatoes in the paramo begins in October, is intensified in November and December, and the last is done in January. They take advantage of the mildness of the climate
[132] at this time. During the months of June, July, and August the
[484] winter is harsh, with intense cold and hurricane winds. Crossing the paramos at this time is quite perilous.

241 In San José, La Troja, El Cabuyo, El Cuartel, Lame, and
433 Vitoncó, during the first four months of the year, wheat, barley, maize, frijoles, broad beans, and peaches are harvested.

Toward the months of October, November, and December, harvesting is done in Suin, Chinas, Calderas, San Andrés, Togoima, Santa Rosa, and Mosoco itself and consists principally of Maize, frijoles, ullucos, potatoes, and coffee. They constitute what we might /304/ call the second harvests of the year in Tierradentro. The planting begins after Ash Wednesday (March approximately) and is intensified in the months of April and May.
244 The last is done in July. The potato seed planted at about this
433 time in Mosoco comes from the harvest in the "paramo." This is a secondary planting of scant yield. It usually results in losses, but the Mosoco cultivators plant with the aim of preserving the seed. It is interesting to note that the sole agricultural activity of one trader based in Mosoco is the planting of potatoes in the
[434] paramo. He dispenses with the July sowing altogether. He prefers to buy the seed in Silvia, he pays the entire labor force, and in spite of these investments, which are high, he gets a good profit.

/304 cont./

241 433 Aside from maize, a basic product of consumption in all the parcialidades, some of them emphasize certain crops primarily intended for commercial purposes. Thus, Mosoco produces potatoes and garlic; San José, wheat; Vitoncó, wheat and peaches; Lame, wheat and laurel wax; Togoima, coca; and the others, coffee.

241 433 The months of the most intense labor in the temperate zone correspond to the first five of the year, and especially to February and March, in order to take advantage of the sunny days during those months for the burning and the sowing, which in turn will benefit from the rains of April, May, and June. During this time, the reserves of the previous year's harvests are consumed, which, let it be said in passing, do not amount [132] to much. Thus, the months of scarcity are June, July, and August, and those of relative abundance, October, November, and December; the former relatively dry and the latter with copious rainfall.

In Mosoco this schedule varies considerably, owing to the [132] peculiar climate and the geographical position. The rains are constant in almost every month of the year; nevertheless, one can count on a few weeks of sunshine during the months of January and February. In the middle of the year, when the trade winds blow from the southeast, the winter is harsh. Thus, the months of intense labor are April, May, and June and coincide exactly with the harvesting of potatoes, wheat, and maize, and also those of November and December, for the planting of potatoes in the "paramo." March, April, and May, are months of plenty, and to some extent September and October as well. It would seem that there should not be any months of "hambruna" /extreme hunger/, but there are.

/305/ It is clear that the people of Mosoco work more and harder than the other natives; they actually harvest in almost every month of the year, but, like the others, they have months of "hambruna," which are September, October, and November, in spite of the fact that during these months they harvest potatoes and ullucos, but they call them such because they do not have 600 maize. The cultivation of potatoes on a large scale began more

Fire is also set to the vegetation on
/306 cont./
241 the ridges, crests, and windings, where no obvious advantage
185 can be gained and where, instead, it destroys a vegetation that virtually /307/ could be turned into a barrier that would prevent the danger of the animals.

The clearings are also laid out on the banks of brooks, streams, rivers, springs, and damp hollows, which, from a lucrative standpoint, is excellent, since it is precisely there that the harvest yields the most, but it is very harmful, since it destroys the vegetation that preserves the moisture and holds the soil, thus avoiding erosion.

241 The clearing is done by all the male members of the
476 family. But more generally the mingas /communal work-parties/ do it. In this case, the workers first cut with their machetes the grasses, branches, vines, etc., in the lower part of the forest; then, with axes and machetes, they fell the trees. It should be noted that these trees are not cut at the base, but more or less at eye level. The fallen trees are allowed to dry for approximately one month and then are burned. The thick logs remain intact, as does the brush. This is piled up, and sticks are cut to make fencing. This work is also done by mingas. First the stakes are driven in about a meter apart. Then sticks and branches are woven in. The fences are made so tight that they prevent dogs,
[417] pigs, and other animals from entering. People enter by means of a stick with notches that leans against the fence on either side. These sticks are called afa, and they are also placed at difficult spots on the paths, chiefly for crossing obstructions.

241 In Mosoco, where the lands are cleared and divided into lots, clearings do not exist. Only in the "paramo," the mountainous region, can they be observed. But the custom of leaving the land uncultivated for several years has not disap-
[824] peared. The fences are made of lechero /Euphorbia/ stakes, a tree that has the peculiarity of taking root and continuing to live. But the use of barbed wire is steadily increasing.

Planting and harvesting

• [152] Planting is conditioned by the pluviometrical conditions in Tierradentro. The summer months are January, February, March, July, August, and September, and those of winter are

/307 cont./

241 April, May, June, October, November, and December. Natu-
132 rally, these periods of summer are relative and correspond in reality to the temperate zone. In Mosoco and the high parts of the Cordillera, /308/ a fine rain is falling almost constantly, if not an actual downpour. In July, August, and September, the winter is harsh, influenced entirely by the trade winds from the southeast.

Bearing these climatic factors in mind, planting is done during the months of March, April, and May. They take advantage of the rains of these months. This agricultural cycle is common for all of Tierradentro including Mosoco proper. The "páramuna" part of Mosoco is excepted, for the reasons listed earlier.

243 Of the cultivable species, maize occupies the dominant place in the agricultural activity of Tierradentro. The preparation of the soil differs somewhat in the temperate and cold thermal levels. Whereas cleaning out and burning the underbrush are sufficient in the temperate one, planting beds are made in the cold one. Maize seed is selected from the best and most filled-out ears, avoiding the small kernels at the points. They believe that they would not fruit, calling them, for this reason, "maize-man," and, on the other hand, calling the big kernels
[842] that yield produce "maize-woman." They make the association that it is the women who have children, even though they do not conceive of fertility without concourse with the man.

243 It is common to have mingas for sowing. In this way the
244 work is soon finished. On the appointed day, eight to ten
476 laborers assemble, with bags full of maize tied at their waists;
[462] they start sowing very early. This is a masculine activity, al-
[184] though in Lame and Mosoco women also participate. The holes are made with a strong, pointed stick at intervals of one meter and 50 centimeters and to a depth of 10 to 15 centimeters. Six or seven kernels are placed in each hole. They bury the frijole next to the logs that remain from the clearing. Peas are also commonly sown there. The seeds of bottle gourds and ahuyama/ squash, /Cucurbita maxima/, which are sown in the maize fields,

Hernández de Alba E-5,4 (no date) 1948 SC15 Paez SC15
Pasto SC17

The area of
this study is delimited on the west by the valley of the Patía River and by the Cuembi, Nambi, and Cuaiquer Rivers, and on the east by the divide between the rivers running to the Pacific Ocean and those flowing eastward into the Caquetá and Putumayo Rivers. P 133 121

All this region is cool to temperate throughout the year, the extremes being at Túquerres, which lies at 3,104 m. (9,433 feet) elevation and has a mean temperature of 11° C., and Ancuyá at 1,358 m. (4,380 feet) with a mean temperature of 21° C. The greater part of the population lives between 2,890 m. (about 9,470 feet) with 12° C., as at Ipiales, and 2,020 m. (about 6,630 feet) with 18° C., as at Buesaco. P 132 P 133

Farther north, the Cordillera Central forms a great mountain mass at the sources of the Cauca and Magdalena Rivers, the latter delimiting the Cordillera Oriental, which extends toward the northeast, entering Venezuela and stopping at the Atlantic Coast. In the Department of Cauca, the native peoples occupied the altiplanos and the mountain slopes of the central portion of the Andes and of the Cordillera Central and Cordillera Oriental. Some of the mountains are snow-capped, like Coconucos (4,800 m.; 15,746 feet) and such volcanoes as Puracé (4,908 m.; 16,102 feet) and Sotará (4,580 m.; 15,026 feet). There are high páramos, swept by icy winds, where only the frailejón (*Espeletia hartwegiana*) and certain grasses grow. Below these heights, the topography is hilly and grandiose, with a succession of hills, terraces, altiplanos, ravines, cañons, and valleys.

Some tribes, like the *Coconuco* and *Moguex*, live in the cold mountain spurs toward the Cauca River; others, like the *Páez* and *Guanaca*, in the high páramos with a climate like that at Moras (3,670 m.; 12,040 feet), Guanacas (3,518 to 3,750 m.; 11,541 to 12,303 feet), Las Delicias, and other places to the east. The *Popayanenses* occupy the temperate Valley of Pubén. The *Pijao* lived in the last mountains of the Cordillera Central toward the Magdalena River, which, like the valley of this river, is low and warm, and extended to the Cauca Valley in the neighborhood of Buga. P 101 361. Po [101] [361]

The country inhabited by the *Popayanenses* at the Conquest has an altitude of 1,760 m. (5,775 ft.) and a mean temperature of 18° C.; the *Páez* in Tierradentro, 1,650 to 2,620 m. (5,774 to 8,595 ft.) and 13 to 17° C.; the *Moguex*, 2,521 m. (8,270 ft.) and 14° C. at Silvia; the *Andaquí* in the region of San Agustín, 1,695 m. (5,561 ft.) and 18° C.; the *Yalcón* and *Timaná*, 1,100 m. (3,608 ft.) and 24° C.; and the *Pijao*, 873 m. (2,864 ft.) and 25° C. at Carnicerías, and 1,700 m. (5,577 ft.) and 18° C. at Pijao (Caldas). P 133 132 Po [133] [132]

Such differences in climate with the consequent differences in flora and fauna contributed to the variations in economy and culture. The high peaks of the cordilleras and the deep rivers were frontiers between the tribes, clearly separating them from one another—the *Moguex* P 101 131

7:Hernández de Alba E-5;(no date) 1948 SC15 Paez SC15

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
131 of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,600 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisiaca*); and large fish from the rivers.[4]

---

[127] [4] The scientific names of the plants were taken from Cuatrecasas, 1949. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

173 he said, "the caciques or chieftains, had their messages trans-
202 mitted from valley to valley by means of runners who were
205 stationed at short intervals along the main roads. Each runner kept himself in readiness to start on the arrival of a message, thus insuring rapid transmission." As the "planos" and also the old trails are found on almost every ridge, it is difficult enough to judge of the value of this explanation; but, if I am not mistaken, such a system of communication existed without doubt at a short distance southward among the Incas of Ecuador and Peru, and perhaps extended into the Cauca valley.

172 On our return from Huila, while traveling between Toribió and Tacueyó, I noticed on the left an isolated hill with a part of its ridge separated from the rest by a deep cross-cut, evidently artificial. The top of the separated part looked in the distance as if also isolated by a ditch. My friend, Mr Emile Bizot, a mining engineer of wide experience in these parts, informs me that this is a common feature of the hilly district formerly inhabited by the natives, and that the enclosed surface always contains numerous graves (plate III, 2).

172 The high peaks of the most rugged districts of Tierra
532 Adentro are often crowned by isolated *huacas*, which are especially sought by treasure-hunters. At Tacueyó we had the opportunity of admiring a set of gold objects found in such graves and of which we made the photograph reproduced in plate II, 2. The frogs are of a type quite distinct from those with which I became familiar in Costa Rica. The representative of a human being recalls certain Chibchan idols, or, according to Mr W. E. Safford, Kitšua amulets. As to the thirteen remaining pieces of gold, quite thin and almost uniform in shape, they are perfectly new to me.

Former and Present Distribution

131 According to Father Rodriguez[1] the Paez, or Paós, Indians
114 lived on the summit and slopes of the *Cordillera de Guanacas*,
133 "sierra muy fria que llaman el Páramo de las Papas," a defini-

[1] P. Manuel Rodriguez, *El Marañon y Amazonas. Historia de los descubrimientos, entradas y reducciones de Naciones*, Madrid, 1684.

SC15 Paez SC15

tion which would correspond pretty well with the explanation given by subsequent authors, except for its last, untranslated member, which seems to imply a lack of geographical knowledge on the part of Father Rodriguez. According to modern maps, indeed, the term "Alto", or "Cordillera" de Guanacas, seems to apply only to the group or node of mountains north of the Coconucos and Puracé volcanoes, and south of the towering Huila. This includes the "Páramo de Moras," which we crossed on our return from Tierra Adentro, but not the *Páramo de las Papas*, which is situated south of the Puracé, at the headwaters of the Cauca, Caquetá, and Magdalena rivers. 131 114 133

If we admit, then, that in Father Rodriguez's description the name Páramo de las Papas is merely a lapsus for Páramo de Moras, the area given by him corresponds pretty well with that which is recognized as such by Uricoechea in his introduction to Castillo's work, excepting that the latter extends this area northward to include the upper Yaguará basin. According to Castillo, this last was probably inhabited by another *parcialidad*, which he calls Bemb, "indios infieles de nacion pijaos." At Huila, when pointing northward to the valleys on the eastern slope of the volcano and asking who lived there, the Indians answered, "Los Pijaos", and among the Spanish people it is generally understood that the Paez and the Pijaos are one and the same. This is also the opinion of Reclus,[1] who says: "Among the various tribes that wandered through the thick forests of this [eastern] slope of the [central] Cordillera, the most barbarous were the *Pijaos* or *Paez*, who selected innocent victims to offer to their divinities. The enemy killed in a fight could be only indifferent to the gods; but a woman, a child, an inoffensive stranger, the pure ones, were welcome to the bloodthirsty genii." And these monstrous sacrifices must be repeated at short intervals to insure the permanent good-will of the gods. 131 114 101 [782 727]

The area given on the accompanying map (plate I)[1] corresponds with the above-mentioned description by Rodriguez, 101 103

Aspects of Paez Culture
Mythology and Tales from the
Parcialidad of Calderas, Tierradentro
by Segundo Bernal Villa

/Page 280 is blank./

/281/ Chapter I

131 Geographic location.--In the northeastern part of the de-
●133 partment of Cauca, like a spearhead embedded in the depart-
ment of Huila, is found the region of Tierradentro, formed by the numerous eastern spurs of the Central Cordillera. It has the shape of a triangle formed by the water divides of the hydrographic basins of the rivers Páez and Yaguará to the east and La Plata and Páez to the south. Toward the west, the Central Cordillera rises like a backbone, along which the paramos of Guanacas (3,518 meters), Las Delicias (3,750 meters), and Moras (3,670 meters) stand out. Toward the north, like a gigantic colossus and dominating the vertex of this geometric figure, stands Nevado del Huila (5,750 meters), the highest in Colombia, except for the Sierra Nevada de Santa Marta.

133 Topography.--Actually, Tierradentro is a complex of mountains running in every direction, although along general lines they are oriented from west to east on the right bank of the Páez and from north to south on its left bank, rugged, steep, with lofty peaks and great gorges, canyons and hills, ravines and valleys, terraces and escarpments, ridges and plateaus, numerous gullies, rivers, and streams with violent
[484] currents and thundering noise. To travel through this region "is to go up or down," as was said by Fr. Pedro de Aguado (1).

1. Cited by Hernández de Alba (Gregorio), p. 925. /See the bibliography in the foreign text, p. 309./

/282 cont./

487 Páez waters upstream, continues along the river Negro, climbs over the cordillera, and reaches Tacueyó.

● 133 Hydrography.--From north to south in a deep and steep bed runs the great Páez, whose frothy waves rush rapidly through the vertigo of the torrents, run swiftly while tracing spirals in the frenzied force of the whirlpools, or leap, being broken into a thousand fragments by the violent shock in the numerous falls and rapids. Born of the thaws on Huila, it receives along its eighty-kilometer course the turbulent /283/ rivers Muesga (San Vicente), Moras, Kukiyú, Ullucos, and La Plata on its right bank, and the Símbola and Negro de Narváez on its left. The Páez river drains all of Tierradentro.

137 Vegetation.--In the major part of the region there no longer exist the "dense and impenetrable forests" mentioned by Carlos Cuervo Márquez. The timber and medicinal species have practically disappeared. The Cinchona genus was heavily exploited during the second half of the past century, when the quinine industry flourished and constituted one of the most vigorous lines in the national economy. The large and dense forests have been cut down systematically by the Indians and colonists to such an extent that the latter are found as far as the steep crags of the Central Cordillera and the hydrographic [314] valleys of the Símbola and Negro de Narváez rivers. On the ridges where virgin forest has miraculously remained intact, it has been noted that it has been entirely cut down within a week in order to make a pasture for the llamas; it is not used, not even for firewood, much less for charcoal, the techniques for which seem to be unknown. In the plains and small valleys of the streams and rivers there is a thriving vegetation which for the most part is of cultural origin, since it was planted to shade the numerous coffee plantations. Gramineae abound. On the hills and plateaus, thickets and shrubs are common, while on the steep slopes pastures present their opulent greenness in winter /the rainy season/ and their yellow-brown tones 600 in summer /the dry season/. The fields are prepared with

The fields are prepared with
/283 cont./

241 machetes and fire. They are the so-called rozas, a barbarous, primitive, and criminal method of agriculture. Burning is a habit of natives and colonists alike and goes so far that even the vegetation of the cliffs, crags, and escarpments is burned, where obviously no practical use can be derived and in addition it leaves the denuded rock at the mercy of the agents of erosion.

136 Fauna.--The fauna consists of a few classes of ophidians and small mammals: tinajos, coatis, pacas, armadillos, porcupines, foxes, deer, tapirs, sloths, and rabbits. Bears, ocelots, and pumas are found in the virgin montañas. Birds, such as wild pigeons and chachalacas, abound.

132 Climate.--There are no data on the rainfall, temperatures, /284/ and winds of this zone. The climate on the whole is temperate, or, to put it better, it is a coffee-growing climate.

361 Owing to the unevenness of the terrain, the natives inhabit
133 a region that extends from 1,000 meters (Itaibe) up to 2,500
132 meters above sea level (Suin, Mosoco, Vitoncó, and Lame). According to Dr. Gregorio Hernández de Alba, at the time of the Conquest the Paez peoples of Tierradentro inhabited "altitudes and climates between 2,620 meters with 13 degrees centigrade and 1,650 meters with 17 degrees centigrade on the average" (1).

1. Hernández de Alba (Gregorio). p. 917 /see the bibliography in the foreign text, p. 309/.

132 The atmospheric humidity and the rainfall increase as the cordillera becomes higher and snow-capped Huila draws nearer, with two summers and two winters, influenced, of course, by the topography, the vegetation, and proximity to the summit. There is an intense summer during the months of January and February, and another in July, August, and September. The winters are intense during the months of March-June and, on a smaller scale, in October-December. Snow-capped Huila

/288 cont./
583 in the church, live together for a period of indeterminate duration, explaining that /289/ the man does not have enough money at hand to marry as soon as he asks the woman, and it is necessary to work in order to obtain it.

771 Religion.--The religion of the Paez is formally Catholicism,
177 but many of their traditions are hidden in it. The principal
[796] fiestas of the natives are religious ones, which acquire true strokes of splendor. The Catholic priest is called upon for the ceremonies of baptism, marriage, and cases of death.

Chapter II

631 Calderas.--Incrusted in the very heart of Tierradentro is the
131 Parcialidad of Calderas, bounded on the north by a high ridge
● 133 that separates it from Chinas and Avirama; on the east, La Muralla, the very model of a fault, separates it from Avirama, just as a ridge separates it from Togoima; to the south, deep gorges and high peaks separate it from San Andrés and Togoima; to the west, the Quebrada Guacharaca divides it from the Parcialidad of Lame.

133 It is crossed from west to east by the Quebrada Kukiyú,
631 actually a river in terms of the volume and violence of its waters, whose bed is deep, enclosed, and inaccessible. Its
[423] left bank is somewhat softened by a beautiful plateau of about 20 hectares, with fertile lands, abundant waters, and on which the pueblo rises; it belongs to the community, whereas the other lands are private property guaranteed by the fact that the owner either personally cleared the montaña or inherited it from his ancestors who cleared the forest. The right bank is steep, harsh,
[161] rugged. Numerous clearings are to be seen on these sloping
[311] lands, indicating the increase in population that compels them to cultivate lands of low fertility and great danger for the laborer.

/178 cont./

361 who have established coffee and sugar-cane plantations and
[563] cattle ranches. The natives occupy the steep and barren sec-
[177] tions.

[342] The pueblo of San Andrés consists of 23 bahareque houses /houses with walls made with two faces of sticks with mud and stone between them/ with thatched roofs. Only one is of brick and tiles. In its general lines the plan is reminiscent of that of Spanish centers: a central plaza with houses around it.

346 The church, which is large, thatched, and white, has a hand-
361 some façade, with a bell tower, arches and columns, a style reminiscent of colonial architecture; it stands in the center of the plaza and was built in the first decade of the nineteenth century by Padre Joaquín Núñez y Tobar. On its south side there stands a large, very old and dilapidated building where the school and the rectory functions; on the other sides it is surrounded by the colonists' houses.

366 There are two stores with a regular supply of merchandise, and on Wednesdays there is a small market where one beef, a few agricultural products, and chicha are sold.

●133 Toward the end of the Pisimbalá valley are found the not
175 very extensive plateaus of Argentina and El Rodeo. El Rodeo has marked historical significance; for a long time it was called Segovia. In the spirit of conquest and colonization, the town of Nueva Segovia was founded there by Captain Hernando Arias Saavedra in accordance with the mandate of Governor Sancho Espinar, who in 1578 gave up these lands after his vainglorious campaign against the Paez. It was short-lived. On this same plateau Mosquera's rebellion against the government of Don Mariano Ospina Rodríguez was won by his spectacular victory over the government forces headed by
[317] General Joaquín París (1). In spite of this, the markets for

1. González, David. Los paeces /The Paez/, manuscript.

/178 cont./

several leagues around were supplied for a long time with the salt extracted from the three salt deposits that still exist in Segovia. Across from these and on the other side of the Ullucos, in Vivorá, another salt deposit was also exploited.

At the confluence of the small stream called El Escaño and the Pisimbalá, on the right bank of the latter and at the foot of the ridge of Aguacate, the Archeological Park of /179/ Tierradentro, a branch of the Instituto Colombiano de Antropología, is located on an alluvial terrace covering an area of two hectares. Founded some 15 years ago, it is in charge of the care and conservation of the archeological monuments, which have been known to the scientific world since 1936, but to which reference was made as early as around the penultimate decade of the last century, when Dr. Carlos Cuervo Márquez carried out his explorations through the "lands of the Paez and much of the Nevado del Huila." Subterranean necropolises with columns, colonnades and niches, black and red geometric painting on a white background, statuary very similar to the Augustinian, ceramics and metalwork are the principal exponents of this culture hardly known in descriptive form.

The Archeological Park of Tierradentro has served as the center of operations for the scientific expeditions which the national government has sponsored, fostered, and supported during the last 15 years.

II

Over the Zigzags of the Road

In order to travel on winding roads one needs horses resistant to fatigue; a dashing spirit must yield to a solemn step, firm tread, and steady pace.

/179 cont./

123 At 11 o'clock in the morning we left the Park, bound for
484 Calderas. The road climbs through the Pisimbalá valley, at
491 first on its right bank and soon on the left, after crossing a wooden bridge with a plank roof; from this bridge to the pueblo of San Andrés, three streams have to be crossed: Chapequís, La Virgen, and the cemetery stream. Along this short distance and at the edge of the road we counted ten houses, all of them thatched except one of masonry, tiles, oil paint, modern manufacture; the others have white washed walls, painted doors, and are generally clean and orderly. They are the houses of mestizos and colonists settled on their respective fincas.

At 11:30 we left the settlement and took the path that leads to Calderas; the road goes ever upward, in slow and slippery
123 zigzags. As we go along, we see houses with graphite-colored
342 roofs and walls which are black when made of mud or (and these are in the majority) yellow when they are of maize stalks; they lie as if submerged /180/ in the plantings of bananas, sugar cane, and yuca; bluish smoke rises vertically in thick columns from the openings.

123 At 12 o'clock we came out on the Mesón, Supok in the
●133 Paez dialect, a small plateau oriented from north to south
[361] and bounded on the east and west by great depressions. Many native huts stand there.

[137] The beautiful valley of the Pisimbalá torrent comes into view in its entirety; contracted at times, then widening more, extensive in length and generally narrow, it descends in a gentle slope in pursuit of the noisy Ullucos; covered with thriving vegetation, it looks like a carpet of living green blending in its tones the stateliness of the cachimbos /búcare, Erytrina umbrosa/, cedars, guamás, gadua bamboo, and yarumos /Cecropia peltata/, and the splendor of the plantings of sugar cane and bananas and the pastures of the herders.

[131] An hour later we reached the Yukaichí ridge, the boundary of the parcialidades /territorial divisions/ of San Andrés and

/180 cont./

123 Calderas, and the water divide of the Kukiyú river and the
● 133 Pisimbalá torrent, the former a deep gorge, the latter an
[131] elongated basin. Toward the north, the outline of another ridge bounds the horizon and divides the parcialidades of Suin and Chinas. Prominent along it, the Vichaguau peak, the hill Dondotá with the double crests, between which, when the sky is clear, one can see Huila with its eternal snows, where the golden rays of the sun break into a silvery radiance. Toward the east one sees the hills of Chindavá and Potrerito, the heights of Togoima, and the canyon of the Páez. Toward the south stand the mountain ranges of Pangok and El Aguacate, which separates the valleys of the Pisimbalá and the Ullucos; the tablelands of Pedregal, Turminá, and Inzá; the sharp peak of Trueno /Thunder/, the "Kapich" of the natives, a summit
123 of silence, lightning, thunder, and storms. In the place where
173 the sun sets, there rises, stately and challenging, the sharp
048 peak of Hipinjí (1), on which, according to some Indians, lie
(133)
[104]

1. H = the English h.
J = the French j.
Sh = the French sh.

the images of saints, the bells, the clothing, the gold, and the silver which the Paez army carried away from San Sebastián de la Plata after murdering all of its white inhabitants, setting fire to the town, and filling up the famous silver mines which had given the town its name and brought large numbers of ad-
173 venturers and not a few misfortunes to the Indians. This legend
123 has fired the imagination of the whites and has led not a few to search for them. It is said that several whites went to the Hipinjí in search of the legendary treasure. At the /181/ /illustration appears here/ top of the peak a white flag was waving. One day there appeared on it the following mysterious order: "At 12 o'clock you may clear out this opening." Their enthusiasm was renewed, their fatigue forgotten, and they went to work eagerly. One worker was rewarded by blind

/182 cont./

487 authentically native achievement which is a true work of
499 engineering; it could not have been done in any other spot or in any other way. The bridge over the Kukiyú was built with two thick beams over which thin cross-pieces have been fastened together with lianas; like all Paez bridges, it has a thatched roof and side rails.

III

Black, Smoking Dots on the Horizon

241 36 From Yukaichí one can see almost the entire parcialidad
[183] of Calderas, exept for the left bank of the Kukiyú. On the ridge of a hill, at the end of a canyon, on a slight plateau, discreetly hidden on a gentle slope or on a bold declivity, one sees trapezoidal figures that glow like graphite, surrounded by rows of golden stalks of maize. They are the Indians' huts, built far apart, submerged in the green landscape of the plantings of bananas and sugar cane, and through whose openings a thick bluish smoke is always emerging, a sign of life and activity.

38 While to the Guajira /Goajiro/ livestock is a symbol of sustenance and the tending of herds its concomitant activity, to the Paez the land is the sustainer of man; the black layer that covers the rocks feeds the woodland /monte/ after the harvest; time will tell when it will be mature and ready for fencing in anew the clearings that will yield the longed-for maize, the plenteous arracacha, the small beans, the blooming cabbage, the thick and abundant santo wheat /trigo del santo/; in the grasslands graze the cattle with bright and variegated hides, small, swift horses of great endurance, the many herds of pigs that fight over the tender roots of shrubs, and the mild sheep that yield wool for the men's ponchos, the women's skirts, and the kuetand yahas of both.

/194/

796 Both the fiestero and the albacero have laborers whom they select themselves. The fiestero has the following: three for the

[133]
[788]

distribution of food; three chicha-makers, two men and one woman; two millers of sugar cane; one fireworks-maker and two women as
796 cooks. The transporting of the sugar cane is done by volunteers
465 who help out daily in exchange for drink. The albacero has the same laborers, and although he does not kill a beef to reward them, he does sacrifice a pig to this end, especially for the fireworks-maker, with all the honors of the table and the demands of etiquette.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[577] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

/294 cont./

311 passes through Topa, Turminá, Guanacas, El Cabuyo, Malvasá,
●/33 Pisimbalá, Lame, La Troja, and Irlanda, from where it twists eastward. The contour line of 3,000 meters, approximately parallel to the previous one, is very close to the ridge of the
[361] Central Cordillera. These two contour lines form a narrow zone that corresponds to the cold thermal level and within which are found the parcialidades of Toez, Huila, Vitoncó, San José, Mosoco, Lame, and Yaquivá, aside from a considerable area from the extinct parcialidades of Guanacas and Turminá.
311 This entire zone represents a "culturally influenced zone" in
[487] the literal sense that Professor Guhl gives it (2). A fine bridle-

2. Guhl, E. "Ambiente Geográfico-Humano de la Costa del Atlántico /Geographical-human Environment of the Atlantic Coast/," Revista Geográfica, p. 159.

[489] path joins Mosoco and Silvia, crossing the Paramo de Moras. The traffic of people is intense and constant during almost every /295/
311 month of the year. In the last decades, this has been an active zone
648 of native and "white" colonization. It still remains so. Coscuro
361 and Malvasá, in the Parcialidad of San Andrés, are purely "white" regions of colonization. But Tumbichukue, the high parts of Lame, Mosoco, San José, Huila, and Toez are zones of exclu-
361 sively native colonization. The importance of Mosoco is out-
311 standing. It was a great center of Páez settlement and still is, in the same manner as Pitayó and Tacueyó are on the other side of the Cordillera, but we cannot state on this account that "the major part of the settlements and the most important ones for the Paeces" are located in the cold region, as was stated
[177] categorically by Professor José Pérez de Barradas. Mosoco,
[433] fully in the process of acculturation, is a good producer of potatoes, wheat, and maize. It is the true Tierradentro in
[648] physiography, production, and progress. But in the times of
[175] the Conquest it was the people of Tálaga, Avirama, Calderas, and Togoima who defeated Ampudia and Belalcázar, and the

/296 cont./

13 and are of very good quality. The wheat and coffee from the
241 municipio of Inzá enjoy a deserved reputation in the republic for the quantity and quality of their crops.

●133 The Páez River receives approximately 32 watercourses on
134 the left bank, and 17 on the right. It is easy to imagine the ruggedness of the terrain if we bear in mind the fact that each
[241] one of them forms an impassable ravine. It is also easy to imagine the magnitude of the erosion, assisted by factors of a cultural nature, such as the systematic battle against herbaceous vegetation by means of the system of annual fires. The violence of the wild waters denudes and even forms veritable rivers of stone, such as are seen at the place called Vicanenga in the municipio of Páez. The streams and torrents sometimes swell to extraordinary proportions. In 1949 the Topa torrent completely washed away its small tributary valley, on which stood the hamlet known by the name of Brisas, now Valencia, a flood which was repeated in April of this year.

241 Of course, the extent of the workable land does not keep
133 pace with the increase in population. The physiography of the
134 cold thermal level, on the other hand, spreads out and flattens
[161] a little, the horizon broadens, the patches of arboreal vegetation increase, and the plots multiply, like veritable chessboards in Mosoco, San José, and Vitoncó. Their soils nourish maize, wheat, potatoes, ullucos, nasturtium, and garlic. On the dividing lines between the plots there rise, like green walls, the plantings of cabuya.

161 3. Population density. The growth of the indigenous popu-
361 lation in general, and of the "white" one in particular, has
311 compelled the former to utilize lands increasingly more difficult, steep, /297/ and sterile, or to emigrate in search of uncultivated land. As early as the time of the Conquest we find notes on the spread of the Páez people to the western slopes of the Central Cordillera, forming such nuclei as Pitayó, Tacueyó, and San Francisco. Nowadays, we find Páez groups on the eastern slopes of the Western Cordillera in the department of Cauca, in the departments of Huila and Tolima, and in the Cauca Valley, as Páez

36/

4. Duque Gómez, L. "Problemas Sociales de algunas parcialidades indígenas del Occidente de Colombia /Social problems of some native parcialidades of western Colombia/," p. 187.

Agriculture and horticulture

24/ Agriculture and horticulture constitute the primary source
133 of subsistence for the Páez. It covers a wide hypsometric zone,
[433] that goes from 1,000 meters (La Plata, Huila) to well beyond the contour line of 3,000 meters in altitude above sea level (Mosoco). Naturally, the species cultivated vary with the thermal level, and, consequently, the dietetic regimen. What do not vary are the methods of cultivation and, above all, the magical practices
241 associated with them. There are also variations in the extent
134 and the type of cultivable soils. Those used the most in Tierradentro are the ones included in the temperate thermal level. We have already discussed their fertility and extent. The soils of the cold thermal level are fertile and more extensive. Thick humus layers are found in Lame, Mosoco, San José, La Troja, Irlanda, Guanacas, Turminá, and Coscuro. These are, of course, truly privileged zones. Nevertheless, the soils are not rationally utilized or conserved. The land is exploited in an exhaustive manner. A clearing will not tolerate two consecutive plantings. Thus, each year new land, new clearing, new fencing, and new burning are required. After having been harvested once, the ground is abandoned, and in the course of the years it once more becomes covered with shrubs and thickets. After seven years, more or less, the land is again cleared of its underbrush, and the same cultivated species are planted once more. In Calderas, Santa Rosa, and Togoima, maize, arracacha, frijoles, cabbages, potatoes, and sometimes peas are planted. The process described earlier is typical of these parcialidades. In Mosoco and the cold parts generally, maize, potatoes, /298/ broad beans, and frijoles are planted in the same clearing, and

/301/

Common Name	Latin Name	Páez Name
241 Pineapple	Ananas comosus (L.) Camargo	chuhá
137 Granadilla	Passiflora Ligularis Jura.	shlal
Coffee	Coffea Arabiga L.	café
192 Ground cherry	Physalis sp.	chimbá

Rue	Ruta graveolens.	luda

222 241 In reality, as far as a certain type of frijole that the natives call "kacha" is concerned, as well as the ground cherry, the chachafruto, fruits in general, and all the plants listed under "Other cultivated plants," with the exception of coca, the word "cultivated" is unsuitable, since they are practically in a semiwild state. The natives make use of their fruits, consumption thus being occasional and not always necessary.

●133 241 361 [131] [161] Although it would appear that the territory of the Páez, at the time of the Conquest, extended up to very close to the Magdalena River, the principal nucleus of the population was located in the temperate zone and in the cold zone. The thermal levels determine the zones of cultivation. One of them goes from 1,000 to 2,000 meters and includes the entire valley of the Páez from Huila to La Plata, and the middle and lower courses of its tributaries Símbola, the river Negro de Narváez, Moras, Kukiyú, and Ullucos. Within it are located the capitals of the district, Inzá and Belalcázar, and the following native aldeas: Itaibe, Chitóquez (Ricaurte), Cuetando, Yaquivá, San Andrés de Pilimbalá, Santa Rosa, Togoima, Avirama, Chinas, Suin, Tálaga, Toez y Huila (Byla), as well as Valencia, Topa, Pedregal, and Turminá. They cultivate principally plantains, manioc, maize, sugar cane, frijoles, arracacha, coca, and coffee,

/301 cont./

133 which is in full development. The other zone goes from 2,000 to
241 3,000 meters and contains the pueblos of Calderas, Lame, Mosoco,
361 San José, La Troja, Vitoncó, and Irlanda. They cultivate potatoes, maize, ullucos, wheat, garlic, and nasturtium.

241 In the cultivation of cane, the Paez differentiate the following /302/ varieties: java /Java/, criolla, amarilla /yellow/ (mum ñusha), negra /black/ (ñusha kuchi). Of maize: capio (white, tender, and mulberry-colored) or kukiguafi, the calentano maize /maize of the hot regions/ or kukibah, the hard calentano, and the fine or kukimull. Of potatoes, the kaka chime (white), the kaka kuchi (with mulberry-colored skin), the kaka bé (red), and the tusa /corncob/ potato (has a mulberry-colored heart). Of manioc, they distinguish the noli, guaturunga, pitaleña, negra /black/, and colorada /red/. Of these, the first and last yield in a year and in three years, respectively, and the others in two years.

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

121 A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

131 The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

[3] For the languages, see especially Jijón y Caamaño, 1940-41; Castillo i Orosco, 1878; and Castellví, 1934. For ethnology, see Douay, 1900; Pittier de Fábrega, 1907; Ortiz, 1935; Guerra F., 1942; Jijón y Caamaño, 1936-38 Otero, 1938; Albis, 1934. See also Languages, pp. 921-922.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Pasto SC17

The area of this study is delimited on the west by the valley of the Patía River and by the Cuembi, Nambi, and Cuaiquer Rivers, and on the east by the divide between the rivers running to the Pacific Ocean and those flowing eastward into the Caquetá and Putumayo Rivers. P 133 121

All this region is cool to temperate throughout the year, the extremes being at Túquerres, which lies at 3,104 m. (9,433 feet) elevation and has a mean temperature of 11° C., and Ancuyá at 1,358 m. (4,380 feet) with a mean temperature of 21° C. The greater part of the population lives between 2,890 m. (about 9,470 feet) with 12° C., as at Ipiales, and 2,020 m. (about 6,630 feet) with 18° C., as at Buesaco. P 132 P

Farther north, the Cordillera Central forms a great mountain mass at the sources of the Cauca and Magdalena Rivers, the latter delimiting the Cordillera Oriental, which extends toward the northeast, entering Venezuela and stopping at the Atlantic Coast. In the Department of Cauca, the native peoples occupied the altiplanos and the mountain slopes of the central portion of the Andes and of the Cordillera Central and Cordillera Oriental. Some of the mountains are snow-capped, like Coconucos (4,800 m.; 15,746 feet) and such volcanoes as Puracé (4,908 m.; 16,102 feet) and Sotará (4,580 m.; 15,026 feet). There are high páramos, swept by icy winds, where only the frailejón (*Espeletia hartwegiana*) and certain grasses grow. Below these heights, the topography is hilly and grandiose, with a succession of hills, terraces, altiplanos, ravines, cañons, and valleys. 133 P

Some tribes, like the *Coconuco* and *Moguex*, live in the cold mountain spurs toward the Cauca River; others, like the *Páez* and *Guanaca*, in the high páramos with a climate like that at Moras (3,670 m.; 12,040 feet), Guanacas (3,518 to 3,750 m.; 11,541 to 3,750 m.; 11,541 to 12,303 feet), Las Delicias, and other places to the east. The *Popayanense* occupy the temperate Valley of Pubén. The *Pijao* lived in the last mountains of the Cordillera Central toward the Magdalena River, which, like the valley of this river, is low and warm, and extended to the Cauca Valley in the neighborhood of Buga. 101 361. PO [101] [361]

The country inhabited by the *Popayanense* at the Conquest has an altitude of 1,760 m. (5,775 ft.) and a mean temperature of 18° C.; the *Páez* in Tierradentro, 1,650 to 2,620 m. (5,774 to 8,595 ft.) and 13 to 17° C.; the *Moguex*, 2,521 m. (8,270 ft.) and 14° C. at Silvia; the *Andaquí* in the region of San Agustín, 1,695 m. (5,561 ft.) and 18° C.; the *Yalcón* and *Timaná*, 1,100 m. (3,608 ft.) and 24° C.; and the *Pijao*, 873 m. (2,864 ft.) and 25° C. at Carnicerías, and 1,700 m. (5,577 ft.) and 18° C. at Pijao (Caldas). P 133 132 Po [133] [132]

Such differences in climate with the consequent differences in flora and fauna contributed to the variations in economy and culture. The high peaks of the cordilleras and the deep rivers were frontiers between the tribes, clearly separating them from one another—the *Moguex* P 101 131

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
13) of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
●133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,600 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisaica*); and large fish from the rivers.[1]

[127] [1] The scientific names of the plants were taken from Cortés, 1919. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

[p. 942 c]

Here the mountain slopes which
/14 cont./
C 311 only 70 years ago were still covered with dense tree growth are
134 now cleared to gain pasture areas for stock-raising, thus causing
P extensive erosion of the normally already very thin humus cover-
361 ing and a certain sterility of the soil. The situation is different
132 in the villages still exclusively inhabited by Indios in northern
Tierradentro. They lie in part considerably higher (Mosoco,
P Vitoncó, Suin, and Lame about 2,500 meters). Here the nights
[244] are already perceptibly cold. Coffee no longer thrives, in its
P stead maize and potatoes. It is also the best climate for cattle-
[233] raising. The mountain slopes, due to relatively sparse settle-
P [311] ment on the part of the Paez, have not all been put to economic
● [134] use as yet; the /15/ tree growth guarantees natural water con-
servation throughout the year.

C 132 The two rainy periods of the year are from May to June and October to December. During these times, especially in the rainy period of the first half of the year, it rains in considerable amounts every day, whereas the dry periods are regularly free of precipitation.

C 317 Tierradentro's wealth underground has not yet been ex-
175 plored with modern means. In pre-Spanish times, and even
[135] after the Conquista /the Spanish conquest; see the glossary,
C 175 p. 249 /, numerous salt beds were exploited. The Spaniards
317 brought Negro slaves into Tierradentro as mine workers, whose
563 descendants make up a considerable part of the population of
464 Belalcázar. Today some of them work as gold-washers on the
316 banks of the Rio Paez. In Indian times gold was still obtained
C 316 at Tálaga, San Vicente, and Jambaló. In the southern part of
C Tierradentro the silver mines were a significant economic factor
[103] near the city of La Plata -- so-named because of its important finds.

C 487 From colonial times up to five years ago only the routes passable for human beings and horses (caminos de herradura /bridle paths/) were available for traffic routes. The two chief connections were from Inzá over Paramo de las Guanacas to Silvia and Popayán and into the Cauca Valley, as well as from Inzá via La Plata into the Magdalena Valley.

C /128 cont./
311 those of the colonists in Tierradentro. In the territory of the
[137] latter there is almost no forest anywhere; all the slopes have been
[233] deforested and artificially, but not through excessive agricultural
C cultivation, made into pasture areas for the livestock of the
311 colonists or large landowners. This has upset the natural water
312 economy of the region. The water flowing off unchecked dur-
134 ing the rainy season washes away the humus earth and forms
C deep gullies on the slopes. The soil thus eroded is infertile.
[361] The mountain slopes dry out completely during the dry seasons,
P so that dwellings can only rarely be built in the higher locations
311 because of the lack of water. In the areas used solely by the
134 natives, in which a natural alternation of cultivated and fallow
312 land is observed, there are countless channels and small brooks
361 that make it possible to put a house near running water at almost
P every spot on the landscape.

241 Every task of the Paez that is connected with the fields,
461 be it clearing, sowing, or harvesting, is done extraordinarily
476 willingly by all participants, "because it is for food." There is
P simply no such thing as anyone unwilling to work in the fields.
134 The soil is not very fertile, since the major part of the moun-
241 tains in the region of Calderas consists of slate which often stands
[135] out bare and on the slopes is covered with a layer of humus or
P loam only 20 to 50 centimeters deep on the average. In the
241 valley the humus layer is often more than a meter deep. The
P abundant land available, however, does not make the utmost
[342] utilization imperative. And although the numerous mountain
brooks are diverted in such a way that every house has its running
water, nevertheless there is no acute inducement for irrigation or
terraced cultivation, nor does the use of them seem to be known.

Maize occupies the major part of the cultivated area, closely followed by sugar cane, the raw product for the manufacture of chicha. Both constitute the basic production of agriculture, and there is no Paez family that does not cultivate sugar cane and maize on its land. The size of the cultivated areas cleared by burning varies. The smallest fields that we saw

/296 cont./

13 and are of very good quality. The wheat and coffee from the
241 municipio of Inzá enjoy a deserved reputation in the republic for the quantity and quality of their crops.

133 The Páez River receives approximately 32 watercourses on
134 the left bank, and 17 on the right. It is easy to imagine the ruggedness of the terrain if we bear in mind the fact that each
[241] one of them forms an impassable ravine. It is also easy to imagine the magnitude of the erosion, assisted by factors of a cultural nature, such as the systematic battle against herbaceous vegetation by means of the system of annual fires. The violence of the wild waters denudes and even forms veritable rivers of stone, such as are seen at the place called Vicanenga in the municipio of Páez. The streams and torrents sometimes swell to extraordinary proportions. In 1949 the Topa torrent completely washed away its small tributary valley, on which stood the hamlet known by the name of Brisas, now Valencia, a flood which was repeated in April of this year.

241 Of course, the extent of the workable land does not keep
133 pace with the increase in population. The physiography of the
134 cold thermal level, on the other hand, spreads out and flattens
[161] a little, the horizon broadens, the patches of arboreal vegetation increase, and the plots multiply, like veritable chessboards in Mosoco, San José, and Vitoncó. Their soils nourish maize, wheat, potatoes, ullucos, nasturtium, and garlic. On the dividing lines between the plots there rise, like green walls, the plantings of cabuya.

161 3. Population density. The growth of the indigenous popu-
361 lation in general, and of the "white" one in particular, has
311 compelled the former to utilize lands increasingly more difficult, steep, /297/ and sterile, or to emigrate in search of uncultivated land. As early as the time of the Conquest we find notes on the spread of the Páez people to the western slopes of the Central Cordillera, forming such nuclei as Pitayó, Tacueyó, and San Francisco. Nowadays, we find Páez groups on the eastern slopes of the Western Cordillera in the department of Cauca, in the departments of Huila and Tolima, and in the Cauca Valley, as Páez

/297 cont./

/6/ outposts, the centers of Chinche and Potrerillos to the north of
31/ the settlement of Palmira (4).
36/

4. Duque Gómez, L. "Problemas Sociales de algunas parcialidades indígenas del Occidente de Colombia /Social problems of some native parcialidades of western Colombia/," p. 187.

Agriculture and horticulture

24/ Agriculture and horticulture constitute the primary source
133 of subsistence for the Páez. It covers a wide hypsometric zone
[433] that goes from 1,000 meters (La Plata, Huila) to well beyond the contour line of 3,000 meters in altitude above sea level (Mosoco). Naturally, the species cultivated vary with the thermal level, and, consequently, the dietetic regimen. What do not vary are the methods of cultivation and, above all, the magical practices
24/ associated with them. There are also variations in the extent
● 134 and the type of cultivable soils. Those used the most in Tierradentro are the ones included in the temperate thermal level. We have already discussed their fertility and extent. The soils of the cold thermal level are fertile and more extensive. Thick humus layers are found in Lame, Mosoco, San José, La Troja, Irlanda, Guanacas, Turminá, and Coscuro. These are, of course, truly privileged zones. Nevertheless, the soils are not rationally utilized or conserved. The land is exploited in an exhaustive manner. A clearing will not tolerate two consecutive plantings. Thus, each year new land, new clearing, new fencing, and new burning are required. After having been harvested once, the ground is abandoned, and in the course of the years it once more becomes covered with shrubs and thickets. After seven years, more or less, the land is again cleared of its underbrush, and the same cultivated species are planted once more. In Calderas, Santa Rosa, and Togoima, maize, arracacha, frijoles, cabbages, potatoes, and sometimes peas are planted. The process described earlier is typical of these parcialidades. In Mosoco and the cold parts generally, maize, potatoes, /298/ broad beans, and frijoles are planted in the same clearing, and

/298 cont./

241 in some cases, fruit trees, and after this, wheat. In San Andrés,
●134 especially in the vegas, maize, plantains, frijoles, arracacha, manioc, sugar cane, and coffee are planted. Thus, there is not proper utilization of the soil or protection of it, aside from the several years of rest. They are not familiar with fertilizers, the rotation of crops, or irrigation systems.

241 It is interesting to note that the families of San Andrés,
423 Calderas, Lame, and Mosoco generally have lands in the low places along the rivers and streams and in the high places where arboreal vegetation abounds, which they call the "montaña." In this way, they can cultivate cold and temperate zone plants (Calderas, San Andrés, Lame) or take advantage of the annual seasonal cycle in the high parts of the Cordillera (Mosoco).

244 A principal dwelling is erected on one of the fincas, while
342 on the others ranchos where the families live during the months of harvest are built. It is at the principal dwelling where the garden is made with plantains, sugar cane, onions, coriander, coca, cabbage (San Andrés, Santa Rosa, Calderas, Togoima), or with cabbage, garlic, onions, yuca de pipchao /yams/, peaches, and apples (Lame, Mosoco, Vitoncó). Peppers are cultivated in the gardens. This principal dwelling forms what in our culture is called hogar /hearth, home/. It is here that the fire is always maintained, that the ears of maize, bundles of wheat, bags of frijoles, tools, troughs, cooking utensils, and sugar mills are kept, where the chickens, guinea pigs, pigs, and turkeys live.

249 Industrial crops practically do not exist. There are no
[248] tobacco or cotton plantations. Sugar-cane plantings are not
[273] extensive among the natives. They are used solely for pro-
[778] ducing guarapo, which has almost completely replaced the maize chicha. Only the whites and a few mestizos have extensive sugar-cane fields for producing panela.

248 Figue thrives in Tierradentro. But it is in Vitoncó and Lame that there are numerous plantings of cabuya of very good quality in terms of the size and quantity of the fiber, planted on the boundaries of the properties. This wealth is not utilized as much as it should be. The natives merely make pouches and lassos for internal consumption.

The
/312 cont./

244 pluviometrical system in this region is relatively high, and the
[134] soils are saturated with moisture. As a result, this method of making the beds pursues a protective aim for the seeds and fruits. Each bed is raised by a thickness of 60 centimeters, with a distance of one meter between one and the next. The formation of the beds has two stages: the molding /moldeada/ and the raising /alzada/. The former consists of lifting the grass covering and folding it over itself, following the capricious undulations of the ground. It is left like this for several weeks, while the grass completely rots away. This is the only fertilizer. Then comes the planting and after this the raising, an operation which consists of covering the molding with the crumbled earth taken from the part where the grass cover was lifted. In this fashion, the beds have abundant soil in which the roots can grow. The planting does not require any weeding.

In the region that the people of Mosoco call "paramo,"
[243] potatoes are planted without order or rows of any sort. In Moras-Mosoco, as in San José, Lame, Tumbichukue, and Vitoncó, two rows of maize are planted at the edge of the beds and within them the potatoes, very close together and without any sort of order. Frijoles, broad beans, peas, or cabbages are also planted
[243] there. Cultivation is multiple and thus exhaustive. After this harvest, wheat is sown, and then the land is left to lie fallow for three or four years, after which the process is repeated. Naturally, these collective sowings rapidly exhaust the soils. Hence, the May and June sowings yield poorly and usually are lost.

The work is done by the members of the family. Mingas
[476] are still in force as a system of collective labor. They are usually
[464] attended by consanguineous and political familiars. Contract labor is common with Guambiano natives. Mosoco day-laborers are not encountered.

The potato harvest is selected into three classes: large, seed, and birucha. The first serves exclusively for the market, while
000 the last is for family consumption. /In the original text, the following tables for Mosoco, Lame, and San Andres, with the observations deduced from them, appear on two sheets inserted between pages 312 and 313./

C /128 cont./
311 those of the colonists in Tierradentro. In the territory of the
[137] latter there is almost no forest anywhere; all the slopes have been
[233] deforested and artificially, but not through excessive agricultural
C cultivation, made into pasture areas for the livestock of the
311 colonists or large landowners. This has upset the natural water
312 economy of the region. The water flowing off unchecked dur-
134 ing the rainy season washes away the humus earth and forms
C deep gullies on the slopes. The soil thus eroded is infertile.
[361] The mountain slopes dry out completely during the dry seasons,

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

Former Occupants. "Planos de Indios." Huacas

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed descendants still live in the villages of Las Pavas and Vijes, near Cali; the "Paveños" have become inveterate legal fighters, keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time. [692 181 162]

101 114 Of the Jamundies I was told that they were indefatigable warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. 172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets, [103] [135]

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

with the right hand over the naked thigh. Two strands are similarly twisted together until the desired thickness is obtained. 283

Gourds.—Gourds are still widely used. They are picked when ripe, cleaned out, and dried. With small openings, they serve as containers for beverages and powdered lime. Some are made into bowls and others are cut up to make spoons. Today these objects are undecorated, but formerly in Timaná they were painted with a resin varnish very similar to that used in Pasto. (See p. 930.) Before the Spanish domination, gourds were also used as frames over which were stretched the prepared skin of the heads of their enemies killed in war. 415 824 [314] [727]

Metallurgy.—The metallurgy of these Indians was the same as that practiced throughout most of Colombia. The metals were gold, copper, and an alloy of the two (tumbaga). It is recorded that the Indians "worked gold," but the processes are not described. Specimens found recently in the territory, however, show molding, casting, and hammering. Metal objects included nose ornaments, parrot-shaped breastplates, necklaces with small animal figures, and some anthropomorphic idols. Gold occurs in this territory, particularly on the upper Páez or the Suin River. 325 [301] [532] [135]

Ceramics.—These tribes made and still make coiled pottery. Modern vessel forms include large jars for storing beverages and poorly shaped, crudely decorated containers for preparing and serving food. There is no individual specialization in this task, women making pots for their own family and not for trade. 323

Stone and wooden artifacts.—The native Indians made stone axes of a simple design, but stonework disappeared during the time of colonization, when the Indians could obtain manufactured iron weapons and utensils such as machetes, axes, hoes, shovels, etc. The manufacture of wooden objects—weaving, cooking, and farming implements and weapons—was furthered by the use of metal tools, and now is well developed, as exemplified by the trapiche (cane mill), a true machine made of wood. 324 182 179 322 249 179

Weaving.—Weaving, little practiced before the Conquest, developed with the post-Contact need for wearing more clothes and with the introduction of sheep, whose wool was used in addition to cotton. Weaving was and is exclusively the work of women (pl. 186). They prepare fine, uniform yarn with a common spindle, which they handle as they walk along the road (pl. 187, *top*). The loom is vertical, made of two horizontal rods fastened to two uprights. The warp runs vertically with a continuous thread. The horizontal weft is pressed down with a wooden sword. They also weave hemp bands on the loom. Woolen blankets are woven in natural colors, but some sashes have bright colors made of imported wool or of home-dyed wool. For red, they use one of the Rubiaceae (*Relbunium hypocarpium*), and for 286 [177] [462] [386]

The fields are prepared with
/283 cont./

241 machetes and fire. They are the so-called rozas, a barbarous, primitive, and criminal method of agriculture. Burning is a habit of natives and colonists alike and goes so far that even the vegetation of the cliffs, crags, and escarpments is burned, where obviously no practical use can be derived and in addition it leaves the denuded rock at the mercy of the agents of erosion.

136 Fauna.--The fauna consists of a few classes of ophidians and small mammals: tinajos, coatis, pacas, armadillos, porcupines, foxes, deer, tapirs, sloths, and rabbits. Bears, ocelots, and pumas are found in the virgin montañas. Birds, such as wild pigeons and chachalacas, abound.

132 Climate.--There are no data on the rainfall, temperatures, /284/ and winds of this zone. The climate on the whole is temperate, or, to put it better, it is a coffee-growing climate.

361 Owing to the unevenness of the terrain, the natives inhabit
133 a region that extends from 1,000 meters (Itaibe) up to 2,500
132 meters above sea level (Suin, Mosoco, Vitoncó, and Lame). According to Dr. Gregorio Hernández de Alba, at the time of the Conquest the Paez peoples of Tierradentro inhabited "altitudes and climates between 2,620 meters with 13 degrees centigrade and 1,650 meters with 17 degrees centigrade on the average" (1).

1. Hernández de Alba (Gregorio), p. 917 /see the bibliography in the foreign text, p. 309/.

132 The atmospheric humidity and the rainfall increase as the cordillera becomes higher and snow-capped Huila draws nearer, with two summers and two winters, influenced, of course, by the topography, the vegetation, and proximity to the summit. There is an intense summer during the months of January and February, and another in July, August, and September. The winters are intense during the months of March-June and, on a smaller scale, in October-December. Snow-capped Huila

7:Hernández de Alba E-5,1(no date) 1946 SC15 Paez SC15

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
131 of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,800 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

●136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisaica*); and large fish from the rivers.[4]

---

[127] [4] The scientific names of the plants were taken from Cortés, 1919. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

SUBSISTENCE ACTIVITIES

241 **Farming.**—The main subsistence of these tribes was and still is based on the cultivation of potatoes, which grow in great quantities in the higher portions of the territory known as Tierradentro, and maize, which is acclimated to the temperate and cold zones. There are three varieties of maize: sweet, soft, and hard. Additional crops were and are yuca or manioc, sweet potatoes, auyamas, ullucos, purutos, frijoles, arracacha, and various other vegetables, and a variety of fruits, including bananas, guayavas, avocados, papayas, [478] pineapples, and passion fruit. Today the *Páez* and *Moguex* are be- [433] ginning to grow wheat, coffee, which is an important item in their [273] economy, and sugarcane, from which is made a coarse sugar and molasses for their fermented drink, guarapo.

241 The men and women of each family generally cultivate the family 476 plot, but for large-scale maize or coffee planting, and for cultivation of the lands of the Church or saint, they work communally, and have meetings called "mingas." Communal work for any particular individual is truly loaned labor, with obligatory recompense. The [782] beneficiary must feed his helpers, generally sacrificing a pig and pre- [273] paring great quantities of chicha for the libations and nocturnal dances after the work. All adults must participate in working the Church lands, but each brings his own food.

241 Implements of cultivation are the digging stick, or macana, for 412 making holes for planting, machetes and axes for destroying vege- 407 tation, and picks and shovels for removing earth, except where re- 492 placed by plows pulled by animal traction.

Domesticated animals.—Domesticated animals include chickens, 231 turkeys, some pigs, dogs, and a few horses and cows. All but the [177] turkeys are of European origin. These animals are rarely sold or killed for food, except for feast days, magical ceremonies, meetings, and visits of relatives, friends or distinguished White men. But [438] sometimes the Indians buy meat in the weekly market and hang it [251] over the hearth, where it is preserved by the smoke.

A custom which has persisted since the beginning of the Colonial 574 Period is that of always giving a guest the "camarico" or "cariño" 431 (affection), a present varying from an egg to a chicken, together with some potatoes, vegetables, and coffee beans.

262 Formerly, meat was obtained from wild rather than domesticated 136 animals—boars (zaínos), guaras, guatines, birds, and guinea pigs, the 231 last being true domesticated animals kept in some numbers in the native houses.

252 **Food preparation.**—Food was cooked in pottery ollas, but metal and [415] enamel ware is now often used. The *Páez* make "mute," a soup of [177] boiled maize, cabbage, squash, and potatoes, and "cocido," a soup

The house

/122 cont./

356 is swept by the women every day with a broom (ctábando) con-
824 sisting of shrubs of the psánga plant. This plant at the same
[825] time drives away fleas. The rubbish is swept out of the house in such a way that even the entrance is clean.

351 All around the house and surrounding it at some distance
417 either a fence is erected or a ditch dug about one meter deep,
[231] within which the poultry and usually the pigs and sheep are kept.
[131] In Calderas, where, because of the low temperature, bamboo
[313] no longer grows, the fence is made of wood obtained from the natural growth when a piece of land is burned off. Stakes are driven vertically into the ground at intervals of about two meters and the interspaces filled with small tree trunks, branches, and twigs up to a good meter in length, lying horizontally. Climbing over this fence is done with notched tree trunks or bamboo stalks placed obliquely against the fence as a ladder. Similar notched tree trunks also serve as ladders in the houses (Ills. 168 and 154 /see pp.274 and 268 /).

514 There are no privies. On account of the isolation of the houses, however, it is never difficult for the Paez to find a place off in the brush or in the forest. We never found the paths
264 and the vicinity of the houses soiled with filth. The Paez showed
[412] the same tact in eating and at other gatherings. We never experienced smacking of lips or belching, even though their eating habits are somewhat crude, for, lacking spoons, they are in the habit of simply shoving their food from the plate into the mouth with the fingers.

/123/ 2. Clothing and Ornaments

291 The Paez today wear clothing covering their upper and lower bodies. In ancient times, according to the reports of chroniclers, some of them were said to have worn small cotton cloaks, although the majority of them "went about naked, even in the cold mountains" (cited by Hernandez, 1944, p. 191,
[302] from P. M. Rodriguez, 1684). They were also said to have painted their bodies with color and to have made imprints on them with

stamps,

P /134 cont./

276 Coca (ēs) is a shrub whose alkaloid leaves, containing
●137 cocaine, tanning substances, and various volatile oils, were used as stimulants even before the time of the Conquista, chiefly among the natives of the Cordilleras region. Almost 200 species of it are known, most of which, namely 137, occur in America (Walger, p. 9). It flourishes almost without exception between the tropics, from Honduras to Bolivia, in a temperature that generally remains between 15 and 20 degrees. In too low a temperature the leaves are small and worthless; in too hot a climate they lose strength and content. The most favorable elevation is between 700 and 1,700 meters.

P The word coca comes from the Kechŭa /Quechua/ lan-
279 guage (coca or cuca), which, however, does not state anything
192 definite about the origin and use of the plant, for the Kechŭa-
171 speaking tribes of Ecuador are the very ones who do not use the plant (Cooper, p. 549). In the northern part of South America the designation hayo, hahiu is customary, in northeastern Peru ebee, hibia, hibio, and in the Amazon region generally, names like ypadu, ypatu, ipado, or batu (Bühler, p. 3344).

P The first information about coca reached Europe as early
175 as 1499 through the report of the Spanish priest, Thomas Ortíz, to
276 his spiritual superiors, according to which the natives of the northern coast of South America used a plant called hayo as a means of enjoyment. The first detailed description of the cultivation and use of the plant is found in a work, printed in 1553, by Pedro de Ciéza de León, who for the first time calls attention to the fact that coca bestows strength and vigor and drives away hunger (Bühler, p. 3353).

P At the time of the Conquista, coca was known in Colombia
276 among the Cauca Valley tribes between Popayán and Cali, near
171 Ibagué in the Magdalena Valley, on the savanna of Bogotá, and
P among the tribes of the Sierra Nevada de Santa Marta. Today the
276 use of coca is officially forbidden in Colombia on account of its
c harmful effects. According to Decree No. 95 of 1938, the sale
656 of coca, except in apothecary shops and drugstores, was forbidden

P C /134 cont./

276 by the "Ministerio de Trabajo, Higiene y Prevesion Social."
C This prohibition was extended by Decree No. 578 of 1941 by the
656 same ministry, according to which an exact list of the existing coca plants of the country was demanded and their destruction ordered, /135/ with a simultaneous prohibition against new plantings (Duque, 1945, pp. 445 f.). Of course this prohibition against coca planting cannot be strictly supervised and enforced in all the remote parts of the country.

P The argument for the use of coca has remained the same
276 from the time of the Conquista to this day: it is supposed to
461 drive away hunger and to give strength. "Without coca one cannot work," I was told over and over again when I asked the Paez the reason for chewing coca. And, as a matter of fact, one sees the Paez chewing it on the long trips to market and during every physical task; but only at work, when one needs strength, and not during festivals and celebrations or on festive days. (The shamans are an exception, see below.)

P The bitter tasting coca is chewed by both sexes, and the
276 boys begin at 12-14 years of age, when they also begin helping
P their father with the work in the fields. The girls generally begin
[887] somewhat later, and in old age both sexes chew quite heavily and more frequently than is normal in younger years. The men take coca three times a day as a normal dose, and each dose lasts about two to three hours. Nothing is eaten all day after taking the first meal early in the morning before work; the second one
P is not eaten until after they return home from the fields in the
[272] late afternoon. During the pauses for coca, unfermented sugarcane juice (nyũsayumfl) is drunk, everyone carrying a calabash with one to two liters of it with him.

P The coca shrub, about 80 to 200 centimeters high, is
276 striking even at a distance because of its fresh, light green,
249 lancet-shaped leaves, which have two slightly curved longitudinal
● [137] lines on the underside. Among the Paez of Calderas almost every family has its coca shrubs, the leaves of which, after plant-
P ing, are harvested from the first year for about 20 years. Anyone
[437] who does not own coca shrubs himself trades for the leaves in

P
C
/136 cont./
276 are naturally more in evidence than in the case of the use of
146 coca with good nutrition and as the only indulgence. Along
273 with improved nutrition and corresponding enlightenment, a
prohibition on brandy instead of its propagation would be more
C desirable for the health of the people than a prohibition on coca.
[651] The departments, however, draw their chief income from the
P brandy tax, whereas coca was always tax-free.

276 Tobacco (wáhi) is neither planted by the Paez nor con-
[249] sumed in large amounts, since there is generally no money
available for the purchase of tobacco or cigarettes. Both sexes,
P however, smoke gift cigarettes, and, to be sure, from child-
hood, that is, from two to three years of age. The shamans
[756] in their séances and ceremonies are in the habit of chewing
[755] cigarette tobacco along with coca, but it is always purchased.
These séances last many hours or throughout the night, during
which shamans and patients together chew this mixture uninter-
ruptedly.

P
273 Chicha (pronounced tschitscha) is one of the alcoholic
[171] beverages which, made out of various raw materials, are wide-
spread among the natives /137/ throughout South America, with
manioc chicha predominating in the forest region (Venezuela,
Brazil) and maize chicha in the Andean region (Cooper, pp.
539 f. and Map 11). Two methods of production are distin-
guished, according to whether it is a matter of raw materials
with a high sugar content (honey, sugar cane, palm sap, pine-
apple) or more starchy crops (manioc, maize). The former ferment
without the addition of saliva and need not be chewed in the
preparation; the latter need human saliva before or after cook-
P ing in order to ferment.

[137] Among the Paez chicha (mbéca) is made only from the
juice of sugar cane, a raw material that is not American, but
came from southern Asia and did not come to America until the
post-Columbian period (Maurizio, 1933, p. 75). Formerly
chicha was made out of maize, as it still is today among the
neighbors of the Paez living in higher regions (for example, the
Guambiano). The name for sugar-cane juice, nyúšayumfl

/263 cont./

756 fact, even the visionary sight of Thunder are worthless by them-
787 selves, if the shaman does not receive any signs. By means of them
278 the teyu discovers the cause of sickness and the means to be employed for healing it, which always consist of the dispensing of herbs. For this reason every shaman always has his fiber bag with all his medicinal herbs with him, in order to have them at hand
[753] and to be able to apply them at any time. Since, however, an illness does not have a physical cause, according to the opinion of the Paez, the herbs used for healing are not applied in accordance with the medical experiences of the shaman, but solely in accordance with his signs.

756 The herbs used by the shamans are the following (*):
278
●137
[127]

*I am taking these, as well as some other data on the shamanism of the Paez, from the excellent summary by S. Bernal Villa (III) /see the bibliography in the foreign text, p. 323/.

čandúr, eš (Erythroxylon coca), bičač (Hevea?), čulko (Oxalis, sp.), čáyuts (Scutellaria racemosa Per.), čuwét, fisa, ečyútse čime (Labiada?), /264/ gwepekas (Urera boccifera L.), kwése (Lonchocarpus?), limonsflyo (Cymbopogon citratus), nyika, nyundayuskey, šu (Spagnum sp.), šuwés (Peperomia sp.), šulápe, šupenyí (Peperomia sp.), tátse, táyuske (Peperomia sp.), ul níny (Hibiscus abelmoschus L.), umsim (Myricia acuminata DC. Vell, aff.), vitubítskwe, wáhi (Nicotiana tabacum L.), yakúma, yúskay (Scleria cattarinensis Boeck).

755 Most of these herbs are first chewed by the shaman and then
756 spat over the affected part. If a person is dying and his soul leaves
278 his body from the heart by way of the upper arms, the pulse of the
[774] lower arms, and the finger tips, the herb čáyuts, for example, is spat by the shaman from the finger tips in the direction of the armpits, in order to check the departure of the soul. Only rarely is a tea brewed from the leaves.

[facing P. 327]

/282 cont./

487 Páez waters upstream, continues along the river Negro, climbs over the cordillera, and reaches Tacueyó.

133 Hydrography.--From north to south in a deep and steep bed runs the great Páez, whose frothy waves rush rapidly through the vertigo of the torrents, run swiftly while tracing spirals in the frenzied force of the whirlpools, or leap, being broken into a thousand fragments by the violent shock in the numerous falls and rapids. Born of the thaws on Huila, it receives along its eighty-kilometer course the turbulent /283/ rivers Muesga (San Vicente), Moras, Kukiyú, Ullucos, and La Plata on its right bank, and the Símbola and Negro de Narváez on its left. The Páez river drains all of Tierradentro.

● 137 Vegetation.--In the major part of the region there no longer exist the "dense and impenetrable forests" mentioned by Carlos Cuervo Márquez. The timber and medicinal species have practically disappeared. The Cinchona genus was heavily exploited during the second half of the past century, when the quinine industry flourished and constituted one of the most vigorous lines in the national economy. The large and dense forests have been cut down systematically by the Indians and colonists to such an extent that the latter are found as far as the steep crags of the Central Cordillera and the hydrographic [314] valleys of the Símbola and Negro de Narváez rivers. On the ridges where virgin forest has miraculously remained intact, it has been noted that it has been entirely cut down within a week in order to make a pasture for the llamas; it is not used, not even for firewood, much less for charcoal, the techniques for which seem to be unknown. In the plains and small valleys of the streams and rivers there is a thriving vegetation which for the most part is of cultural origin, since it was planted to shade the numerous coffee plantations. Gramineae abound. On the hills and plateaus, thickets and shrubs are common, while on the steep slopes pastures present their opulent greenness in winter /the rainy season/ and their yellow-brown tones in summer /the dry season/. The fields are prepared with

/179 cont./

123 At 11 o'clock in the morning we left the Park, bound for
484 Calderas. The road climbs through the Pisimbalá valley, at
491 first on its right bank and soon on the left, after crossing a wooden bridge with a plank roof; from this bridge to the pueblo of San Andrés, three streams have to be crossed: Chapequís, La Virgen, and the cemetery stream. Along this short distance and at the edge of the road we counted ten houses, all of them thatched except one of masonry, tiles, oil paint, modern manufacture; the others have white washed walls, painted doors, and are generally clean and orderly. They are the houses of mestizos and colonists settled on their respective fincas.

At 11:30 we left the settlement and took the path that leads to Calderas; the road goes ever upward, in slow and slippery
123 zigzags. As we go along, we see houses with graphite-colored
342 roofs and walls which are black when made of mud or (and these are in the majority) yellow when they are of maize stalks; they lie as if submerged /180/ in the plantings of bananas, sugar cane, and yuca; bluish smoke rises vertically in thick columns from the openings.

123 At 12 o'clock we came out on the Mesón, Supok in the
133 Paez dialect, a small plateau oriented from north to south
[361] and bounded on the east and west by great depressions. Many native huts stand there.

•[137] The beautiful valley of the Pisimbalá torrent comes into view in its entirety; contracted at times, then widening more, extensive in length and generally narrow, it descends in a gentle slope in pursuit of the noisy Ullucos; covered with thriving vegetation, it looks like a carpet of living green blending in its tones the stateliness of the cachimbos /búcare, Erytrina umbrosa/, cedars, guamás, gadua bamboo, and yarumos /Cecropia peltata/, and the splendor of the plantings of sugar cane and bananas and the pastures of the herders.

[131] An hour later we reached the Yukaichí ridge, the boundary of the parcialidades /territorial divisions/ of San Andrés and

/241/

824 The plants marked with an asterisk were identified by the
[128] Herbario Nal. Colombiano, in particular by Dr. Jesús M.
[137] Idrobo.

[127] For the others, we were guided by the work, Plantas Utiles de Colombia /Useful Plants of Colombia/, by Dr. E. Pérez Arbeláez, published by the Imprenta Nacional de Bogotá in 1947.

75 The té eu and the community. In every culture, medicine
182 performs an eminently humanitarian function. Its nature is
171 sociological. No matter what its methods may be, its purpose is to save human lives. It combats illness, but also prevents it.

75 Among the Paez, medicine cures and prevents. The
182 community and the family perform special ceremonies intended to achieve these two purposes of medicine.

755 When the pest (epidemic) has spread through the com-
*756 munity, threatening its subsistence, the authorities (cabildo)
182 invite the curer to conjure away the danger by performing the
[731] wé ká.

When the illness prevails in a single family, markedly decreasing its members, the eldest invites the curer to perform
[765] the ut ká. After every burial the people must remove the ptans
[783] from their bodies and from the house where the death occurred. The curer is the only one who can do this.

241 The first fruits of plantings made on new lands not culti-
*756 vated before cannot be consumed until the curer has performed
783 the cleansing ceremonies. Thus, it is the curer who defends
182 the family -- preservation of the species -- who purifies the
789 harvests -- preservation of the individual -- and who also defends the community, warding off by means of his conjurations
*756 the epidemics and the individuals who threaten it. In 1952,
789 before an imminent attack by subversive armed groups on the
182 Parcialidad of Santa Rosa, the curer warded it off with maní de montaña /literally, "montaña peanut"/, chewed and blown on the path by which they were to come.

P /298 cont./

245 Guadua bamboo thrives in the temperate valleys. It is of excellent quality. In most cases it serves as shade for the coffee. Its increase would redound in obvious benefits.

P 249 /299/ In spite of the fact that plantings of coca are pro-
C [249] scribed by Colombian law, it is cultivated for consumption at
[656] almost every home; and in some parcialidades there are numerous
P [435] plantings for commercial purposes. The value of the leaf is high. A pound is quoted at three pesos.

Pc 313 Sawmills are found in Coscuro, Toez, the Símbola River,
Pc [785] and the Salado stream. But this is almost exclusively an industry of the "whites." Only in San Andrés and Mosoco was it possible to see native sawyers. There is no reforestation.

P 241 172 137 In a large part of the parcialidades of San Andrés, Calderas, Lame, Mosoco, and Vitoncó, and the entire valley of the Páez River, the clearings seem to have been done in quite remote times. There are no forests, but remnants are found along the crests and ridges that separate the valleys and in the windings where the human foot does not venture to tread. The cliffs are covered with uniform savanna vegetation.

P 172 241 In many parcialidades there are archeological remains be-
P [783] longing to an unknown civilization earlier than that of the Páez. The lands where these elements are found are utilized without any qualms. But when the plantings are in a "new clearing," the natives take the precaution of performing the required purifications before beginning to consume the crops, in order to avoid the "Pijao" plague which might happen if the crops had been in contact with the archeological remains, "pijaos" in the expression of the natives.

P 245 The cultivation of fruit trees is not very widespread, in spite of the fact that up to not very long ago Inzá enjoyed the reputation of being the producer of peaches and apples of very good quality. Nowadays they are cultivated for commercial purposes in Vitoncó, La Troja, and El Cabuyo, where true orchards of these trees are maintained with care. The fruits are splendid and are harvested during the first three months of the

/299 cont./

245 year. Traders in Silvia sell the crops at up to 14 pesos an arroba.
[439] Lame produces perhaps the best peaches, but they are not suitable for export because they are easily damaged. There are also numerous plantings in Tumbichukue and Calderas, although they do not have much care.

247 Floriculture does not exist among the Páez, and they cannot understand the labor that the "whites" invest in their gardens. They are always of the opinion that food plants should be sown on such lands.

241 Among the cultivated plants, they regard as native maize ("the /300/ Pijao had maize"), the hartón /large-sized/ plantain ("the Pijao also had it"), frijoles, mejicano /squash, Cucurbita pepo/, cabbages, and the cane "criolla" /Creole, native/, while coca, they say, seems rather to have come from the "whites."

241 Species cultivated and zones of cultivation
137 Here is a list of the food plants cultivated by the Páez (5):
192
[128]

5. We thank the Herbario Nacional Colombiano, especially Dr. Jesús M. Idrobo, for the scientific identification of the plants.

In reality, as far as a certain type of frijole that the natives call "kacha" is concerned, as well as the ground cherry, the chachafruto, fruits in general, and all the plants listed under "Other cultivated plants," with the exception of coca, the word "cultivated" is unsuitable, since they are practically in a semiwild state. The natives make use of their fruits, consumption thus being occasional and not always necessary.

Although it would appear that the territory of the Páez, at the time of the Conquest, extended up to very close to the Magdalena River, the principal nucleus of the population was located in the temperate zone and in the cold zone. The thermal levels determine the zones of cultivation. One of them goes from 1,000 to 2,000 meters and includes the entire valley of the Páez from Huila to La Plata, and the middle and lower courses of its tributaries Símbola, the river Negro de Narváez, Moras, Kukiyú, and Ullucos. Within it are located the capitals of the district, Inzá and Belalcázar, and the following native aldeas: Itaibe, Chitóquez (Ricaurte), Cuetando, Yaquivá, San Andrés de Pisimbalá, Santa Rosa, Togoima, Avirama, Chinas, Suin, Tálaga, Toez y Huila (Byla), as well as Valencia, Topa, Pedregal, and Turminá. They cultivate principally plantains, manioc, maize, sugar cane, frijoles, arracacha, coca, and coffee,

/365 cont./

177 For our outline of acculturation, we understand by diffusion
[121] achieved cultural transmission, and by acculturation cultural trans-
[127] mission in process, terms expounded by Professor Melville J. Herskovits in his book, El Hombre y sus obras /Man and his Works/.

Within Páez culture there is widely diffused, to the point of constituting an integral part of the cultural body, the following economic elements of alien origin and, more concretely, of European origin:

[231] All of the domestic animals with the exception of the
[137] guinea pig, bananas, sugar cane (the variety known as "criolla"), wheat, barley, garlic, coffee, peaches, apples, and oranges, the agricultural implements, the hydraulic mills, sugar mills, the guadua bamboo, and some varieties of pasture grass, such as orejuela /Alchemilla pectinata/, kikuyu, and poa.

177 Throughout the pages of this work, we have emphasized in
361 particular the cultural developments in process, that is to say, the
563 phenomenon of acculturation. It is obvious that this phenomenon has appeared, with greater or lesser intensity, in those parcialidades where there have been created areas of settlement, within which a specific number of "white" families have settled. But the intensity of the acculturative phenomenon does not rest merely on this fact or on the number of families who live by the norms of Western culture. San Andrés, for example, had its settlement area established for all practical purposes in 1928 and now reckons with more than 20 "white" families, with its nearness to the settlement of Inzá, and, for nearly 15 years, with the Parque Arqueológico of Tierradentro, to some extent a tourist attraction, and yet the process of acculturation is minimal and cannot be compared with the intensity of the same phenomenon in Mosoco, where the settlement area /366/ was created in 1923 and where
177 nowadays there are not more than 12 families of "whites." In
[487] Mosoco there is another factor: the riding path that joins the
[491] municipio of Belalcázar with that of Silvia, a road that has existed since pre-conquest times. Mosoco has been and still
[628] continues to be the mandatory stopping place. In addition, this parcialidad has had intensive contacts with the Guambiano group and the Páez group from the other side of the Cordillera, who are more accutturated.

/366 cont./

[77] are more acculturated. All of these circumstances have permitted the extensification of the cultivation of garlic, wheat, and especially potatoes, as well as the extensification and intensification of livestock-raising, which, in turn, has given rise to a series of phenomena now in the full process of development, such as the modification of work schedules and agricultural cycles, the regularization of trade and transport, the appearance of the habit of capitalization and of the use of credit, the use of barbed wire for fencing, reforestation on a eucalyptus base, the development of household industries, modification of the diet and eating times, adoption of specific objects of adornment by the women (gold earrings), disappearance of coca consumption ("deculturation," to use Fernando Ortiz's neologism), social stratification, the undermining of the institutions of the té eu and the nasa jihi, the calming of the real and magical aggressiveness against the "whites," intensification of primary education, and greater conviction in religious beliefs.

In the temperate zone in general and in San Andrés in particular, the cultivation of coffee is in full swing, and the consequences of this economic fact are beginning to be visible. The palm hat, very common in the parcialidad of Calderas, is not seen very much among the Andresunos, who are adopting the cloth hat of the "whites"; some of them already wear sandals or shoes, and likewise the use of the poncho and of the bag of a manufacture foreign to the culture is spreading; the agricultural implements are being enriched in the same manner as modern housewares; although the most widespread labor system in the parcialidad is that of the mingas, some already pay daily wages for work on their fields; the consumption of meat and panela is [756] quite frequent when there are coffee harvests. It is also interest- [554] ing that in the entire parcialidad there are only two té eu, who are not greatly respected, though they utilize the services of the té eu of Calderas.

● [137] /367/ The "criolla" is the most widespread variety of sugar cane and the one which has been fully accepted by the natives, to the point of being regarded as their own, but other new

/367 cont./

177 varieties are being introduced, such as "java," for example,
[137] which, although the natives call it "wild," they nevertheless praise for its quality and recommend its cultivation.

Such are the general outlines of acculturation in some parcialidades of Tierradentro.

113

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
13 of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,600 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
●137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisaica*); and large fish from the rivers.[4]

---

[127] [4] The scientific names of the plants were taken from Cortés, 1919. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

3. Anthropological Remarks

114 Since I did not take any anthropological measurements
141 among the Paez personally, I cannot give any numerical data. These investigations were undertaken during my stay by the Colombian anthropologist, Nestor Usacategui, but have not yet been published.

•14 From the somatic point of view, as far as the men are concerned, they are generally medium-sized, slim, with narrow shoulders, seldom thickset. As practiced climbers and mountaineers, they are never obese. They do not give the impression of being undernourished, but their padding of fat is very thin. Their arm and body musculature is also poorly developed (cf. Ill. 173 /see p. 277/). They are unable to lift large loads.
[482] A maximum of 25 kilograms is transported by means of the fiber bags hanging down on their backs and carried with a chest-band. Their calves are muscular, but not fat. Fallen arches prevail
[481] generally. Their gait is slightly bowlegged; the great toes point inward during walking. The same somatic peculiarities are also found among the women. In youth they are well-proportioned, in old age never fat.

141 In general brachycephaly predominates, but it is not extreme. The faces are oval, the cheekbones only slightly prominent. The nose is primarily straight, sometimes slightly concave, and of medium width. Among women one sometimes finds slightly distended alae. The forehead /112/ is high, straight,
142 and steep. The eyebrows are not very pronounced. The eyes are sometimes slightly slanting and show -- especially among women -- a slight Mongolian fold. The mouth is large, the lips somewhat puffy. The eye color is dark brown and shining, the skin color medium-brown. In Avirama there was proudly introduced to us a family whose members, along with normal skin-color and dark eyes, have reddish-blond hair. One of the grandfathers was said to have been lighter colored and to have had even lighter hair. The normal color of the hair is dark; the hair is straight, but not stiff, and sometimes wavy. Even in old

Even in old

/112 cont./

142 age the hair seldom becomes white. We met only one woman with slightly graying hair and an old man with a gray, sparse
[302] beard, but dark hair. The beard among men is scant. The beard hair is regularly plucked (see Ills. 148 to 155 /see pp. 265-268/).

143 According to the blood-group analysis of the Paez, among the 303 individuals examined there were 88.78 per cent of blood group 0, 6.93 per cent of blood group A, and 4.29 per cent of blood group B. The blood group A+B is not represented (G. Arcila Velez, pp. 11-14).

829 The racial concept of Indian is foreign to the Paez themselves. To them "Indio" designates a cultural status. My colleague, Segundo Bernal Villa, an Indian from the region of Pasto, was designated as "blanco" because of his European clothing. And when our interpreter Victoriano bought himself "white clothing" (hat, pants, shirt, shoes) with the money he earned, he was called a "white" in his village and accordingly treated with hostility.

161 The population figures for the Paez do not seem either to increase or decrease, as far as the uncivilized Paez are con-
165 cerned, for example, in Calderas. Infant mortality comes to more
164 than 50 per cent. The most common cause of sickness is whooping cough. The health of children who survive their second year, as well as of adults, is -- considering the circumstances -- quite good. True, one scarcely sees old people over 60 (and
[132] those who look that old are probably younger). The most fre-
[362] quent illness of adults is tuberculosis, which claims numerous victims, since the nights are very cold and the cold and wind can
[262] penetrate through the light walls of the houses unhindered. More-
[273] over, no fat of any kind is commonly eaten. Another illness from which many Paez suffer, which, however, is not taken seriously, is stomach trouble caused by the drinking of brandy even during
[154] infancy and the unsuitable diet in childhood. Infants are given
[262] beans, cabbage, and yuca, but no milk, except mother's milk.

stroyed the city of Caloto, then on the Magdalena river, according to Alcedo. But it is not unlikely that, later on, during their decline, the Pijaos, Paés, and perhaps several other tribes became mixed, and those whom we now call *Paez* are the survivors in blood, customs, and traditions, of all these frequently named *parcialidades* or *naciones*. 101 174

Physical Characteristics

There is no special reference by former writers respecting the physical characteristics of these Indians, probably because of the apparent uniformity in type of all the tribes of tropical South America. According to my own very fleeting observations the Paez are small, broad-shouldered, with small bony hands, and feet broadened toward the extremities. Their skin is very dark, a character common to all Indians living at great altitudes. In the case of almost every adult, both male and female, coming under my observation, I observed a fine black pubescence covering all visible parts of the body. They appear to be generally strong and healthy, and their physical endurance is not below the average. On our trip across the cordillera each adult man carried at least thirty kilograms, and many of them more than fifty, and none complained of being too heavily laden, although the trail up to nearly 4,000 meters and down again was exceedingly rough and steep, requiring at times not only much exertion but equal presence of mind. 1420 147

It is well to mention, after Uricoechea, that the Paeces are naturally inclined to warfare, and invariably join one side or the other in the unceasing Colombian revolutions. In early times they raided the Spanish establishments, the destruction of Caloto on two occasions (the first time in 1641) being still held by them in vivid remembrance as glorious feats of their ancestors. I was even assured that not long ago, during the last war, they were with difficulty prevented from making an incursion on the neighboring Cauca cattle ranches. 181 121

I was quite surprised to find among the Paez Indians a character that I had noticed previously in Central America, but of which no record could be found in current literature. I refer to 147

157 pipes they play while walking along, unless their hands are kept
533 busy plaiting braids of gynerium bark in the manufacture of
383 their hats. This is the exclusive occupation of the men.
[463] Women almost invariably walk along spinning wool, their distaff under the left arm and the spindle in the left hand, while the right hand is busy at the wool.

883 The Paez maidens are fond of flowers and are very playful.
157 On one occasion I observed several of them going up the hill
481 beyond the river, in front of the church at Huila, their arms entwined about one another's necks; then they began running up the steep hill as in a contest of endurance. As they became exhausted they threw themselves on the grass, while their movements showed that they were playing and joking all the time. These children of Nature are not unpleasant to look at,
[515 except for their usual lack of cleanliness; nor are they wanting
142] in coquetry, and they are often pretty. But in the presence of
[609] strangers they are extremely bashful, doing their utmost to keep in the background.

291 The old women are generally very ugly. Their clothing con-
515 sists only of dirty rags, and their skin is covered with the filth of years.

593 Relations between the sexes, especially between husbands
562 and wives, seem to be easy and without an air of superiority on the part of the former. On the few occasions that I had to entertain these people at their houses, the women took the same interest and the same part in the proceedings as the men, which was very different from what I observed among the Central American Indians.

609 Toward strangers, and especially toward Colombians of other
186 races, the attitude of the Indians is decidedly hostile. Unless induced by the prospect of profit they will neither sell anything nor lend any service, often refusing money and accepting only articles which they especially desire. They will not allow white
[563] or black people in their homes, and at Huila they are even unwilling that the only white family living there should share the practically inexhaustible supply of fuel scattered about in the near-by forest, or have horses or cattle pasturing on the almost

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
361 Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166 193] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17,578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

[Parcialidad of Calderas]

/289 cont./

●142 The Calderuno /native of Calderas/ is rather tall, with a light copper skin, straight black hair, a straight nose somewhat flattened and broad at the base, slightly prominent cheekbones, dark brown eyes reminiscent of the Mongolian eye, a broad forehead, long and robust extremities, a slightly pentagonal face; many have mustaches, and, on the whole, the
157 features are rather /290/ handsome. On the other hand, he is talkative, communicative, deeply traditionalistic, proud
[361] of himself, and has a deep love of the land. Isolated as they
[177] are from the other parcialidades by natural accidents and far removed from the urban centers of Inzá and Belalcázar, they are shy, sullen, and withdrawn with the white, stubbornly opposed to contact with him, and, as a result their institutions, have suffered less from the impact of cultural mestization.
797 Not even the very church that has worked so persistently for the
177 catechization of these tribes, especially in this century through the Lazarist missionaries active since 1905, has been able to penetrate fully into the soul of these people.

114 I have carried out my research in this parcialidad since
773 the month of August of last year, with several interruptions.
[124] The myths and tales which I now present were gathered with patient labor after much waiting, for the natives, when questioned about these themes, nearly always reply with the word himeto ("I don't know"). There is no need to stress the importance of mythology as an institution in the so-called "primitive" cultures. Nor is it my intention to theorize on the subject. It is enough to say, in the words of Herskovits, that "mitología es como la carta constitucional de las creencias y presta sentido a la conducta ritual que se deriva de sus consagraciones /mythology is the constitutional charter of beliefs and gives meaning to the ritualistic behavior that is derived from its consecrations/" (1). The chroniclers tell

/For information on genic locations based on Streng's diagram of co-ordinates of the blood groups of the natives of South America, see: 4: Hill et al., 8818 Warao, Category 116, pp. 107-114./

/112 cont./

142 age the hair seldom becomes white. We met only one woman with slightly graying hair and an old man with a gray, sparse [302] beard, but dark hair. The beard among men is scant. The beard hair is regularly plucked (see Ills. 148 to 155 /see pp. 265-268/).

143 According to the blood-group analysis of the Paez, among the 303 individuals examined there were 88.78 per cent of blood group 0, 6.93 per cent of blood group A, and 4.29 per cent of blood group B. The blood group A+B is not represented (G. Arcila Velez, pp. 11-14).

829 The racial concept of Indian is foreign to the Paez themselves. To them "Indio" designates a cultural status. My colleague, Segundo Bernal Villa, an Indian from the region of Pasto, was designated as "blanco" because of his European clothing. And when our interpreter Victoriano bought himself "white clothing" (hat, pants, shirt, shoes) with the money he earned, he was called a "white" in his village and accordingly treated with hostility.

161 The population figures for the Paez do not seem either to increase or decrease, as far as the uncivilized Paez are con-
165 cerned, for example, in Calderas. Infant mortality comes to more
164 than 50 per cent. The most common cause of sickness is whooping cough. The health of children who survive their second year, as well as of adults, is -- considering the circumstances -- quite good. True, one scarcely sees old people over 60 (and [132] those who look that old are probably younger). The most fre-
[362] quent illness of adults is tuberculosis, which claims numerous victims, since the nights are very cold and the cold and wind can [262] penetrate through the light walls of the houses unhindered. More-
[273] over, no fat of any kind is commonly eaten. Another illness from which many Paez suffer, which, however, is not taken seriously, is stomach trouble caused by the drinking of brandy even during [354] infancy and the unsuitable diet in childhood. Infants are given [262] beans, cabbage, and yuca, but no milk, except mother's milk.

/313 cont./
105 settlement. At the same time, however, we must certainly confirm a cultural impoverishment, considerable in some respects, among these people who outwardly seem quite prosaic and matter-of-fact.

105 Anthropologically they belong to the American Centraloid
143 /zentraliden/ race (v. Eichstedt /see the bibliography in the
144 foreign text, pp. 323-327, for this and the following references/) with a striking predominance of blood group 0. Although the latter fact is only one component of the somatic picture, it is extremely interesting to find a predominance of this blood group among a large number of American natives. Among the Paez there are 88.78%, among the neighboring Guambiano 84.25% (Lehmann, Duque y Fornaguera, p. 200), among the natives of Caldas 92.25% (Duque, 1944, p. 626), among the Sibundoy 84.42%, among the Santiagos 94.23% (Paez-Perez y Freudenthal, p. 413), and among the Pijao the blood group 0 is almost 100% (Reichel, 1944, p. 517). These investigations of Colombian tribes agree with a more comprehensive picture. According to the analysis of G. Arcila Velez (p. 11), 80.6% of the people among the Eskimo are of blood group 0, 91.3% among the pure North American Indians, 72.7% among the Navajo, 97.7% among the Yucatecans, 79% among the Mataco, and 100% among the Guarani of the Rio Grande do Sul.

105 The form of settlement of the Paez in the deeply fissured
[361] mountainous region of Tierradentro is the loose arrangement of individual family-farms on the mountain slopes, as far from neighbors as possible. The village settlement-area is geographically invariable and embraces the natural area of the dwellings and the land used within a valley basin. The house, as the family focus and social center for one family in each case, is built on the family's own land. It is used -- depending on the type of construction -- for a harvest period or for ten to 15 years. The land belongs to the family that first cleared it. Besides this there is community land for the free use of all members of the village. The interior of the normally /314/ hip-roofed rectangular houses is divided into two rooms, one of which serves as the kitchen and living room, the other as a storage room.

P /135 cont./
276 exchange for brandy, wheat, or maize (for exchange and barter
249 rates, see "Trade" /see pp. 92-94 /). Within the family each
437 one harvests for himself as many leaves as he happens to need;
otherwise the father of the family usually barters for the entire
family. Harvest time is throughout the year (Ill. 174 /see
P p. 277 /).

276 Before use the leaves are roasted in a clay bowl and then
317 carried around in the colored wool pouch (kwatandyáha), together
[415] with a small calabash containing lime. The lime (kwatánd) is
obtained from limestone (kwatandkwát) which crops out at various places throughout the region and which men and women look for as it is needed, or the husband sends his wife to fetch a few stones. These pieces of limestone are put in a vigorously fanned fire for two hours, /136/ then in a clay bowl, and cold water is
P poured over them. After that the cracked stone is pounded to
276 powder. To enjoy it, one takes a handful of leaves out of his pouch and puts them in the mouth and chews them for a while, until the lime can be added. Care must be taken that neither the tongue nor lips come in contact with the lime. Beginners press the coca mash flat against their tongues with their gums and sprinkle a pinch of lime from the pear-shaped, absolutely unadorned calabash (kwatandóka) upon it; practiced coca-chewers take a pinch of lime on the back of the hand between thumb and index finger and toss it into the open mouth with a flourish. The green saliva copiously produced is partly spat out, but most of
P it is swallowed. In the case of old people it often runs out of the
C mouth and drips on the clothing (Ill. 179 /see p. 280 /).

276 According to my experiences among the Paez and the
P coca-chewing Colombian workers, the harmful effect of coca
C seems to be exaggerated in most of the studies on the subject.
276 Of interest, however, are the data of C. Gutiérrez Noriega (1952),
146 who investigates the psychological and physiological effect of
273 taking coca, especially among the Peruvian Indios. There, in the region of the greatest coca consumption, two to four kilograms per person and year, the daily amount of food for a worker is only about 2,000 calories per day. With a simultaneous drinking of brandy and an inadequate diet, physical and mental consequences

P C /136 cont./
276 are naturally more in evidence than in the case of the use of
146 coca with good nutrition and as the only indulgence. Along
273 with improved nutrition and corresponding enlightenment, a
prohibition on brandy instead of its propagation would be more
C desirable for the health of the people than a prohibition on coca.
[651] The departments, however, draw their chief income from the
P brandy tax, whereas coca was always tax-free.

276 Tobacco (wáhi) is neither planted by the Paez nor con-
[249] sumed in large amounts, since there is generally no money
available for the purchase of tobacco or cigarettes. Both sexes,
P however, smoke gift cigarettes, and, to be sure, from child-
[755] hood, that is, from two to three years of age. The shamans
[755] in their séances and ceremonies are in the habit of chewing
cigarette tobacco along with coca, but it is always purchased.
These séances last many hours or throughout the night, during
which shamans and patients together chew this mixture uninter-
ruptedly.

P 273 Chicha (pronounced tschitscha) is one of the alcoholic
[171] beverages which, made out of various raw materials, are wide-
spread among the natives /137/ throughout South America, with
manioc chicha predominating in the forest region (Venezuela,
Brazil) and maize chicha in the Andean region (Cooper, pp.
539 f. and Map 11). Two methods of production are distin-
guished, according to whether it is a matter of raw materials
with a high sugar content (honey, sugar cane, palm sap, pine-
apple) or more starchy crops (manioc, maize). The former ferment
without the addition of saliva and need not be chewed in the
preparation; the latter need human saliva before or after cook-
P ing in order to ferment.

[137] Among the Paez chicha (mbéca) is made only from the
juice of sugar cane, a raw material that is not American, but
came from southern Asia and did not come to America until the
post-Columbian period (Maurizio, 1933, p. 75). Formerly
chicha was made out of maize, as it still is today among the
neighbors of the Paez living in higher regions (for example, the
Guambiano). The name for sugar-cane juice, nyũ̃ãyumĩ

/113/

Physicians are not consulted in any case. All illnesses that do not show external influences are traced back to evil sorcery or to the "pest" (see under "Religion"/see p. 191 ff./). They must therefore be treated by the native shamans /see the glossary, p. 250 /. Open wounds and injuries are treated by the midwife. Now and then, however, people visit the mission station in order to have a tooth pulled, on which occasion the nurses without reservation praise their great steadfastness in enduring pain.

The impairment to health caused by the consumption of coca and chicha seems to me to be exaggerated by the authorities; it would be even less with sensible and nourishing food. The prohibition against coca consumption and the government's battle against coca and chicha give the impression of being more a struggle against a brandy tax deficit, for alcohol under the state monopoly may be sold to any Indio in any quantity. The fact that the Paez generally does not work hard and continuously probably has nothing to do with any degeneration caused by the stimulants mentioned, but rather it is quite simply his psychological attitude which does not let him see why a human being should strive for things which seem unnecessary to him, things beyond his animal necessities of life, eating and reproduction. I often asked whether, in their opinion, there might come a time when the Paez, too, would wear only Colombian clothing or even use electric lighting. They had never thought about it and in no instance had an answer.

II. Material Culture

1. The Dwelling

a) The Settlement

Politically and sociologically the Paez villages of Tierradentro embrace the inhabitants of a valley basin more or less closed off by the surrounding mountains. In their structure, however, they are not villages in our sense, by which we understand a locally concentrated aggregation of a number of houses,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

stroyed the city of Caloto, then on the Magdalena river, according to Alcedo. But it is not unlikely that, later on, during their decline, the Pijaos, Paés, and perhaps several other tribes became mixed, and those whom we now call *Paez* are the survivors in blood, customs, and traditions, of all these frequently named *parcialidades* or *naciones*. 101 174

Physical Characteristics

There is no special reference by former writers respecting the physical characteristics of these Indians, probably because of the apparent uniformity in type of all the tribes of tropical South America. According to my own very fleeting observations the Paez are small, broad-shouldered, with small bony hands, and feet broadened toward the extremities. Their skin is very dark, a character common to all Indians living at great altitudes. In the case of almost every adult, both male and female, coming under my observation, I observed a fine black pubescence covering all visible parts of the body. They appear to be generally strong and healthy, and their physical endurance is not below the average. On our trip across the cordillera each adult man carried at least thirty kilograms, and many of them more than fifty, and none complained of being too heavily laden, although the trail up to nearly 4,000 meters and down again was exceedingly rough and steep, requiring at times not only much exertion but equal presence of mind. 142 147

It is well to mention, after Uricoechea, that the Paeces are naturally inclined to warfare, and invariably join one side or the other in the unceasing Colombian revolutions. In early times they raided the Spanish establishments, the destruction of Caloto on two occasions (the first time in 1641) being still held by them in vivid remembrance as glorious feats of their ancestors. I was even assured that not long ago, during the last war, they were with difficulty prevented from making an incursion on the neighboring Cauca cattle ranches. 181 121

I was quite surprised to find among the Paez Indians a character that I had noticed previously in Central America, but of which no record could be found in current literature. I refer to 147

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

147 the odor peculiar to the Indians, which becomes quite noticeable when they are sweating and which so closely resembles that of the secretion of the so-called *sahino*, or wild hog (*Dicotyles tajacu* L.), that I have more than once been deceived into believing that our trail crossed the path of a drove of these animals.

516 When at rest the Paez men almost invariably sit on their heels, the toes sustaining the whole weight of the body, while the women sit with their legs stretched together on the ground, [544] even when near the fire in their houses. In micturition young 481 girls remain standing. The gait of both men and women is short-paced and easy, the body being always slightly inclined forward, probably on account of the habit of carrying heavy loads.

824 Like all children of Nature, the Paez Indians are very keen 826 observers of their surroundings, as is shown by the minuteness of their differentiation in plants and in certain groups of insects. Castillo, for instance, gives the names of no fewer than six different varieties of ants —

[552]

kan-kik	*cĩ-kik-ue*	*eĩa-i*
kik-finis	*gnue-kandi*	*to-fiti*

and I collected very few plants for which they did not have a ready name.

Reproduction and Death

881 When a girl reached puberty the event was celebrated among the old Paez Indians by a special dance called *itsa-ko*, during which the young naked female was placed in a hole dug outside the ball-house and thoroughly washed with *chicha*. We have no 836 notice of pre-marital liberty being conceded to women, nor of the relation of children to parents in the family organization. As 595 tradition has it, the pre-conquest Paez were polygamous, and notwithstanding the efforts of the missionaries, it is almost certain that this practice has not completely disappeared. We know nothing about the existence of marriage ceremonies before 581 the introduction of the Catholic ritual. It is likely, however, [586] that marriages were endogamous and free, and, as such, a very frail institution, as Castillo informs us that even in his time

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

marriage bonds were not definitely made until experiment indicated the fecundity of the woman, and that the union was dissolved at the will of the husband if the wife proved to be barren. The same authority informs us that the wife had to give her husband the necessary clothing, while the husband provided food for the family. 581 [586] [585]

A custom mentioned by Castillo was that during menses the women spent the time sitting in small huts expressly built for that purpose, for fear of contaminating the common dwelling and of bringing disease and death to its occupants. 841

Rodriguez relates another custom in connection with childbirth and death: ". . . y siempre que pare la mujer, ó que muere alguno de su familia, desamparan la casa, dexando en ella al difunto con cantidad de bastimento y de la chicha, brebage, que beben: y á las casas donde parió la mujer, las dejan con las inmundicias de el parto, y acabadas de nacer las criatures, las laban, y se vañan sus madres, poniendose en viaje á buscar nuevo paraje para su habitacion, que siempre procuran sea en parte muy fragosa, por no ser visitados." 844

These details are confirmed by Castillo and were probably still observed in his time. As to what is done at present, and regarding the family organization in general, it is very difficult to obtain reliable information. The Indians are very jealous of their women, do not tolerate in them any intercourse with strangers, and become instantly distrustful when questioned about family matters. 152 593 609

With reference to death, Castillo differs from Rodriguez in that he states that a dying person was taken from the house, so that he did not actually die in it, and that the dwelling was destroyed by fire. He does not mention the custom of leaving food near the corpse, but states that the body was buried and a fence built around the grave. 768 763 764

Diseases

No diseases came under my observation during my stay at Huila and Tacueyó, and the Indians rather impressed me as being a healthy people. But if their vocabulary affords suffi- 164 [114]

/256 cont./

754 Sorceresses are numerous, and it seems that they are the most feared.

[787] Sorcerers receive signs from the devil and the evil spirits who help them appear in the form of snakes, donkeys, or pigs.

[825] They are different from the ghost and Rainbow. It is said that the pig teaches the person to be very fierce or inclined to drunkenness (drunks roll about on the floor like pigs in the mud); the donkey, to be a glutton.

In general it seems that every adult is a potential sorcerer, and all the more so those who deviate from the institutionalized norms of behavior.

754 554 578 Victims of sorcery. The victims of sorcery are found everywhere among the people, without any distinction as to sex or age, status or function. The sorcerer himself commonly takes the initiative, but he is also at the disposal of those who want to employ him.

The victims of sorcery frequently are those people who are efficient, hard-working, and frugal, virtues which in our society lead to the development of a capitalist economy.

754 554 152 578 In Santa Rosa they speak of the lamented death of one of their ex-gobernadores. He was young -- they say -- intelligent, a good conversationalist, /257/ and very hard-working. He owned much land and good fields of coffee, yuca, maize, and sugar cane. Jealousy, the source of discord and injustice, motivated the sorcerers Lorenzo Io and Dolores Oinó, his wife, who joined forces at once with the greatest of the sorceresses, Felisa Ipia, in order to put an end to this man's life. This is the judgment of the curers and the opinion of the community. But the accusation was made by the victim himself, who, in the course of his death agony, which was prolonged, dreamed of the above-mentioned sorcerers. The dying man repeatedly requested that the sorcerers should be sent for, so that he might settle accounts with them. When they left his house to attend to the wish of the dying man, he expired. He died convinced that they had cast a spell upon him.

/257 cont./

757 A curer from Santa Rosa, while taking a spell off a sick
554 person, explained that this man owned much land and that they
152 had cast a spell upon him in order to appropriate it.
578 In Calderas a man who can read, write, and make memorials for the Alcaldía of Inzá, a maker of fireworks, builder of houses, and good farmer, was naturally the cause of envy. A sorcerer wanted to kill him. He called his soul while he was asleep. But the one called was aided by the soul of his brother, who blew mambe toward him. On the following day his left eye became white and was on the point of dropping out. A curer was able to cure him, but he remained one-eyed. The two brothers remained enemies of the sorcerer.

754 On another occasion and in the same parcialidad, two
683 brothers gave a sorcerer a beating. In revenge he cast a spell
623 on both within a year. Fearful of punishment, the sorcerer went to other parcialidades, but on his return the cabildo put him in the stocks.

In the old days -- says a curer from Santa Rosa -- the cabildos punished the sorcerers. Those of today are afraid of them. The elders /mayores/ have died bewitched. Actually, the Indians refuse to serve on the cabildo or to accept the post of capitán for fear of the sorcerers.

754 The sorcerers are all thieves. They often steal under the
685 very eyes of the owner, who, fearful that they will cast a spell upon him, does not make the slightest protest. But the sorcerers, in turn, fearful that he might complain to the white authorities, cast a spell upon him.

754 In Calderas, those who purchase livestock to expand their small hacienda have been attacked by sorcery.

The Indian who has lived with the whites, who has adopted
754 their clothing, their dietary habits, and their agricultural and
177 cattle-raising techniques, /258/ and who has given up the
554 habit of consuming coca and chicha is not only the victim of magical attacks, but is the direct recipient of offensive words and deeds.

/263 cont./

182 The people perceive only the effects. Only the expectant
754 attitude announces to us its presence. The latent fears tell us of its vigor. The members of the cabildo, the capitán, the té eu, the working men, the parturient women have a strong fear of sorcery.

When the pest spreads through the community, when the elders die and their experience and advice are lost, thoughts
[761] turn inevitably to the power of the sorcerers. Most deaths are brought about by sorcerers, the informants say.

754 Sorcery is a powerful barrier against the introduction
182 of the customs of a capitalist economy and also against the
177 intrusion of the whites in their parcialidades. It is strange that sorcery should exist in the less acculturated parcialidades, while in San Andrés it has practically disappeared. It is said to have been vigorous until 1926, the year when the Municipal Council of Inzá established in the parcialidad a settlement area in which the whites settled. With this measure living together was inescapable and they chose to accept them. Nevertheless, during the drinking bouts of the old people, the tremendous resentment that has become natural to them still crops out.

182 Furthermore, it makes its influences felt in the distribution
754 of land. Each family has lands from which it lives. With the
423 increase in population the problem of their unequal distribution
[554] has become prominent. Those who have the most land are
[152] the targets of envy and sorcery; they are more prone to magical attacks aimed at taking away their land. Intrasocial tensions
754 appear to be brought into equilibrium by means of this insti-
182 tution. The fear of reprisals checks aggression. Revenge is too prejudicial, since it can be manifested not only against
[184] individuals, but also against animals and plantings. It is
[177] perfectly true to say that while in Calderas acts of bloodshed
[675] are rare and suicide is unknown, in San Andres, a parcialidad
[762] which is largely acculturated, the homicides, murders, and cases of arson are hair-raising.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

deserted savannas. It must be said, in extenuation, that they have been subjected to much abuse by their neighbors of the "superior race." Moreover, the Paeces are naturally hostile to strangers, descending, as we have seen, from a warlike people. The old Paeces always went about armed, carrying a lance or javelin in the hand and ready to protect their bodies from the darts of an enemy by means of a shield of basket-work (*opimb*), or of tapir hide (*yimba-kât*). The warlike tendencies of the tribe were stimulated by means of periodical contests in which the most valiant warriors fought each other in the presence of the multitude.

To-day, as we have seen, the descendants of these have abundant opportunity to satisfy their fighting propensity by taking sides in the frequent quarrels of the political parties that thus far have kept Colombia in an almost continual turmoil.

Sexual intercourse between Paez women and men of other races is said not to exist; barbarous chastisement would be the fate of the offending female. It is to be expected, however, that the closer contact brought about by the gradual penetration of the Tierra Andentro by whites and negroes will soon overcome the purity of the Paez blood and open the way to amalgamation with the neo-Colombian race.

Reclus, cited above (page 311), gives us to understand that the Paez were cannibals, and the tradition current in the villages along the western foot of the cordillera confirms his intimation with reference to the Pijaos; for the coming of "el Pijao" is still a menace to children. The early chroniclers tell us of several anthropophagous tribes which lived in this region, and it is not unlikely that the Paeces had a share in that custom.

GRAMMATICAL NOTES

Castillo's *Nociones gramaticales* is limited to a list of the personal pronouns and the conjugation of the verbs 'to be' and 'to write.' A few more grammatical indications are incorporated in the vocabularies, but on the whole these data are very meager, and much remains to be done in this direction.

000 /288 cont./
756 medicine men. To cure the patient, he divines which of the
755 supernatural beings caused the illness, proceeds to placate him,
[787] and then prescribes medicines to the patient. If the placation is not successful, the patient literally sinks into despair. The indispensable articles for all curing are coca, tobacco, and
[462] aguardiente. The medicine men are persons well along in years
[754] and belonging to the masculine sex. They cannot cure the effects of sorcery, although they can protect themselves against it.

754 c) Fifty per cent of all illnesses, the informants state,
[753] are caused by sorcery, and by the same token 50 per cent of
[761] the deaths, since sorcery is incurable. The sorcerers conceal their activities, and it seems that all adults are potential sor-
754 cerers. The institution of sorcery is a true escape valve for the
● 154 strong aggressive impulses of the natives and to some extent plays the role of a social regulator. Through it are channeled the jealousy, resentment, and vengefulness of the natives. The victims of sorcery are the most skillful and hard-working individuals, those who have a good house, good crops, and a growing number of domestic animals. Harvests and plantings
[683] generally are the object of sorcery. Sorcerers who are publicly unmasked are exposed to the anger of the community and even to exile, a measure taken not so much on account of their be-
[685] ing sorcerers as of their being thieves. All sorcerers are thieves. Sorcery appears with considerable frequency in the symbolism of dreams.

583 Marriage.--Marriage is monogamous and patrilocal. Both
[595] the chroniclers and Dr. Gregorio Hernández de Alba speak of
[591] the custom of the year of probation to acquaint the man with
[177] the skill, energy, and fecundity of his future wife. A thriving
[797] institution in times past, it is now in sharp decline owing to the action of mission work. Obviously, the purpose of this institution is to find out whether the woman is hard-working, faithful, not a thief, and to understand her ways in order to establish a lasting union. Nowadays the Paez, before being married

The cultivation of potatoes on a large scale
/305 cont./ began more
244 or less two decades ago. "From 1925 to 1930 the one who
433 planted the most potatoes was Ezequiel Mulcué, who caused amazement among the people; now the least planted is 20 arrobas," says one informant. Nowadays there are natives who sow up to 200 arrobas in a year, of which only 70 are planted in the "paramo," and they yield better results than the other arrobas planted. Then, we ask, why do the people of Mosoco have their months of hunger?

262 The basic product of the Paez diet is maize. It was in
154 the past and it continues to be so in the present. Psychologi-
[198] cally, they feel completely satisfied when they have maize for consumption. Its absence causes a sensation of dietary dissatis-
[243] faction. Before the era of the potato, the cultivation of maize and wheat predominated.

461 During the months of July, August, September, and Octo-
464 ber, the natives have little work. This is why those from
166 Vitoncó, San José, Lame, and Suin go and sign up as peons on the fincas of the "whites" on the other side of the Cordillera (Popayán, Corinto, and even in the Cauca Valley). They return toward the end of the year, when the maize and wheat harvests are drawing near. The natives of Calderas, San Andrés, Santa Rosa, and Togoima go to the fincas of Inzá or La Plata. They return in October when the maize harvests are approaching. It must be said that this labor force is excellent and cheap. And for this reason very much in demand.

The natives of Mosoco have sufficient work in their own country.

Clearings /rozas/

241 The term roza is used generically for the extent of land
433 cleared, burned, cleaned, and fenced, ready for planting. It is found on every private property. It has an area of approximately one hectare. Clearings of two or more hectares are rare. An increase in production does not reflect an enlargement of the clearings, but rather their multiplication and the utilization of ever more rugged and /306/ sterile lands. The natives, to

Everyone grants everyone else

/203 cont./

571 whatever he expects and claims for himself, quite as a matter of
829 course. This results in an entirely natural self-esteem, injury to
●155 which on the part of the "blancos" is felt as very painful by the Paez.

576 Within the Paez communities the obligation of a greeting (gwéčaya) by a younger person to an older one is strictly observed. Even a "family feud" does not absolve the younger people from the respectful greeting "pétenga" (translated by "good day") toward the older people of other families, who acknowledge it with " "pé'taw." Removing one's hat at the same time is not customary.

[608] A greeting by shaking hands takes place only among members of the family or with one's godfather or godmother with the salutation "ndyósta utsménga" (Godparent, how are you?), during which the hat is also removed. Contemporaries greet each other with

[521] "éwča" (how are you) and reply with "éwčataw" (I am well). Generally people chat awhile when they meet, introduce the conversation with a joke, a bit of news in the village, or perhaps merely a remark about the weather.

156 Though the Paez may be regarded basically as an individualist, this does not hold true universally. On account of the abundantly available land, it is possible for him to isolate himself and withdraw for weeks at a time to his separate farm, but

461 nonetheless the Paez does not like to drink his chicha alone. And
476 usually friends and neighbors help, not only with housebuilding or
156 clearing, but also with sowing and lesser tasks. The labor of the individual, in instances of mutual help, is merely loaned, however, since the same persons meet again for joint aid on the corresponding tasks of a neighbor. The owner in question must also make chicha and food liberally available for each task, which makes every joint task a small feast. The actual useful effects of the communal work are slight, and, as a visitor from the outside, one has the impression that the joint eating and drinking is the primary thing, interrupted at times by only brief periods of work. On sober consideration -- which no Paez, of course, undertakes -- the joint consumption in connection with a communal task is more expensive for the individual than if each person himself over a correspondingly

/108/

115 We then looked for another interpreter, the Calderun Victoriano Piñakué, about 17 years old and very open-minded with regard to "white" civilization. His father even once visited Popayán, the capital of the department of Cauca. Through this he had a somewhat broader outlook and became involved in a quarrel with a bad shaman, in which the latter took one of his eyes by magic. Since then old Piñakué has been blind in one eye. A younger brother of Victoriano is going to school in Inzá and is the helper of the sacristan there. Victoriano is very much interested in one day becoming acquainted with Popayán or even Bogotá. He speaks Spanish quite well and has already earned money on occasion in the service of the white colonists and in La Plata as a construction worker, in order to buy clothing of the whites for himself. By "white" the Paez mean the Spanish culture of the Colombians, namely, clothing, education, and corresponding customs, not, however, skin color or other characteristics of the white race.

[191] [464] [829]

Victoriano set great store by dressing, not like a Paez, but like a white. He was an enthusiastic fellow-worker, not, however, out of greed for money, but out of sincere interest, and at every opportunity he would ask how things were among us in Germany. With a great craving for knowledge, he would again and again have our photos of Europe explained to him, and he even made an effort to learn German.

115 156 554 In his native village of Calderas the work with Victoriano was very difficult, since he was very unpopular because he dresses like a white. Several times, when his fellow villagers were drunk, they even wanted to murder him. Once when we visited a house together, he was heckled by some tipsy men: he was called a sluggard who does nothing the whole day but talk with the "doctores" and go for walks. Besides, they said, he thinks that he is better than the rest of the Paez because he wears "white" clothing. When Victoriano replied that in his work among the whites it would be impossible for him to wear the Calderun costume, but that in his dress he was obliged to adjust to his environment, they retorted that he went to the whites merely in order to be able to eat more meat.

/108 cont./

115 Victoriano likes to parade his outward standing of higher
156 culture openly. He possesses soap, a toothbrush, a small brush
554 for grooming his eyebrows, and perfume. He uses all these
[598] toilet articles very frequently. He is not afraid of the jealousy of his Calderun fellow-villagers; he always carries his machete /see the glossary, p. 249/ with him in order to defend himself. He wants to marry a "white" woman outside of Calderas (cf. also "The Course of a Day" /see p. 133 /).

124 /109/ In the work an attempt was made as a matter of
286 principle to observe all the activities of the Paez ourselves;
386 when this was not feasible, two different informants were questioned if possible. Two examples will show, however, that errors can creep in, even with the most careful work: I had the dyeing process for the black-dyed fabrics explained to me by the interpreter Marcos, according to whom they are first boiled with certain leaves, and then all of this is placed in black humus earth for two days. When the same question was put to Victoriano, he stated that the black coloring occurs if the fabric is placed in black humus earth for two days. At my suggestion that the fabric first had to be boiled with leaves, he delightedly agreed with me. When called to account as to why he had not told me that, he replied: "Well, you did not ask me about that; you only wanted to know how the material becomes black!"

124 One cannot speak sufficiently often and again and again
423 in different ways about the same subject, for to the Paez the necessity or the meaning of explanations for things self-evident to them is usually incomprehensible. Thus in the case described there was as little ill-intent or even mere carelessness as in the following case: In roaming over boundary lines, I inquired as to which fields were private property and which were community property. We came to the general conclusion that the lowlands were community property and the mountain slopes the private property of the man or family who had first cleared the land. I asked Victoriano several times as to whether there were any pieces of land that at present had no owner. He stated emphatically that all the land had been disposed of and there was no longer any ownerless land.

/201 cont./

461 28 Whereas the men for the most part plait straw hats when they have nothing else to do, the women are busy with spinning and making the coca bags or the fiber bags. But even at this they do not work steadily in the sense, say, that they complete first one bag, for example, or make all the preparations from the outset for weaving an article of clothing; rather, they always work a little at a time on each task. Thus, for example, first a little spinning is done, then wood is fetched, then a coca bag is worked on, and then perhaps a brief hour is spent at the loom in order to weave a few centimeters more on the carrying band of the fiber bags, if the fiber material is at hand. No preparations are made for this plaiting and weaving for a long period in advance, but rather one provides herself with wool, spins it, weaves a bit farther, and then drops the work again for a week or more. Nevertheless, the women do not have periods of out-and-out idleness, like the men.

461 574 156 [192] This doing-nothing is designated among the Paez with a word of Spanish origin pasnyándo (paseando). To be sure, one must not overdo the inactivity, that is, not "go for a walk" longer than about two weeks in succession, for otherwise one is called "alko" (dog), who runs from house to house, sniffs about everywhere, and gets his food from other people by begging. This is encouraged by the unwritten law of the Paez, to give food to a starving person, [773] wherever it may be, until he is satisfied. This is taken very seriously, not only when adults are the petitioners, but also in the case of small children, in memory of an event in prehistoric times when Chauté /202/ turned a number of persons into stones because they had not given a begging child anything to eat out of their surplus (see the myths /see p. 224/). Hence if anyone enters a house "pasnyándo," he is given something to eat. Younger, unmarried people in particular take advantage of this and sometimes do not work at all, but go to a different house every day. They inquire as to where sugar cane is being milled, help there, are given chicha to drink and food to eat, and the next day go somewhere else. Thus there are some men who have neither house nor field, but nevertheless live quite well. To be sure, the

/202 cont./

461 villagers know these "strollers," and even say that they are
574 sluggards who do not work; but if they then come at mealtime, they
●156 get their food and are usually kept there gladly, because they know how to tell stories well and amusingly, go around everywhere, and always have news to impart. If a man is married and has a wife and children, he must, of course, cultivate his own field, in order to be able to feed his family. In Calderas, however, there is even a married "stroller" who has neither a house of his own nor his own field. He lives in the house of a good-natured man whom he helps in the field and in the house. But this is regarded as an exception.

829 Thanks for favors or benefits bestowed, which, according
571 to the view of the Paez, are taken for granted, were not custom-
[576] ary originally. Today, however, thanks are often expressed with
[178] a word of Spanish origin "slopage" (Dios se lo pague), without, however, any feeling of a debt of gratitude, such as toward a
[621] wealthy person or a person in a superior position. Within the Paez communities there is, to be sure, no sociologically established authority; similarly, there is no chief or employer of a number of people who would be dependent upon him and owe him obedience. Hence no one is forced to obey anyone whom he does not like or to do anything that he may not care to do. Accordingly, there is no respect for strangers to the place or even for the priest, for when the Calderun are in their village, "on their soil," everyone regards everyone else as equal. Not the least important in this connection is the general understanding of one another by the inhabitants, their strengths and weaknesses, which makes pretense, any spurious authority simply assumed by an official, impossible. This is one reason -- perhaps the principal reason -- why the Calderun purposely do not want to have anything to do with the "blancos" and their officials. An attempt to trace this back to an awareness of their own inferiority indicates a complete misunder-
[565] standing of the character of the Paez. Their lack of social classes, and therefore the impossibility of looking down on /203/ another person, explains their general respect for one another, which is bestowed on everyone equally. Everyone grants everyone else

Everyone grants everyone else

/203 cont./

571 whatever he expects and claims for himself, quite as a matter of
829 course. This results in an entirely natural self-esteem, injury to
155 which on the part of the "blancos" is felt as very painful by the Paez.

576 Within the Paez communities the obligation of a greeting (gwéčaya) by a younger person to an older one is strictly observed. Even a "family feud" does not absolve the younger people from the respectful greeting "pétenga" (translated by "good day") toward the older people of other families, who acknowledge it with " "pé'taw." Removing one's hat at the same time is not customary.

[608] A greeting by shaking hands takes place only among members of the family or with one's godfather or godmother with the salutation "ndyósta utsméṅga" (Godparent, how are you?), during which the hat is also removed. Contemporaries greet each other with

[521] "éwča" (how are you) and reply with "éwčataw" (I am well). Generally people chat awhile when they meet, introduce the conversation with a joke, a bit of news in the village, or perhaps merely a remark about the weather.

● 156 Though the Paez may be regarded basically as an individualist, this does not hold true universally. On account of the abundantly available land, it is possible for him to isolate himself and withdraw for weeks at a time to his separate farm, but

461 nonetheless the Paez does not like to drink his chicha alone. And
476 usually friends and neighbors help, not only with housebuilding or
156 clearing, but also with sowing and lesser tasks. The labor of the individual, in instances of mutual help, is merely loaned, however, since the same persons meet again for joint aid on the corresponding tasks of a neighbor. The owner in question must also make chicha and food liberally available for each task, which makes every joint task a small feast. The actual useful effects of the communal work are slight, and, as a visitor from the outside, one has the impression that the joint eating and drinking is the primary thing, interrupted at times by only brief periods of work. On sober consideration -- which no Paez, of course, undertakes -- the joint consumption in connection with a communal task is more expensive for the individual than if each person himself over a correspondingly

/203 cont./

461 longer period of time, consumed the products he himself raised.
476 Thus the practice of communal work and the joint consumption
●156 of food and drink connected with it do not unconditionally emphasize the necessity for remote individual farms as against the compact village layout.

556 /204/ From what has been said about joint work and the
461 joint consumption associated with it, it follows that, with this
[478] method of production and consumption, practically no one can acquire great wealth, for the more a person has, the more he needs to entertain his helpers. Theoretically, however, it would be easy to become rich, if, for example, a young man would clear an additional piece of land each year for the planting of wheat or sugar cane and sell its yield for money or barter it for horses or cows. He would have to do this for several years, and then his herd of cows and mares would increase quite automatically, and with it his wealth. The actual work necessary for this
556 would be slight. Nevertheless, this is not possible in practice,
626 because, on the one hand, most of the Paez do not calculate and think so far ahead, and, on the other hand, the sufficiently intelligent and industrious ones would be subject to the dangerous envy of the other members of the community. The democratization of the Paez communities not only favors what is common, but also prevents the individualization of what is common to all -- among other things, even the common poverty.

For this reason no show is made of any possessions that one
556 might have. Significantly, only in connection with taking an inventory of livestock at the end of our work did we discover that even in Calderas there are comparatively rich people. This was not to be seen by an outsider, since these families do not stand out from the others either by dress or by way of life. Moreover, they did not tell me anything about their property -- a matter of more than ten head of cattle in the case of three families. I learned about it more or less accidentally from other
[65] people. In the case of these families, I could not see any reason for the concealment of their wealth, since they do not have any obligations or taxes or fees to pay. They likewise do not play a

/251 cont./

756 In any case, "the curers have something and are kind,"
554 said one informant. They are respected, and at entertainments they are attended to in the room where important people (síndico, capitán, gobernador, eminent old people) are received, and they are served on larger plates.

Prestige is an advantage of the curer. It is not unusual for the curer to command more devotion than the capitán of the Parcialidad.

All the curers claim to be happy in their profession, and many are grateful to their teacher for his instruction. The advantage of being a curer is to be waited on by people, to be singled out from among the others, and also to be pursued for his knowledge, says one Calderun curer. Everyone seeks him out as a good curer; many of them are regarded as priests, for people come daily to their homes to look for them. They have more power than other people.

The curer has a high social status by virtue of his functions. But for no reason other than these functions. He commands respect and recognition for services rendered. No one can treat him badly. If during a drinking bout he is offended in some way, on the following day they hasten to make amends.

756 /252/ Psychological characteristics of the Té eu. The
157 curers vary in age from 30 to 70 years old. As a rule, they
156 have eyes deeply set in the orbital sockets, a penetrating gaze, a readiness to converse and laugh, a gentle manner, not at all aggressive; they are temperate and show much self-control and sureness in their movements.

A characteristic motor habit: seated on a very low log, they give the impression of squatting; their arms rest on their knees and with their hands they stroke their temples or chin. This motor habit is prevalent among Paez men.

[177] Their clothing is typically Paez; they do not favor change,
[291] although they are friendly enough with whites. They always
[757] advise their patients not to use the remedies of the whites or they will die.

* /252 cont./

756 They are very tractable, friendly, and in our cultural
● 156 terms we would say that they have a marvelous gift for dealing
157 with people.

[886] When they grow old, they cease to perceive the signs.
[787] They believe that when a curer dies, his death is heralded
[821] by thunder. They live in permanent tension to counter the
[763] attacks of sorcerers. At the slightest symptom, they go to their kachí to divine and to take the appropriate precautions. They eat little so as not to sleep at night; they do not suffer from insomnia. They refrain from sexual relations and from ají during their treatments.

[731] They attract the entire concern of the community when epidemics occur. The true curers, those conscious of their profession, are temperate, engrossed in the fight against sickness, and of a kindly disposition. They inspire trust and do not show egoism; they readily explain the secrets of their profession.

* 756 Competition among the Té eu. Some rivalry seems to
578 exist among the curers, and the natives even list the zones of action of the curers. It is certain that a curer will boast of having overpowered another in the latter's own area of practice. A curer from Santa Rosa tells how he overpowered a colleague.

755 The informant went to give treatments to a white patient
* 756 at Alto de Atarraya. There he found another curer who was
578 giving remedies that were useless. The patient provided for them very well, with abundant chicha and aguardiente. The new arrival drank with care. His colleague had already eaten the pork, but the patient was following /253/ him. The two curers prepared to fight. The new curer took his tama and his coca and at nine at night prepared to divine. His assisting spirit told him that the other one had given false remedies. Thus he had to learn the effective remedies. He discovered that the harm had been done by a native servant girl, along with some neighbors who did not like him. At once he called in the cook in order to question her and make sure of what she had

/255 cont./

754 It is said that one who is to become a sorcerer does not need a teacher; he will discover the remedies and the evil spirits. Nevertheless, in the Parcialidad of Santa Rosa it is said that the most dangerous sorceress in the place teaches people how to do witchcraft.

754 *756 The té eu can easily become sorcerers, if they show interest in becoming familiar with their remedies. A sorcerer can be a good curer and cure people, but nevertheless he will demand better provisions.

754 *[756] As a rule, it is unusual for a té eu to be universally acknowledged as such, for many people, and the sorcerers among them, commonly designate them as nasa jihi (evil person).

[787] They may have the visions from a very early age, but the practice of sorcery begins in adulthood and is perfected with maturity. The sorcerers who are publicly acknowledged are about 35 years old, most of them being elders.

/256/ Sorcerers never show their remedies; much less is it possible to attend one of their sessions. This is a concealed activity. One knows who the sorcerers are by public identification. [124] All the information obtained about them is provided by the people and sometimes by the curer himself. Nevertheless, ●[156] none of them confesses practicing this activity; rather, on the contrary, they protest their innocence and claim to be the best persons in the community.

[623] [692] The remedies that the sorcerers possess are said to be well hidden, for if the cabildo were to find them, they would punish them irremediably.

[513] The sorcerers cast their spells at night. The natives say that they do not sleep. No sooner has night fallen than they are chewing coca and tobacco. They sleep during the day. They prefer the dark of night for performing their activities, although they do not have special days or specific hours.

The sorcerers do not introduce objects into the body (toads, hair, etc.), nor can they turn into animals.

/262 cont./

683 and finally exiled him. The sorcerer nearly died. He com-
184 plained to the Alcadía of Inzá about the brutality of the cabildo. The Alcadía had the stocks destroyed by force, in spite of the protests of the natives. The punishments of the sorcerers in the Parcialidad of San Andrés were about the same up to some 30 years ago.

683 Often, when there is a very dangerous sorcerer, the curers
754 band together in order to kill him. They call his soul, and
756 when it draws near they hit it with a stick smeared with chayuts.
774 The soul leaves with a whistling sound. When a volcano erupts,
[823] it is a sign that the devil is punishing the souls of sorcerers.

754 Psychological characteristics of the sorcerers. Broadly
157 speaking, the sorcerers are timid, resentful, aloof, with a very
156 strong persecution complex; they try to avoid contact with people, believing that they see in each of them a presumed accuser; they tend to be self-supporting; suspicious to a high degree, they roundly deny the accusations of their victims, regarding themselves furthermore as good persons, sound and inoffensive; they pretend to know nothing about remedies, and it is very difficult to obtain any information from them about sorcery. Most of them are intelligent. Endoculturally they are at odds with their own group, insofar as they embody the struggle against the influences of foreign cultures.

The nasa are convinced that no sooner has the sun gone down than the sorcerers are already at work. The most dangerous ones sleep during the day. For this reason they regard as peculiar characteristics of the sorcerers red eyes, an evasive look, aloofness, an unpleasant appearance, egoism, and suspiciousness. They look like criminals, informants say.

182 /263/ Socio-dynamic value of sorcery. Within Paez
754 society, sorcery is vital, overly active, and gravitates into all the social interstices. But, as must be evident, at all times and places it pertains to the realm of concealment. Its executors are surreptitious. They always act in the shadows.

/109 cont./

124 One day, at the sight of a freshly cleared field on the
423 highest mountain slopes, I asked a Paez working there to whom this land belonged and whether the person concerned had always owned it. He answered that he himself was the owner and that previously the parcel had been ownerless. He said that he had cleared it for himself and only recently built his house here in order to live here. In answer to my question as to whether there was any more ownerless land, he explained to me that the highest and inaccessible mountain peaks which are still covered with big trees and have never been cleared do not belong to anyone and that any Paez could clear a piece on them, which would then become his property. Later I called Victoriano to task, saying that actually there still was ownerless land. "Yes," he then answered me, "of course there is still ownerless land, but it is so poor that it has no value."

● 157 Far from their village, on the way to market, and generally in /110/ places away from home, the Paez, if they
[123] are alone or in the minority, are timid and reserved. If they
[522] are together in large numbers, however, or, even better, in their own house, they are usually quite bold and impudent and loudly made their jokes at our expense. Indeed, jocularity is a
157 prominent characteristic of the Paez. No talk, no conversation,
521 be it ever so unimportant, is begun without joking -- often of
522 an erotic nature. The importance of conducting such a light,
[134] idle conversation is shown by the fact that serious-minded girls are scarcely ever married.

123 They made fun of my wife in particular, for they found
522 it altogether ugly that she wore long pants. Numerous jokes
157 were made about this, which we, of course, did not understand, and for this reason we, in turn, had to take the initiative by making a joke which was then acknowledged gratefully and usually
609 with quick-wittedness. On the whole, respect toward strangers
522 inside their dwelling is unknown to them. In larger groups they
159 make their asides even in a strange environment, accompanied by much laughter. Since one does not understand them, one
[797] easily gets the impression that they are silly. In their own houses they also mimic the visiting mission priest by repeating

/110 cont./

609 parts of the Mass, as they have understood it, in an exaggeratedly
522 dramatic fashion. The priest has a difficult office in any case.
797 They do not understand his sermons and teachings in the church,
157 conducted in the Spanish language. If he speaks their own language, his inevitable mistakes are commented upon amid loud laughter.

123 On our first visit to Calderas, a man about 30 years old met us at the boundary of the village and asked us in a gruff tone whether we did not know that this land was only for the Paez. No white man had any business here. We should turn back, for no one wanted our visit. Marcos Antonio intervened and explained that we had only come to bring gifts to the Calderun and that we had no intention of settling down in Calderas. We would surely leave again the next day. The man let this pass and warned us upon departure not to dare try to steal any land.

[623] Even later we never obtained permission from the cabildo, the village council, to remain in the village more than a week at a time. Our reputation among the younger people of the village improved from week to week, on the one hand because we offered a cigarette to each man and each woman with whom we had an opportunity to talk, but even more because -- as we were told later -- we were friendly to everyone and always /111/ laughed.

[648] As a matter of fact, it would never occur to any of the white or mixed-colored colonists to favor a Calderun even with a glance. On the contrary, in the houses lying along the road, the dogs are trained to attack the Indios. True, these dogs are all undernourished and generally very cowardly. The Paez man need only raise his machete or a club in order to ward off the dog. We were the first whites who did something completely out of the ordinary in that we were always friendly, without any mental reservations, and always greeted them first, in their language. And this not only in Calderas, but also in Inzá and on the roads to the market. This friendliness was taken in good part on all sides. Then later, after we were able to show and to give them the first photographs of themselves, they were definitely pleased to be photographed and now and then offered us an egg or a bowl of chicha /see the glossary, p. 248/ when we photographed them.

/113 cont./

361 but rather we are /114/ concerned, almost without exception, with individual farms scattered on the slopes of the mountains, where the families live in the midst of their cultivated fields (cf. Ills. 156 and 157 /see p. 269 and 270/). The Paez is by [157] no means an unsociable person and likes to take part in the festivals, but he does not like to live closely confined in a village and to have his neighbors always around him; rather, he prefers to live quite far away from the next house, surrounded by his animals, in order to be able to go about his daily work in the fields undisturbed with his family.

423 609 Every Paez has a strong tie to "his soil," and the fear that he could be robbed of his soil and land dictates his unfriendly and forbidding attitude toward the stranger. Besides, for centuries their experiences with the whites have been too unfortunate for the Paez to be able to understand that a stranger might come for entirely unselfish reasons, merely in order to become acquainted with them and their country.

423 [342] [428] The Paez builds his house, as the family's focus and social center, only upon his own land, which he inherited from his fathers and which, through all subsequent generations, belongs to the family that first cultivated it. There is land in sufficient quantity in every family; in case of need anyone can also find ownerless, uncleared land on the highest sites of the mountain ranges.

Whereas the slopes of the mountains are private property after the initial clearing, the valley floor with the community house and the festival plaza is community land. The houses are 487 [487] connected with one another, as well as with the village plaza, by means of footpaths which are always very narrow because the Paez, even in larger numbers, never walk side by side, but always one behind the other. Originally even the connecting trails between the individual villages, the trails that had to be taken to the weekly markets in Belalcázar or Inzá, were no wider. In more recent times, however, visits on the part of secular and religious authorities made it necessary to widen the trails for riders.

31 Since there are no compact settlements among the Paez, there is also no geographical variations of the village. The church

3. Customs during the Course of Life and of a Day

182 593 [159] [114] The Paez generally give the impression of being contented human beings, and it seems that marriage and family life are better than average. Of course, the observations on this are very scanty, for, on account of the remote location of the individual dwellings, the research worker always has only a brief glimpse of family conditions at any one time. This very solitude, however, and the consciousness of greater dependence on one another within the family favors its cohesion, even as it reduces the conflict and irritation which arise through women's gossip when people live too closely on top of one another.

842 [123] Basically every family wants a great many children -- at any rate so said all the men questioned. Two Calderun women, however, /184/ confided to my wife that there was a remedy -- which they and other women, too, naturally did not use! -- that [825] would with certainty prevent conception: One must eat some of [237] the spittle of a mula (the female, infertile cross between horse and donkey), and then one would no longer have children. They said that a woman does this only when she has already given birth to a great many children. In general every girl desires a great

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

the drum-dance, in which the women sang to the accompani- 535
ment of a drum; *vito-ko*, or *fits-ko*, the stick-dance, etc.

In addition to the shells and reeds, the Indians also accom- 535
panied their dances with a kind of drum (*kimb*), consisting of a 534
long wooden trough hung by its extremities; and the *tsoits*, or rattle, a calabash containing small stones or hard canna seeds and provided with a handle.

According to Castillo the Paez had also other deities, corre- 776
sponding somewhat to the lares of the ancient Latins, 778
carved images of which were often found in the houses. The *diqi*, who were at one time priests, sorcerers, and medicine-men, [79]
lived in retirement and were considered as the keepers of the doctrines of a traditional civilizer of the nation, called *Gnekiasi*. So strong was their influence in Castillo's time that he complains rather bitterly about it, and proceeds to explain how the true God, wishing to free the Paez from such a devilish guide, simply employed a subterfuge to drown him in the Paez river, together with two of his apostles!

The belief in a future existence is indicated, as Uricoechea 825
relates, by the fact that the Indians never molested white dogs, 795
in order that they might not be bitten by them at the doors of the house beyond the grave.

There were birds and other signs of good or of evil omen. 787
A woman would never step over a leather rope stretched on the ground, but would lift it up and pass beneath. During the construction of bridges, two men constantly beat the waters to frighten away evil spirits. The death of a person was often 761
attributed to witchcraft, and he whose face bore some likeness 754
to that of the dead person was often regarded as the culprit, provided the patient in his cravings had not given the name of the supposed sorcerer. The soul of a cow whose fat had been 805
used for illumination during religious ceremonies was believed 774
to go directly to heaven: this last belief, however, must be of post-conquest origin.

Among themselves the Indians are jovial and contented. 157
The approach of the men whom we often met on the trails 533
around Huila was usually first detected by the sound of the 283

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

157 pipes they play while walking along, unless their hands are kept
283 283 busy plaiting braids of gynerium bark in the manufacture of
[663] their hats. This is the exclusive occupation of the men. Women almost invariably walk along spinning wool, their distaff under the left arm and the spindle in the left hand, while the right hand is busy at the wool.

885 The Paez maidens are fond of flowers and are very playful.
157 On one occasion I observed several of them going up the hill
481 beyond the river, in front of the church at Huila, their arms entwined about one another's necks; then they began running up the steep hill as in a contest of endurance. As they became exhausted they threw themselves on the grass, while their movements showed that they were playing and joking all the time. These children of Nature are not unpleasant to look at,
[515 except for their usual lack of cleanliness; nor are they wanting
142] in coquetry, and they are often pretty. But in the presence of
[609] strangers they are extremely bashful, doing their utmost to keep in the background.

291 The old women are generally very ugly. Their clothing con-
515 sists only of dirty rags, and their skin is covered with the filth of years.

593 Relations between the sexes, especially between husbands
562 and wives, seem to be easy and without an air of superiority on the part of the former. On the few occasions that I had to entertain these people at their houses, the women took the same interest and the same part in the proceedings as the men, which was very different from what I observed among the Central American Indians.

609 Toward strangers, and especially toward Colombians of other
186 races, the attitude of the Indians is decidedly hostile. Unless induced by the prospect of profit they will neither sell anything nor lend any service, often refusing money and accepting only articles which they especially desire. They will not allow white
[565] or black people in their homes, and at Huila they are even unwilling that the only white family living there should share the practically inexhaustible supply of fuel scattered about in the near-by forest, or have horses or cattle pasturing on the almost

[Parcialidad of Calderas]

/289 cont./

142 The Calderuno /native of Calderas/ is rather tall, with a light copper skin, straight black hair, a straight nose somewhat flattened and broad at the base, slightly prominent cheekbones, dark brown eyes reminiscent of the Mongolian eye, a broad forehead, long and robust extremities, a slightly pentagonal face; many have mustaches, and, on the whole, the
157 features are rather /290/ handsome. On the other hand, he is talkative, communicative, deeply traditionalistic, proud
[36] of himself, and has a deep love of the land. Isolated as they
[177] are from the other parcialidades by natural accidents and far removed from the urban centers of Inzá and Belalcázar, they are shy, sullen, and withdrawn with the white, stubbornly opposed to contact with him, and, as a result their institutions, have suffered less from the impact of cultural mestization.
797 Not even the very church that has worked so persistently for the
177 catechization of these tribes, especially in this century through the Lazarist missionaries active since 1905, has been able to penetrate fully into the soul of these people.

114 . I have carried out my research in this parcialidad since
773 the month of August of last year, with several interruptions.
[124] The myths and tales which I now present were gathered with patient labor after much waiting, for the natives, when questioned about these themes, nearly always reply with the word himeto ("I don't know"). There is no need to stress the importance of mythology as an institution in the so-called "primitive" cultures. Nor is it my intention to theorize on the subject. It is enough to say, in the words of Herskovits, that "mitología es como la carta constitucional de las creencias y presta sentido a la conducta ritual que se deriva de sus consagraciones /mythology is the constitutional charter of beliefs and gives meaning to the ritualistic behavior that is derived from its consecrations/" (1). The chroniclers tell

1. Herskovits, p. 409 /see the bibliography in the foreign text, p. 309/.

/191 cont./

829 while the others contend for their land and reduce the extent
665 of the parcialidad. This is what the people of Avirama, Togoima, and Lame have done. Nowadays, their relations appear to be cordial, for their political differences, at least, seem to have been obliterated.

●157 The Paez are extremely pugnacious, aggressive by nature; they are easily aroused and only with difficulty erase rancor from their minds. Their psychological characteristic seems [648] to be the explosion. History gives many authentic proofs. [669] Adverse to the Spanish yoke, destroyers of the colonial settlements, /192/ in the times of the republic they have served as instruments for blind ambitions and political revenge, and nearly all the civil uprisings have been nourished with their blood. They adjust easily to the military, guerilla, barbarian [579] spirit. The riots that have taken place in the present century are memorable: La Quintinada, La Collada, and the 28th of January, the first of which took place in 1916, the second in 1932, and the third in 1950, out of motives of racism, religion, and political rancor, respectively.

Persistence in vengeance, hair-raising and fearsome crimes, and the spilling of blood characterize many aspects of the social and political life of these Indians.

VI

Fiesteros, Albaceros, and Mayordomos

796 About three months before the celebration of the fiesta,
623 the cabildo begins to select the names of the fiesteros /fiesta leaders/ for the following year. When the candidates have been chosen, the entire cabildo goes to their home, where after much dilatory chatting they announce the authorized choice. The offer is rejected at first, but eventually the great honor is accepted.

/251 cont./

756 554 In any case, "the curers have something and are kind," said one informant. They are respected, and at entertainments they are attended to in the room where important people (síndico, capitán, gobernador, eminent old people) are received, and they are served on larger plates.

Prestige is an advantage of the curer. It is not unusual for the curer to command more devotion than the capitán of the Parcialidad.

All the curers claim to be happy in their profession, and many are grateful to their teacher for his instruction. The advantage of being a curer is to be waited on by people, to be singled out from among the others, and also to be pursued for his knowledge, says one Calderun curer. Everyone seeks him out as a good curer; many of them are regarded as priests, for people come daily to their homes to look for them. They have more power than other people.

The curer has a high social status by virtue of his functions. But for no reason other than these functions. He commands respect and recognition for services rendered. No one can treat him badly. If during a drinking bout he is offended in some way, on the following day they hasten to make amends.

756 /252/ Psychological characteristics of the Té eu. The 157 curers vary in age from 30 to 70 years old. As a rule, they 156 have eyes deeply set in the orbital sockets, a penetrating gaze, a readiness to converse and laugh, a gentle manner, not at all aggressive; they are temperate and show much self-control and sureness in their movements.

A characteristic motor habit: seated on a very low log, they give the impression of squatting; their arms rest on their knees and with their hands they stroke their temples or chin. This motor habit is prevalent among Paez men.

[177] Their clothing is typically Paez; they do not favor change, [291] although they are friendly enough with whites. They always [757] advise their patients not to use the remedies of the whites or they will die.

* /252 cont./

756 They are very tractable, friendly, and in our cultural
156 terms we would say that they have a marvelous gift for dealing
●157 with people.

When they grow old, they cease to perceive the signs.
[886] They believe that when a curer dies, his death is heralded
[787] by thunder. They live in permanent tension to counter the
[821] attacks of sorcerers. At the slightest symptom, they go to their
[763] kachí to divine and to take the appropriate precautions. They eat little so as not to sleep at night; they do not suffer from insomnia. They refrain from sexual relations and from ají during their treatments.

[731] They attract the entire concern of the community when epidemics occur. The true curers, those conscious of their profession, are temperate, engrossed in the fight against sickness, and of a kindly disposition. They inspire trust and do not show egoism; they readily explain the secrets of their profession.

* 756 Competition among the Té eu. Some rivalry seems to
578 exist among the curers, and the natives even list the zones of action of the curers. It is certain that a curer will boast of having overpowered another in the latter's own area of practice. A curer from Santa Rosa tells how he overpowered a colleague.

755 The informant went to give treatments to a white patient
* 756 at Alto de Atarraya. There he found another curer who was
578 giving remedies that were useless. The patient provided for them very well, with abundant chicha and aguardiente. The new arrival drank with care. His colleague had already eaten the pork, but the patient was following /253/ him. The two curers prepared to fight. The new curer took his tama and his coca and at nine at night prepared to divine. His assisting spirit told him that the other one had given false remedies. Thus he had to learn the effective remedies. He discovered that the harm had been done by a native servant girl, along with some neighbors who did not like him. At once he called in the cook in order to question her and make sure of what she had

/262 cont./

683 and finally exiled him. The sorcerer nearly died. He com-
184 plained to the Alcadía of Inzá about the brutality of the cabildo. The Alcadía had the stocks destroyed by force, in spite of the protests of the natives. The punishments of the sorcerers in the Parcialidad of San Andrés were about the same up to some 30 years ago.

683 Often, when there is a very dangerous sorcerer, the curers
754 band together in order to kill him. They call his soul, and
756 when it draws near they hit it with a stick smeared with chayuts.
774 The soul leaves with a whistling sound. When a volcano erupts,
[823] it is a sign that the devil is punishing the souls of sorcerers.

754 Psychological characteristics of the sorcerers. Broadly
● 157 speaking, the sorcerers are timid, resentful, aloof, with a very
156 strong persecution complex; they try to avoid contact with people, believing that they see in each of them a presumed accuser; they tend to be self-supporting; suspicious to a high degree, they roundly deny the accusations of their victims, regarding themselves furthermore as good persons, sound and inoffensive; they pretend to know nothing about remedies, and it is very difficult to obtain any information from them about sorcery. Most of them are intelligent. Endoculturally they are at odds with their own group, insofar as they embody the struggle against the influences of foreign cultures.

The nasa are convinced that no sooner has the sun gone down than the sorcerers are already at work. The most dangerous ones sleep during the day. For this reason they regard as peculiar characteristics of the sorcerers red eyes, an evasive look, aloofness, an unpleasant appearance, egoism, and suspiciousness. They look like criminals, informants say.

182 /263/ Socio-dynamic value of sorcery. Within Paez
754 society, sorcery is vital, overly active, and gravitates into all the social interstices. But, as must be evident, at all times and places it pertains to the realm of concealment. Its executors are surreptitious. They always act in the shadows.

Colombia SC1
Tierradentro

C /13 cont./
133 Negro de Narvaez, the principal rivers of Tierradentro. They
C drain into the Magdalena River, like all the rivers on the eastern
487 slope of the Central Cordillera. The principal traffic routes of
133 Tierradentro also lead to the Magdalena Valley, the most im-
C portant one leading down to the Rio Paez by way of /14/ La Plata
[632] to Neiva or Garzón. Thus, La Plata forms the center of trade and communication for this area, which economically, however, is not yet very accessible.

Even the earliest chroniclers described Tierradentro as a land of "eternal up and down." As a matter of fact, despite its excellent climate for colonization, the large number of small rivers cutting deep into the mountains represents a great obstacle
P to accessibility for communication, without which more extensive
[161] agricultural production is not profitable. The impassability is
[101] one of the reasons that the Paez Indians here, with a total number of about 25,000 persons, have maintained themselves racially pure and, in a few mountain valleys, in a relatively original state culturally.

C The climatic differences of this region lying less than
132- three degrees of latitude north of the equator are considerable, de-
133 pending on the elevation. Neiva, lying 472 meters high on the
a
[633] Magdalena River and the capital of the department of Huila, is one of the warmest cities of Colombia with an average temperature of 30°. Nevado del Huila, lying only 75 kilometers to the west in a straight line, is covered with eternal snow. In between there is an average temperature of 21° at 1,200 meters elevation
C
[361] and one of 11° at 3,000 meters. The predominant elevation of the settlements in the southern part of Tierradentro lies between 1,400 and 1,700 meters, which corresponds to a mean temperature of
C
[245] 18-20°. This is the best climate for the Colombian coffee. At
[249] the same time it is an excellent climate and elevation for the
[233] planting of sugar cane and maize and for cattle-raising, economic
P activities that only the colonists profit by in a commercial sense.
C
[648] The Paez villages lying in this climate are therefore extensively
P overrun by colonists, and broad stretches of land have been taken
[361] by them for agricultural use. Here the mountain slopes which
C

127 We know little about the other Indian cultures of southern Colombia existing at the time of the Conquista. The conquistadors had tasks other than drawing up scientific ethnographic descriptions of their cruel enemies. Nevertheless, working with subtle methods, modern ethnological and linguistic research in the old sources has produced outstanding results.

114 Our knowledge is very inadequate with regard to the Paez,
127 who, with approximately 25,000 persons, constitute the largest
[164] non-Spanish-speaking population group within Colombia, next to the Goajiro, the inhabitants of the Guajira Peninsula in the northern part of the country. The oldest dates come from
[797] Eugenio Castillo i Orosco, who, from 1735-1755, was active as a missionary in Tálaga -- often at the risk of his life, as he reports -- and wrote down a vocabulary, a grammar, and some cultural data about the Paez. This manuscript was printed in 1877. Further ethnological data are given by the Colombian general, Carlos Cuervo Marquez, who, on his extensive journeys, also traveled through the Tierradentro region from north to south and produced the first reports about its archeological cultures. The next one, in terms of time, to report on the Paez was the American ethnologist, Henri Pittier de Fábrega, who in 1906, coming out of the central part of the Cauca Valley from the northwest by way of Corinto and Toribió, spent a few days in Tacueyó and Huila. Georg Bürg, who first investigated the archeological objects of Tierradentro more thoroughly, likewise lived for a time among the Paez and gives a few ethnographic notes in his report. In his comprehensive survey of the highland tribes of southern Colombia, Gregorio Hernandez de Alba also reports about the Paez, with whom he became acquainted in connection with his own research. Graciliano Arcila Velez undertook a blood-group examination on 303 Paez. The first thorough special study of Paez-culture from the standpoint of the religious and social life was made at the time of our stay in Tierradentro by the Director of the Archeological Park of San Andrés, Segundo Bernal Villa.

/112 cont./

142 age the hair seldom becomes white. We met only one woman with slightly graying hair and an old man with a gray, sparse beard, but dark hair. The beard among men is scant. The [302] beard hair is regularly plucked (see Ills. 148 to 155 /see pp. 265-268/).

143 According to the blood-group analysis of the Paez, among the 303 individuals examined there were 88.78 per cent of blood group 0, 6.93 per cent of blood group A, and 4.29 per cent of blood group B. The blood group A+B is not represented (G. Arcila Velez, pp. 11-14).

829 The racial concept of Indian is foreign to the Paez themselves. To them "Indio" designates a cultural status. My colleague, Segundo Bernal Villa, an Indian from the region of Pasto, was designated as "blanco" because of his European clothing. And when our interpreter Victoriano bought himself "white clothing" (hat, pants, shirt, shoes) with the money he earned, he was called a "white" in his village and accordingly treated with hostility.

161 The population figures for the Paez do not seem either to increase or decrease, as far as the uncivilized Paez are con-
165 cerned, for example, in Calderas. Infant mortality comes to more
164 than 50 per cent. The most common cause of sickness is whooping cough. The health of children who survive their second year, as well as of adults, is -- considering the circumstances -- quite good. True, one scarcely sees old people over 60 (and [132] those who look that old are probably younger). The most fre- [362] quent illness of adults is tuberculosis, which claims numerous [262] victims, since the nights are very cold and the cold and wind can [273] penetrate through the light walls of the houses unhindered. More- over, no fat of any kind is commonly eaten. Another illness from which many Paez suffer, which, however, is not taken seriously, is stomach trouble caused by the drinking of brandy even during [254] infancy and the unsuitable diet in childhood. Infants are given [262] beans, cabbage, and yuca, but no milk, except mother's milk.

/312 cont./

539 when the thief again came, took down some potatoes, kindled a fire, and roasted them in it, he took out both of his eyes "out of foolishness" before he ate and laid them on one of the three hearthstones. Then the owner of the potatoes, whom the thief, of course, could not see, stepped up, saw the eyes, and kicked them into the fire, so that they burned with a bang. The thief heard the bang, to be sure, but thought to himself, how fine the potatoes are popping and sizzling!

When the thief had eaten all the potatoes, he looked for his eyes, but could not find them. He then left the house very sadly, without eyes, and set out for his own house. On the way he met a rat who was out walking there, and they started a conversation. The thief complained that he had lost his eyes and that, without eyes, it was very difficult to find them again. He begged the rat to lend him one of hers only until he had found his own eyes again. The rat lent him one, but since both of his eyes were burned, he could not, of course, find them. The man then turned himself into wind.

The rat searched for the thief of her eye for a long time, but could not find him. Her son, like his mother, also had only one eye. The son in turn had a son, and he, too, had only one eye. Since that time the descendants of this rat family have only one eye. And that is why one can still find rats today who, to be sure, have the nose, mouth, feet, skin, and ears of a rat, but only one eye or none at all; they go back to that rat who once lent one of her eyes.

/313/

105 V. Summary and Culture-historical Classification of Paez Culture

[161] [621] [177] [197] If we briefly summarize the sketch of Paez life and the elements of their culture, we find before us a democratic agricultural people of 25,000 persons, among whom no one is master and no one servant. Surrounded for centuries by Spanish culture, they have preserved their language in extensive sections of their area of settlement.

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
361 Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166 193] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17,578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

/288 cont./
583 in the church, live together for a period of indeterminate duration, explaining that /289/ the man does not have enough money at hand to marry as soon as he asks the woman, and it is necessary to work in order to obtain it.

771 Religion.--The religion of the Paez is formally Catholicism,
177 but many of their traditions are hidden in it. The principal
[796] fiestas of the natives are religious ones, which acquire true strokes of splendor. The Catholic priest is called upon for the ceremonies of baptism, marriage, and cases of death.

Chapter II

631 Calderas.--Incrusted in the very heart of Tierradentro is the
131 Parcialidad of Calderas, bounded on the north by a high ridge
133 that separates it from Chinas and Avirama; on the east, La Muralla, the very model of a fault, separates it from Avirama, just as a ridge separates it from Togoima; to the south, deep gorges and high peaks separate it from San Andrés and Togoima; to the west, the Quebrada Guacharaca divides it from the Parcialidad of Lame.

133 It is crossed from west to east by the Quebrada Kukiyú,
631 actually a river in terms of the volume and violence of its waters, whose bed is deep, enclosed, and inaccessible. Its
[423] left bank is somewhat softened by a beautiful plateau of about 20 hectares, with fertile lands, abundant waters, and on which the pueblo rises; it belongs to the community, whereas the other lands are private property guaranteed by the fact that the owner either personally cleared the montaña or inherited it from his ancestors who cleared the forest. The right bank is steep, harsh,
[161] rugged. Numerous clearings are to be seen on these sloping
[311] lands, indicating the increase in population that compels them to cultivate lands of low fertility and great danger for the laborer.

361 /295 cont./
311 strong political groupings had their principal seats at Tálaga,
643 Suin, and Avirama (3). "The place of residence of a cacique
175
[622]
[103]

3. Hernández de Alba, Gr. "The Highland Tribes of Southern Colombia," pp. 915-960.

constituted a sort of settlement or gathering place, most of which remain today as Indian pueblos and retain their names, such as Suin, Tálaga, Avirama, Togoima," Chitoquez, Cuetando, Yaquivá, Pisimbalá, and Itaibe, all of them located at the
361 temperate thermal level. It is precisely along the course of
311 the Páez River and along the middle and lower courses of its
● 161 tributaries that the Páez population is now concentrated.

13 2. Physiography. Merely a single glance at the wild geography of Tierradentro will give an idea of the pattern of life of the Páez people. The physiography of the entire course of the Páez River, from Irlanda to Itaibe, with nearly all of its tributaries, is compressed into profiled accidents. It might be said that it forms a "thermic chimney," Professor Guhl's expression. It belongs to the temperate thermal level. This is the land of the great slopes covered with natural pastures and of the short, narrow vegas with fertile soils. There are those who speak of the fertility of all the soil of Tierradentro, classifying it, consequently, as a privileged zone. The concept proves to be deceptive, because it does not take into account the physiographic factor. We find the usable vegetal layer /296/ only in the extremely narrow vegas of the rivers, ravines, and streams, and in places
13 where the topography becomes a little smoother. The left bank
241 of the Páez River, from Toez to La Plata, is usable for agricul-
[233] ture and stock-raising only with difficulty, given the brutality of the slopes. Every tributary that enters on this side is a deep ravine isolated by ridges running from northeast to southwest. On the other hand, the left bank has important vegas. It is there that plantains, manioc, sugar cane, coca, arracacha, maize, and lately coffee and guadua bamboo are grown. The soils are essentially acid, and the Gramineae grow in abundance

/296 cont./

13 and are of very good quality. The wheat and coffee from the
241 municipio of Inzá enjoy a deserved reputation in the republic for the quantity and quality of their crops.

133 The Páez River receives approximately 32 watercourses on
134 the left bank, and 17 on the right. It is easy to imagine the ruggedness of the terrain if we bear in mind the fact that each
[241] one of them forms an impassable ravine. It is also easy to imagine the magnitude of the erosion, assisted by factors of a cultural nature, such as the systematic battle against herbaceous vegetation by means of the system of annual fires. The violence of the wild waters denudes and even forms veritable rivers of stone, such as are seen at the place called Vicanenga in the municipio of Páez. The streams and torrents sometimes swell to extraordinary proportions. In 1949 the Topa torrent completely washed away its small tributary valley, on which stood the hamlet known by the name of Brisas, now Valencia, a flood which was repeated in April of this year.

241 Of course, the extent of the workable land does not keep
133 pace with the increase in population. The physiography of the
134 cold thermal level, on the other hand, spreads out and flattens
[161] a little, the horizon broadens, the patches of arboreal vegetation increase, and the plots multiply, like veritable chessboards in Mosoco, San José, and Vitoncó. Their soils nourish maize, wheat, potatoes, ullucos, nasturtium, and garlic. On the dividing lines between the plots there rise, like green walls, the plantings of cabuya.

161 3. Population density. The growth of the indigenous popu-
361 lation in general, and of the "white" one in particular, has
311 compelled the former to utilize lands increasingly more difficult, steep, /297/ and sterile, or to emigrate in search of uncultivated land. As early as the time of the Conquest we find notes on the spread of the Páez people to the western slopes of the Central Cordillera, forming such nuclei as Pitayó, Tacueyó, and San Francisco. Nowadays, we find Páez groups on the eastern slopes of the Western Cordillera in the department of Cauca, in the departments of Huila and Tolima, and in the Cauca Valley, as Páez

Agriculture and horticulture

24/ Agriculture and horticulture constitute the primary source
133 of subsistence for the Páez. It covers a wide hypsometric zone
[433] that goes from 1,000 meters (La Plata, Huila) to well beyond the contour line of 3,000 meters in altitude above sea level (Mosoco). Naturally, the species cultivated vary with the thermal level, and, consequently, the dietetic regimen. What do not vary are the methods of cultivation and, above all, the magical practices
24/ associated with them. There are also variations in the extent
134 and the type of cultivable soils. Those used the most in Tierradentro are the ones included in the temperate thermal level. We have already discussed their fertility and extent. The soils of the cold thermal level are fertile and more extensive. Thick humus layers are found in Lame, Mosoco, San José, La Troja, Irlanda, Guanacas, Turminá, and Coscuro. These are, of course, truly privileged zones. Nevertheless, the soils are not rationally utilized or conserved. The land is exploited in an exhaustive manner. A clearing will not tolerate two consecutive plantings. Thus, each year new land, new clearing, new fencing, and new burning are required. After having been harvested once, the ground is abandoned, and in the course of the years it once more becomes covered with shrubs and thickets. After seven years, more or less, the land is again cleared of its underbrush, and the same cultivated species are planted once more. In Calderas, Santa Rosa, and Togoima, maize, arracacha, frijoles, cabbages, potatoes, and sometimes peas are planted. The process described earlier is typical of these parcialidades. In Mosoco and the cold parts generally, maize, potatoes, /298/ broad beans, and frijoles are planted in the same clearing, and

222 In reality, as far as a certain type of frijole that the natives
241 call "kacha" is concerned, as well as the ground cherry, the chachafruto, fruits in general, and all the plants listed under "Other cultivated plants," with the exception of coca, the word "cultivated" is unsuitable, since they are practically in a semiwild state. The natives make use of their fruits, consumption thus being occasional and not always necessary.

133 Although it would appear that the territory of the Páez, at the
241 time of the Conquest, extended up to very close to the Magdalena
361 River, the principal nucleus of the population was located in the
[131] temperate zone and in the cold zone. The thermal levels determine
[161] the zones of cultivation. One of them goes from 1,000 to 2,000 meters and includes the entire valley of the Páez from Huila to La Plata, and the middle and lower courses of its tributaries Símbola, the river Negro de Narváez, Moras, Kukiyú, and Ullucos. Within it are located the capitals of the district, Inzá and Belalcázar, and the following native aldeas: Itaibe, Chitóquez (Ricaurte), Cuetando, Yaquivá, San Andrés de Pisimbalá, Santa Rosa, Togoima, Avirama, Chinas, Suin, Tálaga, Toez y Huila (Byla), as well as Valencia, Topa, Pedregal, and Turminá. They cultivate principally plantains, manioc, maize, sugar cane, frijoles, arracacha, coca, and coffee,

/345 cont./

427 San Andrés is the sole region of Tierradentro, as far as we
161 know, where tenant farmers are found. Although the number of persons sunk in this servitude is no higher than 100, the mere occurrence of this phenomenon already tells us of an excess of population, at least in the parcialidades of San Andrés and Santa
[131] Rosa, from which the tenant farmers came. On the other hand, the scattering of the Páez group through this very department of Cauca, the departments of Huila and Tolima, and even through
[311] the department of the Valle is well known. The colonization of the uncultivated lands in Tierradentro by the natives has been systematic and intensive during recent years. There is the utilization of ever more inaccessible lands for agriculture in the temperate thermal level. All of these are factors that clearly tell us of an excess in the Páez population.

427 Here is what a tenant farmer told us about the phenomenon
241 of tenant farming: As a tenant farmer he has the right to own a
466 house, a garden, and a clearing. The house and garden are contiguous and complementary. His garden occupies one plaza /a Colombian measure with 80 meters to the side/ more or less, and in it he has planted plantains (about 200 trees), oranges (about five trees), onions, arracacha, manioc, sugar cane, sweet potatoes, and some 200 coca trees. He has surrounded the garden with barbed wire provided by the owner in order to avoid damage by the animals of the hacienda. He can lay out his clearing on any site of the hacienda. It changes every year. In his present clearing he has planted 1,500 manioc plants; 200 of arracacha (he could not find more seed); maize; small frijoles /fríjol chiquito/ (in one month he hills the "sprigs," in two months they flower, and in three months he harvests) and large frijoles /fríjol grande/, and, finally, about two loads of sugar-
[433] cane shoots (seed). The produce of the clearing and of the garden is primarily for consumption, but if there is a surplus he may sell it to anyone, even though the owner urges him not
[249] to sell to anyone but himself. The sugar cane is milled in the
[257] /346/ sugar mill of the owner, with the subsequent use of his implements to make panela, half of what is produced being given to him.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Pasto SC17

P 175 648 P [161] Po [175] [648]

The captain was, therefore, like the aboriginal hereditary cacique, the chief of each aboriginal group.

The decrease of the native population was accelerated until, in the Province of Popayán, according to "Descripción del Reyno de Santa Fé de Bogotá," by Francisco Silvestre (1927), there were in 1789 only 64,463 inhabitants—3,603 families of Whites, 6,022 of Indians, 4,793 of freemen (Negroes), and 3,247 slaves (Negroes), who worked in the mines and haciendas and replaced the Indians, who were disappearing. When the revolution against Spain began, the various groups of Indians in this region behaved very differently, each according to the disposition previously shown. The *Pasto* followed the Spanish troops, forming a royalist unit that was difficult to conquer, whereas the *Páez* took the part of the Republic and were led by the celebrated Indian Chief, Gregorio Calambás, who was shot by Warleta, and thus became a martyr of Colombian Independence.

With the consolidation of the Republic, the laws of Colombia established reservations for the Indians, but the neglect and exploitation characteristic of the Colonial Period continued, and there were only a few missions. There has not been contemplated until now any economic, cultural, or sanitary betterment of these natives. Most of them finally have disappeared, vanquished by diseases, by economic want, which the new necessities created and contact with civilization aggravated, and by the shrinkage of their reservation lands through the ambition of those who made it a policy to break up the native communities through official subdivision of their lands.

THE CULTURE OF THE PASTO, COAIQUER, QUILLACINGA, AND POPAYANENSE

The *Pasto* or *Coaiquer*, the *Quillacinga*, and the *Popayanense* formed a culturally homogeneous group at the time of the Conquest and later experienced very similar acculturation.

SUBSISTENCE ACTIVITIES

Farming.—Subsistence was based on intensive horticulture. Each family had its own small fields and grew potatoes and other tubers, xíquimas, a grain which Cieza calls cebada, quinio or quinoa, and maize, of which there was little in *Pasto* territory but much elsewhere.

A simple, pointed stick is used today in Nariño for planting.

The historians do not mention communal work in agriculture, but probably it was carried out in the form of labor loans (minga) between individuals, as today in Nariño and Cauca. The beneficiary of help in harvesting crops has to give each helper a basketful of the produce, a form of compensation called "chindé." He is also obligated to give similar help to the others. This communal labor is more solemn when the Indians work and plant the lands of the

/15 cont./

La Plata into the Magdalena Valley. Since the construction of an auto road from La Plata to Belalcázar, there is a good road connection both to the Cauca Valley and to the Magdalena Valley. From La Plata a bus goes to Garzón in four hours and to Neiva in seven hours. At the present time both cities have twice-weekly air service to Bogotá and Neiva, besides a daily train connection with the capital of the country. It takes about ten hours by bus to go from La Plata over the Central Cordillera to Popayán. From Popayán there is daily air service to all parts of the country.

Most of the archeological sites and the most important ones lie near the small village of San Andrés, on the hilltops and ranges of the valley of the same name. The place lies about six kilometers straight north of Inzá, separated from it by the Rio Ullucus and El Aguacate range. In order to get from La Plata to San Andrés, one first takes the road toward Belalcázar up the Rio Paez to Juntas, the point of confluence of the Rio Ullucus with the Rio Paez. From Juntas one must ride horseback west into the mountains for about three hours in order to reach San Andrés. This place is a village with the same characteristics as all Paez villages, that is to say, it consists of only /16/ a church, a school, the house of the town council, and a few other houses used by merchants and by the inhabitants for religious festivals. The latter, Paez Indians and colonists, live on individual farms on the slopes of the mountains along the valleys of the small streams, in a very unfavorable distribution, to be sure, as far as the Paez are concerned: the white and mixed-colored colonists live in the fertile valleys, mainly along the river courses, where they grow coffee, maize, and sugar cane, whereas the Indios must be content with the relatively unfruitful slopes.

C /104 cont./
632 includes 15 villages with Belalcázar as the administrative seat.
[103] Belalcázar, which takes its name from the conquistador Sebastian de Belalcazar, but not altogether correctly, since the latter was unable to conquer the Tierradentro area, is at the same time the
P 162 seat of the Apostolic Prefect for Tierradentro. According to the
C 162 632 census of 1938, the population of Tierradentro, consisting of mixed-colored colonists and racially pure Indios, contains 17,578 inhabitants, distributed over Belalcázar with 13,861 and Inzá with 3,717 inhabitants. The more recent count of 1951, with a total of 25,495 inhabitants, showed a considerably larger figure, of which 15,388 fall to the municipio of Balalcazar and 10,103 to
C [114] the municipio of Inzá. A comparison of the two counts of 1938 and 1951 shows /105/ a notable error in the count in the municipio of Inzá for the year 1938 (figures cited in Bernal Villa [I], p. 285).

P 641 [162] [851] [191] Of this number about 80 per cent are natives who today are largely civilized, that is, they are baptized and speak some Spanish. Politically they, too, are basically full citizens of the country; they may vote and be drafted into military service, but
P 641 423 do not pay any taxes. In one respect, however, fortunately for them, they are regarded as "minors" before the law; in their totality they own all the landed property of Tierradentro, but
P 641 423 691 648 the individual man is not in a position to sell his land. This is supposed to keep the Paez from losing their settlement area to the whites. In practice this law is not always strictly observed, for otherwise neither the colonists nor the large landowners, who are slowly but surely pushing their pasture and agricultural lands into the territory of the natives, could be in Tierradentro. The latter cannot in fact defend themselves against this, for, due to lack of money, no one among them is in a position to complain in court. If a complaint is nevertheless made, the Indios always lose, as, for example, in Itaibe, in the southeastern part of Tierradentro, where the Spaniards began to colonize as early as 1636 and where for many years lawsuits were carried on by the Indios in vain. Moreover, no judge is able to undertake anything against a rich landowner or against the missions likewise owning land.

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive T [563] fashion with wooden pans, the workers standing up to their knees [186] in water. The Paez do not generally intermarry with the Negroes, but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 361 563 b) The Paez who north of the Rio Ullucus have settled both banks of the Rio Paez as far north as Nevado del Huila. They have in part intermarried with the white and mestizo colonist P [103] population. The /106/ places inhabited by them are: Araujo, Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

T 162 103 P 114 121 P 181 648 101 c) The pure Paez villages of Calderas, Chinas, Huila, Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez of Calderas have preserved their cultural individuality most purely. We worked primarily among them, and the present material, insofar as nothing is said to the contrary, refers to the culture of the Paez of Calderas. The Calderun, as the inhabitants of Calderas are known in the country, are by far the most unapproachable of all the Paez. They have best kept to this day the three laws of Juan Tama, the mythical hero of the Paez, which were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

/114 cont./

361 with graveyard, the community house, festival houses, and, more recently, mission station and school are the central pole, whereas the family houses are always built in other places, but on one's own land (Ills. 146-147 /see p. 264/). Sometimes 342 one erects a house merely for one harvest, that is, for half a 361 year, in the middle of his field that is to be harvested. During the work and harvest it may then happen that a Paez family will not see its neighbors for several weeks.

361 The size of the villages varies; Calderas is one of the [162] largest Paez /115/ communities and contains about 200 houses with approximately 1,000 inhabitants. Other villages, San Andrés, Santa Rosa, Lame, and others, are substantially smaller. 484 In each case it takes considerable time to cross a village, be- 361 cause this means, of course, crossing the entire valley basin in question. In the case of Calderas this is more than three hours [487] for a European on horseback. The Paez, it is true, travel over the steep short-cuts much more quickly on foot.

b) The House

342 For laying out a house one looks for a building spot as 312 close as possible to a small brook, large numbers of which flow down from the slopes of the mountains and unite at the foot of the valley floor to form the Kokiyó River (literally "maize water"). When it is impossible to lay out a house directly on a brook, the water is led from above through a small ditch past the house. This, as well as any other running water, may always be drunk. [514] It is known that the residents living above this house now and then urinate in the water, but "that does not matter at all," I was assured.

591 In principle, only one family, consisting of father, mother, [594] and children, lives in a dwelling. The married sons must build their own houses. It is customary, however, for newlyweds to go [342] on living in the house of the father for a time, until they have [476] saved enough chicha and food to feed the friends who will help them build their house. In one case, however, in the house of

/178 cont./

614 bearers of the name Guagáz, the old family whose members furnish the capitan and who numerically make up about a quarter of the village. The young men of this name do not always find their wives in Calderas. They /179/ must therefore often look for them in other villages, although in general this is preferably not done. Thus we have among the Paez exogamous kin-groups, that is, groups of persons of male descent, who, to be sure, live dispersed, but have a common festival house, and who cannot marry each other because of their same name. They lack the consciousness of being descended from the same ancestor, however. Similarly, there is neither a common kin-group chief, nor [162] special costumes, or any other common insignia. The bearers of [346] six family names, who together make up more than 60 per cent of the population, have festival houses on the village plaza, in each of which the bearers of the same name meet for the big annual festivals, Immaculada (December 8), Semana Santa (Easter), and San Juan (June 24), and eat and drink together. The other families, who have no festival house of their own, take part in the festival houses of friends' families.

[551] The six large families of Calderas are: Guagáz, Piñakuē, Petíns, Oléz, Oriága, Pechéne.

614 Within the kin groups, relatives play no role, but the god-
602 parents (padrino, madrina) do, and strict etiquette is observed with
608 respect to them. Boy or girl, man or woman who meet their god-
576 parents anywhere must kneel down to receive their blessing.

601 The kinship nomenclature is in part more differentiated than ours. The common form of address for father and child and mother and child and the differentiated address for older and younger siblings are striking. The designations for father and mother are differentiated according to whether one speaks of one's own or of foreign fathers and mothers. One's own father is táta, the foreign one néi; one's own mother is máma, the foreign one nihí. It does not matter whether a man or a woman is speaking in the following examples:

In general
842 /184 cont./every girl desires a great
[581] many children, for this is the chief requirement for being married. Moreover, the percentage of barren women -- in childless marriages,
[162] they say, the fault is always the woman's -- is not small. According to inquiries, it comes to about 10 per cent. Men generally want boys; the women, girls, in order to have help in the house-
845 hold. Twin births are rare, but they are not regarded as anything special; rather, people are happy about them as they are about other children. Deformities at birth are said not to occur; however, I saw several persons with cleft palates. They seem to be ashamed of this, for in conversations with us they always held
847 their hands over their mouths. Infanticide does not occur. To
123 inquiries about this, there was always the completely horrified counterquestion as to whether that was the case in my country.
165 Overpopulation is not to be feared, even with a larger number
[163] of children -- the average is three to four living children per family -- since infant mortality comes to more than 50 per cent.
[164] Whooping cough is the most frequent cause of death among small children.

a) Birth and Childhood

843 The parents' concern for the child begins even before birth. The husband of a pregnant woman expecting her first child must sleep with her very frequently, for otherwise the child would be very weak. In the case of subsequent children this is no longer
[783] required so often after the beginning of pregnancy. The pregnant woman may not leave the house or eat pork for two months before the birth, since this causes "pest" and she would have stomach
[822] pains; this would be very detrimental to the child. For the same reason she may not eat beans and onions, and no fish because it comes from the cold element, water, and because a pregnant woman must not become cold.

843 According to one informant, the pregnant woman retires
343 to the menstruation hut (dúyat) two to three weeks before the
124 birth. During this time her mother or another female relative cooks for the family. According to another informant, the
000 */185/ woman does not retire to the dúyat until the birth. In any

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

FORMER OCCUPANTS. "PLANOS DE INDIÓS." HUACAS

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed [692 181 descendants still live in the villages of Las Pavas and Vijes, near Cali; the "Paveños" have become inveterate legal fighters, 162] keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 Of the Jamundies I was told that they were indefatigable 114 warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town [103] of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have [135] been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. 172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
361 Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166-173] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17,578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

/320 cont./

231 chickens were not lacking. But it was impossible to obtain trust-
124 worthy information about this wealth. A mestizo trader very familiar with the region estimates that in Calderas there must be no fewer than about 350 head of cattle, a figure that is well
[162] deserving of credit. This parcialidad has approximately 150 families. In the statistical table that we present below 55 families are represented, for many of which the data are incomplete and others have an approximate value, deduced from information by third parties and from direct observation. The statistical tables for the parcialidades of Mosoco, Lame, and San Andrés correspond to reality.

233 Lands intended exclusively for pasture do not exist, with
[311] the exception of that which, on account of its rugged topography and deforestation, covered with grasses that become green again in winter, cannot be used for anything except for pasture, with the risk, of course, that the animals might wander away. In general the animals graze in the stubble, in the communal pastures, in the shade of the brush and thickets. In Calderas, for example, most of the livestock is hidden from strangers' eyes. They eat the branches and grasses that grow on lands that were once fields. In this way they grow wild and shy, but fat and exempt from disease. To catch these animals is equivalent to going on a real hunting expedition in that trained dogs participate, and 10 or 15 men outfitted with their respective lassos and suitably distributed in especially good places for lassoing, detaining, deflecting, or directing the progress of the animal being chased by the dogs. This work is done preferably on Sundays, at the special invitation of the cattleowners, either to brand the calves or to catch a cow intended for trade, sale, or slaughter. When the work is done, a good amount of chicha is consumed. Only the livestock that grazes on the communal llano is visible to strangers and relatively tame.

232 Everyone prefers females for reproduction. The males
439 are consumed, sold, or traded for young females and, rarely, for
231 other articles. Often there is a lack of breeding bulls. In such cases the cows do not calve and are regarded as sterile, a fact that is duly exploited by the white and mestizo traders in order to

propose "trades".

/337 cont./

423 communal land, since they have a right to it and anyone can do so. Those who come from elsewhere have a right to the communal land provided that they have grown up there. In Calderas there are people from Lame who own their land because they have cleared the montaña. Nowadays there are no more montañas [591] to clear, and thus persons from elsewhere cannot come in. If a [582] Calderuno marries a woman from another parcialidad, his father-in-law or brothers-in-law must give land /338/ to his wife and the spouse thus enters the community. Thus spoke the informant.

Distribution of implements, stock, and crops

121 We are basing the distribution of implements, stock, and crops on the research carried out in the parcialidades of Mosoco, Lame, San Andrés, and Calderas.

● 162 The parcialidad of Mosoco has, approximately, some 250 families with an average of 4 children; Lame, some 130 with an average of 3 children; San Andrés, some 200 with an average of 4 children; and Calderas, some 150 families with 3 children on the average also. In Mosoco we studied 25 families, or 10% of the total; in Lame, 8 or 5.3%; in San Andrés, 15 or 7.5%, and in Calderas 55 or 36.6%. In the first parcialidad listed there is one family of a mestizo and another of a white, which are equivalent to 8% of the total families investigated; in the second, two families of whites are represented, equivalent to 25% of the total families investigated; in the third, 26.6% of the total families investigated are represented by two families of whites and two families of mestizos. No family of "whites" lives in Calderas.

/338 cont./

412 Bearing in mind that of the 48 families investigated, 52%
422 are from Mosoco, 16.6% from Lame, and 31.2% from San
[162] Andrés, we can make the following deductions: The average
/339/ number of machetes owned by each family in the three parcialidades is two. This indicates the universality of this implement.

Implements for working the land are more numerous in Mosoco and Lame than in San Andrés, especially in the former, where shovels almost reach 4 and the small bars 2 per family. This is explained by the fact that in those parcialidades they do not need to clear the lands, but only raise the beds in the pastures.

The number of axes for each family in Mosoco is almost double.
[423] The reason for this is that almost all the families own land in the
[311] mountainous part called "paramo." The clearing of wooded areas is intensive in Mosoco because they still exist. In San Andrés and Lame, virgin montañas have almost disappeared.

/354 cont./

43 onions, cabbages, barley, and eggs, with which it is not possible to maintain regular trading. The Indians, without exception, buy salt and also acquire hats, shirts, trousers, machetes, shovels, bars, axes, knives, aluminum pots, cups, iron plates, spoons, candles, soap, and aguardiente. Less frequently, large and brilliantly colored kerchiefs for the children, and tweezers /pinzas/ and necklaces for the women.

439 San Andrés is a small native settlement which has been
443 inhabited by the "whites" since the settlement area was estab-
438 lished. It contains three stores that sell some merchandise,
[162] some drugs, beer, aguardiente, and bread. Two of them have gramophones. There are also two other stores, which sell chicha and aguardiente exclusively. On Wednesdays a small market is held. In front of one of the houses, peddlers and traders from other areas display their wares; on the small plaza an awning is raised by an acculturated native woman in order to sell food, and a little farther there is a stand where meat is sold. The market starts moving at dawn. The natives bring small amounts of manioc, arracacha, white cabbage, eggs, coffee, and onions, /355/ which are bought immediately by the "whites." Then the butcher starts selling meat, usually in two-pound portions, which are what the natives buy. The peddlers sell a few trinkets and commodities. At 9:00 A.M. the liquor places
[273] begin to move. At ten in the morning the market is over, and
[578] at midday and in the afternoon only drunken natives are to be
[643] seen. At those times quarrels between them are frequent, and often the natives' aggressiveness is channeled against the "whites," as they assert that they are the true owners of the land and the settlement. The natives have the habit of selling their articles (coffee, eggs) only to persons known to them, even if others can pay them better prices.

On Wednesdays there are also markets in Guasdualejo (Togoima) and Turminá; on Thursdays in Valencia, and on
[491] Saturdays in Inzá and Belalcázar. Those of Belalcázar and Valencia, because they are connected by vehicular road with La Plata (Huila), are better attended and have a larger volume of trade. Large numbers of natives from different parcialidades

/180 cont./

583 In Paris on the first of March, 1877, Esequiel Uricoechea
[175] wrote in his introduction to the Vocabulario: "Marriage in the sense in which we accept it today did not exist among the Páeces: two people lived a married life for some time and the marriage was not legalized without the previous certainty that
[192] the woman was fecund. It is natural then, that we find among the Páeces, as among the Peruvians, two verbs (imi and iyó) which indicate respectively the woman accepts the man and the man takes the woman. The woman was obliged to give clothing to the husband, and he "to provide sustenance for the family" (12).

12. Castillo y Orozdo, E. del. Vocabulario Páez-Castellano /Paez-Spanish Vocabulary/, 1877, p. XIV.

Our informants from Calderas confirm the effectiveness of this custom, some justifying it by the need of the future husband /181/ to obtain the money to pay the expenses of the wedding, others in order to "catear" /sample, find out/ if the woman is honest, a worker, and faithful, and there was no lack of those who clearly stated that this trial marriage "is customary because if the woman should turn out to be machorra /barren/ there is no marriage." When such occurs the man returns the woman to her parents without any problem standing in the way, which would not be the case if they were married by the Church, in which case the return is not possible.

●162 Our investigations concerning the frequency of the "amaño"
583 in the established families of some parcialidades of Tierradentro
595 showed the following results:
184 Calderas: 42 families (28% of the approximate total of Calderun families). 57.1% of these families practiced the amaño: 42.9% were married first by the Church.

San Andrés: 13 families (6.5% of the approximate total of San Andrés families). 92.3% were married first by the Church; 7.7% practiced the amaño.

/181 cont./

162 Lame: 8 families (6.2% of the approximate total of Lame
583 families). 87.5% were married first by the Church; 12.5% prac-
595 ticed the amaño.
184 Mosoco: 26 families (10.4% of the approximate total of families in Mosoco). 88.1% followed the Catholic law; 11.6% practiced the amaño.

Although the percentages for the parcialidades of San Andrés and Lame may not reflect fully the real situation concerning the custom owing to the paucity of data, one can clearly see the vigor that it still has in Calderas, a parcialidad less acculturated,
581 of course, than the others. Once the man is convinced of the
594 fertility of his mate, the marriage is legalized at the altar of the
[585] Catholic Church. Then the economic co-operation of the spouses, initiated at the beginning of their married life, is stabilized and gains strength, and the marriage becomes, as one of our informants remarked, an association for the "mutual benefit of the contracting parties, to serve each other, without in any way
594 being a burden to either of them." The man enlarges his clear-
462 ings in order to take care of "the sustenance of the family," plants sugar cane and coca in order to obtain chicha and narcotic for holding mingas /work parties/, in order to celebrate religious festivals, in order to "cuidar" his relatives and to relax with his friends; he hires himself out as a peon /182/ in order to acquire money and to buy shawls for his wife, wool and cloth that the woman makes into camisas for herself, her husband, and her sons, and trousers for these last, begins to build his house, if he does not have one, on the lot that his father has assigned to him, to make a home for his family. The woman, on her part, administers the products that her husband brings to her, weaves the ruana /poncho/ and kuetand-yaha (mambe pouch /a bag for the ingredients of chews/) for the husband and children, prepares the food, raises hens and pigs, and cares for her children less than three years old (13). In this manner, among the Páez, marriage,

13. For the division of activities according to sex, see our work "Economía de los Páez /Economy of the Paez/," /published in the

In general
842 /184 cont./every girl desires a great
[581] many children, for this is the chief requirement for being married. Moreover, the percentage of barren women -- in childless marriages,
[162] they say, the fault is always the woman's -- is not small. According to inquiries, it comes to about 10 per cent. Men generally want boys; the women, girls, in order to have help in the house-
845 hold. Twin births are rare, but they are not regarded as anything special; rather, people are happy about them as they are about other children. Deformities at birth are said not to occur; however, I saw several persons with cleft palates. They seem to be ashamed of this, for in conversations with us they always held
847 their hands over their mouths. Infanticide does not occur. To

[164] Whooping cough is the most frequent cause of death among small children.

a) Birth and Childhood

843 The parents' concern for the child begins even before birth. The husband of a pregnant woman expecting her first child must sleep with her very frequently, for otherwise the child would be very weak. In the case of subsequent children this is no longer
[783] required so often after the beginning of pregnancy. The pregnant woman may not leave the house or eat pork for two months before the birth, since this causes "pest" and she would have stomach
[822] pains; this would be very detrimental to the child. For the same reason she may not eat beans and onions, and no fish because it comes from the cold element, water, and because a pregnant woman must not become cold.

843 According to one informant, the pregnant woman retires
343 to the menstruation hut (dúyat) two to three weeks before the
124 birth. During this time her mother or another female relative cooks for the family. According to another informant, the
000 /185/ woman does not retire to the dúyat until the birth. In any

/101 cont./

175 648 Nineteen years later, in 1562, Domingo Lozano made a new attempt to exploit the rich silver mines of Timaná and La Plata. He was obliged to withdraw, however, only to return the next year with reinforced troops. He founded the city of San Vicente de Paez, but only two months later, in an attack by the Paez on the city founded by him, he lost his life. An auxiliary body of troops advancing in forced marches from Popayán was also completely destroyed. After this new expulsion of the conquerors, the Paez allied themselves with the Pijao, who had destroyed Neiva in 1569. Together they attacked and plundered the silver mines of the city of La Plata in 1577, killed all the inhabitants, and set fire to the houses.

As a result of these unfavorable reports, the Spanish king energetically ordered the "pacification of the province," which from 1605-1608 was carried out so successfully that finally the troops could not find any Indios to fight or houses to plunder. In 1605, after the lost battle of Itaibe, the Paez retreated to the region of their inaccessible mountains still occupied by them today. Their western neighbors, the Guanaca, allied themselves with the Spaniards, and the latter put through their territory the [997] connecting road from /102/ Popayán to Bogotá. In 1613 the Jesuits set up the first mission station and a rest station for travelers ● [164] in the town of Guanacas. In 1790 most of the Guanaca fell [731] victim to an introduced smallpox epidemic. The survivors withdrew to the present Inzá, where they were absorbed among the colonists. Nothing has remained of their language.

175 648 797 The Paez continued to defend their country against the Spaniards and against missionization and, by their sudden attacks, made the road to Bogotá never quite safe. And then in the subsequent period the Spaniards had little interest in missionizing and civilizing the Paez. After the Guanacas station, only one 648 mission was founded in Tálaga. Because of the location of the 177 individual communities, enclosed by high mountain ranges, a 175 few villages were able to remain uninfluenced by Spanish civiliza- [36] tion for quite a long time. Later the authorities supported the establishment of native self-government, the cabildo /see the

/112 cont./

142 age the hair seldom becomes white. We met only one woman with slightly graying hair and an old man with a gray, sparse
[302] beard, but dark hair. The beard among men is scant. The beard hair is regularly plucked (see Ills. 148 to 155 /see pp. 265-268/).

143 According to the blood-group analysis of the Paez, among the 303 individuals examined there were 88.78 per cent of blood group 0, 6.93 per cent of blood group A, and 4.29 per cent of blood group B. The blood group A+B is not represented (G. Arcila Velez, pp. 11-14).

829 The racial concept of Indian is foreign to the Paez themselves. To them "Indio" designates a cultural status. My colleague, Segundo Bernal Villa, an Indian from the region of Pasto, was designated as "blanco" because of his European clothing. And when our interpreter Victoriano bought himself "white clothing" (hat, pants, shirt, shoes) with the money he earned, he was called a "white" in his village and accordingly treated with hostility.

161 The population figures for the Paez do not seem either to increase or decrease, as far as the uncivilized Paez are con-
165 cerned, for example, in Calderas. Infant mortality comes to more
● 164 than 50 per cent. The most common cause of sickness is whooping cough. The health of children who survive their second year, as well as of adults, is -- considering the circumstances -- quite good. True, one scarcely sees old people over 60 (and
[132] those who look that old are probably younger). The most fre-
[362] quent illness of adults is tuberculosis, which claims numerous victims, since the nights are very cold and the cold and wind can
[262] penetrate through the light walls of the houses unhindered. More-
[273] over, no fat of any kind is commonly eaten. Another illness from which many Paez suffer, which, however, is not taken seriously, is stomach trouble caused by the drinking of brandy even during
[854] infancy and the unsuitable diet in childhood. Infants are given
[262] beans, cabbage, and yuca, but no milk, except mother's milk.

In general
842 /184 cont./every girl desires a great
[581] many children, for this is the chief requirement for being married. Moreover, the percentage of barren women -- in childless marriages,

d) Death

761 According to the belief of the Paez, death occurs chiefly
776 through the action of the evil shamans (nyic) or the evil spirits
165 ec̀, tũs, and gĕlyómp (see "Religion" /see pp. 191ff./). Included
164 here also is the not infrequent cause of death through consumption.
[262] Causes of death of children are chiefly whooping cough, as well as stomach and intestinal disorders, the latter brought about by a
[762] diet very unsuitable for children. Suicide is completely unknown.

764 The death of a member of the community is passed on from
[763] man to man by members of the family and neighbors. There is
[203] no public mourning or lamentation; upon the death of small
[765] children, people act as though they were glad, since the children are now "little angels." (Among the colonists, as well as among
[192] the Paez, the Spanish word "angelito" is used.) In former times it was customary to abandon the house when death occurred and to leave the deceased and some food in it (Castillo i Orosco, p. IX).

764 The manner of burial is the same for men, women, and
184 children; there are no social differences. A few customs in other Paez communities, however, differ from those of the Calderun. Therefore the burial of the dead in Calderas will be described first.

[177] For burial the deceased is dressed if possible in purchased,
[291] that is, "white" clothing, even if he was the poorest of the poor and had never worn such clothing. For this reason the relatives incur considerable expense, which often cannot be paid for a long time. Burial takes place the day after death. Only the feet of the deceased are washed. This work, as well as dressing the deceased, may be done by relatives or even by outsiders; they must, /196/ however, always be men, even in the case of female deceased persons. The body is taken by two men on a bier made of two tree trunks to the graveyard next to the church, where two other men, usually relatives, have already dug the grave. The latter is trapezoid-shaped, a good shoulder's breadth at head height and narrower at the foot end. Its length is determined by the size of the deceased. The direction of the grave is completely arbitrary.

SC15 Paez SC15

marriage bonds were not definitely made until experiment indicated the fecundity of the woman, and that the union was dissolved at the will of the husband if the wife proved to be barren. The same authority informs us that the wife had to give her husband the necessary clothing, while the husband provided food for the family. 581 [586] [585]

A custom mentioned by Castillo was that during menses the women spent the time sitting in small huts expressly built for that purpose, for fear of contaminating the common dwelling and of bringing disease and death to its occupants. 841

Rodriguez relates another custom in connection with childbirth and death: ". . . y siempre que pare la mujer, ó que muere alguno de su familia, desamparan la casa, dexando en ella al difunto con cantidad de bastimento y de la chicha, brebage, que beben: y á las casas donde parió la mujer, las dejan con las inmundicias de el parto, y acabadas de nacer las criatures, las laban, y se vañan sus madres, poniendose en viaje á buscar nuevo paraje para su habitacion, que siempre procuran sea en parte muy fragosa, por no ser visitados." 844

These details are confirmed by Castillo and were probably still observed in his time. As to what is done at present, and regarding the family organization in general, it is very difficult to obtain reliable information. The Indians are very jealous of their women, do not tolerate in them any intercourse with strangers, and become instantly distrustful when questioned about family matters. 152 593 609

With reference to death, Castillo differs from Rodriguez in that he states that a dying person was taken from the house, so that he did not actually die in it, and that the dwelling was destroyed by fire. He does not mention the custom of leaving food near the corpse, but states that the body was buried and a fence built around the grave. 768 763 764

Diseases

No diseases came under my observation during my stay at Huila and Tacueyó, and the Indians rather impressed me as being a healthy people. But if their vocabulary affords suffi- 164 [114]

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

164 cient testimony, they have their share of physical ailments. Besides itch (*lel*), tumors of several kinds (*lol-sek*, tonsilitis; *koii*, tumor in the groin), they have original names for smallpox (*buzgni*), which I was told often rages among them, for diarrhœa (*u-tšitš*), dysentery (*mengni*), and intermittent or malarial fevers (*ya-ya-gni* in the ancient dialect, *kni-kni-ni* in that spoken at the present day).

757 114 Of the practices and superstitions made use of in the cure of these diseases I could gain no information, but it is very probable that the Paez still have their own medicine-men.

Clothing. Personal Adornment

291 286 [231] At present the wool obtained from the numerous sheep kept by the Paez Indians plays the most important part in the clothing of both sexes. I cannot find any direct information on the fabrics used before the introduction of sheep by the Spaniards, [174 439] but it is most likely that the Paez obtained cotton from the Indians of the Cauca and Magdalena plains, the cultivation and the manufacture of which into thread must have formed one of the principal industries in the latter. I have already referred [192 174] to the great number of clay spindle-whorls found in the graves and on old dwelling sites throughout the Cauca valley. Judging by these we may feel sure that the former inhabitants were great spinners. On the other hand, the present Paez Indians still weave most of their own clothing, and there is no reason why they should not have done so formerly.

291 [177] The dress of the men consists of a pair of short trousers (*hiii*), that are evidently a concession to modern civilization. These are made of raw cotton cloth, or of imported fabrics, and reach from the waist to about the knees. Over the shoulders is worn a broad rectangular piece of white woolen homespun cloth, split in the middle in the form of a poncho so as to allow the head to pass through, and hanging free front and back. This is called *tund-atš*, i. e., 'the cloth that binds, or covers.' It is generally worn next to the skin, but sometimes a light cotton shirt, called *atš-petš*, is first put on. Over the *tund-atš* they carry on their left [276] side, hanging by straps that pass over the right shoulder, the coca

SC15 Paez SC15

easy to determine the words that form such families, and it remains for the future student to systematize and complete them. We are able, however, to give a few examples: 193 114

Kuė is indicative of smallness, fragility, and is found also in several terms referring to childhood or parental relations. Examples: 192 193

kuė	child.
a-kuė	monkey.
ala-kuė	child.
anł-kuė	nephew.
anł-tsun-kuė	grandson.
atł-kuė	nephew.
doχ-kuė	nephew.
eł-kuė	orphan (phantom's son).
ñu-kuė	uncle, father's brother.
pe-ñu-kuė	aunt, father's sister.
tuku-kuė (onomatope)	a small dove.
uesa-kuė	girl.
ues-kuė	thread.
uitła-kuė	bird.

In the following words, however, the signification of the suffix is not apparent:

ak-kuė	burial.
eiχ-ka-kuė	ant.
ia-kuė	ceremonial feather-dress.
ka-kuė	body.
imeta-kuė	dorsal spine.
ne-kuė	challenge, contest.
sa-kuė	heart of a tree.

Guė, meaning disease, is found as a suffix in a few known cases:

atła-guė	hectic fever (lit. hot-ache). [164]
buts-guė	smallpox.
iaia-guė	intermittent fever.
su-guė	a medicinal plant.

/236 cont./

755 783 Since sicknesses have a magical origin, the treatments are also magical in character. "The cleansing" is indispensable in every treatment, with its attendant remedies and movements.

165 164 Symptoms of sicknesses. Among the sicknesses clearly identifiable by the natives are smallpox and whooping cough, given their characteristic symptoms. Some of the informants, not many, to be sure, state that their children died of such sicknesses.

165 761 776 On the whole, child mortality, which is rather high, is said to be caused by, in order of frequency and in generic terms, pest, Echi, and sorcery. The cases of death by the ghost and rainbow are few.

753 776 The symptomatologies given for the sicknesses are very vague and even confused with one another. The Echi, ghost, and rainbow sting, not really the body, but the soul, leaving hairs in the body that cause fevers and sharp pains at the spot where they are found. These hairs, when placed in the palm of the hand, move as if they were alive. They differ in color: the red ones are from Kallumb, the reddish blue ones from [755] the rainbow, and the black ones from Echi. The hairs are re- [783] moved by rubbing with remedies prior to the cleansing.

/237/ It is said that the sting of pallumb /sic/ causes heaviness, lack of appetite, pains in the head and body, fever, and even insanity.

753 776 821 When the arco /literally "bow"/, called kitús, is referred to, it is nothing other than the rainbow, which comes out at any hour of the day, accompanied by a rainy drizzle, the "rainbow meow," which causes scabies (chande) in children [755] when it falls upon them; it is not harmful for adults. The curers, [789] and they alone, from their ranchos blow chewed remedies toward it, tobacco, chandur, Ñushamuanda, and yacuma [755] negua, in order to make it disappear quickly. Other people chew remedies, when they have them at hand, and rub them on their bodies. There is a general idea that the rainbow causes

/237 cont./

753 cramps in the body, and furthermore that sorcerers see it in the
776 form of a turkey impelled to peck people.
821

It seems obvious that what the Indians call Echimbe (red
753 Echi) or candelilla fina /thin glowworm/ is a firefly /luciérnaga/
825 somewhat difficult to capture and extremely fierce. They differentiate it perfectly well from the fire beetle /cocuyos (cucuyos)/. They say that it is an animal that God produced in
[755] order to harm the Christians. The curers call them and catch them in their Kachí, while other Indians, chewing coca, catch them anywhere and bring them to the curer to be buried.
[774] They believe that their fierceness is due to the fact that the
[829] souls of the Pijao are incarnated in them.

753 The symptoms of the sting of Echi are vague and imprecise and refer solely to bodily pains.

The symptoms of Pijao "dirt" are recognized by respiratory difficulties.

● 164 They differentiate perfectly well the venereal diseases,
757 which seem to be quite widespread in the acculturated parcialidades. In Calderas they are said to have spread widely among both sexes, without respect to age, and to have been treated with copper sulphate, for the remedies of the Indians were of no use. In Santa Rosa antibiotics are used. A curer in that parcialidad maintains that those diseases were brought from La Plata by wandering women and that it befell him to treat two cases: one was serious and the patient died; the second, not very advanced, he treated with yukchacha, montaña barbasco, and fisa (bitopat or bodoquero). He administered the juice for six days and subjected the patient to a diet of chicken exclusively.

755 Remedies. The remedies used by the Paez curer are
757 vegetal. As a rule they are prescribed in combination. Thus:
/238/ To clean away the ptans:

[783] Yacuma blanca, ul fiñ, ñundayuskei, shugues, chandur, guepeyuskey, chayuts.

38. Deficit compensated for by $65.00 saved in 1952, or 14.1% of the income.

511 In the statistical table of expenses, the first thing that we observe in the three parcialidades is the small amount of money spent under the headings "Drugs," "Medical Service," "Taxes," and "Education."

75 The protection of the health of adults and children is fundamental among the Páez. Child mortality has a high percentage, and parasitosis, diarrhea, and tuberculosis are almost endemic. But in Páez culture the care of the té eu (good curer) and the nasa jihi (sorcerer), the former protects people from illness and from the curses of the latter; the sorcerer with his magic powers can take people's lives. On the other hand, the té eu openly condemn the use of the drugs and the medical service of the "whites." These two institutions still enjoy great power and basically govern almost all of the institutional life of the Páez. In Mosoco seven heads of families spent small sums of money for the purchase of drugs. /The following table and illustrations appear between p. 360 and p. 361 in the original text./

[text continues on p. 108]

7:Hernández de Alba E-5,4(no date) 1946 SC15 Paez SC15

The King of Spain, receiving word of the troubles in this region, ordered Don Juan de Borja, his Governor at Santa Fé, to carry out the "pacification of the province," meaning the extermination of its inhabitants. The decisive war started in Chaparral in 1605 and ended in 1608 when a Spanish witness wrote of this territory, where the *Páez* had remained free for so many years, that the provinces "were so desolated that the troops could not find Indians to fight, houses to plunder, or roots or grain to eat, and, if some Indian remained, instead of daring to plant boldly, he sowed four handfuls of grain here, two more there in the shadows and cover of the trees . . . they went about harrassed, thin, and emaciated until life was ended, for the soldiers saw corpses of people dead of hunger or sickness at every step" (Simón, 1882–92, Septima Noticia, ch. 49, vol. 5, pp. 314–15). A document in the ecclesiastical archives of Páez, dated July 17, 1638, states that in the lands adjoining the *Páez* there lived a *Pijao* Indian named Ambrosio, who had said that Captain Andrés de Zúñiga could now well enjoy this country because there were *Pijao* but not *Páez* Indians in it and because the *Pijao* saw themselves doomed and the land had no proprietor. 175 648

The *Guanaca*, who, because their chief was an enemy of the *Páez* chief, had allied themselves with the Spaniards in order to attack the *Páez*, were the first to surrender and join a Spanish colony. The first road between Popayán and Santa Fé passed through their territory, where the Spaniards established a hostelry for traders. This district was given to the Jesuits, who established the Church of Guanacas and, later, a town of the same name. But the Indians felt another lethal force of European origin—disease which they were unable to withstand. In 1790, a smallpox epidemic so reduced them that they abandoned their town, and the few survivors retired to the narrow mesa, where the modern town of Inza is situated. Here they gradually disappeared altogether. [797] [177] [164] [731]

The *Páez* continued to resist and defend their lands against Spanish missionization, so that the road to Guanaca never became secure. The extinction of the *Pijao*, the lack of important quantities of gold in the area, and the difficulty of the terrain, which was such that the Chronicler Pedro de Aguado said "to travel through *Páez* territory is to go up and down," caused the Spaniards to abandon interest in dominating these peoples. They were content to establish the Guanacas mission, and, a little later, the parish of Tálaga. Subsequently, as these Indians, who were isolated in their high mountains, were allowed to retain their customs and beliefs without interference, they did not protest when small groups of Whites peacefully occupied certain places in their lands. 175 648 797

Thus began the true Colonial Period for those tribes which survived the wars of the Conquest. The encomienda system was inaugurated, 175 648

/112 cont./

142 age the hair seldom becomes white. We met only one woman with slightly graying hair and an old man with a gray, sparse
[302] beard, but dark hair. The beard among men is scant. The beard hair is regularly plucked (see Ills. 148 to 155 /see pp. 265-268/).

143 According to the blood-group analysis of the Paez, among the 303 individuals examined there were 88.78 per cent of blood group 0, 6.93 per cent of blood group A, and 4.29 per cent of blood group B. The blood group A+B is not represented (G. Arcila Velez, pp. 11-14).

829 The racial concept of Indian is foreign to the Paez themselves. To them "Indio" designates a cultural status. My colleague, Segundo Bernal Villa, an Indian from the region of Pasto, was designated as "blanco" because of his European clothing. And when our interpreter Victoriano bought himself "white clothing" (hat, pants, shirt, shoes) with the money he earned, he was called a "white" in his village and accordingly treated with hostility.

161 The population figures for the Paez do not seem either to increase or decrease, as far as the uncivilized Paez are con-
● 165 cerned, for example, in Calderas. Infant mortality comes to more
164 than 50 per cent. The most common cause of sickness is whooping cough. The health of children who survive their second year, as well as of adults, is -- considering the circumstances -- quite good. True, one scarcely sees old people over 60 (and
[132] those who look that old are probably younger). The most fre-
[362] quent illness of adults is tuberculosis, which claims numerous victims, since the nights are very cold and the cold and wind can
[262] penetrate through the light walls of the houses unhindered. More-
[273] over, no fat of any kind is commonly eaten. Another illness from which many Paez suffer, which, however, is not taken seriously, is stomach trouble caused by the drinking of brandy even during
[854] infancy and the unsuitable diet in childhood. Infants are given
[262] beans, cabbage, and yuca, but no milk, except mother's milk.

In general
842 /184 cont./every girl desires a great
[581] many children, for this is the chief requirement for being married. Moreover, the percentage of barren women -- in childless marriages,
[162] they say, the fault is always the woman's -- is not small. According to inquiries, it comes to about 10 per cent. Men generally want boys; the women, girls, in order to have help in the house-
845 hold. Twin births are rare, but they are not regarded as anything special; rather, people are happy about them as they are about other children. Deformities at birth are said not to occur; however, I saw several persons with cleft palates. They seem to be ashamed of this, for in conversations with us they always held
847 their hands over their mouths. Infanticide does not occur. To
123 inquiries about this, there was always the completely horrified counterquestion as to whether that was the case in my country.
● 165 Overpopulation is not to be feared, even with a larger number
[163] of children -- the average is three to four living children per family -- since infant mortality comes to more than 50 per cent.
[164] Whooping cough is the most frequent cause of death among small children.

a) Birth and Childhood

843 The parents' concern for the child begins even before birth. The husband of a pregnant woman expecting her first child must sleep with her very frequently, for otherwise the child would be very weak. In the case of subsequent children this is no longer
[783] required so often after the beginning of pregnancy. The pregnant woman may not leave the house or eat pork for two months before the birth, since this causes "pest" and she would have stomach
[822] pains; this would be very detrimental to the child. For the same reason she may not eat beans and onions, and no fish because it comes from the cold element, water, and because a pregnant woman must not become cold.

843 According to one informant, the pregnant woman retires
343 to the menstruation hut (dúyat) two to three weeks before the
124 birth. During this time her mother or another female relative cooks for the family. According to another informant, the
000 /185/ woman does not retire to the dúyat until the birth. In any

/195 cont./

d) Death

761 According to the belief of the Paez, death occurs chiefly
776 through the action of the evil shamans (nyic) or the evil spirits
165 ec, tus, and gělyómp (see "Religion" ~~/see~~ pp. 191ff./). Included
164 here also is the not infrequent cause of death through consumption.
[262] Causes of death of children are chiefly whooping cough, as well
as stomach and intestinal disorders, the latter brought about by a
[762] diet very unsuitable for children. Suicide is completely unknown.

764 The death of a member of the community is passed on from
[763] man to man by members of the family and neighbors. There is
[203] no public mourning or lamentation; upon the death of small
[765] children, people act as though they were glad, since the children
are now "little angels." (Among the colonists, as well as among
[192] the Paez, the Spanish word "angelito" is used.) In former times
it was customary to abandon the house when death occurred and
to leave the deceased and some food in it (Castillo i Orosco,
p. IX).

764 The manner of burial is the same for men, women, and
184 children; there are no social differences. A few customs in other
Paez communities, however, differ from those of the Calderun.
Therefore the burial of the dead in Calderas will be described first.

[177] For burial the deceased is dressed if possible in purchased,
[291] that is, "white" clothing, even if he was the poorest of the poor
and had never worn such clothing. For this reason the relatives
incur considerable expense, which often cannot be paid for a long
time. Burial takes place the day after death. Only the feet of the
deceased are washed. This work, as well as dressing the deceased,
may be done by relatives or even by outsiders; they must, /196/
however, always be men, even in the case of female deceased
persons. The body is taken by two men on a bier made of two
tree trunks to the graveyard next to the church, where two other
men, usually relatives, have already dug the grave. The latter
is trapezoid-shaped, a good shoulder's breadth at head height
and narrower at the foot end. Its length is determined by the size
of the deceased. The direction of the grave is completely arbitrary.

/236 cont./

755 Since sicknesses have a magical origin, the treatments are
783 also magical in character. "The cleansing" is indispensable in every treatment, with its attendant remedies and movements.

●165 Symptoms of sicknesses. Among the sicknesses clearly
164 identifiable by the natives are smallpox and whooping cough, given their characteristic symptoms. Some of the informants, not many, to be sure, state that their children died of such sicknesses.

165 On the whole, child mortality, which is rather high, is
761 said to be caused by, in order of frequency and in generic terms,
776 pest, Echi, and sorcery. The cases of death by the ghost and rainbow are few.

753 The symptomatologies given for the sicknesses are very
776 vague and even confused with one another. The Echi, ghost, and rainbow sting, not really the body, but the soul, leaving hairs in the body that cause fevers and sharp pains at the spot where they are found. These hairs, when placed in the palm of the hand, move as if they were alive. They differ in color: the red ones are from Kallumb, the reddish blue ones from
[755] the rainbow, and the black ones from Echi. The hairs are re-
[783] moved by rubbing with remedies prior to the cleansing.

/237/ It is said that the sting of pallumb /sic/ causes heaviness, lack of appetite, pains in the head and body, fever, and even insanity.

753 When the arco /literally "bow"/, called kitús, is referred
776 to, it is nothing other than the rainbow, which comes out at
821 any hour of the day, accompanied by a rainy drizzle, the "rainbow meow," which causes scabies (chande) in children

/The headings are obviously in error on this table./

38. Deficit compensated for by $65.00 saved in 1952, or 14.1% of the income.

511 In the statistical table of expenses, the first thing that we observe in the three parcialidades is the small amount of money spent under the headings "Drugs," "Medical Service," "Taxes," and "Education."

75 The protection of the health of adults and children is fundamental among the Páez. Child mortality has a high percentage,
511 [165] and parasitosis, diarrhea, and tuberculosis are almost endemic.
[164] But in Páez culture the care of the té eu (good curer) and the nasa jihi (sorcerer); the former protects people from illness and from the curses of the latter; the sorcerer with his magic powers can take people's lives. On the other hand, the té eu openly condemn the use of the drugs and the medical service of the "whites."
[182] These two institutions still enjoy great power and basically govern almost all of the institutional life of the Páez. In Mosoco seven heads of families spent small sums of money for the purchase of drugs. /The following table and illustrations appear between p. 360 and p. 361 in the original text./

The Economy of the Paez

by

Segundo Bernal Villa

/Page 292 is blank./

/293/ General observations

433 Products of the soil make up the substantive part of the Páez economy. The Indians are barely familiar with a few manual arts practiced on very rare occasions. Hunting and gathering are quite secondary, and fishing even more so. Livestock-raising, while being an activity worthy of notice for its development, and for being, in addition, the essence of the native conception of wealth, serves more for carrying out disadvantageous barter transactions with the mestizo and white populations than for deriving a profit either in cash or in kind. The Páez economy is thus a direct one, devoid of intermediaries in the functions of production and consumption. The family consumes what it produces. The articles of consumption that are acquired are few. Essentially [439] they are salt, tools, cooking utensils, and clothing. On the other hand, the products that are sold are few: coffee, laurel wax, potatoes, garlic, and coca. It should be noted that the increase in some of these products is of recent date. Páez production merely provisions and seldom leaves a surplus to maintain regular trade. Foresight for times of scarcity exists, but it is neither sufficient nor organized.

221 Working the land conditions the daily activities of the Páez family. It might be said that the vital cycles are subordinated to the agricultural cycles. Basically, the year is divided into the months of the preparation of the soil and the months of the harvest, [166] including the protection of the crops in season. They devote the [464] months that fall between the extremes of this economic cycle to minor manual activities or they emigrate to hire out as day laborers

[166]
[464]
[192]
[179]
[128]

1. Generic term with which the natives designate all those who observe the norms of western culture, without any distinction as to race. For convenience we have adopted this usage, putting the term in quotation marks.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[578] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
361 Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166] [193] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17;578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

The cultivation of potatoes on a large scale
/305 cont./ began more
244 or less two decades ago. "From 1925 to 1930 the one who
433 planted the most potatoes was Ezequiel Mulcué, who caused amazement among the people; now the least planted is 20 arrobas," says one informant. Nowadays there are natives who sow up to 200 arrobas in a year, of which only 70 are planted in the "paramo," and they yield better results than the other arrobas planted. Then, we ask, why do the people of Mosoco have their months of hunger?

262 The basic product of the Paez diet is maize. It was in
154 the past and it continues to be so in the present. Psychologi-
[198] cally, they feel completely satisfied when they have maize for consumption. Its absence causes a sensation of dietary dissatis-
[243] faction. Before the era of the potato, the cultivation of maize and wheat predominated.

461 During the months of July, August, September, and Octo-
464 ber, the natives have little work. This is why those from
166 Vitoncó, San José, Lame, and Suin go and sign up as peons on the fincas of the "whites" on the other side of the Cordillera (Popayán, Corinto, and even in the Cauca Valley). They return toward the end of the year, when the maize and wheat harvests are drawing near. The natives of Calderas, San Andrés, Santa Rosa, and Togoima go to the fincas of Inzá or La Plata. They return in October when the maize harvests are approaching. It must be said that this labor force is excellent and cheap. And for this reason very much in demand.

The natives of Mosoco have sufficient work in their own country.

Clearings /rozas/

241 The term roza is used generically for the extent of land
433 cleared, burned, cleaned, and fenced, ready for planting. It is found on every private property. It has an area of approximately one hectare. Clearings of two or more hectares are rare. An increase in production does not reflect an enlargement of the clearings, but rather their multiplication and the utilization of ever more rugged and /306/ sterile lands. The natives, to

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguex*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.

/258 cont./

754 Thus, the victims are "the most skillful, the most charitable
554 toward travelers, the friends of the whites, those who display the most friendliness among the natives, those who have much livestock, large tracts of land, good plantings." In this phrase are listed almost the full gamut of the victims of sorcery. From previous examples, we see that those who have land, animals, mental ability and manual dexterity, and good fields, the energetic numbers of the cabildo, those who take the path
[182] of transculturation, are victims of sorcery. In addition, revenge and resentment are evened up by means of sorcery.

754 It is not surprising that undesirable whites are victims of
648 sorcery. The undesirable ones are those who covet their lands. The curers, on their own initiative or supported by the cabildo, call the soul of the white at a strategic spot, capture it, whip it with pringamoza (Urticaceae) and put bad remedies on it so that it will never return to the region. They say that the white begins to feel too lazy to travel in the area and finally decides to return to his country.

[177] In parcialidades such as Calderas, where much resistance is shown against living with and contact with the white, there are some people who are such sorcerers and such enemies of the white that even in the church they leave enchanted eggs so that not even the priest will come.

754 Among the victims of sorcery are parturient women and newborn babies, when the sorcerer or other envious persons do not want a certain family to prosper.

The power of sorcerers extends not only to human beings
[433] and animals, but also to the plantings. The loss of a planting
[167] means suffering from hunger, a shortage of coca, and emi-
[464] gration of the parents to distant places in order to hire out as laborers.

In the clearing they may put enchanted eggs, salt, pubic hair, or capio maize in order that the planting be lost.

/126 cont./

433 only on the basis of knowledge about their rites, ceremonial acts, mythology, cultic preparations, or festivals of thanksgiving.
433 This is difficult in view of the great cultural poverty of the Paez,
241 but it is noteworthy that nothing connected with agriculture or
[233] with cattle-raising reveals any kind of cultic relationship.
Neither during sowing nor harvesting was I able to observe or
[224] learn of any kind of typical agricultural rites, whereas in connection with hunting, now economically unimportant, a number of precepts and prohibitions surround the hunter before and after his hunting.

a) Agriculture

243 The chief crop in the Calderun region, as among the Paez
• 191 generally, is maize, which was at the same time the most im-
114 portant cultivated plant and the basic food of the American peoples from Patagonia to Canada in pre-Colombian times. To this day the discussion about its culture-historical origin has not come to an end. Formerly Central America was regarded as the original land of its cultivation. On ethno- /127/ botanical grounds and plant-geographical investigations, K. Birket-Smith (p. 32) assumes that the original land of maize cultivation is not Central America, but northern South America, since, according to the more recent botanical discoveries, the original form of maize is believed to have been found in the form of the pod corn (Zea mays tunicata) of the Andean countries. Not to be left unmentioned are the voices which most recently have argued for an Asiatic origin of maize, as well as of cotton (Zerries, 1952, pp. 104/5).

If we compare these hypotheses about the origin of maize with the first authenticated reports about its occurrence in America, we find as the oldest date the year 1493, when Columbus had already brought maize to Europe from his first journey across the ocean. As early as 1525 maize was extensively cultivated in the fields of Andalusia (Schweinfurt, pp. 514 f).

P /134 cont./

276 Coca (ēs) is a shrub whose alkaloid leaves, containing
137 cocaine, tanning substances, and various volatile oils, were used as stimulants even before the time of the Conquista, chiefly among the natives of the Cordilleras region. Almost 200 species of it are known, most of which, namely 137, occur in America (Walger, p. 9). It flourishes almost without exception between the tropics, from Honduras to Bolivia, in a temperature that generally remains between 15 and 20 degrees. In too low a temperature the leaves are small and worthless; in too hot a climate they lose strength and content. The most favorable elevation is between 700 and 1,700 meters.

P The word coca comes from the Kechŭa /Quechua/ lan-
279 guage (coca or cuca), which, however, does not state anything
192 definite about the origin and use of the plant, for the Kechŭa-
171 speaking tribes of Ecuador are the very ones who do not use the plant (Cooper, p. 549). In the northern part of South America the designation hayo, hahiu is customary, in northeastern Peru ebee, hibia, hibio, and in the Amazon region generally, names
P like ypadu, ypatu, ipado, or batu (Bühler, p. 3344).

The first information about coca reached Europe as early
175 as 1499 through the report of the Spanish priest, Thomas Ortíz, to
276 his spiritual superiors, according to which the natives of the northern coast of South America used a plant called hayo as a means of enjoyment. The first detailed description of the cultivation and use of the plant is found in a work, printed in 1553, by Pedro de Ciéza de León, who for the first time calls attention to the fact that coca bestows strength and vigor and drives away hunger (Bühler, p. 3353).

P At the time of the Conquista, coca was known in Colombia
276 among the Cauca Valley tribes between Popayán and Cali, near
171 Ibagué in the Magdalena Valley, on the savanna of Bogotá, and
P among the tribes of the Sierra Nevada de Santa Marta. Today the
276 use of coca is officially forbidden in Colombia on account of its
C harmful effects. According to Decree No. 95 of 1938, the sale
656 of coca, except in apothecary shops and drugstores, was forbidden

Colombia SC1

P
C
/136 cont./
276 are naturally more in evidence than in the case of the use of
146 coca with good nutrition and as the only indulgence. Along
273 with improved nutrition and corresponding enlightenment, a
prohibition on brandy instead of its propagation would be more
C desirable for the health of the people than a prohibition on coca.
[651] The departments, however, draw their chief income from the
P brandy tax, whereas coca was always tax-free.

276 Tobacco (wáhi) is neither planted by the Paez nor con-
[249] sumed in large amounts, since there is generally no money
available for the purchase of tobacco or cigarettes. Both sexes,
P however, smoke gift cigarettes, and, to be sure, from child-
[755] hood, that is, from two to three years of age. The shamans
[755] in their séances and ceremonies are in the habit of chewing
cigarette tobacco along with coca, but it is always purchased.
These séances last many hours or throughout the night, during
which shamans and patients together chew this mixture uninter-
ruptedly.

P
273 Chicha (pronounced tschitscha) is one of the alcoholic
[171] beverages which, made out of various raw materials, are wide-
spread among the natives /137/ throughout South America, with
manioc chicha predominating in the forest region (Venezuela,
Brazil) and maize chicha in the Andean region (Cooper, pp.
539 f. and Map 11). Two methods of production are distin-
guished, according to whether it is a matter of raw materials
with a high sugar content (honey, sugar cane, palm sap, pine-
apple) or more starchy crops (manioc, maize). The former ferment
without the addition of saliva and need not be chewed in the
preparation; the latter need human saliva before or after cook-
P ing in order to ferment.

[137] Among the Paez chicha (mbéca) is made only from the
juice of sugar cane, a raw material that is not American, but
came from southern Asia and did not come to America until the
post-Columbian period (Maurizio, 1933, p. 75). Formerly
chicha was made out of maize, as it still is today among the
neighbors of the Paez living in higher regions (for example, the
Guambiano). The name for sugar-cane juice, nyúšayumĩ

/145 cont./

532 776 carving anywhere else or obtain an explanation anywhere (*).

* Possibly this is supposed to represent "Thunder," who, as the most important mythical figure and also as the shamans' assistant spirit, is described as a small man with the shaman staff and a triangle as a musical instrument, who displays his sexual parts.

223 Bird-hunting for the pigeon-sized tom birds is carried on by almost all Paez families with the net (ōka), as well as with the shotgun. The net is about five meters high and 20 meters wide. For this purpose a correspondingly wide breach is cut in the growth of trees or bushes on a hill or the ridge of a mountain chain, and the net fastened in the opening produced. The flushed birds, who think that there is a convenient passage at this place, fly into the net, get caught in it, and are then killed by the [237] capturers, who twist their heads. Another type of bird-catching consists of fastening a noose made of horsehair (nyákiwez; nyák = to set up, wez = string) to the twig of a tree or shrub in such a [857] way that the noose rests in a bird's nest. When the bird returns to its nest, the noose becomes entangled in its foot, and the boy -- for it is mostly boys who engage in this task of noose-setting -- 224 is able to seize the bird. Rabbits are caught in the same way with nooses, but made of agave fibers, by laying the nooses where they pass.

226 Fishing is done with hook and line at the river or with [283] poison in weirs. The fishing line (wendyánsyuts) consists of twined agave string to which are tied a metal hook and a stone as a sinker. A small worm is fastened to the hook as bait. [462] Angling is done only by men, and at twilight or at night.

226 Fishing with poisonous plants is a cultural characteristic 824 of almost all South American Indians. For this purpose a total ● 171 of more than 100 species of poisonous plants are used by them, which means that this part of the world leads all the continents in this respect (Heizer, p. 277). Among the Paez, fishing with

/146 cont./

726 In order to defend their mountain country the Paez also used
[725] large rocks which they hurled down on the attackers from the
[177] heights. They, too, however, soon succeeded in obtaining iron
[411] and iron weapons. In their battles at the time of the Conquista
they were already using swords and machetes.

411 The stone-sling plaited of agave fibers, whose manufacture
726 is described below (see under "Plaiting" /see pp. 85-86 /), is
773 of great importance mythologically in the battles with the "Pijao."
628 For geographical reasons it is the typical weapon of the American
411 mountain peoples from Tierra del Fuego to Canada, whereas the
● 171 blowgun, for similar reasons, is the typical weapon chiefly of the
Amazonas and Orinoco forest area. The simultaneous occurrence
of blowgun and sling is found all the way from Mexico to Ecuador
and in Bolivia (Friederici, 1911, pp. 71-73, Pl. 13).

411 /147/ The blowgun of the Paez consists of a single barrel and
is very simple in its construction. It is made only by men, but
[462] for bird-hunting is used almost solely by boys. To make it, one
[857] uses the thin, straight trunk of the fíza tree, the pith of which is
[223] burned out with a long iron tube about eight millimeters in di-
ameter and heated red-hot. The length of the tube is two to
three meters. No special mouthpiece is attached. As a sight a
little piece of beeswax is pasted above the mouth of the blowgun.
[824] The ball-shaped fruits of the smbák tree, which have exactly the
right caliber when green, are used as shot. The range amounts
[211] to about 20 meters. The accuracy of the shot is not great. Never-
theless, there are boys who have carved more than 20 notches
above the blowhole of the tube as a record of the birds killed.

4. Crafts and Techniques

a) Treatment of Fibers

283 The fiber material used by the Paez for plaiting, weaving,
nets, or ropes is primarily agave, cotton, or sheep wool. Agave
and cotton are ancient American fiber plants whose homeland is
probably Central America, while working with sheep wool has its
tradition in the Peruvian Highlands, in working with llama or

/147 cont./

283 alpaca wool and the wool of their wild relatives, the vicuña and guanaco.

283 824 The agave (mbāts) grows in all parts of Tierradentro, and the fibers of its fleshy, watery leaves are used for plaiting, weaving, and the making of nets and ropes. The fiber must be obtained immediately after the leaf, 1.50 meters long, is struck off the plant, since the moisture is lost very rapidly and it is then very difficult to remove the dry flesh from the fibers. For this purpose every house has a tree trunk leaning diagonally against the wall in the shadow of the roof, and a string with a small stick hangs down from the upper part of it. This is stuck crosswise into the leaf hanging tip-downward, and then the pulpy parts of the agave leaf are scraped downward rapidly with a very sharp-edged, halved bamboo tube split lengthwise, until only the long, continuous, clean fibers /148/ remain (Ills. 177 and 178 /see p.279 /). These are tied loosely around a beam to dry, until sooner or later they are spun and twisted for use.

283 [462] Men and women employ different techniques to obtain thread from the agave fibers. The men twist the thread with the hand on the upper thigh, whereas the women spin the agave fiber, like the sheep wool, into thread with the spindle. Two methods of spinning are distinguished among the South American natives, depending on the shape of the [114] spindle and the way it is held. O. Frödin and E. v. [171] Nordenskiöld call these the Bororo and the Bakaïri /Bacairi/ methods, according to their characteristic occurrence. The first method is the older culture-historically. In this case the spindle staff is symmetrical in cross-section and the whorl is generally near the lower end. In spinning, the spindle is held more or less horizontally and is placed with the lower end on a forked twig stuck into the ground or is held between the toes. The spun thread is first wound onto the shorter part below the whorl and only later wound up on the main [171] part above. The principal area of distribution of this type

/148 cont./

283 of spindle lies east of the Andes, in Mojos and in eastern Ecuador.
● 171 The Bakaïri spindle, also designated as the "Andean drop spindle," is characterized by a conical thickening at its lower end. The whorl is slipped onto the spindle staff from above and cannot slide off, since by the Bakaïri method spinning is done only in a vertical position. The upper end of the spindle is often provided with a notch or a hook. In principle the thread is formed at the upper, longer end of the spindle shaft, in other words, exactly the opposite of the Bororo spindle. The area of distribution of the Bakaïri type is a very large one; it occurs throughout the Andean area, as well as in the Venezuelan and Brazilian forest region.

283 The spindles of the Paez (wágat; as wool spindle: káswagat) and their spinning methods cannot be said to belong strictly to either the Bororo or the Bakaïri type, since they contain elements of both. The unadorned spindle shaft is uniformly about three millimeters thick, the whorl (nyít) may either be absent or is slipped on very artlessly in the form of a crudely carved, discus-
[824] shaped bone or wood disk. Not infrequently a piece of an ear of maize, a potato, or a bean pod will serve as a whorl substitute. The spindle is held in different ways. It may hang down free perpendicularly, with the tip in perpendicular position resting on a support (upper thigh), or it is held horizontally in the air or even with the lower part upward /149/ (Ills. 179 to 180 /see p. 280 /). The position of the spindle does not depend on whether agave fiber or wool is spun, but rather it seems to be
[171] arbitrary. Whereas these characteristics point to Bakaïri spinning, at least insofar as the spindle is held downward without support, the way the thread is made and its being wound temporarily on the lower, shorter part of the spindle are characteristic of Bororo spinning, although its typical fork-shaped support, with the spindle held horizontally, is absent here. Among the Paez, the spindle is worked with the right hand. The left plucks the fibers and forms the thread. The women can sit, stand, or walk during this. Insofar as it is a matter of working with sheep wool, the women are in the habit of spinning it chiefly on the way to the

/287 cont./

4. Music

533 In no area of Paez culture is poverty evident to such an ex-
535 tent as in song and dance, the predominant expressions of the character and spirit of all peoples. No peculiar dance is per-
[173] formed among the /288/ Paez, and I heard no song sung. This undoubtedly represents an impoverishment, for it may be seen
533 from the folklore that in former times there was dancing. A similar conclusion must also be drawn about the playing of very
[173] agreeable music. Their knowledge of music, however, makes it
[181] highly probable that song also existed, especially among a people that is basically jolly and constantly disposed to jest. In fact,
[581 521 522 192] it is very difficult for a girl who is slow in jocular conversation to get a husband. And to my question about the Paez word for "sing house" listed in Uricoechea, the amiable Victoriano, to his own great surprise, was immediately able to give me a special word in his language, "mẽmyat."

534 It is not possible to say with certainty which of the musical instruments used by the Paez today is an original one. The ab-
[171] sence of any kind of rattle, the outstanding instrument of the American natives, is surprising (*).

* Pittier de Fábrega (p. 325) /see the bibliography in the foreign text, p. 326/, however, mentions among the musical instruments of the Paez a rattle (tsoõts) in the form of a calabash with a handle, which was filled with small stones. Whether this may not perhaps be an instrument of the Negroes of Belalcázar is still undecided.

534 The cow horn (kǎčn) found in every house is not in the true
202 sense a musical instrument, but one for signaling. It is completely undecorated and, consisting of a horn sawed off at the tip, gives only one tone, which is produced in the same manner as the tone of a bugle or fanfare. This horn is used by the men when they come down from the mountains after a joint felling of the trees needed for housebuilding, in order to notify the village of their return.

P /291 cont./
533 properly with their instruments and simply uniformly beat sixteenths.
[177] Thus it seems that the melody is more original and hence more
534 firmly anchored in the tradition of the Paez, and that with the
C borrowing of the drum, the corresponding modern rhythm was also
533 adopted. This has been corroborated for me by an observation per-
534 taining to the music of the Negroes of Tumaco in the Colombian
[177] port city on the Pacific coast. There, among the descendants of onetime slaves, West African musical instruments with corresponding Negro designations are still in use today, among others the xylophone-like marimba and two drums, the conical konuno with skin stretched over one side and the cylindrical bass drum covered with skin on both sides, the bombo. The latter shows the same type of stretching as the Paez bass drum and is also played with two drumsticks, one of which, provided with a raw-rubber knob, is struck on the skin and the other, a simple stick, on the frame of the body of the drum.

P
533 The musicians are always men. They play the music as
[462] amateurs who learn one or another instrument because they have taken a fancy to it. The drum is the more popular instrument, whereas flutists are less numerous and primarily limited to certain families.

P
535 The dances danced today, which, by the way, not everyone
[171] masters, correspond to the Colombian bambuco, though they do not show the dexterity and lightness of movement required for that, such as is found among the Colombian rural population in other parts of the country.

P
535 By way of a note, there should be cited the dances which H.
114 Pittier de Fabrega (based on E. Castillo i Orosco) mentions for the Paez and which in some of the designations, point to an independent culture: onza-kó, /292/ "mouse dance," nwi-kó "buzzard dance," itsa-kó, puberty dance of the girls, eč-koi-kó, dance of the spirit-flute, tel-koi-kó, dance of the long flute or war dance, la-kó, dance to dedicate a house, etc.

/292 cont./

5. Folklore

*539 The present fund of tales of the Paez is neither rich nor varied. Here, too, a certain impoverishment has undoubtedly taken place, as may be seen from fragments of larger complexes of myths. Among these there are the "Story of the Woman from Whose Body Useful Plants Come Forth," stories about transformed animals and human beings, as well as stories about werejaguars. [171] The story of the ghostly human head that comes rolling by is also extraordinarily widespread in North and South American legends [176] and has a manifold lunar-mythological meaning. In contrast to this, the complete absence of typical stories about the forest spirit (gĕlyŏmp) is noteworthy, although the latter plays an important role in the religious conceptions of the Paez. Animal and transformation tales are only very dull and colorless.

114 609 *539 [887] Unfortunately, the reluctance of the Paez to communicate is particularly frustrating in the recording of the myths. It is primarily the old people who can tell stories. But they are the very ones who are particularly standoffish toward the stranger. The chroniclers and early reporters tell us nothing about the folklore of the Paez, and even the most recent travelers of the 'thirties report only the story of Juan Tama or deny that the Paez have any mythology at all.

12 609 *539 [554] The stories collected by S. Bernal Villa and by myself could surely be augmented with better acquaintance among the old people. The unpopularity of our interpreter, especially among the old people, was sometimes so great an obstacle that Victoriano had to ask suitable informants for some of the stories told about his father or uncle.

*539 The themes of the stories chiefly consist of tales about Thunder (Nos. 1-12), mostly under his names of Juan Tama, Llivan, Chauté, or Juan Chiracol. In the myths he is the first shaman and teacher of the present-day shamans (see under "Religion" /see pp. 176 ff. /) and considerably more powerful than human beings. He is not an exalted, numinous figure, however. On the contrary, people in olden days /293/ sometimes treated him quite badly, threw poisonous herbs in his lagoon,

/314 cont./

105 The clothing of the men and women covers the upper and lower body. The men's upper garment, called "ruana" in Colombia, "poncho" in Peru, is a sleeveless shirt open at the sides. It is ancient American, known both from the relief of the so-called "sun god" of Tiahuanaco and from a grave of the pre-Spanish [291] period in Arica (northern Chile) (Montell, pp. 173-183). Soon [171] after the Conquista, since the second half of the sixteenth century, this Andean article of clothing, which consists simply of a square piece of cloth with an elongated slit for the head, was distributed throughout the area of the Andean mountain cultures. Its name, "atc," among the Paez, however, has no parallel linguistically. [177] The men's trousers are clearly Spanish. The women's costume is most simple: as an upper garment to a skirt a rectangular piece of cloth is simply put crosswise over their upper bodies.

[241] From an economic point of view, field cultivation is primary. It is carried out by the men in the form of the burned-clearing system with a ten-year clearing cycle. The only field tool is the [433] digging stick. The minimal area of cultivated land for one family is about one hectare. The principal crops are maize and sugar [177] cane. The latter was not introduced until after the Conquista. The Paez word means "sweet." The Paez designation for maize, "kotc," has no parallel with the corresponding words of the Chibcha, Carib, or Aruac /Arawak/ language groups, but with Kechua /Quechua/, where maize is called "kuts" (Birket-Smith, pp. 22-30). The stimulants are coca and chicha made of sugar-cane juice. Both Paez words, ez and mbēka, respectively, have no parallels in other language groups.

105 241 There are no outstanding festivals indicative of a planter's culture or rites associated with the products of field cultivation, nor does anything indicating an agricultural rhythm of life appear in the myths and religious customs of the Paez. The mythology and ceremonial customs are remnants of a hunter's attitude of mind. It appears as though the Paez did not adopt their primitive agriculture until the time of the Conquista or shortly before, and adopted only the mechanical application of the methods of simple digging-stick farming, without the ceremonial customs associated

/315 cont./

105 "Araucanian" type (O'Neale, p. 115). In place of the shed rod we have a simple loop; in place of the heddle rod, a bundle of loops.

105 The warp threads are stretched in the form of the "false spiral warp,"
286 a mixture of the method of the continuous, circular warp with the
171 method of the terminating flat warp. This genuinely American way of stretching the warp is found among the Northwest Coast Indians as well as among the tribes of the Gran Chaco (Olson, pp. 114-121). Culture-historically H. Nevermann regards the various forms of American weaving /316/ as having originated on the basis of a native or pre-Polynesian plait-weaving. Among the Paez we find this technical stage in the plait-weaving of the carrying bands of the coca bags.

105 For dyeing, vegetable dyes are used, which dye only sheep wool, but not cotton.

Pottery is very simple. There are only hemispherical pots and bowls made with the spiral coil technique, both without any ornamentation.

The present political organization of the Paez is based on the village community. It is led by a village council (cabildo), whose members are chosen for a year from among the men of the village. The designations for the members of the cabildo and their functions are in part Spanish. In former times the leaders of the Paez were
[621] often men with shamanistic abilities. The village is not organized
[565] by either classes or occupations. No one need serve another for
[463] pay; the word and the thing are unknown to the Paez. The father
[464] of the family with his sons or brothers works his fields, and if
[476] friends or neighbors lend their help, it is compensated for by assistance in their fields.

[594] The family organization is basically the patrilineal,
[178] monogomous nuclear family, consisting of the parents and the unmarried children. Here there has probably been the least
[851] change in Paez culture. The children are given the family of the
[533] father. For her marriage the woman receives no dowry of any kind from her parents, and she keeps her maiden name. Since there are no social or financial reasons for concluding a marriage, a woman has only the merit of her personality and abilities. These are tested during a "trial year" before the actual conclusion of the marriage.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194	*epench*	is now	*pent*,	old (applied to female only).
114	*isos*	" "	*sus*,	urine.
[192]	*atamp*	" "	*taap*,	fog, cloud.

In Castillo's vocabularies *.rs* stands for *ʒ*, *z* for *ts* and *tz*, *ch* for *tš*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mis-a*, it is not; *ishc* for *its-i*, to join, to marry, etc.

II. — Word-formation

192 *Remarks.* — A few preliminary remarks as to the vocabulary
114 given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's
114 vocabulary and their orthography adapted to our own.
192 Among those words not included in Castillo's, some have
197 simply escaped him, as, for instance, a number of plant names.
174 But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 *Compound Nouns.* — The Paez language, like most of the
114 languages belonging to the Chibchan group, has suffixes indica-
[171] tive of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

/205 cont./

533 are played by a large number of people, those playing the melody (flutes) are few and usually restricted to a few families.

291/
534

533 The women do not play any musical instrument.

Secular singing is unknown; only religious songs are sung at the hours of prayer, the Mass, and the procession.

535 The dancing of the Calderas people is stylized and very similar to the Colombian bambuco. It is danced by mixed couples, separately or joined together. As a rule the dancers take on a certain air of gravity and concentration, and the onlookers follow their movements attentively. The woman always

[171]

/241/

824 The plants marked with an asterisk were identified by the
[128] Herbario Nal. Colombiano, in particular by Dr. Jesús M.
[137] Idrobo.

[127] For the others, we were guided by the work, Plantas Utiles de Colombia /Useful Plants of Colombia/, by Dr. E. Pérez Arbeláez, published by the Imprenta Nacional de Bogotá in 1947.

75 The té eu and the community. In every culture, medicine
182 performs an eminently humanitarian function. Its nature is
171 sociological. No matter what its methods may be, its purpose is to save human lives. It combats illness, but also prevents it.

75 Among the Paez, medicine cures and prevents. The
182 community and the family perform special ceremonies intended to achieve these two purposes of medicine.

755 When the pest (epidemic) has spread through the com-
*756 munity, threatening its subsistence, the authorities (cabildo)
182 invite the curer to conjure away the danger by performing the
[731] wé ká.

When the illness prevails in a single family, markedly decreasing its members, the eldest invites the curer to perform
[765] the ut ká. After every burial the people must remove the ptans
[783] from their bodies and from the house where the death occurred. The curer is the only one who can do this.

241 The first fruits of plantings made on new lands not culti-
*756 vated before cannot be consumed until the curer has performed
783 the cleansing ceremonies. Thus, it is the curer who defends
182 the family -- preservation of the species -- who purifies the
789 harvests -- preservation of the individual -- and who also defends the community, warding off by means of his conjurations
*756 the epidemics and the individuals who threaten it. In 1952,
789 before an imminent attack by subversive armed groups on the
182 Parcialidad of Santa Rosa, the curer warded it off with maní de montaña /literally, "montaña peanut"/, chewed and blown on the path by which they were to come.

?:Hernández de Alba E-5¥(no date) 1948 SC15 Paez SC15
Moguex

286 [386] blue, the fruit of the jagua palm (kii), probably *Genipa* sp. A woven fabric is made black by burying it for several days with clay and branches of a *Phyllanthus* which they call "sal."

[531] They make woolen bags by hand, using a kind of crochet technique without needles, and decorate them with rectangular and rhomboid figures. Some bags are made of hemp (fique), in which case the stitches are larger and the article has greater elasticity.

411 **Weapons.**—For weapons, the *Páez* used large, thick lances of black [824] or chonta palm, 20 to 25 palms or more long, clubs or macanas, stones [171] thrown with slings, large rocks rolled down from heights, spear throwers like those used by the *Chibcha*, and shields of jaguar, puma, or [179] bear skin. The *Páez* quickly adopted iron arms from the Spaniards, and in the last wars of the Conquest they used steel swords and knives. [172] In a recently discovered grave were copper bells, a golden breastplate, shield bars of tumbaga, a Spanish dagger, and a curved knife of the Arabian or north African type used by the conquistadors.

[223] Today the *Páez* use the club or macana, ordinary guns, machetes, knives, and, for killing birds, the blowgun.

354 **Fire making.**—Fires are generally made today with flint and steel, but some Indians use modern matches. For both heating and cook- [372] ing, the fire is made on the ground in the main house, surrounded [177] by stones which help support the pots. It is covered at night, and almost never goes out.

354 Illumination is provided not only by the fire but by candles made of wax from the wax palm and from seeds of a wild laurel. The latter 824 are cooked and pressed in a bag so that the wax drips into a half [388] calabash or pot to form a semispherical lump. It is melted to make candles with cotton wicks. The *Páez* use these themselves and also sell them, for they are superior to candles made of animal tallow. A cruder means of lighting consists of transfixing a large number of "higuerilla" seeds on a long, thin bamboo splinter. When the splinter is laid horizontally and lighted, the first seed burns strongly, after which the flame passes from seed to seed, lasting some 15 minutes and throwing a fair light a few feet around.

COMMERCE

438 Each week a market is held in the municipio or in some of the small 439 native villages (pls. 190, 191). The Indians sell vegetables, tortillas, eggs, chickens, and laurel wax, and buy salt, brown sugar, and espe- [435] cially lime (mambe) to be chewed with coca. Each product has a price in Colombian money, whether by quantity or weight. The unit [804] of weight is called an "egg," and more or less equals the weight of a chicken egg. After his few customary transactions, paid for either in [273] cash or in terms, in which the future coffee crop is mortgaged to the

600 C 491/ C 489 [494] [509] [497] C [494] C [509] La Plata into the Magdalena Valley. Since the construction of an auto road from La Plata to Belalcázar, there is a good road connection both to the Cauca Valley and to the Magdalena Valley. From La Plata a bus goes to Garzón in four hours and to Neiva in seven hours. At the present time both cities have twice-weekly air service to Bogotá and Neiva, besides a daily train connection with the capital of the country. It takes about ten hours by bus to go from La Plata over the Central Cordillera to Popayán. From Popayán there is daily air service to all parts of the country.

P C 172 489 361 P C [492] P C 361 162 C [241] Most of the archeological sites and the most important ones lie near the small village of San Andrés, on the hilltops and ranges of the valley of the same name. The place lies about six kilometers straight north of Inzá, separated from it by the Rio Ullucus and El Aguacate range. In order to get from La Plata to San Andrés, one first takes the road toward Belalcázar up the Rio Paez to Juntas, the point of confluence of the Rio Ullucus with the Rio Paez. From Juntas one must ride horseback west into the mountains for about three hours in order to reach San Andrés. This place is a village with the same characteristics as all Paez villages, that is to say, it consists of only /16/ a church, a school, the house of the town council, and a few other houses used by merchants and by the inhabitants for religious festivals. The latter, Paez Indians and colonists, live on individual farms on the slopes of the mountains along the valleys of the small streams, in a very unfavorable distribution, to be sure, as far as the Paez are concerned: the white and mixed-colored colonists live in the fertile valleys, mainly along the river courses, where they grow coffee, maize, and sugar cane, whereas the Indios must be content with the relatively unfruitful slopes.

/296 cont./

539 bent down to his mother and shouted into her ear with the voice of thunder, "Ooooh," whereupon she came back to life. And he did the same thing to his sister. Llivan then left the house in order to see how many Pijao were dead; he went as far as Togoima, holding a pair of scissors in one hand and a bag in the other, and cut off the earrings and necklaces of all the dead Pijao and gathered them up in his bag. Near Togoima he found a young Pijao who had not yet been killed sitting in a hole; he had a human leg that he was going to eat because he was hungry. "Ah," said Llivan, "you are not yet dead?" -- whereupon he hurled his lightning and killed this Pijao also.

[192] Then Llivan carried all the ornaments that he had taken off the Pijao /297/ into one of the underground prehistoric burial caves (koátkac) of the kind that the Paez do not use to bury their dead. This cave was located near a river, and after Llivan had put down the ornaments, the river rose and covered the burial site with the treasures.

Then Llivan returned to the house of his mother and said: "Now I have killed all the Pijao and none of them will ever come back. But now I can no longer live with you. Since I have killed so many Pijao, it is possible that I might kill you, too. I must therefore leave you. I bought myself a very beautiful house in the mountains and shall live alone from now on, but never die." His mother and sister both wept, but not he. Mother and sister offered to accompany him, but he declined. Then Llivan set out. His sister followed, in order to see where Llivan went, but Llivan was accompanied by the wind and therefore he went so fast that no one could follow him. The sister could only see that Llivan rose far behind into the air. Then it began to rain, and the clouds were very low, and Llivan fell down into the Hipendyk Lagoon. Thenceforth Llivan lived in the lagoon and became Thunder.

[115] Victoriano told me this detailed story after learning it from his father and his uncle. Old Celia Uriaga of Calderas told it to me in a similar way but much less completely.

C 105 Pc 197 /320 cont./ what is common in the vocabulary and structure of the language goes back to Chibcha or to a linguistically different substratum. Analogously this is true of the archeological cultures of the northern Andean area, which are also similar in many aspects, but do not go back to the Chibcha culture.

P 105 172 174 There remains the question of the ethnic relationship of the archeological Tierradentro-culture. In view of their meager material and artistic cultural possessions, the Paez were technically not capable of the manifestations of an advanced culture that exist in Tierradentro. With their strictly democratic social structure, they also lack the organization by estate needed to maintain such a culture. Even in the mythological traditions of the Paez, there is no hint of any relationship with the archeological culture. The only similarity seems to be the Paez method of burial in a niche grave; typologically, however, this is not identical with the shaft grave. In addition there is the difference of the cremation burial in the archeological culture in contrast to the skeleton burial of the entire corpse among the Paez. Moreover, the Paez are a local, relatively narrowly circumscribed tribe; the archeological culture, on the other hand, has the most extensive geographical relationships in the art (*), in the style of

> * G. Hernandez de Alba (IV) /see the bibliography in the foreign text, p. 324/ found a necklace of small sodalite figures in a grave chamber. This material is otherwise not found in Colombia. It comes from a Bolivian mine, and works of art made of it are found in Tiahuanaco as well as in Peruvian and Argentinian sites.

their stone statues, and in the method of burial in shaft graves.

Artistic relationships, however, make probable more extensive linguistic relationships than is the case for the Paez and their neighbors. From this standpoint a relatively well-developed trade may also be assumed. The disposition and present activity of the Paez, however, does not give us any support in this respect either.

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaquí/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

FORMER OCCUPANTS. "PLANOS DE INDIOS." HUACAS

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed [692 181 162] descendants still live in the villages of Las Pavas and Vijes, near Cali; the "Paveños" have become inveterate legal fighters, keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 114 Of the Jamundies I was told that they were indefatigable warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town [103] of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have [135] been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. 172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

emeralds, and other objects, were ruthlessly destroyed or scattered about, without consideration for their archeological or even for their intrinsic value. Among the pieces of pottery more commonly found are the small elegantly designed disks, or spindle-whorls, of which I procured several specimens for the United States National Museum (plate II, 1). I obtained also a minutely wrought spider, and one of the gold fish-hooks that are often met with on sand beaches along the streams. 172

The principal Jamundí relic of Agua Sucia, and which is not likely to be displaced for some time, is the so-called "Piedra de los Sacrificios," an immense block of old eruptive stone, covered with pictographs (plate III, 1). The miners and peasants living in the district believe that a definite meaning is attached to these rude drawings, and possibly some speculative archeologist will see in them more or less mystic symbolism that my lesser imagination fails to discover; for I think we must be contented with regarding them simply as the product of representative art in its infancy. A few of the glyphs are reproduced here, some giving an idea of the geometric notions of the draftsmen, while the others are rudiments of the art of designing (plate II, 1, and figures 1, 2). 172 212 [531]

On the way to Tacueyó I became acquainted for the first time with a so-called "plano de Indio," such as are found at short intervals on the mountain ridges of the entire Cauca region. While pursuing our way on the top of a very narrow spur, we suddenly found that the crest was cut across by a very deep ditch that showed every evidence of having been the work of man. Beyond this ditch the top of the hill had very probably been artificially leveled off so as to form a plane surface of about 15 meters in width and 20 meters in length. At the end of this esplanade the hill is cut by another ditch, identical with the first. The distance between the two ditches is very much greater than the length of the esplanade, amounting to more than 100 meters. 172

According to all indications, the level space was the site of an Indian house, and that part of the hill between the ditches is generally found to be full of graves, those on the house site 172 361

172 containing, as a rule, gold objects and pieces of superior pottery.
361 We observed many of these "planos de Indios" on the road between Corinto and Tacueyó, their situation corresponding ex-

172
212

FIG. 2. — Pictographs on the "Piedra de los Sacrificios."

172 actly with what we know of the present habits of isolation of
361 the Paez Indians. The number of graves at each site does not however seem to agree with the former custom of these Indians
[844 of abandoning a house as soon as a birth or a death had taken
768] place in it.

As a very good example of the altitude at which the former

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

inhabitants of these valleys established their residences, I may mention that the highest "plano" on the cordillera was found at about 3,300 meters at El Alto de las Cruces, one of the spurs of the Páramo de Buena Vista, the limit of the forest being here

172 361

172
212
531

at about 3,600 meters. The greatest altitude of the abodes of the present Indians scarcely exceeds 2,600 meters.

172
361

While on this subject I shall mention an explanation of the "planos" as it was given by one of our Indians. "In old days,"

173
202
205

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

173 he said, "the caciques or chieftains, had their messages trans-
202 mitted from valley to valley by means of runners who were
205 stationed at short intervals along the main roads. Each runner kept himself in readiness to start on the arrival of a message, thus insuring rapid transmission." As the "planos" and also the old trails are found on almost every ridge, it is difficult enough to judge of the value of this explanation; but, if I am not mistaken, such a system of communication existed without doubt at a short distance southward among the Incas of Ecuador and Peru, and perhaps extended into the Cauca valley.

172 On our return from Huila, while traveling between Toribió and Tacueyó, I noticed on the left an isolated hill with a part of its ridge separated from the rest by a deep cross-cut, evidently artificial. The top of the separated part looked in the distance as if also isolated by a ditch. My friend, Mr Emile Bizot, a mining engineer of wide experience in these parts, informs me that this is a common feature of the hilly district formerly inhabited by the natives, and that the enclosed surface always contains numerous graves (plate III, 2).

172 The high peaks of the most rugged districts of Tierra
532 Adentro are often crowned by isolated *huacas*, which are especially sought by treasure-hunters. At Tacueyó we had the opportunity of admiring a set of gold objects found in such graves and of which we made the photograph reproduced in plate II, 2. The frogs are of a type quite distinct from those with which I became familiar in Costa Rica. The representative of a human being recalls certain Chibchan idols, or, according to Mr W. E. Safford, Kitšua amulets. As to the thirteen remaining pieces of gold, quite thin and almost uniform in shape, they are perfectly new to me.

Former and Present Distribution

131 According to Father Rodriguez[1] the Paez, or Paós, Indians
114 lived on the summit and slopes of the *Cordillera de Guanacas*,
133 "sierra muy fria que llaman el Páramo de las Papas," a defini-

[1] P. Manuel Rodriguez, *El Marañon y Amazonas. Historia de los descubrimientos, entradas y reducciones de Naciones*, Madrid, 1684.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

164 cient testimony, they have their share of physical ailments. Besides itch (*lel*), tumors of several kinds (*lol-sek*, tonsilitis; *koii*, tumor in the groin), they have original names for smallpox (*hnzgni*), which I was told often rages among them, for diarrhœa (*n-tsitš*), dysentery (*mengni*), and intermittent or malarial fevers (*ya-ya-gni* in the ancient dialect, *kni-kni-ni* in that spoken at the present day).

757 Of the practices and superstitions made use of in the cure of
114 these diseases I could gain no information, but it is very probable that the Paez still have their own medicine-men.

Clothing. Personal Adornment

291 At present the wool obtained from the numerous sheep kept
286 by the Paez Indians plays the most important part in the cloth-
[231] ing of both sexes. I cannot find any direct information on the fabrics used before the introduction of sheep by the Spaniards,
[174 but it is most likely that the Paez obtained cotton from the In-
439] dians of the Cauca and Magdalena plains, the cultivation and the manufacture of which into thread must have formed one of the principal industries in the latter. I have already referred
[192 to the great number of clay spindle-whorls found in the graves
174] and on old dwelling sites throughout the Cauca valley. Judging by these we may feel sure that the former inhabitants were great spinners. On the other hand, the present Paez Indians still weave most of their own clothing, and there is no reason why they should not have done so formerly.

291 The dress of the men consists of a pair of short trousers (*hiii*),
[177] that are evidently a concession to modern civilization. These are made of raw cotton cloth, or of imported fabrics, and reach from the waist to about the knees. Over the shoulders is worn a broad rectangular piece of white woolen homespun cloth, split in the middle in the form of a poncho so as to allow the head to pass through, and hanging free front and back. This is called *tund-atš*, i. e., 'the cloth that binds, or covers.' It is generally worn next to the skin, but sometimes a light cotton shirt, called *atš-petš*, is first put on. Over the *tund-atš* they carry on their left
[276 side, hanging by straps that pass over the right shoulder, the coca

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

They represent the primitive type of
habitation, the agglomerations being the result of the efforts of 342 [177]
the missionaries.

The villages are generally in the open grazing districts at the 361
bottom of the valleys, on side plateaus, or on broad ridges. They are not compact in the common sense of the word, but consist of isolated groups of houses, the approximate common center of which is often indicated by the whitewashed thatch-roofed church (plate v).

The walls of the permanent houses are made of a kind of 342
bajareque, i. e., a skeleton of canes filled in with clay. In the 353
better homes the interior is divided into two or more rooms, usually very small, with a hearth in the middle; but oftener [354]
there are no interior partitions, the dwelling consisting of a single square apartment. In every case that came under my [356]
observation the interior was very untidy.

The Indians openly objected to our entering their houses, 352
hence I could gain only casual glimpses of their domiciles, the 123
furnishing of which seems to be an imitation of that of the 177
dwellings of the few Spanish people living among them or in the immediate neighborhood.

Outside the houses they generally have a cane-crusher of 407
primitive type, with horizontal smooth cylinders moved by means of levers at each end. A loom and a grinding stone are 286
also seen occasionally under an adjacent shelter (plates IV,[1] and VI).[2] 412

There may often be seen, either about or inside the house, 415
very large jars used as receptacles in the elaboration of the chicha. These utensils seem to be almost the only survival of the ancient earthenware industry. The smaller pottery vessels which were seen occasionally had been taken from old graves. [192]

Each group of houses, in which several generations of a 351
single family dwell, is surrounded by a small enclosed field, [592]
planted with sugar-cane, plantains, oranges and other fruits, and greens and roots of daily use. The garden enclosure is formed by a ditch, inside of which is a wooden fence or a stone wall, the latter often crowned by a hedge of maguey (*Furcræa*), [247]
lechero (*Euphorbia*), borrachero (*Solanum*), and other bushes.

/178 cont./

several leagues around were supplied for a long time with the salt extracted from the three salt deposits that still exist in Segovia. Across from these and on the other side of the Ullucos, in Vivorá, another salt deposit was also exploited.

At the confluence of the small stream called El Escaño and the Pisimbalá, on the right bank of the latter and at the foot of the ridge of Aguacate, the Archeological Park of /179/ Tierradentro, a branch of the Instituto Colombiano de Antropología, is located on an alluvial terrace covering an area of two hectares. Founded some 15 years ago, it is in charge of the care and conservation of the archeological monuments, which have been known to the scientific world since 1936, but to which reference was made as early as around the penultimate decade of the last century, when Dr. Carlos Cuervo Márquez carried out his explorations through the "lands of the Paez and much of the Nevado del Huila." Subterranean necropolises with columns, colonnades and niches, black and red geometric painting on a white background, statuary very similar to the Augustinian, ceramics and metalwork are the principal exponents of this culture hardly known in descriptive form.

The Archeological Park of Tierradentro has served as the center of operations for the scientific expeditions which the national government has sponsored, fostered, and supported during the last 15 years.

II

Over the Zigzags of the Road

In order to travel on winding roads one needs horses resistant to fatigue; a dashing spirit must yield to a solemn step, firm tread, and steady pace.

P /298 cont./

245 Guadua bamboo thrives in the temperate valleys. It is of excellent quality. In most cases it serves as shade for the coffee. Its increase would redound in obvious benefits.

P 249 /299/ In spite of the fact that plantings of coca are pro-
C [249] scribed by Colombian law, it is cultivated for consumption at
[656] almost every home, and in some parcialidades there are numerous
P [435] plantings for commercial purposes. The value of the leaf is high. A pound is quoted at three pesos.

Pc 313 Sawmills are found in Coscuro, Toez, the Símbola River,
Pc [785] and the Salado stream. But this is almost exclusively an industry of the "whites." Only in San Andrés and Mosoco was it possible to see native sawyers. There is no reforestation.

P 241 In a large part of the parcialidades of San Andrés, Calderas,
● 172 Lame, Mosoco, and Vitoncó, and the entire valley of the Páez
137 River, the clearings seem to have been done in quite remote times. There are no forests, but remnants are found along the crests and ridges that separate the valleys and in the windings where the human foot does not venture to tread. The cliffs are covered with uniform savanna vegetation.

P 172 In many parcialidades there are archeological remains be-
241 longing to an unknown civilization earlier than that of the Páez.
P [783] The lands where these elements are found are utilized without any qualms. But when the plantings are in a "new clearing," the natives take the precaution of performing the required purifications before beginning to consume the crops, in order to avoid the "Pijao" plague which might happen if the crops had been in contact with the archeological remains, "pijaos" in the expression of the natives.

P 245 The cultivation of fruit trees is not very widespread, in spite of the fact that up to not very long ago Inzá enjoyed the reputation of being the producer of peaches and apples of very good quality. Nowadays they are cultivated for commercial purposes in Vitoncó, La Troja, and El Cabuyo, where true orchards of these trees are maintained with care. The fruits are splendid and are harvested during the first three months of the

7:Hernández de Alba E-5y (no date) 1946 SC15 Paez SC15

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

121 A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

131 The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

[3] For the languages, see especially Jijón y Caamaño, 1940-41; Castillo i Orozco, 1878; and Castellví, 1934. For ethnology, see Douay, 1900; Pittier de Fábrega, 1907; Ortiz, 1938; Guerra F., 1942; Jijón y Caamaño, 1936-38 Otero, 1938; Albís, 1934. See also Languages, pp. 921-922.

Hernández de Alba E-5#(no date) 1948 SC15 Paez SC15
Pasto SC17

distinct people. The present city of Pasto was founded in *Quillacinga* territory in the valley of Atris, which was occupied by several small groups: the *Isancales*, *Paguanes*, *Zacuampues*, *Chorros* (Velasco, 1841–44, 2:153), *Mocondino*, *Bejendino*, *Buyzaco*, *Guajansangua*, *Mocozonduque*, *Guacuanquer*, and *Macaramata* (Cieza, 1932, ch. 33). *Quillacinga* territory extended from the frontier of the *Pasto* on the west, i. e., the Guáitara River, eastward to the mountain ridges from which flow the Caquetá and Putumayo Rivers. Its northern and northeastern limits are the high páramo of the Letrero and the sources of the Cauca River. Recent investigations show that it extends south to the district of Puerres (Guerra, 1942). (See also Ortiz, this volume, p. 911.)

Popayanense.—North of the *Quillacinga* in the province of the *Popayanense*, which is well delimited by the Cauca River valley and by the first spurs of the Cordillera Oriental and Cordillera Central, were numerous peoples who had the same general culture, although some of the first historians differentiate them. These tribes, which may collectively be called *Popayanense*, perhaps included the *Puracé*. The many small groups so lacked political unity, however, that Cieza said "That there were no men among them who were feared," i. e., they lacked chiefs.

Coconuco, Moguex, and Páez.—In the hills and small valleys of the eastern slopes of the Cordillera Central were groups of distinctive and strongly organized people. The *Coconuco*, the *Moguex* (*Guambía*), and the *Páez* lived on the eastern slope of the Cordillera, and the *Guamza* (*Guamsa*), *Malausa*, *Polindara*, *Palaces*, *Tembio*, *Colaza*, *Zotara*, and *Guachicone* on the western slope of the Cordillera (Cieza, 1932, ch. 32). Linguistically and culturally,[7] these tribes were very homogeneous. There were three important subgroups: (1) the *Coconuco*, *Cotara* (*Zotara*), and *Colaza;* (2) the *Moguex* (*Guambía*), *Totoró*, and *Polindara;* (3) the *Páez*, with groups on both slopes of the Cordillera Central. (See also Lehmann, this volume, p. 969.)

Andaquí and neighboring tribes.—The *Andaquí* lived in the mountains from the source of the Magdalena River to near Timaná and south to the high ridges which form the watershed between the upper Magdalena River and the Fragua and upper Caquetá Rivers (Velasco in Ternaux Compans, 1840, pp. 167–68; Pérez, 1862). This zone contains the important archeological remains known as San Agustín (Arroyo, 1907). The territory of the *Yalcón* (*Cambi*) was between the headwaters of the Río de la Plata and the Magdalena River (Simón, 1882–92, vol. 4, Noticia cuarta, ch. iii). The *Timaná* were found by the conquistadors to the southeast of this region, between the Guarapas and Magdalena Rivers centering around Timaná (Velasco, in Ternaux Compans, 1840, 3:26). The *Páez* lived to the north of the

[7] Jijón y Caamaño, 1938–39, 2:186; Otero, 1939.

?Hernández de Alba E-5,4(no date) 1948 SC15 Paez SC15
Moguex

286 [386] blue, the fruit of the jagua palm (kii), probably *Genipa* sp. A woven fabric is made black by burying it for several days with clay and branches of a *Phyllanthus* which they call "sal."

[531] They make woolen bags by hand, using a kind of crochet technique without needles, and decorate them with rectangular and rhomboid figures. Some bags are made of hemp (fique), in which case the stitches are larger and the article has greater elasticity.

411 **Weapons.**—For weapons, the *Páez* used large, thick lances of black [824] or chonta palm, 20 to 25 palms or more long, clubs or macanas, stones [171] thrown with slings, large rocks rolled down from heights, spear throwers like those used by the *Chibcha*, and shields of jaguar, puma, or [179] bear skin. The *Páez* quickly adopted iron arms from the Spaniards, and in the last wars of the Conquest they used steel swords and knives. [172] In a recently discovered grave were copper bells, a golden breastplate, shield bars of tumbaga, a Spanish dagger, and a curved knife of the Arabian or north African type used by the conquistadors.

[223] Today the *Páez* use the club or macana, ordinary guns, machetes, knives, and, for killing birds, the blowgun.

354 **Fire making.**—Fires are generally made today with flint and steel, but some Indians use modern matches. For both heating and cook- [372] ing, the fire is made on the ground in the main house, surrounded [177] by stones which help support the pots. It is covered at night, and almost never goes out.

354 Illumination is provided not only by the fire but by candles made of wax from the wax palm and from seeds of a wild laurel. The latter 824 are cooked and pressed in a bag so that the wax drips into a half [388] calabash or pot to form a semispherical lump. It is melted to make candles with cotton wicks. The *Páez* use these themselves and also sell them, for they are superior to candles made of animal tallow. A cruder means of lighting consists of transfixing a large number of "higuerilla" seeds on a long, thin bamboo splinter. When the splinter is laid horizontally and lighted, the first seed burns strongly, after which the flame passes from seed to seed, lasting some 15 minutes and throwing a fair light a few feet around.

COMMERCE

438 Each week a market is held in the municipio or in some of the small 439 native villages (pls. 190, 191). The Indians sell vegetables, tortillas, eggs, chickens, and laurel wax, and buy salt, brown sugar, and espe- [435] cially lime (mambe) to be chewed with coca. Each product has a price in Colombian money, whether by quantity or weight. The unit [804] of weight is called an "egg," and more or less equals the weight of a [273] chicken egg. After his few customary transactions, paid for either in cash or in terms, in which the future coffee crop is mortgaged to the

C /18 cont./
172 discovery value of the objects brought to light, the landowners
656 often have them dug up by guaqueros and sold for their own
423 benefit. Digging for spoils on the part of the guaqueros is, of course, forbidden by the law mentioned. Since, however, the archeological sites are almost never in the vicinity of cities or police stations, this uncontrollable digging is practiced even today in large parts of the country, to the detriment of the science of archeology.

C The excavation sites belonging to the park lie within sight
172 of the administration building. The other sites are often to be
484 reached only by very narrow and steep paths. For example, in
487 order to reach El /19/ Canadá, one travels on horseback for an
C [492] hour. It takes just as long to climb on foot the Filo de El Aguacate, to which the detour on horseback takes more than twice as long. At least the same amount of time, one to three hours, is also generally required for the trip from one village to another.

C The sharply fissured, steeply rising mountains around the
133 archeological park represent the typical panorama of the
172 Tierradentro region (Ills. 5-9 /see pp. 261-263/). The archeological sites with the grave chambers are always on heights, the simpler ones on the peaks of the highest ridges, the largest and
C most splendid ones on leveled-off hilltops below these. One has
133 the best view of the valley of San Andrés from its western end,
361 the Yokaichí ridge, beyond which the valley of Kokiyó, with the village of Calderas, begins. From here one has a broad view as far as the Dondotá ridge, which borders the towns of Suin and Chinas. To the north the Chíndava Mountains border the village of Togóima. Looking eastward in the direction of our ascent, the houses of Supón lie directly below us, then comes the village of San Andrés, then about two kilometers downstream the administrative building for the park, and about two kilometers below
C the park the point Cruzero, from which the road from San Andrés
133 to Juntas branches off in the direction of Inzá. Still farther east,
P [823] forming the imposing background of this mountainous landscape,
[776] lie the towns of Pedregál and Turminá, and behind them the
[173]

Colombia SC1
Tierradentro

C /19 cont./
133 dome of "Picacho des Trueno," the mountain of thunder and
D lightning, in which the Paez of San Andrés believe that the
[823] thunder lives and in which -- in the opinion of some Indios --
[776] the Paez, after the destruction of the city of La Plata (1577),
[173] hid the captured gold and silver, the bells and figures of saints
C of the old Spanish silver city devastated by them.

126 My own archeological research in the Tierradentro region
172 includes an inventory of the archeological objects, as well as
114 prehistoric excavations within the sites of the Alto de San Andrés, the Filo de El Aguacate, El Canadá, and Segovia. For the inventory, exact outline and sectional drawings of the various grave types were first of all undertaken. The photographs of the grave chambers /not reproduced for the translation/ show all the types of decoration that occur. Furthermore, the statues present in the Tierradentro region, as well as the types of ceramics, are completely illustrated /not reproduced for the translation/. The excavations include intact grave-chambers not yet opened by pirate diggers, with the first completely preserved burial urns of the Tierradentro culture of the chambered graves.

C /20/ In the description and numbering of the grave cham-
172 bers the numbering used after the establishment of the park was changed. On the Alto de San Andrés today this is the reverse of what it was formerly, since the entrance of the now fenced-in area lies in the direction of the San Andrés River. The present grave chamber No. 1 corresponds to the No. 12 of G. Hernandez de Alba and J. Perez de Barradas. In Segovia, too, the numbering of the grave chambers has changed. The only chambers published thus far, Nos. H. 1 and H 2 of G. Hernandez de Alba, or Nos. 1 and 2 of J. Perez de Barradas, now lie farthest from the entrance and correspond to Nos. 35 and 38. The designations of a few of the sites were also changed. The archeological site "Necropolis de San Andrés" is now officially called "Alto de San Andrés," the "Loma Alta de San Andrés" is now "Filo de El Aguacate," and the "Parte alta del potrero de las Huacas" is now "El Duende." /The remainder of p. 20 and pp. 21-96 are omitted in the translation./

/287 cont./

4. Music

533 In no area of Paez culture is poverty evident to such an ex-
535 tent as in song and dance, the predominant expressions of the character and spirit of all peoples. No peculiar dance is per-
[173] formed among the /288/ Paez, and I heard no song sung. This undoubtedly represents an impoverishment, for it may be seen
533 from the folklore that in former times there was dancing. A similar conclusion must also be drawn about the playing of very
[173] agreeable music. Their knowledge of music, however, makes it
[181] highly probable that song also existed, especially among a people
[581 521 522 192] that is basically jolly and constantly disposed to jest. In fact, it is very difficult for a girl who is slow in jocular conversation to get a husband. And to my question about the Paez word for "sing house" listed in Uricoechea, the amiable Victoriano, to his own great surprise, was immediately able to give me a special word in his language, "mẽmyat."

534 It is not possible to say with certainty which of the musical
[171] instruments used by the Paez today is an original one. The absence of any kind of rattle, the outstanding instrument of the American natives, is surprising (*).

* Pittier de Fábrega (p. 325) /see the bibliography in the foreign text, p. 326/, however, mentions among the musical instruments of the Paez a rattle (tsoóts) in the form of a calabash with a handle, which was filled with small stones. Whether this may not perhaps be an instrument of the Negroes of Belalcázar is still undecided.

534 The cow horn (kǎčn) found in every house is not in the true
202 sense a musical instrument, but one for signaling. It is completely undecorated and, consisting of a horn sawed off at the tip, gives only one tone, which is produced in the same manner as the tone of a bugle or fanfare. This horn is used by the men when they come down from the mountains after a joint felling of the trees needed for housebuilding, in order to notify the village of their return.

/290 cont./

534 is wound around the entire body of the drum. A string with a small piece of wood as a rattle device is stretched across the lower skin. The method of construction of the drum and the bass drum [184] is the same in Calderas. A drum in Santa Rosa differs in that each of the stretchers, upper and lower, consists of a switch used double, with the edges of the drum skin clamped in between (Fig. 37 /see p. 258 /). The measurements of the small drum are 16 centimeters in height and 22 centimeters in diameter, those of the bass drum 40 centimeters in height and about 60 centimeters in diameter.

533 In playing the music, for which no text is (any longer) known, the drum and the bass drum beat the same rhythm, but in a different manner. The drum is beaten on the skin with two drumsticks, which are simply two ordinary, inarticulated pieces of wood. The bass drum is beaten with one hand with a regular drumstick consisting of a stick with a wrapping of cloth, while the other hand beats against the frame with a little stick. In three-quarter time, the principal kind of time, the bass drum is beaten with the drumstick in one hand, the first and third quarter regularly and the second quarter in eighths. The other hand beats afterwards with the other stick on the frame.

533 Whether this Paez rhythm is original or was taken over with
● 173 the drum cannot be determined with certainty. According to the tradition of the Paez, as told in the story "The Paez with the Ax," the Pijao women in former times, when as yet /291/ there were no drums, beat out the rhythm on their breasts with their hands during the dances. We may assume that this was also in part the case
533 among the earlier Paez. According to E. Castillo i Orosco, the
[175] Paez formerly used hanging chichacanoas /chicha troughs/ as drums
[534] (kwimb). They consisted of hollowed-out tree trunks and during the kwimbkó dance were beaten by all the men together, while the women sang. The rhythm beaten on the drums at the present time, however, seems to be less firmly anchored than the melody. They
[797] are so fond of the latter that they do not sing hymns at the Mass in
[177] the mission church, but play the customary melodies on the same instruments, albeit disproportionately slower. The drum and the bass lose the beat in doing this; they do not know how to begin

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

inhabitants of these valleys established their residences, I may 172
mention that the highest "plano" on the cordillera was found 361
at about 3,300 meters at El Alto de las Cruces, one of the spurs of the Páramo de Buena Vista, the limit of the forest being here

172
212
531

FIG. 2.—Geometrical figures on the "Piedra de los Sacrificios."

at about 3,600 meters. The greatest altitude of the abodes of 172
the present Indians scarcely exceeds 2,600 meters. 361

While on this subject I shall mention an explanation of the 173
"planos" as it was given by one of our Indians. "In old days," 202
205

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

173 he said, "the caciques or chieftains, had their messages trans-
202 mitted from valley to valley by means of runners who were
205 stationed at short intervals along the main roads. Each runner kept himself in readiness to start on the arrival of a message, thus insuring rapid transmission." As the "planos" and also the old trails are found on almost every ridge, it is difficult enough to judge of the value of this explanation; but, if I am not mistaken, such a system of communication existed without doubt at a short distance southward among the Incas of Ecuador and Peru, and perhaps extended into the Cauca valley.

172 On our return from Huila, while traveling between Toribío and Tacueyó, I noticed on the left an isolated hill with a part of its ridge separated from the rest by a deep cross-cut, evidently artificial. The top of the separated part looked in the distance as if also isolated by a ditch. My friend, Mr Emile Bizot, a mining engineer of wide experience in these parts, informs me that this is a common feature of the hilly district formerly inhabited by the natives, and that the enclosed surface always contains numerous graves (plate III, 2).

172 The high peaks of the most rugged districts of Tierra
532 Adentro are often crowned by isolated *huacas*, which are especially sought by treasure-hunters. At Tacueyó we had the opportunity of admiring a set of gold objects found in such graves and of which we made the photograph reproduced in plate II, 2. The frogs are of a type quite distinct from those with which I became familiar in Costa Rica. The representative of a human being recalls certain Chibchan idols, or, according to Mr W. E. Safford, Kitšua amulets. As to the thirteen remaining pieces of gold, quite thin and almost uniform in shape, they are perfectly new to me.

Former and Present Distribution

131 According to Father Rodriguez[1] the Paez, or Paós, Indians
114 lived on the summit and slopes of the *Cordillera de Guanacas*,
133 "sierra muy fria que llaman el Páramo de las Papas," a defini-

[1] P. Manuel Rodriguez, *El Marañon y Amazonas. Historia de los descubrimientos, entradas y reducciones de Naciones*, Madrid, 1684.

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
36/ Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166-173] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17,578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

/180 cont./

123 Calderas, and the water divide of the Kukiyú river and the
133 Pisimbalá torrent, the former a deep gorge, the latter an
[131] elongated basin. Toward the north, the outline of another ridge bounds the horizon and divides the parcialidades of Suin and Chinas. Prominent along it, the Vichaguau peak, the hill Dondotá with the double crests, between which, when the sky is clear, one can see Huila with its eternal snows, where the golden rays of the sun break into a silvery radiance. Toward the east one sees the hills of Chindavá and Potrerito, the heights of Togoima, and the canyon of the Páez. Toward the south stand the mountain ranges of Pangok and El Aguacate, which separates the valleys of the Pisimbalá and the Ullucos; the tablelands of Pedregal, Turminá, and Inzá; the sharp peak of Trueno /Thunder/, the "Kapich" of the natives, a summit
823 of silence, lightning, thunder, and storms. In the place where
●173 the sun sets, there rises, stately and challenging, the sharp
648 peak of Hipinjí (1), on which, according to some Indians, lie
[133]
[104]

   J = the French j.
   Sh = the French sh.

the images of saints, the bells, the clothing, the gold, and the silver which the Paez army carried away from San Sebastián de la Plata after murdering all of its white inhabitants, setting fire to the town, and filling up the famous silver mines which had given the town its name and brought large numbers of ad-
173 venturers and not a few misfortunes to the Indians. This legend
823 has fired the imagination of the whites and has led not a few to search for them. It is said that several whites went to the Hipinjí in search of the legendary treasure. At the /181/ /illustration appears here/ top of the peak a white flag was waving. One day there appeared on it the following mysterious order: "At 12 o'clock you may clear out this opening." Their enthusiasm was renewed, their fatigue forgotten, and they went to work eagerly. One worker was rewarded by blind

/181 cont./

173 823 fortune: his efforts brought to light a large jar overflowing with gold. In his great joy he went running to his companions to tell

142 291 302

173 823 them of the coveted find; in their eagerness they all flew to the lucky spot, and oh! supreme misfortune, the treasure had vanished. Minutes later, the powder flask exploded, killing several, mutilating others, and leaving only a few alive. The whites localize the Hipinjí legend in Tumbichukue.

487 499 /182/ The descent to the Kukiyú is effected along a vertical ridge, following a path with innumerable zigzags, an

/182 cont./

423 The work on the land is a daily exercise in co-operation.
461 Owership by an Indian is an unquestionable right, and its de-
[173] fense a categorical imperative. Lliban and Juan Chiracol
[628] fought the Pijao for the ownership of the land and to defend an
[648] inalienable right. Likewise, because the whites covet their land, they do not like to have them around /183/ and avoid receiving them under some pretext or other. Their security and
[735] their happiness lie in the ownership of land. Poverty as they understand it, a shortage of food and livestock, is due solely to the laziness of those who suffer it.

857 Children grow up in continuous communion with the
868 activities of their parents. While the girl helps her mother in household tasks and goes out with her to bring firewood from their respective clearings, the boys with their machete on their shoulder and their pouches of coca and mambe /lime/, exactly like their fathers, clean the clearings, build fences, weed their plantings, and when the maize ripens and the wheat grows tall, they spend the day defending them against the attacks of parrots, guaras, borugos, squirrels, and coatis. At an early age they are already doing the same tasks, but with the hope of building a house, marrying, raising children, and owning livestock, large quantities of coca, and sugar cane for their
342 chicha. In a way, the house is a necessary supplement to their pieces of land; furthermore, many are for the period of the clearings. The selection of a site for the house does not take into account either the beauty of the landscape or the levelness of the terrain, but rather the inaccessibility of both. Only when the house is to last for more than one generation will they attend to certain requisites: solidity, construction or privately owned land, and the selection of an adequate site by the medicine man (té éu). One fine day the owner selects
[759] a site: "This is a good place to build a house and to live," he says. Then he takes there the medicine man, who during the
[787] night "thinks about" whether the site is suitable or unsuitable; he chews coca and remedies, takes mouthfuls of aguardiente

534 by cuts with a machete (Ill. 203 /see p. 290/). In spite of the
322 relatively correspondent holes, each flute has a slightly different tone caused by the varying diameter of the tube.

533 According to the investigation kindly undertaken by my
534 brother Wilfried on the sample flute of Vicente Puche that I acquired, it is tuned between C and C-sharp. Its six finger-holes produce a nonsemitonic seven-tone scale. All the tone steps, however, are somewhat inexact, that is, not exactly a whole tone-step apart. This is particularly noticeable from the third to the fourth tone where we perceptibly have less than a major second, but considerably more than a half step. This is noteworthy because in our diatonic major scale there is also a definite half-step between these two tones.

The blowing is on the right or left side. The extended fingers, work-worn by the heavy field work, cover the finger holes with the first or second joint.

534 The value of the flute is not very high. On festive days
[678] people are in the habit of becoming intoxicated in the festival
[796] houses and in the subsequent brawls the flutes are used as striking
[273] instruments and thus broken.

/290/ Every music group has at least one small cylindrical drum (káka) or a bass drum (kut), both of which are covered with skin on two sides and are wider than high in their dimensions.
[177] Drum and bass drum in this form are probably borrowed and were
[174] taken over throughout South America from former Negro slaves. Their manufacture among the Paez is specialist's work. At
[463] present Vicente Puche makes the flutes as well as the drums. In former times, however, there was a special expert who made only
[461] drums and bass drums. The work time for their manufacture amounts to 10 to 14 days, since one day is allowed for each operation (cutting wood, drying it, for the various processes in treating
[824] the skins, etc.). The cylindrical body of the drum is made from
[237] the wood of the utsé tree. The two drum-skins (katc) are made of calfskin. They are stretched with cords made of agave fiber, which run in a zigzag from one stretcher to the other over the body of the drum. They are tightened by a continuous loop that encircles two strands of the stretching cords at a time and at the same time

C 105 Pc 197 /320 cont./

what is common in the vocabulary and structure of the language goes back to Chibcha or to a linguistically different substratum. Analogously this is true of the archeological cultures of the northern Andean area, which are also similar in many aspects, but do not go back to the Chibcha culture.

P 105 172 174 There remains the question of the ethnic relationship of the archeological Tierradentro-culture. In view of their meager material and artistic cultural possessions, the Paez were technically not capable of the manifestations of an advanced culture that exist in Tierradentro. With their strictly democratic social structure, they also lack the organization by estate needed to maintain such a culture. Even in the mythological traditions of the Paez, there is no hint of any relationship with the archeological culture. The only similarity seems to be the Paez method of burial in a niche grave; typologically, however, this is not identical with the shaft grave. In addition there is the difference of the cremation burial in the archeological culture in contrast to the skeleton burial of the entire corpse among the Paez. Moreover, the Paez are a local, relatively narrowly circumscribed tribe; the archeological culture, on the other hand, has the most extensive geographical relationships in the art (*), in the style of

> * G. Hernandez de Alba (IV) /see the bibliography in the foreign text, p. 324/ found a necklace of small sodalite figures in a grave chamber. This material is otherwise not found in Colombia. It comes from a Bolivian mine, and works of art made of it are found in Tiahuanaco as well as in Peruvian and Argentinian sites.

their stone statues, and in the method of burial in shaft graves.

Artistic relationships, however, make probable more extensive linguistic relationships than is the case for the Paez and their neighbors. From this standpoint a relatively well-developed trade may also be assumed. The disposition and present activity of the Paez, however, does not give us any support in this respect either.

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaqui/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

Former Occupants. "Planos de Indios." Huacas

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed descendants still live in the villages of Las Pavas and Vijes, near Cali; the "Paveños" have become inveterate legal fighters, keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 114 Of the Jamundies I was told that they were indefatigable warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town of Jamundí, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

2: Pittier de Fábrega E-4, 5 (1906) 1907

101 only it might be necessary to modify it slightly if we were able
103 to localize all of the thirty-four villages or hamlets reputed to be of Paez stock and included in the following systematic list:

1. *Paez Basin*

As-at	Inzá	Suin
Chinas	Líme	Tálaga
Chitoco	Mosoco	Toés
Cuetandó	Nátaga	Vitoncó
El Pital	San Andrés de la Plata	Vaquirá
El Naranjal	San José	

2. *Palo Basin*

Jambaló	San Francisco	Toribío
Pitaió	Tacueyó	

3. *Orejas, Corre, and Piendamo Mountains*

Cajibio	Caldonió	Paniquitá

4. *Vaguará Basin*

El Retiro		Iquirá

5. *Locality Uncertain*

Abirama	Osyó	Ricaurte
Caldera	Pueblo Nuevo	Tobóima
La Troja	Pusó	

101 The principal neighbors of the Paez Indians, according to the above description of their territory, were to the north — the Quimbayas on the western slope of the central cordillera, and the Pijaos on the eastern slope. To their east were the Manipos, in the Magdalena valley; the Guanacos were on both watersheds of the central cordillera southward; and westward on the plains of the Cauca valley, the Kitšua and the Jamundíes. The Kitšua were probably the most advanced in culture of all these different stocks, and the ones whose influence is more easily recognized
[177 in the customs and idiom of the Paez. Their language is also
191] the only one which has come down to us in its integrity.

There is no positive proof of the identity of the Paez and
101 Pijaos, and it is fair to state that there are many data pointing to
174 the fact that originally they were merely neighbors, and allied against the Spaniards, as, for instance, in 1641, when they de-

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

stroyed the city of Caloto, then on the Magdalena river, accord- 101
ing to Alcedo. But it is not unlikely that, later on, during their 174
decline, the Pijaos, Paós, and perhaps several other tribes became mixed, and those whom we now call *Paez* are the survivors in blood, customs, and traditions, of all these frequently named *parcialidades* or *naciones*.

Physical Characteristics

There is no special reference by former writers respecting the 142
physical characteristics of these Indians, probably because of the apparent uniformity in type of all the tribes of tropical South America. According to my own very fleeting observations the Paez are small, broad-shouldered, with small bony hands, and feet broadened toward the extremities. Their skin is very dark, a character common to all Indians living at great altitudes. In the case of almost every adult, both male and female, coming under my observation, I observed a fine black pubescence covering all visible parts of the body. They appear to be gen- 147
erally strong and healthy, and their physical endurance is not below the average. On our trip across the cordillera each adult man carried at least thirty kilograms, and many of them more than fifty, and none complained of being too heavily laden, although the trail up to nearly 4,000 meters and down again was exceedingly rough and steep, requiring at times not only much exertion but equal presence of mind.

It is well to mention, after Uricoechea, that the Paeces are 181
naturally inclined to warfare, and invariably join one side or the 721
other in the unceasing Colombian revolutions. In early times they raided the Spanish establishments, the destruction of Caloto on two occasions (the first time in 1641) being still held by them in vivid remembrance as glorious feats of their ancestors. I was even assured that not long ago, during the last war, they were with difficulty prevented from making an incursion on the neighboring Cauca cattle ranches.

I was quite surprised to find among the Paez Indians a charac- 147
ter that I had noticed previously in Central America, but of which no record could be found in current literature. I refer to

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

164 cient testimony, they have their share of physical ailments. Besides itch (*lel*), tumors of several kinds (*lol-sek*, tonsilitis; *koii*, tumor in the groin), they have original names for smallpox (*buzgui*), which I was told often rages among them, for diarrhœa (*u-tsits*), dysentery (*mengui*), and intermittent or malarial fevers (*ya-ya-gui* in the ancient dialect, *kui-kui-ni* in that spoken at the present day).

757 114 Of the practices and superstitions made use of in the cure of these diseases I could gain no information, but it is very probable that the Paez still have their own medicine-men.

Clothing. Personal Adornment

291 286 [23] At present the wool obtained from the numerous sheep kept by the Paez Indians plays the most important part in the clothing of both sexes. I cannot find any direct information on the fabrics used before the introduction of sheep by the Spaniards, [174 439] but it is most likely that the Paez obtained cotton from the Indians of the Cauca and Magdalena plains, the cultivation and the manufacture of which into thread must have formed one of the principal industries in the latter. I have already referred [92 174] to the great number of clay spindle-whorls found in the graves and on old dwelling sites throughout the Cauca valley. Judging by these we may feel sure that the former inhabitants were great spinners. On the other hand, the present Paez Indians still weave most of their own clothing, and there is no reason why they should not have done so formerly.

291 [177] The dress of the men consists of a pair of short trousers (*hiii*), that are evidently a concession to modern civilization. These are made of raw cotton cloth, or of imported fabrics, and reach from the waist to about the knees. Over the shoulders is worn a broad rectangular piece of white woolen homespun cloth, split in the middle in the form of a poncho so as to allow the head to pass through, and hanging free front and back. This is called *tund-atš*, i. e., 'the cloth that binds, or covers.' It is generally worn next to the skin, but sometimes a light cotton shirt, called *atš-petš*, is first put on. Over the *tund-atš* they carry on their left [276 side, hanging by straps that pass over the right shoulder, the coca

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

FOOD. CULTIVATED AND OTHER USEFUL PLANTS

The principal food of the Paez Indians is maize, or Indian corn, of which they grow several varieties, belonging to three distinct types, namely, a sweet corn (*tšulpi*), a soft corn (*kapio*), and the common flint corn. The words *tšulpi* and *kapio* belong to the Kitšua language, a fact that points to the southern origin of these varieties. Judging from tradition, as well as from the varietal names used elsewhere in the Cauca valley, the flint corn that is grown all over the country may possibly be of northern origin. The Paez language has only one word to designate all varieties of corn, and it is interesting to note that the one now in use (*kutš* or *kukš*) is quite distinct from that employed in Castillo's time (*kokavi*). It is not unlikely that the present name was introduced by some of the tribes subsequently incorporated with the Paez.

262 243 [192] [174] [192]

The *tšulpi*, or sweet corn, is usually eaten roasted or boiled on the cob. Of soft corn, or *kapio*, they make a kind of dough called *χhiontš*, which is the base of several culinary preparations, among them the tortilla (*kuáts*). *Kaš* is a gruel made of black corn; *mutši*, or *motši* (the Kitšua *motc*), is prepared by shelling the kernels without disintegrating them. Last, but not least, large quantities of the grain are used in the preparation of chicha (*beka*).

262 252 [273]

Beans are generally cultivated along with maize. I noticed two varieties — *us kutš*, black beans, and *us bi*, red beans. The *osgual*, cited by Castillo as special to the village of Suin, are the seeds of the *Erythrina edulis* Triana, which I collected under the name of *us ual*; they are large, and when boiled taste almost exactly like the common horse-bean (*Faba vulgaris*).

244 262 [252]

Of scarcely less value as a food-staple are the several varieties of squashes, so generally cultivated and eaten as to have caused Castillo to express the opinion that "most of the Indians would perish should these fail in the province." The larger variety, *ápe-tots* (*Cucurbita maxima?*), is less common, and may have been introduced, although it already existed in Tierra Adentro in Castillo's time; *ápe*, the zapallo or pumpkin (*Cucurbita pepo*), is perhaps indigenous to the region, since the last native name,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194	*epench*	is now	*pens*,	old (applied to female only).
114	*isus*	" "	*sus*,	urine.
[192]	*atamp*	" "	*taap*,	fog, cloud.

In Castillo's vocabularies *xs* stands for *s*, *z* for *ts* and *tz*, *ch* for *tš*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mes-a*, it is not; *ishc* for *its-i*, to join, to marry, etc.

II. — Word-formation

192 114 *Remarks.* — A few preliminary remarks as to the vocabulary given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's 114 vocabulary and their orthography adapted to our own.

192 197 174 Among those words not included in Castillo's, some have simply escaped him, as, for instance, a number of plant names. But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 114 [171] *Compound Nouns.* — The Paez language, like most of the languages belonging to the Chibchan group, has suffixes indicative of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

(3) *From other Languages.* — It is likely that the Paez language borrowed many other terms from neighboring tribes, but thus far we lack the necessary material for comparison. As explained above, since Castillo's residence among these Indians their language seems to have undergone considerable change, especially in its vocabulary, a fact readily explained if we admit that the present Paez are composed of the remains of several tribes, greatly reduced in number by their wars with the Spanish conquerors and the hardships they suffered after their submission to the new rule. With the Chibcha, the analogies seem reduced to the rules of construction, the vocabulary being totally distinct. 192 174

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

12/ A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

13/ The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

Pasto SC17

TRIBAL DIVISIONS

Captain Sebastián de Belalcázar was the first conquistador who went north from Quito and entered the Andean region of what is today Colombia. He passed through the territory of the Pasto and Popayán Rivers to reach the region of Neiva and beyond in 1535–36.

At the time of their discovery, the native peoples north of Ecuador were very numerous, but the chroniclers, for example Cieza de León, who crossed this region in 1545 and is its outstanding historian, gave their locations and designations in a very confused manner. The historians classified the aboriginal peoples either according to small villages or groups of houses, slight differences of dialects, or slight cultural variations, so that the true classifications are very difficult to make.

Modern ethnological studies and a critical interpretation of the chroniclers somewhat clarify the cultural panorama of these regions, however, and it is now possible to list the following tribal divisions which existed just before the Conquest [6] (map 7):

Pasto.—The *Pasto* (*Koaiker*, *Cuaiquer*, *Quayquer*, *Coaiquer*,[6] etc.) (Jijón y Caamaño, 1936–38), who had a uniform language and culture throughout their villages, were distributed from the town of Tuza between the Mira and San Juan Rivers northward throughout the mountains to the valley of the Patía River and toward the northeast to the southern boundary of the present Department of Cauca. Eastward, they extended to the country of the *Quillacinga*, which began at the Guáitara River (Cieza, 1880, ch. 33). In the west, they occupied the western portion of Nariño, but accurate information is lacking on some tribes, which like the *Abades*, *Masteles* (Juán López de Velasco *in* Guerra, 1942) and *Patía* of the lower Patía River, lived toward the Pacific Coast region. The Angasmayo River in *Pasto* territory was the limit of the conquest of the *Inca* Guaynacapa (Cieza, 1880, ch. 37). Ortíz locates this river southeast of Nariño but other authors identify it with the Mayo River farther to the north.

There was a large number of native groups or villages within this area. Among these Cieza mentions the *Ascual*, *Mallama*, *Túcurres*, (*Tulcan*), *Zapuys*, *Iles*, *Guaimatal*, *Funes*, *Chapal*, *Males*, *Piales*, *Pupiales*, *Turca*, some of which are south of the Colombia-Ecuador border, *Cumba*, and others, and adds that, "All these peoples and chiefs had and have the name of *Pastos*" (Cieza, 1932, ch. 33). Guerra gives other names of small groups (parcialidades).

Quillacinga.—East and southeast of the *Pasto* lived the *Quillacinga*. Padre Velasco (1841–44, vol. 3) identified them with the *Pasto*, but cultural and linguistic differences between these tribes leave no doubt that Cieza de León (1880, ch. 33), was correct in considering them a

[6] Castellví, 1934; Guerra, 1942; Jijón y Caamaño, 1940–41; Ortíz, 1937 d, 1938 c; and Otero, 1928, 1939.

[6] The *Coaiquer* are sometimes treated as a subgroup of the *Pasto*. (See this volume, pp. 927–936, 937–938.)

/183 cont./

557 say, the surname, is transmitted through the paternal line. The
582 wife retains it throughout her life, but does not transmit it to her children. A son of hers will bear only the father's surname.
604 According to an /184/ informant from Calderas a man respects his paternal uncles and aunts in the same manner as the maternal uncles, but not the maternal aunt, because "she is not a real relative;...she is a woman and not a man ... the men (older) have to be respected the same as the old women" and, generalizing, adds: "of the uncles and aunts one respects the men more than the women and the paternal uncles more than
601 the maternal ones." Although the terms for designating the
604 uncles and aunts of EGO differentiate sex and specify the line to which they belong, EGO considers the relationship of the paternal uncles and aunts to be closer than that of the maternal ones, and although the uncles call the sons of their brothers "sons," there does not exist among the present-day Páez a clear concept of parallel uncles and cross uncles and, consequently, of parallel and cross cousins. Masculine EGO calls paternal and maternal male cousins Iakté, paternal and maternal female cousins pesh, making them equal with his own sisters and brothers, and feminine EGO calls paternal and maternal female cousins Iakté, paternal and maternal male cousins Jish, making
601 them equal also with her own brothers and sisters. But logically
604 such a distinction must have existed, to judge from the conduct
582 observed in the selection of mates and in the respect that EGO pays to his uncles and aunts, this being more pronounced for the paternal than for the maternal ones and greater still for the men.
114 Eugenio del Castillo y Orozco corroborates our argument. In
60 his Vocabulario he states that the mother-in-law is called by the
582 same term as the one designating the father's sister (pezoz), and the father-in-law by the same term as the one for designating the mother's brother (cacca). This means that in the eighteenth century in-law kinship specified the origin of the spouses, clearly showing marriage between cross cousins.

60 All these traits make us think that possibly there were
614 patrilineal exogamous clans, now manifested by some types of
●174 stereotyped conduct,

Ethnography

/Page 98 is blank./

/99/

I. Introduction

1. Historical Sketch of the History of the Paez since the Conquista

P
175

When the Spanish general, Sebastian de Belalcazar, as lieutenant general of Francisco Pizarro, conquered the northern part of the Inca kingdom and founded the city of Quito in the year 1534, he made careful inquiries about the countries lying farther north. Then he met a foreign Indian who gave his name as Muquetá and that of his cacique /see "Kazike" in the glossary, p. 249/ as Gogotá. When he was further questioned as to whether his country contained the metal that the Spaniards called gold, he eagerly affirmed this and added that in his country there is a lagoon /see the glossary, p. 249/, upon which his cacique travels with a raft several times a year, powdered from head to foot with gold dust, so that he looks like a gilded man. In this fashion he offers gold objects to the sun, whereupon he washes off his body and offers this gold, too, as a sacrifice. This story was the reason that Sebastian de Belalcazar in 1535 sent Diego de Tapia on an exploration to the north, in the direction of the land of El Dorado, the gilded man. He reached the present Rio Carchi. This became the starting point of the conquest of southern Colombia by the Spaniards.

7
70

175
648

The resistance against the intruders shown by the natives of southern Colombia differed. The tribes of the Pasto and Quillacinga and the Cauca Valley tribes around Popayán offered only slight resistance. They had already been subjugated earlier by the soldiers of the Inca, whose kingdom with its northernmost expansion reached as far as Rio Ancasmayo. The Paez, Guambiano, Andaqui, and Pijao, on the other hand, living in barely accessible

P
175
648

/99 cont./

175 648 parts of the Central Cordillera, offered the Spaniards violent and quite successful resistance. In the same year that Belalcazar sent out the first expedition, a troop of Spaniards under Pedro de Añasco set out for the north. In 1536 Belalcazar likewise followed him. In the course of that year he founded the cities of Popayán and Cali in the Cauca Valley, important /100/ starting points for further explorations. The latter proceeded in the direction of the Central Cordillera, the paramos of Moras and Guanacos, and Tierradentro. Amid constant battles with the Paez, who at that time occupied a considerably larger area than today, Belalcazar was repulsed and was obliged to return to Popayán and Lima, leaving behind 26 Spaniards, among them several officers. In 1537 he undertook a second assault from Popayán, in order to reach the land of El Dorado through Tierradentro. With 100 horsemen, 200 infantrymen, and more than a thousand Indios as porters, he came to the Magdalena River without being hindered by the Paez. After four months of hard fighting with the natives of the Magdalena Valley, he finally, on the plateau of Bogotá, met the conquistador Gonzalo Jimenez de Quesada, who had shortly before come from the north. A threatened clash of weapons between the two conquerors was prevented by the arrival of a third conquistador, that is, when Nikolaus Federmann, the German mercenary leader who was in the service of the Welsers /a German banking house/, reached Bogotá from the east, through the lowlands of Venezuela.

We again hear about the martial activity of the Paez when in 1538/39 Pedro de Añasco, with immeasurably cruel treatment of the natives, pushed into the Magdalena Valley, in order to keep open, at the command of Belalcazar, the connecting route from Quito to Santa Fé de Bogatá, the capital of the newly founded viceroyalty of New Granada. In a desperate battle 5,000 warriors of the united Timaná, Yalçon, Paez, and Apirama succeeded in overpowering the Spaniards and capturing their leader, Pedro de Añasco. The Indios provided a dreadful fate for him, who had had the son of the female cacique of the Timaná, Gaitana, burned. Gaitana, upon whose urging the

/100 cont./

175 alliance of the tribes against the Spaniards had come about, had
648 him dragged from village to village and one of his limbs hacked off each day.

In order to avenge the death of his comrade-in-arms, Juan de Ampudia with his mercenaries then set out in 1539/40 from Popayán for Tierradentro. But he and his mercenaries were overcome by the same fate. He himself lost his life, and his men were driven back by the Paez amid great losses. Not discouraged by this fate of his predecessors, Francisco García set out on a new expedition into Tierradentro, but he, too, failed completely. The cacique Gaitana achieved, by means of fiery speeches, a renewed alliance of the Timaná, Paez, Yalcon, Apirama, Guanaca, and Pijao, and with 10,000 men she fell upon the city of Timaná and /101/ destroyed it. Its defender, Diego Ruiz des Campo, fell in an attempt, with his riders, to break through the dense swarm of Indian troops armed with the new weapon of lances 40 spans long.

Soon afterward Juan Cabrera was called from Neiva to Timaná for its reconstruction. The Yalcon offered peace and their co-operation in the reconstruction of the city destroyed by them. Juan Cabrera accepted this, and then, when the Yalcon and their caciques were assembled, he fell upon them from ambush and killed their caciques and the greater part of the men. There has not been a tribe of Yalcon since then.

The Paez remained intact and kept their peace until in 1543 Belalcazar returned from a brief stay in Spain and now, with 1,000 horsemen and fully equipped, undertook from Popayán an expedition of retaliation against the Paez. The Paez, fighting for their freedom in their mountains, stood up against the most experienced general of Spain. After severe, bloody losses Belalcazar was obliged to withdraw in defeat. From then on he made no further attempts to subjugate the Paez (*).

* There is a detailed description of this era, briefly sketched here, in H. Trimborn (1954), pp. 67-84 /see the bibliography in the foreign text, p. 327/.

/101 cont./

•175 648 Nineteen years later, in 1562, Domingo Lozano made a new attempt to exploit the rich silver mines of Timaná and La Plata. He was obliged to withdraw, however, only to return the next year with reinforced troops. He founded the city of San Vicente de Paez, but only two months later, in an attack by the Paez on the city founded by him, he lost his life. An auxiliary body of troops advancing in forced marches from Popayán was also completely destroyed. After this new expulsion of the conquerors, the Paez allied themselves with the Pijao, who had destroyed Neiva in 1569. Together they attacked and plundered the silver mines of the city of La Plata in 1577, killed all the inhabitants, and set fire to the houses.

As a result of these unfavorable reports, the Spanish king energetically ordered the "pacification of the province," which from 1605-1608 was carried out so successfully that finally the troops could not find any Indios to fight or houses to plunder. In 1605, after the lost battle of Itaibe, the Paez retreated to the region of their inaccessible mountains still occupied by them today. Their western neighbors, the Guanaca, allied themselves with the Spaniards, and the latter put through their territory the [997] connecting road from /102/ Popayán to Bogotá. In 1613 the Jesuits set up the first mission station and a rest station for travelers [164] in the town of Guanacas. In 1790 most of the Guanaca fell [731] victim to an introduced smallpox epidemic. The survivors withdrew to the present Inzá, where they were absorbed among the colonists. Nothing has remained of their language.

175 648 797 The Paez continued to defend their country against the Spaniards and against missionization and, by their sudden attacks, made the road to Bogotá never quite safe. And then in the subsequent period the Spaniards had little interest in missionizing and civilizing the Paez. After the Guanacas station, only one 648 mission was founded in Tálaga. Because of the location of the 172 individual communities, enclosed by high mountain ranges, a 175 few villages were able to remain uninfluenced by Spanish civiliza- [36] tion for quite a long time. Later the authorities supported the establishment of native self-government, the cabildo /see the

/102 cont./

175 glossary, p. 248/, and, by means of reservation laws, protected
177 the Paez from the gradually advancing colonists. In this way the
648 Paez were able to preserve their language and customs to a con-
[178] siderable extent, in contrast to the other mountain tribes of
Colombia, who have long since been absorbed in the Spanish-
175 Colombian culture. In the struggles for independence from the
648 Spanish crown under Simon Bolivar from 1812 to 1824, the Paez
fought for their liberation on the republican side under Gregorio
Calambás. Their leader was captured and shot. After the
victorious termination of the struggles for independence, Gregorio
Calambás became one of the martyrs of Colombian independence (*).

* According to V. A. Bedoya, P. J. Ramirez Sendoya, and G. Hernandez de Alba (VII).

175 The Pijao perished like the Guanaca. After having oc-
101 cupied, before the Conquista, almost the entire area of the
648 present-day department of Tolima east of the Central Cordillera,
[151] as the eastern neighbors of the Quimbaya, they perished in
countless battles with the Spaniards. As late as the eighteenth
century, remnants of them lived in the valley of the Rio Negro
de Narvaez, as neighbors of the Paez. They, called Bemb by the
Paez, as well as the Guanaca, spoke languages that differed
from the Paez. They could not understand one another.

178 Besides the Paez, the culture of the Guambiano, a
101 neighboring tribe called Mogweĭ by the Paez, has been preserved
114 to a certain extent up to the present day. The Guambiano in-
habit the west side of the Central Cordillera and today live in
the valley of the Piendamó around Silvia. The life and customs
of his tribe have been recently represented by the Guambiano
Francisco Tumiña Pillumbe in a number of very instructive /103/
drawings, each of which was provided with a brief text by
Gregorio Hernandez de Alba.

P /134 cont./

276 Coca (ĕs) is a shrub whose alkaloid leaves, containing
137 cocaine, tanning substances, and various volatile oils, were used as stimulants even before the time of the Conquista, chiefly among the natives of the Cordilleras region. Almost 200 species of it are known, most of which, namely 137, occur in America (Walger, p. 9). It flourishes almost without exception between the tropics, from Honduras to Bolivia, in a temperature that generally remains between 15 and 20 degrees. In too low a temperature the leaves are small and worthless; in too hot a climate they lose strength and content. The most favorable elevation is between 700 and 1,700 meters.

P The word coca comes from the Kechŭa /Quechua/ lan-
279 guage (coca or cuca), which, however, does not state anything
192 definite about the origin and use of the plant, for the Kechŭa-
171 speaking tribes of Ecuador are the very ones who do not use the plant (Cooper, p. 549). In the northern part of South America the designation hayo, hahiu is customary, in northeastern Peru ebee, hibia, hibio, and in the Amazon region generally, names like ypadu, ypatu, ipado, or batu (Bühler, p. 3344).

P The first information about coca reached Europe as early
175 as 1499 through the report of the Spanish priest, Thomas Ortíz, to
276 his spiritual superiors, according to which the natives of the northern coast of South America used a plant called hayo as a means of enjoyment. The first detailed description of the cultivation and use of the plant is found in a work, printed in 1553, by Pedro de Ciéza de León, who for the first time calls attention to the fact that coca bestows strength and vigor and drives away hunger (Bühler, p. 3353).

P At the time of the Conquista, coca was known in Colombia
276 among the Cauca Valley tribes between Popayán and Cali, near
171 Ibagué in the Magdalena Valley, on the savanna of Bogotá, and
P among the tribes of the Sierra Nevada de Santa Marta. Today the
C 276 use of coca is officially forbidden in Colombia on account of its
c harmful effects. According to Decree No. 95 of 1938, the sale
656 of coca, except in apothecary shops and drugstores, was forbidden

Among the Paez, fishing with

/145 cont./

226 poisonous plants is done once a year, in the dry season, as com-
824 munity fishing with weirs. For this purpose -- it was explained to me -- a dam of stones and earth is first made by the men. The herbs, which only grow high in the mountains and contain a poisonous substance, and which have been pulverized with stones, are tossed into the pool thus partitioned off. These herbs are called yúkse or kēse. The fish are said to die from them immediately. /146/ They are caught only by the men. But since the poisonous herbs are so far away and are to be found only with difficulty, the men are said to catch the fish sometimes unpoisoned at the weirs with their bare hands.

f) Weapons

411 The weapons of the Paez are limited to hunting weapons
[726] and children's toys, since wars are no longer fought. The only important hunting weapon today is the shotgun. As children's
[524] playthings there are the stone-sling (ísot), blowgun (pāt), and in in recent times the elastic sling (káučéro).

[824] In former times, in the battles with the Spaniards, the
[714] Paez were said to have used lances 25 handspans long made from the wood of the chonta palm, as well as plaited shields or shields
[237] of tapir skin (Pittier, p. 327). I could find no confirmation for the
[124] present-day or even earlier use of lance and shield; my informants
[175] were familiar with neither the word nor the object. From the chroniclers, however, it is reported that the Paez, as well as other mountain peoples of this region, had learned from their battles with Spanish horsemen to defend themselves with long lances. There is, however, absolutely no foundation for a pre-Spanish use
714 of this type of lance. It is not unlikely that the Paez originally had plaited shields (opimb). The word for skin shield (himba-kat) is interesting; its present literal meaning is "horse skin." Whether himba meant "tapir" in pre-Spanish times cannot be ascertained.

/169 cont./
491 rivers (*), for example, the Rio Kokiyó, which flows through

[114] * I did not see anywhere the simplest form of a bridge mentioned by H. Pittier (p. 320) /see the bibliography in the foreign text, p. 326/ in the northern part of Tierradentro, a bridge which people cross hand over hand on a liana stretched across the river.

the Calderun region, there are strong bridges over which even
491 loaded horses may go without trouble. This type of bridge
499 consists of two tree trunks placed a good meter apart, upon which poles are tied crosswise as planking. Only about every fifth planking pole is lashed, while the ones in between are held fast by a longitudinal beam laid over each of the main supports. On either side of the bridge, poles are tied vertically and horizontally as a railing and at the same time serve to support the roofing. The latter is a characteristic of all such bridges (Ills. 194 and 195 /see pp. 285 and 286/). One finds it not only on the bridges in the colonists' region of Tierradentro, but /170/ also, for example, on the bridges of the upper Magdalena River, the region around San Agustín.

The third type of bridge is found in two artfully constructed arched bridges made of bamboo over the Rio Paez at Belalcázar and Avirama (Ills. 191 to 193 and 196 /see pp. 285 and 286/).
[284] They are both quite similar in construction and, like all the other bridges of the Paez, made without nails or other iron parts, but simply lashed with bast and lianas. For reinforcement, however, two wire cables have now been stretched underneath.
491 Although even the Spaniards at the time of the conquistadors
177 report on the "weak and flexible bamboo bridges" and on the
499 "liana bridges" of Tierradentro (Hernandez, 1944, p. 189), in
[175] the case of the two above-mentioned arched bridges, which are relatively difficult to construct, it seems not to be a matter of an original Paez technique. Indeed, these would be the only suspension bridges of this type in pre-Spanish South America.

/216/

IV. Spiritual Culture

1. Language

121 According to A. v. Humboldt, languages are differentiated by the elements of content and form, and, accordingly, languages are divided into three groups, which in the following period were erroneously interpreted as stages of the development of language. According to this, the oldest stage was represented by the isolating languages, which express form elements by means of independent words with the meaning still recognizable as far as content is concerned. Their words, as in Chinese, are monosyllabic, isolating. The second group is made up of the agglutinative languages, in which the element of form is added to the element of content, the stem, through clearly recognizable affixes. The Ural-Altaic and the Bantu languages in particular are put here. The inflected languages occupy the third stage. In them the form element is expressed by inner changes of the stem or by affixes closely intergrown with the stems, as, for example, in the Indo-Germanic and Hamito-Semitic languages.

Even though this classification of languages was subsequently abandoned as the schema of a sequence of development, it is nevertheless quite applicable as an initial, practical orientation. For the more precise classification of a language, the working out of the phonetics and syntax is required.

197 193 Paez is an agglutinative language. The grammatical forms are built up by a succession of syllables. The pronunciation is difficult for a European. It is similar to Kechua /Quechua/, from which a number of loanwords have been adopted.

175 797 192 193 114 The oldest linguistic reports about the Paez come from P. Eujenio del Castillo i Orosco, who collected his linguistic material around 1735, as a missionary in Tálaga. It was supplemented and published by E. Uricoechea in 1877. The collected data include a catechism, a vocabulary, and a grammar with information about personal pronouns and the conjugations of "to be" and "to write." The grammar and vocabulary contain some forms and word formations that are alien to the original Paez language.

/290 cont./

534 is wound around the entire body of the drum. A string with a small piece of wood as a rattle device is stretched across the lower skin. The method of construction of the drum and the bass drum [184] is the same in Calderas. A drum in Santa Rosa differs in that each of the stretchers, upper and lower, consists of a switch used double, with the edges of the drum skin clamped in between (Fig. 37 /see p. 258 /). The measurements of the small drum are 16 centimeters in height and 22 centimeters in diameter, those of the bass drum 40 centimeters in height and about 60 centimeters in diameter.

533 In playing the music, for which no text is (any longer) known, the drum and the bass drum beat the same rhythm, but in a different manner. The drum is beaten on the skin with two drumsticks, which are simply two ordinary, inarticulated pieces of wood. The bass drum is beaten with one hand with a regular drumstick consisting of a stick with a wrapping of cloth, while the other hand beats against the frame with a little stick. In three-quarter time, the principal kind of time, the bass drum is beaten with the drumstick in one hand, the first and third quarter regularly and the second quarter in eighths. The other hand beats afterwards with the other stick on the frame.

533 Whether this Paez rhythm is original or was taken over with 173 the drum cannot be determined with certainty. According to the tradition of the Paez, as told in the story "The Paez with the Ax," the Pijao women in former times, when as yet /291/ there were no drums, beat out the rhythm on their breasts with their hands during the dances. We may assume that this was also in part the case 533 among the earlier Paez. According to E. Castillo i Orosco, the [175] Paez formerly used hanging chichacanoas /chicha troughs/ as drums [534] (kwimb). They consisted of hollowed-out tree trunks and during the kwimbkó dance were beaten by all the men together, while the women sang. The rhythm beaten on the drums at the present time, however, seems to be less firmly anchored than the melody. They [797] are so fond of the latter that they do not sing hymns at the Mass in [177] the mission church, but play the customary melodies on the same instruments, albeit disproportionately slower. The drum and the bass lose the beat in doing this; they do not know how to begin

/281 cont./

487 Routes of communication.--Until the fourth decade of the present century, the routes of penetration were horse paths which passed through the paramos of Guanacas, Las Delicias, and Moras, or through Inzá, Pedregal, Topa, and La Plata. The three first ones communicated with the Cauca valley, and the second with the /282/ Magdalena valley. These were the routes of the colonial era and, to a large extent, of the times [648] of the republic. The Guanacas route was the first to serve for communication between the kingdom of Quito and Santafé de Bogotá, owing, of course, to the more favorable attitude of the Guanaca Indians toward the conquistadores, who, taking advantage of their relationship with the Paez, made them their 797 allies and assistants. The first religious mission was established ● 175 in Guanacas in 1613. By way of the Paramo de Moras Captain 175 Juan de Ampudia entered Paez territory to take exemplary re- 648 venge for the tragic death of his colleague-at-arms, Captain Pedro de Añasco. To his disgrace and that of Spain, he met a terrible death on the cliffs of Togoima. By way of the same Paramo de Moras came the Adelantado Don Sebastián de Belalcázar, who had the same aims as his unfortunate predecessor, but this time his death, too, was added. The Paez gave him the most crushing defeat on the Peñón de Tálaga, and the Adelantado had to flee, leaving on the field of battle 491 the body of the heroic Captain García Tovar. The intense [484] traffic through these dangerous peaks and cold paramos decreased considerably with the opening of the Quindío road, and even much more with the inauguration of the La Plata-Belalacázar road. Tierradentro is connected by road with Popayán and 487 Neiva. Nowadays only the Indians from Mosoco, San José, and Vitoncó, and the Paez from Toribío, Tacueyó, and [788] Jambaló travel by way of the Paramo de Moras. That of Las Delicias is traveled by the Moguex, especially on their annual pilgrimages to the religious festivities of Our Lady of Nátaga. The Guanacas route is practically abandoned. There is also another route, traveled relatively frequently, which follows the

I

Point of Departure

631 To the north of the municipio of Inzá and to the west of
[361] the confluence of the Ullucos and Páez rivers, two hours on horseback from the points just mentioned, the corregimiento /district governed by a corregidor/ of San Andrés is found on the left bank of the Pisimbalá torrent, an affluent of the
[175] Ullucos. Its name has been registered in the parochial books
[103] since 1736, when the priest José Fernández Belalcázar, as the
[797] representative of the Bishop of Popayán, initiated in San Andrés de Pisimbalá pastoral visits to the Paez pueblos.

361 San Andrés de Pisimbalá is a pueblo with the same characteristics that we have noted in other Paez centers; that is to say, it consists of a church, a school, the rectory, the house of the cabildo, and some others used solely for the celebration of religious fiestas. It is located on a small plateau, a ledge hanging on the declivity.

563 At the present time it is inhabited by whites and mestizos
177 whose ways of life, norms of behavior, and labor practices
361 have been imposed on the natives. Resistance to contact has
[648] been overcome, but active resentment against the white still
[566] crops out among the old people. Almost completely acculturated, many of them have sunk to the state of tenant farmers. The phenomenon of the colonization of Indians and land is the same everywhere. The Indian loses his land and sinks into servitude.

In 1926 the Municipal Council of Inzá created a settlement area with clearly delineated boundaries in a common agreement /178/ between the municipal authorities and the cabildo. The colonists established themselves in that area. The valley of the Pisimbalá torrent is narrow, but extremely fertile. It belongs in its entirety to a few families of colonists,

/178 cont./

361 who have established coffee and sugar-cane plantations and
[563] cattle ranches. The natives occupy the steep and barren sec-
[177] tions.

The pueblo of San Andrés consists of 23 bahareque houses
[342] /houses with walls made with two faces of sticks with mud and stone between them/ with thatched roofs. Only one is of brick and tiles. In its general lines the plan is reminiscent of that of Spanish centers: a central plaza with houses around it.
346 The church, which is large, thatched, and white, has a hand-
361 some façade, with a bell tower, arches and columns, a style reminiscent of colonial architecture; it stands in the center of the plaza and was built in the first decade of the nineteenth century by Padre Joaquín Núñez y Tobar. On its south side there stands a large, very old and dilapidated building where the school and the rectory functions; on the other sides it is surrounded by the colonists' houses.

366 There are two stores with a regular supply of merchandise, and on Wednesdays there is a small market where one beef, a few agricultural products, and chicha are sold.

133 Toward the end of the Pisimbalá valley are found the not
•175 very extensive plateaus of Argentina and El Rodeo. El Rodeo has marked historical significance; for a long time it was called Segovia. In the spirit of conquest and colonization, the town of Nueva Segovia was founded there by Captain Hernando Arias Saavedra in accordance with the mandate of Governor Sancho Espinar, who in 1578 gave up these lands after his vainglorious campaign against the Paez. It was short-lived. On this same plateau Mosquera's rebellion against the government of Don Mariano Ospina Rodríguez was won by his spectacular victory over the government forces headed by
[317] General Joaquín París (1). In spite of this, the markets for

1. González, David. Los paeces /The Paez/, manuscript.

/178 cont./

several leagues around were supplied for a long time with the salt extracted from the three salt deposits that still exist in Segovia. Across from these and on the other side of the Ullucos, in Vivorá, another salt deposit was also exploited.

At the confluence of the small stream called El Escaño and the Pisimbalá, on the right bank of the latter and at the foot of the ridge of Aguacate, the Archeological Park of /179/ Tierradentro, a branch of the Instituto Colombiano de Antropología, is located on an alluvial terrace covering an area of two hectares. Founded some 15 years ago, it is in charge of the care and conservation of the archeological monuments, which have been known to the scientific world since 1936, but to which reference was made as early as around the penultimate decade of the last century, when Dr. Carlos Cuervo Márquez carried out his explorations through the "lands of the Paez and much of the Nevado del Huila." Subterranean necropolises with columns, colonnades and niches, black and red geometric painting on a white background, statuary very similar to the Augustinian, ceramics and metalwork are the principal exponents of this culture hardly known in descriptive form.

The Archeological Park of Tierradentro has served as the center of operations for the scientific expeditions which the national government has sponsored, fostered, and supported during the last 15 years.

II

Over the Zigzags of the Road

In order to travel on winding roads one needs horses resistant to fatigue; a dashing spirit must yield to a solemn step, firm tread, and steady pace.

/190 cont./

609 It was necessary for someone to tell them that they were sent by
797 /191/ Laureano Gómez before they all said: "Well, then, let
871
829 them remain."

666 In spite of their stubborn conservatism, the leaders of the
829 municipio cannot manage to make them vote for their chosen candidates unless they first get their ration of meat, chicha, and aguardiente. The ration and the vote form an indivisible unit.

829 "I am godo /Goth, pejorative for Spaniard/ to the marrow, a true conservative," exclaimed one of the important men of
[773] Calderas while he was drunk. "Juan Chiracol also was a conservative," said another.

829 The Indians of Tierradentro have been liberals since 1860,
●175 thanks to the victor's aura gained by Mosquera on the plains
648 of Segovia. "The battle of Segovia" --says the padre David González--"in which the Indians took part and in which Mosquera encouraged the native ferocity, and the march on Bogotá, which fell to the rebel general, made him a demigod
[464] in the eyes of the Paez. Since the first days of the colony they have venerated the name Mosquera; the Marquis don Cristóbal Mosquera y Figueroa had been their master, their encomendero, he had taken them to Popayán in gangs to work on his haciendas, he had given to them the huge lands of his
[665] encomienda... Naturally the Indians of Tierradentro have been strongly bound since 1860 to the political faction which represented Mosquera, liberalism. In the armed struggles which later scourged the nation, the Paez staunchly bore the liberal standard."

829 In view of this, the political affiliation of the Calderas
665 Indians is an odd one; up to less than a decade ago, they formed a conservative island in the midst of a liberal majority. Possibly this attitude conceals a great desire to defend their lands. The Calderas people have no marked sympathy for the neighboring parcialidades. "They are Reds," say the natives,

/294 cont./

311 passes through Topa, Turminá, Guanacas, El Cabuyo, Malvasá,
133 Pisimbalá, Lame, La Troja, and Irlanda, from where it twists eastward. The contour line of 3,000 meters, approximately parallel to the previous one, is very close to the ridge of the
[361] Central Cordillera. These two contour lines form a narrow zone that corresponds to the cold thermal level and within which are found the parcialidades of Toez, Huila, Vitoncó, San José, Mosoco, Lame, and Yaquivá, aside from a considerable area from the extinct parcialidades of Guanacas and Turminá.
311 This entire zone represents a "culturally influenced zone" in
[487] the literal sense that Professor Guhl gives it (2). A fine bridle-

2. Guhl, E. "Ambiente Geográfico-Humano de la Costa del Atlántico /Geographical-human Environment of the Atlantic Coast/," Revista Geográfica, p. 159.

[489] path joins Mosoco and Silvia, crossing the Paramo de Moras. The traffic of people is intense and constant during almost every /295/
311 month of the year. In the last decades, this has been an active zone
641 of native and "white" colonization. It still remains so. Coscuro
361 and Malvasá, in the Parcialidad of San Andrés, are purely "white" regions of colonization. But Tumbichukue, the high parts of Lame, Mosoco, San José, Huila, and Toez are zones of exclu-
361 sively native colonization. The importance of Mosoco is out-
311 standing. It was a great center of Páez settlement and still is, in the same manner as Pitayó and Tacueyó are on the other side of the Cordillera, but we cannot state on this account that "the major part of the settlements and the most important ones for the Paeces" are located in the cold region, as was stated
[177] categorically by Professor José Pérez de Barradas. Mosoco,
[433] fully in the process of acculturation, is a good producer of potatoes, wheat, and maize. It is the true Tierradentro in
[648] physiography, production, and progress. But in the times of
[175] the Conquest it was the people of Tálaga, Avirama, Calderas, and Togoima who defeated Ampudia and Belalcázar, and the

361 /295 cont./
311 strong political groupings had their principal seats at Tálaga,
643 Suin, and Avirama (3). "The place of residence of a cacique
175
[622] 3. Hernández de Alba, Gr. "The Highland
[103] Tribes of Southern Colombia," pp. 915-960.

constituted a sort of settlement or gathering place, most of which remain today as Indian pueblos and retain their names, such as Suin, Tálaga, Avirama, Togoima," Chitoquez, Cuetando, Yaquivá, Pisimbalá, and Itaibe, all of them located at the
361 temperate thermal level. It is precisely along the course of
311 the Páez River and along the middle and lower courses of its
161 tributaries that the Páez population is now concentrated.

13 2. Physiography. Merely a single glance at the wild geography of Tierradentro will give an idea of the pattern of life of the Páez people. The physiography of the entire course of the Páez River, from Irlanda to Itaibe, with nearly all of its tributaries, is compressed into profiled accidents. It might be said that it forms a "thermic chimney," Professor Guhl's expression. It belongs to the temperate thermal level. This is the land of the great slopes covered with natural pastures and of the short, narrow vegas with fertile soils. There are those who speak of the fertility of all the soil of Tierradentro, classifying it, consequently, as a privileged zone. The concept proves to be deceptive, because it does not take into account the physiographic factor. We find the usable vegetal layer /296/ only in the extremely narrow vegas of the rivers, ravines, and streams, and in places
13 where the topography becomes a little smoother. The left bank
291 of the Páez River, from Toez to La Plata, is usable for agricul-
[233] ture and stock-raising only with difficulty, given the brutality of the slopes. Every tributary that enters on this side is a deep ravine isolated by ridges running from northeast to southwest. On the other hand, the left bank has important vegas. It is there that plantains, manioc, sugar cane, coca, arracacha, maize, and lately coffee and guadua bamboo are grown. The soils are essentially acid, and the Gramineae grow in abundance

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguex*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.

[2] Cieza de León, 1922; Aguado, 1916; Simón, 1882-82; Oviedo y Valdés, 1851-55; Velasco, 1841-44.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

12/ A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

13/ The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

Pasto SC17

TRIBAL DIVISIONS

Captain Sebastián de Belalcázar was the first conquistador who went north from Quito and entered the Andean region of what is today Colombia. He passed through the territory of the Pasto and Popayán Rivers to reach the region of Neiva and beyond in 1535–36.

At the time of their discovery, the native peoples north of Ecuador were very numerous, but the chroniclers, for example Cieza de León, who crossed this region in 1545 and is its outstanding historian, gave their locations and designations in a very confused manner. The historians classified the aboriginal peoples either according to small villages or groups of houses, slight differences of dialects, or slight cultural variations, so that the true classifications are very difficult to make.

Modern ethnological studies and a critical interpretation of the chroniclers somewhat clarify the cultural panorama of these regions, however, and it is now possible to list the following tribal divisions which existed just before the Conquest [5] (map 7):

Pasto.—The *Pasto* (*Koaiker, Cuaiquer, Quayquer, Coaiquer,*[6] etc.) (Jijón y Caamaño, 1936–38), who had a uniform language and culture throughout their villages, were distributed from the town of Tuza between the Mira and San Juan Rivers northward throughout the mountains to the valley of the Patía River and toward the northeast to the southern boundary of the present Department of Cauca. Eastward, they extended to the country of the *Quillacinga*, which began at the Guáitara River (Cieza, 1880, ch. 33). In the west, they occupied the western portion of Nariño, but accurate information is lacking on some tribes, which like the *Abades, Masteles* (Juán López de Velasco in Guerra, 1942) and *Patía* of the lower Patía River, lived toward the Pacific Coast region. The Angasmayo River in *Pasto* territory was the limit of the conquest of the *Inca* Guaynacapa (Cieza, 1880, ch. 37). Ortíz locates this river southeast of Nariño but other authors identify it with the Mayo River farther to the north.

There was a large number of native groups or villages within this area. Among these Cieza mentions the *Ascual, Mallama, Túcurres,* (*Tulcan*), *Zapuys, Iles, Guaimatal, Funes, Chapal, Males, Piales, Pupiales, Turca,* some of which are south of the Colombia-Ecuador border, *Cumba,* and others, and adds that, "All these peoples and chiefs had and have the name of *Pastos*" (Cieza, 1932, ch. 33). Guerra gives other names of small groups (parcialidades).

Quillacinga.—East and southeast of the *Pasto* lived the *Quillacinga.* Padre Velasco (1841–44, vol. 3) identified them with the *Pasto,* but cultural and linguistic differences between these tribes leave no doubt that Cieza de León (1880, ch. 33), was correct in considering them a

P 113 **Contemporary descriptions.**—Albis (1934), describing a visit to the *Andaquí* in 1854; Bollaert (1860); Brisson (1899), good on the *Pasto*; Castellví (1934), on language groups; Castillo i Orosco (1878), on *Páez* language; Censo de la Población de la República de Colombia (1924); Cortés (1919), on the flora; Cuervo, M. C. (1920), on archeology and ethnology; Garganta Fabrega (1942), on coca; Douay (1900), on language; Jiménez (1936), on geography; Ortíz (1935), on the native communities of Jamondino and Males; Otero (1938), on the *Guanacas* and (1939) on languages in the Departamento del Cauca; Pérez (1862), on the geography of Cauca; Pittier de Fabrega (1907), on the *Páez;* Reclus (1893); Thrasher, (1860–61); and Triana (1907).

LANGUAGES

P 197 175 Ever since the chroniclers wrote of the Conquest, the problem of the native languages in this part of Colombia has been extremely complicated. One writer affirmed, "It is certain that there are more languages differing from another than there are leagues in the whole province" (Jijón y Caamaño, 1936–38, 2: 179–82). According to the "Relación de los Sucesos de Pedrarias Dávila," by Governor Andagoya, the Spaniards ascending the Cauca Valley found within 2 leagues east of Cali:

> There are other peoples with a different language from that of the *Lili*. In the ten leagues of the road toward Popayán there is another people of another language . . . toward the other cordillera of the mountains in the eastern part . . . the language of Popayán extends some ten leagues toward the south. And from the top of the mountains toward the valley of Timaná is another different language and ten leagues beyond [from Popayán] from one cordillera to the other there are other different languages all the way to Quito. [Cuervo, 1894, 2:112.]

P 197 But modern linguistic studies in this region have classified the languages spoken at the time of the Conquest as follows:

- *Chibchan family*
  - *Chibcha-Aruaco group*
    - *Aruaco subgroup*
      - *Andaquí* (Castellví, 1934)
  - *Taironaco-Barbacoa group*
    - *Páez subgroup*
      - *Páez, Paniquitá, Quilla*
      - *Totoró, Polindara, Moguex (Guambía), Cocoruco,* and *Guanaca*
      - *Pijao, Panche, Quimbaya, Pantágora**
  - *Cachaca (Kamsá) family*
    - *Quillacinga subgroup* (Castellví)
  - *Tucanoan family*
    - *Pasto subgroup*†

Po [197]

*Castellví, 1934; *Jijón y Caamaño*, 1938; and Otero, 1938.

†Rivet cited by Guerra. Jijón y Caamaño classifies the *Pasto* or *Cuaiquer* language in the *Taironaco-Barbacoa* group of the *Chibchan* family.

?:Hernández de Alba E-5,4 (no date) 1948 SC15 Paez SC15
Pasto SC17

All the region of Popayán and of the *Páez* in the Cordillera Central thus spoke closely related and very similar dialects which were often grouped. For example, the dialects of the *Pijao*, *Páez*, *Timand*, and *Yalcón* were classed together. In the south, an area of the *Pasto* language extended to Ecuador. Between the *Pasto* and *Páez*, bordering also on the *Pijao*, the native peoples spoke *Quillacinga* and *Andaquí*.

P 197 Po [197]

Of all these languages, there survive today only *Páez*, which is spoken in Tierradentro, and its dialect, *Paniquitá*, on the western slope of the Cordillera Central in Toribío, Caldono, Jambaló, and in parts of Silvia and Totoró. *Moguez* and the related *Totoró* and *Polindara* are spoken in Silvia and in the regions of Totoró and Polindara, according to Otero. *Andaquí* is spoken by only a few scattered groups surviving in the lower region of the Caquetá River.

HISTORY

After Don Sebastián de Belalcázar founded the City of Quito, he sent Diego de Tapia on a voyage of exploration toward the north in 1535 (Otero d'Costa, 1935 a). This expedition discovered the new lands of the Cordillera as far as the large Quillacinga River, today the Carchi River. This river became the point of departure for important travels in the same year by Pedro de Añasco, and in 1536 by Belalcázar, who founded Cali and Popayán, both key points for future expeditions and discoveries. These were the first White contacts with the Andean tribes of southern Colombia. In 1538, Belalcázar undertook a second expedition from Quito, crossing the Cordillera through *Páez* territory and then passing among the *Pijao* Indians. Both tribes resisted him with their feeble arms. He continued toward the east until he met the expeditions of Jiménez de Quesada and Federman at Bogotá. With the foundation of outposts by Jiménez de Quesada in the lands called the New Kingdom of Granada, Añasco was sent back to found Timaná in the territory of the *Timaná* and *Yalcón*. This city was to be the base for communications between Perú, Quito, Popayán, and Santa Fé de Bogotá.

P 175 648

The *Pasto* and *Quillacinga*, after a few encounters with the Spanish soldiers, in which they always suffered bloody defeats because of the weakness of their weapons (arrows, lances, wooden swords, and sometimes slings) and because the Spaniards used horses and hunting dogs, began to surrender. The inhabitants of the Valley of Popayán, who were poor warriors, also ceased to struggle. These tribes had previously suffered the *Inca* invasion, which had extended north to the Angasmayo River, which washed their lands. But the *Páez*, *Moguez*, *Andaquí*, and *Pijao*, thanks to the rugged mountains in their territory and to their more bellicose character and better organization, presented a serious obstacle to the Spaniards' ideal route, which had been drawn

[727]

by Belalcázar between the Kingdom of Quito and Bogotá. Few Spaniards wished to adventure through these wild lands where the Indians were strong and ambushed them. The founders of Timaná were constantly attacked, and the frightening legend of cannibalism began to spread. It was said that Spaniards were the preferred victims, and that the Indians considered the flesh of enemies the finest morsels in their great victory feasts. The soldiers collected some gold in the so-called penetrations (entradas) of the country—attacks really made to kill the natives, to destroy their crops, and to burn their houses. All of this made the Indians resist more strongly, but it was necessary to clear the road to Santa Fé, and the war of extermination went on without respite. Belalcázar himself returned to *Páez* territory and was defeated at the rocky cliff of Talagá in 1541, only to return with more than 200 soldiers, of whom 100 had horses, and spread blood and fire among the Indian villages. But the Indians made reprisals. They assailed Timaná and killed its mayor, after putting out his eyes and leading him through the market places with a cord passed through his face. This act of vengeance was to satisfy Gaitana, a valiant warlike Indian woman who had formed various Indian alliances against the Spaniards because they burned her son. In 1543, the *Pijao* destroyed the town of Los Angeles, recently founded in the Neiva Valley. They continually attacked the area surrounding Ibagué, but many of them were defeated and killed in 1556 in the plains of Chaparral by Francisco de Trejo's troops. Both Spaniards and Indians were stubborn in their struggles, the Indians being unwilling to make peace as long as they were being killed and their crops destroyed.

The struggle was rekindled in 1562 when Captain Domingo Lozano, having requested the privilege of conquering the Indians, organized an army and entered *Páez* territory. He founded the town of San Vicente de Páez near Huila Mountain in order to ensure Spanish domination of the heart of the country. But the Indians ambushed his soldiers and gradually killed off the cavalry, the Spaniards' strongest troops. Eventually, they destroyed San Vicente and again controlled their own rugged lands. The *Pijao*, meanwhile, fought to the death. They destroyed Villa Vieja or Neiva in 1569 and, allied with the *Páez*, took San Sebastián de la Plata in 1577, killing all its inhabitants and burning the houses. They finally put an end to and avenged the Spaniards' exploitation of a silver mine which had been discovered in *Moscopan* and *Yalcón* territory in 1551.

Fleeing Spanish pressure which extended from Timaná toward the heart of the Andes, the *Andaquí*, exhausted by the wars, followed the high hills to the east, and began in 1564 to descend toward the Caquetá River.

?:Hernández de Alba E-5,4(no date) 1946 SC15 Paez SC15

The King of Spain, receiving word of the troubles in this region, ordered Don Juan de Borja, his Governor at Santa Fé, to carry out the "pacification of the province," meaning the extermination of its inhabitants. The decisive war started in Chaparral in 1605 and ended in 1608 when a Spanish witness wrote of this territory, where the *Páez* had remained free for so many years, that the provinces "were so desolated that the troops could not find Indians to fight, houses to plunder, or roots or grain to eat, and, if some Indian remained, instead of daring to plant boldly, he sowed four handfuls of grain here, two more there in the shadows and cover of the trees . . . they went about harrassed, thin, and emaciated until life was ended, for the soldiers saw corpses of people dead of hunger or sickness at every step" (Simón, 1882–92, Septima Noticia, ch. 49, vol. 5, pp. 314–15). A document in the ecclesiastical archives of Páez, dated July 17, 1638, states that in the lands adjoining the *Páez* there lived a *Pijao* Indian named Ambrosio, who had said that Captain Andrés de Zúñiga could now well enjoy this country because there were *Pijao* but not *Páez* Indians in it and because the *Pijao* saw themselves doomed and the land had no proprietor. 175 648

The *Guanaca*, who, because their chief was an enemy of the *Páez* chief, had allied themselves with the Spaniards in order to attack the *Páez*, were the first to surrender and join a Spanish colony. The first road between Popayán and Santa Fé passed through their territory, where the Spaniards established a hostelry for traders. This district was given to the Jesuits, who established the Church of Guanacas and, later, a town of the same name. But the Indians felt another lethal force of European origin—disease which they were unable to withstand. In 1790, a smallpox epidemic so reduced them that they abandoned their town, and the few survivors retired to the narrow mesa, where the modern town of Inza is situated. Here they gradually disappeared altogether. [797] [177] [164] [731]

The *Páez* continued to resist and defend their lands against Spanish missionization, so that the road to Guanaca never became secure. The extinction of the *Pijao*, the lack of important quantities of gold in the area, and the difficulty of the terrain, which was such that the Chronicler Pedro de Aguado said "to travel through *Páez* territory is to go up and down," caused the Spaniards to abandon interest in dominating these peoples. They were content to establish the Guanacas mission, and, a little later, the parish of Tálaga. Subsequently, as these Indians, who were isolated in their high mountains, were allowed to retain their customs and beliefs without interference, they did not protest when small groups of Whites peacefully occupied certain places in their lands. 175 648 797

Thus began the true Colonial Period for those tribes which survived the wars of the Conquest. The encomienda system was inaugurated, 175 648

?Hernández de Alba E-5,4(no date) 1946 SC15 Paez SC15
Pasto SC17

P 175 648 in which a Spaniard held a territory occupied by Indians. The natives, under a chief who was protected by the White authorities and P [652] who made contact between the master, or encomendero, and his sub- [651] jects, had to give a certain number of days' work and a specified P tribute in products of the lands, animals, gold, or manufactures. The [177] encomiendas made no effort to Hispanicize the Indians, but continued to loot and massacre them. The Indians, reduced to utter misery, gave up all their artistic and industrial activities, and devoted the greater part of their time to the service of the master or to seeking products to pay the obligatory tribute. To remedy this situation, the Spanish Crown decreed the native "parcialidad," giving surviving P groups reservations and prohibiting their employment in transporting [623] men and goods over the highways. This reform was never entirely carried out, however, and the Indians, in spite of having their own government, the cabildo or Indian council, continued in servitude P or debt slavery.

[621] The native Indian government consisted generally of a governor, [631] a first mayor (alcalde mayor), a second mayor (alcalde segundo), a trustee (sindico or fiscal), and constables (alguaciles), the last a kind of police who transmitted to the people the orders which the Whites gave through the governors or mayors, and who carried out penalties P of imprisonment, of placing in stocks, and whipping, which the 175 first Spaniards introduced into the punishment of the natives. At the 648 same time, the Christianization of the Indians began. It succeeded 797 in an imperfect way, however, for the Indian attended Masses, ar- 438 ranged and participated in processions, and did not miss the solemn 273 ceremonies a single Sunday largely because on the same day he brought his own products to the pueblo for sale, bought salt or meat which he P needed, and devoted himself to drinking chicha, the traditional drink 175 which he had always taken on religious or social occasions.

648 The Indians of Nariño, descendants of the *Pasto*, lost their language Po and many of their customs during the Colonial Period, although they [463] continued to live as natives on their reservations, which daily became [333] smaller because of the encroachments by the neighboring Whites or Mestizos. They became farmers with small landholdings and, occasionally, masons in the cities. The *Moguex* and *Páez*, however, P 175 retained their language and the greater part of their customs. Some 648 of them, especially the men who had to deal with the Whites, learned a little Spanish, and they continued throughout the Colonial Period P to defend their lands and their traditions. To religious practices in- [191] troduced by the missionaries, they added such elements as the offer P of food to the souls of the dead. They added to the Colonial council [622] (cabildo) the office of captain, an official who, unlike the rest of the council, was not responsible to civilian authorities but had life tenure, sometimes a hereditary position, and more authority within the group.

?:Hernández de Alba E-5,4 (no date) 1946 SC15 Pasz SC15
Pasto SC17

The captain was, therefore, like the aboriginal hereditary cacique, the chief of each aboriginal group. P 175 648

The decrease of the native population was accelerated until, in the Province of Popayán, according to "Descripción del Reyno de Santa Fé de Bogotá," by Francisco Silvestre (1927), there were in 1789 only 64,463 inhabitants—3,603 families of Whites, 6,022 of Indians, 4,793 of freemen (Negroes), and 3,247 slaves (Negroes), who worked in the mines and haciendas and replaced the Indians, who were disappearing. When the revolution against Spain began, the various groups of Indians in this region behaved very differently, each according to the disposition previously shown. The *Pasto* followed the Spanish troops, forming a royalist unit that was difficult to conquer, whereas the *Páez* took the part of the Republic and were led by the celebrated Indian Chief, Gregorio Calambás, who was shot by Warleta, and thus became a martyr of Colombian Independence. P [161] Po [175] [648]

With the consolidation of the Republic, the laws of Colombia established reservations for the Indians, but the neglect and exploitation characteristic of the Colonial Period continued, and there were only a few missions. There has not been contemplated until now any economic, cultural, or sanitary betterment of these natives. Most of them finally have disappeared, vanquished by diseases, by economic want, which the new necessities created and contact with civilization aggravated, and by the shrinkage of their reservation lands through the ambition of those who made it a policy to break up the native communities through official subdivision of their lands.

THE CULTURE OF THE PASTO, COAIQUER, QUILLACINGA, AND POPAYANENSE

The *Pasto* or *Coaiquer*, the *Quillacinga*, and the *Popayanenses* formed a culturally homogeneous group at the time of the Conquest and later experienced very similar acculturation.

SUBSISTENCE ACTIVITIES

Farming.—Subsistence was based on intensive horticulture. Each family had its own small fields and grew potatoes and other tubers, xiquimas, a grain which Cieza calls cebada, quinio or quinoa, and maize, of which there was little in *Pasto* territory but much elsewhere.

A simple, pointed stick is used today in Nariño for planting.

The historians do not mention communal work in agriculture, but probably it was carried out in the form of labor loans (minga) between individuals, as today in Nariño and Cauca. The beneficiary of help in harvesting crops has to give each helper a basketful of the produce, a form of compensation called "chindé." He is also obligated to give similar help to the others. This communal labor is more solemn when the Indians work and plant the lands of the

7:Hernández de Alba E-Sj (no date) 1948 SC15 Page SC15
Moguex

756 787 775 784 the fire and turns on the lights, and everyone returns to examine a layer of fine ashes placed beforehand at the door. If the ashes show the footprints of an angel, they believe that the soul is saved, but if the footprints are those of a bird, they believe that the soul is condemned to hell. In some cases they ascertain the fate of the soul by the kind of bird prints.

WARFARE

726 The *Páez* and *Moguex* were particularly warlike. Their attacks were staged in the morning, accompanied by yells and the sound of trumpets, horns, sea shells, and drums. They were generally armed with great spears or pikes, spear throwers, and slings. When fighting, [411] they would first hurl javelins with their spear throwers, then use their slings, the missiles for which they carried in a pouch, and finally pick up their spears or pikes for man-to-man struggle. They also formed closed squadrons, men with clubs alternating with spearmen. The former would step forward to wield their clubs, and then draw back to their positions for protection. Their best defense was on high ridges, from which they rolled large stones on their enemies. They perfected these natural defenses by cutting or camouflaging paths on which they prepared ambushes. They built trenches or pitfalls, which caused the attacking Spaniards much trouble.

628 The principal enemies of these peoples were the *Pijao* and the Spanish soldiers. The *Páez* remember the *Pijao* well, and call the stone [648] statues in their territory "portraits of Pijaos," and the painted tombs, [632] "houses of Pijaos." They are afraid to see the statues or visit the [764] tombs.

To insult an enemy killed in war, they cut off his penis and placed it 727 on the road.

266 Some historians ascribe cannibalism to the *Páez* and the *Moguex*, which seems to have no basis in fact. They kept trophy heads and stuffed the skins of their enemies, but did not eat their foe. There are, however, numerous historical references which state that in the wars [175] against the Spaniards, the *Páez* left the bodies of dead enemies for the [648] *Pijao* to eat, and that they cremated their own dead or dried them [764] over a slow fire, which Friar Pedro Simón (1882–92, ch. 23) mistook [114] for a means for preserving the flesh so that it could be eaten later.

As war trophies, they kept enemy heads, which they preserved with 72 resins, and the skins of their entire bodies, which they filled with ashes [314] (Aguado, 1931, vol. 3, book 16, ch. 3). They even preserved the heads of the Spaniards' horses. They carried these trophies to wars, meetings, and feasts.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Moguex

535 There is much dancing today. The sexes perform in couples or separately. Among the *Moguex*, some of the expert dancers are paid to dance with all couples in a sort of "bambuco." Dancing is always a part of *Páez* ceremonies for the death of children, baptismals, weddings, saint holidays, and meetings for collective work (mingas) held in the evening when people return from their plantations.

Dancing, as other social events, is subject to a special ceremony [585] or etiquette, strongly connected with religious beliefs. For example, in the wedding celebration, a prayer is first said in which the souls of [608] the dead are asked permission to dance, or "scrape the floor," as they call dancing. Only the godparents and the bride and groom may [527] dance at the beginning.

526 The *Páez* do not masquerade, but the *Moguex* always masquerade during the period of carnival preceding Holy Week.

[524] **Games.**—Games do not hold an important place among these peoples. The children amuse themselves by imitating the activities [857] of their elders. The only game recorded is simulated warfare, performed as a part of a rite in honor of the dead after a communal [769] feast. Two teams under their captains or caciques attacked and shot arrows at each other. Even if some contestants were killed or wounded, no one bore a grudge.

276 **Narcotics.**—The *Páez* and the *Moguex* chewed coca leaves mixed in the mouth with lime powder. Coca chewing is widespread among men, but very little practiced by women. It is used especially by [756] the shaman when he is practicing. In Colonial times the use of coca [177] spread to the rural population of Mestizos and Whites in Nariño, Cauca, and Huila.

273 **Alcoholic beverages.**—These Indians formerly made chicha of maize, but today they ferment it with sugarcane molasses. They also have [178] fermented sugarcane juice (guarapo), and a sort of rum (aguardiente). The latter is distilled clandestinely in their huts from guarapo and certain herbs fermented together in earthenware crocks. The Indians drink guarapo every day, but restrict the use of chicha and the stronger guarapo and aguardiente to market days, religious feast days, burials, weddings, mingas or meetings for work, and witchcraft [462] ceremonies. Guarapo and chicha are made by women, who sometimes chew the maize to increase its fermentation. They are stored in large, hollowed tree trunks and in large earthen jars, which are kept in a special place in the hut. There is never a lack of these beverages for home use and for welcoming an unexpected visitor.

RELIGION

175 The early Spaniards had little understanding of the religion of these 771 people. They reported that the Indians had but few idols and no temples or places of worship. Castillo mentions that they wor-

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguez

Castillo mentions that they wor-

175 shiped the sun, in whose honor they met and danced in places called 771 "Itaqui-finó," i. e., the place where the sun revealed its mysteries; 776 and that they venerated a kind of culture hero called Guequiau. It was he who instructed shamans (mohanes). [756]

This hero has a counterpart in the religious legend of Juan Tama, 773 the Son of the Star. One day when the Morning Star shone very 776 brightly, some Indians found a child in a gorge—ever since called the Gorge of the Star. This was Juan Tama. They picked him up and entrusted him to a woman to nurse, but he nursed so much that her milk dried up. He was given to another woman, whom he also made very weak. They then said that he could not be nursed by a woman, and gave him food. After he grew up, he married the female chief of Huila, Doña María Mendiguagua, and became chief of all the Indians. He instructed people and explained to them how to keep the land for themselves and not mix with White people. He pronounced them invincible and summoned a chief from Pitayó, called Calambás, whom he appointed his manager. Calambás rebelled,[12] but was defeated by Juan Tama, who pardoned him on account of his bravery, and conferred on him and his heirs the right to rule the *Páez* in Bitoncó. As death approached, Juan Tama went to the lake on the páramo of Moras and sank into the waters. He had come out of this place and returned to it, leaving no heirs.[13]

In the neighborhood of Bitoncó there is a rock with what appears 776 to be human footprints. When the Indians pass it, they uncover 823 their heads and say, "The Holy One came this way." Another rem- [623] nant of the cult of Juan Tama is the custom that each member of the council spends one week at the shores of the lake before the end of his term to render an account to Juan Tama of his actions in office. Likewise, newly elected officers, as soon as they receive their staffs or insignia of authority, spend a week at the lake. They toss silver [621] coins into it, wash their staffs, and pray for strength to rule well. [631] This ceremony, performed with the greatest secrecy, is called the "curing of the staffs." Recently, however, the Indians have stopped [821] "curing" their staffs in the lake, for they say that Juan Tama is angry, and whenever they approach the lake, it rains and storms badly.

In the Guanacas section there was another sacred lagoon, called Tumbachí, which was recently drained because a snake that lived there attracted girls and kept them for a whole year, and then returned them when they were about to become mothers.

These tribes believed that the soul comes back to life. 775

Witchcraft was strongly developed among these Indians, who still 754 believe in most of its practices, in spite of the catechization forced 177 upon them by the missionaries.

[12] During the War of Independence, as well as in subsequent revolutions, the Indians of the family named Calambás distinguished themselves as warriors. [669]

[13] We are indebted to Father David González for this legend, told to him by an old Indian in Lame. [114]

/178 cont./

The Family

594 361 The social group par excellence in Páez culture is the nuclear family. Its importance stands out if we consider that ●175 the Páez live dispersed within their geographic area. Both the 594 chroniclers and the parish priests who concerned themselves 361 with them emphasize this characteristic. In 1751 the priest of Tálaga, Licenciado Eugenio del Castillo y Orozco, wrote in his report to Don Juan Francisco de Eguizaval, Governor and Captain General of the city of Popayán and its provinces, "that by command of his Illustrious Lordship Don Francisco José de Figueredo y Victoria on the Council of His Majesty, currently Bishop of this Diocese, I reported to the Governor previous to your Lordship, stating that since the year 1719, when I was in these Provinces assisting as interpreter for the Very Excellent Don Pedro Felipe García, then inspector for them, and afterwards in 1731 the same for Dr. D. Francisco Gómez Constantino, I learned that the Indians of this province had been inclined to live dispersed at various distances and only sat together at drinking parties in the homes of their Caciques or Capataces when they came from some Riria (which they call Necue) or to celebrate the first menstruation of a woman (which they call Izacó) or for another cause for vain observance, and, after finishing, they again separate" (3). Multiple efforts were made by the

parish priests and by the governors of the colonial period to "reducirlos a vida sociable" /reduce them to a social life/, but the "bárbara naturaleza" /barbarous nature/ of these natives made their efforts fruitless. And this cultural trait is still

842 /180 cont./
583 the woman is fecund. For this the culture offers the institutional
581 device of "amaño," by which the man lives with the woman for a
182 time before legalizing the marriage. And we are given clear
175 and precise information about this by Licenciado Eugenio del
595 Castillo y Orozco and his brother, Licentiado Isidro del Castillo
583 y Hrozco /sic/, in their respective reports which they gave to the Governor and Captain General mentioned above: "that they followed the evil custom of living in intimate relations for a long time with the woman whom they were to marry, and if after the marriage they had no offspring they would leave her and seek another woman who might be fecund and whom they thought they might marry if they were not married to their own wives (as Manuel Bolza, an Indian of this village (9), wished

9. Tálaga.

to do), and as was done by Antonio Cofongo (an Indian of San Antonio de las Chinas), from whom he learned not to break up the legitimate religious marriage, which could be prohibited, and who suggested that they get out of the difficulty by any false means, even to arranging for others, from the lowest Indian to the highest, to testify to a lying statement, and if anyone dissented from it and would not follow the wish of the Cacique or Moján, fear caused the dissenters to escape to other parts; some fled with their concubines when they were not acceptable to her parents or relatives, others to avoid work, and others from necessity" (10) ..."and that they flee from all their vices and

10. Archivo Nacional de Bogotá, op. cit., Folio 228.

sins, which are: witchcraft, drunkenness, and concubinage" (11).

11. Archivo Nacional de Bogotá, op. cit., Folio 230.

/180 cont./

583 In Paris on the first of March, 1877, Esequiel Uricoechea
[175] wrote in his introduction to the Vocabulario: "Marriage in the sense in which we accept it today did not exist among the Páeces: two people lived a married life for some time and the marriage was not legalized without the previous certainty that
[192] the woman was fecund. It is natural then, that we find among the Páeces, as among the Peruvians, two verbs (imi and iyó) which indicate respectively the woman accepts the man and the man takes the woman. The woman was obliged to give clothing to the husband, and he "to provide sustenance for the family" (12).

12. Castillo y Orozdo, E. del. Vocabulario Páez-Castellano /Paez-Spanish Vocabulary/. 1877, p. XIV.

Our informants from Calderas confirm the effectiveness of this custom, some justifying it by the need of the future husband /181/ to obtain the money to pay the expenses of the wedding, others in order to "catear" /sample, find out/ if the woman is honest, a worker, and faithful, and there was no lack of those who clearly stated that this trial marriage "is customary because if the woman should turn out to be machorra /barren/ there is no marriage." When such occurs the man returns the woman to her parents without any problem standing in the way, which would not be the case if they were married by the Church, in which case the return is not possible.

162 Our investigations concerning the frequency of the "amaño"
583 in the established families of some parcialidades of Tierradentro
595 showed the following results:
184 Calderas: 42 families (28% of the approximate total of Calderun families). 57.1% of these families practiced the amaño; 42.9% were married first by the Church.

San Andrés: 13 families (6.5% of the approximate total of San Andrés families). 92.3% were married first by the Church; 7.7% practiced the amaño.

/101 cont./

175 648 Nineteen years later, in 1562, Domingo Lozano made a new attempt to exploit the rich silver mines of Timaná and La Plata. He was obliged to withdraw, however, only to return the next year with reinforced troops. He founded the city of San Vicente de Paez, but only two months later, in an attack by the Paez on the city founded by him, he lost his life. An auxiliary body of troops advancing in forced marches from Popayán was also completely destroyed. After this new expulsion of the conquerors, the Paez allied themselves with the Pijao, who had destroyed Neiva in 1569. Together they attacked and plundered the silver mines of the city of La Plata in 1577, killed all the inhabitants, and set fire to the houses.

As a result of these unfavorable reports, the Spanish king energetically ordered the "pacification of the province," which from 1605-1608 was carried out so successfully that finally the troops could not find any Indios to fight or houses to plunder. In 1605, after the lost battle of Itaibe, the Paez retreated to the region of their inaccessible mountains still occupied by them today. Their western neighbors, the Guanaca, allied themselves with the Spaniards, and the latter put through their territory the [997] connecting road from /102/ Popayán to Bogotá. In 1613 the Jesuits set up the first mission station and a rest station for travelers [164] in the town of Guanacas. In 1790 most of the Guanaca fell [734] victim to an introduced smallpox epidemic. The survivors withdrew to the present Inzá, where they were absorbed among the colonists. Nothing has remained of their language.

175 648 797 The Paez continued to defend their country against the Spaniards and against missionization and, by their sudden attacks, made the road to Bogotá never quite safe. And then in the subsequent period the Spaniards had little interest in missionizing and civilizing the Paez. After the Guanacas station, only one 648 mission was founded in Tálaga. Because of the location of the 179 175 individual communities, enclosed by high mountain ranges, a few villages were able to remain uninfluenced by Spanish civiliza- [36] tion for quite a long time. Later the authorities supported the establishment of native self-government, the cabildo /see the

/102 cont./

175 glossary, p. 248/, and, by means of reservation laws, protected
● 177 the Paez from the gradually advancing colonists. In this way the
648 Paez were able to preserve their language and customs to a con-
[178] siderable extent, in contrast to the other mountain tribes of
Colombia, who have long since been absorbed in the Spanish-
175 Colombian culture. In the struggles for independence from the
648 Spanish crown under Simon Bolivar from 1812 to 1824, the Paez
fought for their liberation on the republican side under Gregorio
Calambás. Their leader was captured and shot. After the
victorious termination of the struggles for independence, Gregorio
Calambás became one of the martyrs of Colombian independence (*).

* According to V. A. Bedoya, P. J. Ramirez Sendoya, and G. Hernandez de Alba (VII).

175 The Pijao perished like the Guanaca. After having oc-
101 cupied, before the Conquista, almost the entire area of the
648 present-day department of Tolima east of the Central Cordillera,
[151] as the eastern neighbors of the Quimbaya, they perished in
countless battles with the Spaniards. As late as the eighteenth
century, remnants of them lived in the valley of the Rio Negro
de Narvaez, as neighbors of the Paez. They, called Bemb by the
Paez, as well as the Guanaca, spoke languages that differed
from the Paez. They could not understand one another.

178 Besides the Paez, the culture of the Guambiano, a
101 neighboring tribe called Mogweš by the Paez, has been preserved
114 to a certain extent up to the present day. The Guambiano in-
habit the west side of the Central Cordillera and today live in
the valley of the Piendamó around Silvia. The life and customs
of his tribe have been recently represented by the Guambiano
Francisco Tumiña Pillumbe in a number of very instructive /103/
drawings, each of which was provided with a brief text by
Gregorio Hernandez de Alba.

/106 cont./

648 it was impossible for the Spaniards to conquer Tierradentro and [101] [181] subjugate the Paez.

Even today the Paez love their independence above all. And even though they cannot accomplish anything by force against the "whites," by which they mean the colonists and the Colombians in general, they nevertheless hate them with impotent fury. "Muiska pešu" (*), "white robber," is what they call the

* Concerning the transcription and phonetics of Paez words, cf. pp. 154-156.

colonists who took their land from them. The latter, however, more industrious than the Paez, need land for their numerous children. They cannot see why the best and virgin soil should remain unused in the hands of the Paez.

361 The rivers arising in the heights as a result of the water flowing down in the mountainous country form enclosed valley basins, each of which contains a village politically. These are, however, not villages in our sense, since the houses do not lie together, but separately, scattered on the slopes of the entire 123 valley basin as individual farms. This decentralized position of 361 a village rendered the ethnological work considerably more difficult, since one cannot keep an eye on "his" village and survey all the inhabitants together. Hence it is very difficult to become acquainted with all the people of the village, since in each case one must go great distances from one house to another and at the same time usually very laboriously climb a slope. How often it happened that the inhabitants were not at home at the moment or did not want to be seen or spoken to. For, at first, the Calderun did not by any means care to see us, and even after months of life and visits among them, the old people looked back with nostalgia on the times when /107/ all intruding whites were killed. 123 Today, moreover, not only whites, but even foreigners come to [177] Calderas. "If we speak to them and treat them well," they said, "then more and more whites will come here." How often it happened that we visited one of the old men, who, I was told,

/113/

175 Physicians are not consulted in any case. All illnesses that do not show external influences are traced back to evil sorcery or to the "pest" (see under "Religion"/see p. 191 ff./). They must therefore be treated by the native shamans /see the glossary, p. 250 /. Open wounds and injuries are treated by the midwife. Now and then, however, people visit the mission station in order to have a tooth pulled, on which occasion the nurses without reservation praise their great steadfastness in enduring pain.

273 276 648 The impairment to health caused by the consumption of coca and chicha seems to me to be exaggerated by the authorities; it would be even less with sensible and nourishing food. The prohibition against coca consumption and the government's battle against coca and chicha give the impression of being more a struggle against a brandy tax deficit, for alcohol under the state monopoly may be sold to any Indio in any quantity. The fact that the Paez generally does not work hard and continuously probably has nothing to do with any degeneration caused by the stimulants mentioned, but rather it is quite simply his psychological attitude which does not let him see why a human being should strive for things which seem unnecessary to him, things beyond his animal necessities of life, eating and reproduction. I often asked whether, in their opinion, there might come a time when the Paez, too, would wear only Colombian clothing or even use electric lighting. They had never thought about it and in no instance had an answer.

461 829

II. Material Culture

1. The Dwelling

a) The Settlement

361 Politically and sociologically the Paez villages of Tierradentro embrace the inhabitants of a valley basin more or less closed off by the surrounding mountains. In their structure, however, they are not villages in our sense, by which we understand a locally concentrated aggregation of a number of houses,

600 /120 cont./

354 415 the simplest possible form. Three rocks provide the lateral sup-
port or stand for the pots, of which there are two at most, a
metal one, usually of aluminum, and an earthen one. Very
poor families have only one earthen pot, which is relatively
[417] cheap to buy. The earthen pot cannot be hung up; it is set
between the three fire-stones in such a way that it cannot tip
over, whereas the aluminum pot is hung by its handle on a soot-
covered, angled stick that hangs down from the ridge (Ill. 166
352 /see p. 273/). Above the fire area there hangs a frame made
[251] of maize canes and about one square meter in size, on which
[353] household utensils and, above all, the rock salt for salting food
are stored, airy and dry. Tables, chairs, or stools of any kind
[237] are unknown. One generally sits on the hairy side of an un-
tanned and hence board-stiff cowhide, on which one also /121/
[513] sleeps, or one sits on a beam, a block of wood, or a stone. Paez
[771] who have seen house furnishings in Inzá or in the dwellings of white
colonists have sometimes built for themselves as a bed a sort
of bench 30-50 centimeters high, consisting of sticks or reeds
[513] laid side by side. For sleeping the customary cowhide is spread
on it. These sleeping benches are not used for sitting.

342 The nights in Calderas are generally quite cool, and
362 the light construction of the walls with cracks between the in-
132 dividual maize stalks does not in any way prevent the cold wind
from coming in. In a few houses, near the sleeping area, I saw
the walls sealed by means of expressed sugar-cane piled up
462 horizontally. For sleeping, the members of the family lie down
[354] in a circle around the fire area, where the fire must be kept going
[513] all through the night. This, like all housework, is the task of
the woman, who must gather sufficient fuel beforehand and get up
every two hours during the night to stir up the fire. Furthermore,
[264] she must get up an hour earlier in the morning in order to have
the first meal, which is eaten around five o'clock, sometimes
[461] even at four o'clock, prepared on time. In spite of this, the
men think that they are the ones who do the hardest work and that
basically they are the only ones in the village who really work.

/121 cont./

372 In case the fire should go out, which happens very rarely, the men, if they have no matches, know how to make fire by striking the blade of the iron machete with a stone and catching the sparks in the dry tinder of expressed sugar-cane. To fan this or a dying fire the hat is used as a fire fan, instead of a special fan. A few times I also saw a reed tube (yotá) about 50 centimeters long, which is blown into with the mouth and which thus acts like a bellows.

352 Infants do not as a rule sleep on the floor, but in ham-
[854] mocks (máka), which, however, as the name indicates, were
[513] not originally Paez. Nevertheless all the men know how to
[286] make them out of agave fibers, which is done with the same knotting technique as in the manufacture of nets for bird hunting.
415 Moreover, a few bags (yáha) made of agave fibers, which con-
[286] tain beans, maize, or other supplies, hang on the wall posts.
[353] Arracacha lies on the floor. For drinking chicha, which is allowed
[273] to ferment in large, hollowed-out tree troughs, calabashes (tőka) are used, but they are plain and undecorated. Cracked cala-
[249] bashes are sewed with a waxed agave thread (Fig. 25 /see p.253/). The calabash gourd is grown in the house garden /122/
412 of every family; its meat is inedible. Furthermore, an oval or
352 rectangular grindstone on which maize is ground with a smaller hand-stone is found in every household. It usually lies on the floor in a corner of the house, but sometimes it is set about one meter high on two forked posts.

412 Meals are taken with wooden spoons (todšá'tc) off of
415 wooden plates (bič), which are carved by the Paez themselves
264 (Fig. 27 /see p. 253/). Aluminum or enamel bowls were rarely
[322] encountered in Calderas. Plates and mugs of aluminum were
[177] therefore always coveted gift articles, along with kitchen knives, needles, safety pins, matches, and salt.

356 Cleanliness within the house is surprisingly great, consider-
515 ing that the Paez wash their bodies but seldom and their hands only when they are "very dirty." This is the case when a person has been working in a burned field and has cleared away the
000 sooty, burned tree trunks and the burned underbrush. The house

/123 cont./

291 stamps. Soon after the Conquista they adopted the upper garment
177 and the straw hat still worn today.

The clothing of the men consists of the upper garment, linen trousers, the cloak (called "poncho" in Peru, "ruana" in Colombia /see the glossary, p. 250 /) and the waterproof, plaited
291 straw hat. The upper garment and the ruana are woven by the
294 women out of sheep wool, whereas the linen trousers are made
286 by the men themselves out of purchased fabrics. This is note-
177 worthy culture-historically, for cutting clothing from woven
[462] fabrics was unknown to the South American Indians in pre-Colombian times, since fabrics were not woven "by the meter" to be sewed later into clothing as desired; rather, the shape of the subsequent article of clothing was already taken into con-
296 sideration at the start of the weaving. It follows from the method of manufacture that torn fabrics are never repaired by the women with a ready-made patch, but are always darned in imitation of
[462] the texture of the cloth. It is different for men's trousers, the materials of which are bought by the men and sewed by them themselves, never by the women. Once these -- as well as the purchased shirts -- are torn, they are never darned, but always repaired by the men by means of a patch sewed underneath.
296 Thus, we have here the fixed rule that woven clothing is never-
177 patched, but is darned, whereas the sewed clothing is never darned,
462 but is always patched. The former is women's work, the latter men's work.

291 The garment covering the upper body of the men (tondatc; for lack of an appropriate European designation it is called upper garment in the following) is not a sleeveless shirt, since the sides are not sewed together, but are open. It is quite simply a rectangular woven piece of wool about 60 centimeters wide and 160 centimeters long, whose warp threads run lengthwise. A slit about 30 centimeters long is left open in the center for the neck. It is pulled on over the head, and the lower ends are either stuffed into the trousers or left hanging over them. In the latter case they must be secured with a strap tied over them (Ills. 154 /see p. 268/, 165, 166 /see p. 273/, 171 /see p. 276 /, 202 /see p. 289 /, 203 /see p. 290/).

/124 cont./

291 The upper garment (ipotsatc) is a simple, rectangular piece of cloth about 160 centimeters long and 80 centimeters wide, which, when being put on, is held crosswise so that the warp and ornamental threads run crosswise. When it is on, it covers only the bosom, back, and one side, whereas the other one remains more or less free (Ills. 166 /see p. 273/ and 178 /see p.279 /). In use it is put on from one side of the body over the bosom to the other side, and then led across the back to the original side again. The back /125/ part is now pulled up and fastened over both shoulders to the bosom part with a thorn (tõpo) or a safety pin. The part that hangs down is tucked into the skirt. In general the women try to buy colored, usually red blouses in the market for festival days, and these then replace the old, simple cloth. The skirts, however, are not exchanged for other clothing, because the purchased fabrics are not nearly as durable and also do not have the necessary width.

Outside the house the women usually wear a shawl over the ipotsatc; they either weave one (senyatc) for themselves or [854] purchase it (panyelõn). In any case it is necessary for carrying bables, for they are wrapped in it and secured with the colored belt (tãw) (Ills. 152 /see p. 267 /, 166 /see p. 273 /, 178. /see p. 279/, 183 /see p. 282 /).

292 There is no special, original ceremonial dress or any special clothing for dignitaries. The latter carry, as their only [293] distinguishing mark, the chonta staff introduced to them by the [177] Spaniards. For festivals and ceremonies people try to wear either items of European clothing or a new outfit of the customary garments. For a Christian burial it is the duty of the members of [764] the family to bury the deceased in the clothing of white Colombians. [177]

291 Small children usually run around naked or have a scrap of cloth hung over them in the style of the ruana. Larger boys wear either a large ruana reaching to the upper thighs, which is held together by a belt, or they already wear trousers. Smaller girls are usually dressed in a piece of cloth reaching from the upper body down over the knees, which is drawn over one shoulder. Older girls wear the clothing of the women. No distinction is

/146 cont./

726 In order to defend their mountain country the Paez also used
[725] large rocks which they hurled down on the attackers from the
[177] heights. They, too, however, soon succeeded in obtaining iron
[411] and iron weapons. In their battles at the time of the Conquista they were already using swords and machetes.

411 The stone-sling plaited of agave fibers, whose manufacture
726 is described below (see under "Plaiting" /see pp. 85-86 /), is
773 of great importance mythologically in the battles with the "Pijao."
628 For geographical reasons it is the typical weapon of the American
411 mountain peoples from Tierra del Fuego to Canada, whereas the
191 blowgun, for similar reasons, is the typical weapon chiefly of the Amazonas and Orinoco forest area. The simultaneous occurrence of blowgun and sling is found all the way from Mexico to Ecuador and in Bolivia (Friederici, 1911, pp. 71-73, Pl. 13).

411 /147/ The blowgun of the Paez consists of a single barrel and is very simple in its construction. It is made only by men, but
[462] for bird-hunting is used almost solely by boys. To make it, one
[857] uses the thin, straight trunk of the fíza tree, the pith of which is
[223] burned out with a long iron tube about eight millimeters in diameter and heated red-hot. The length of the tube is two to three meters. No special mouthpiece is attached. As a sight a little piece of beeswax is pasted above the mouth of the blowgun.
[824] The ball-shaped fruits of the smbák tree, which have exactly the right caliber when green, are used as shot. The range amounts
[211] to about 20 meters. The accuracy of the shot is not great. Nevertheless, there are boys who have carved more than 20 notches above the blowhole of the tube as a record of the birds killed.

4. Crafts and Techniques

a) Treatment of Fibers

283 The fiber material used by the Paez for plaiting, weaving, nets, or ropes is primarily agave, cotton, or sheep wool. Agave and cotton are ancient American fiber plants whose homeland is probably Central America, while working with sheep wool has its tradition in the Peruvian Highlands, in working with llama or

/153 cont./

286 [177] The hammock (máka), as the Spanish name already indicates, is a borrowed article and not generally distributed in the Andean cultures. Among the Paez it is used only for children. Its dimensions, with 100 meshes, are about 100 by 100 centimeters. It is hung up with agave or horsehair ropes, which are looped through the upper and lower rows of meshes and then tied to house posts.

[415] The berry sieves (tása) are present in almost every household. They are about 30-60 centimeters in diameter and are stretched inside a round wooden frame. The meshes are formed by means of the "fishnet knot" (Fig. 34d /see p. 256 /). This draws together very closely and is then scarcely recognizable in its structure.

283 The sling (ísut) is made with various techniques. For its manufacture the dried fibers of the agave leaf are used just as they are obtained when the leaf is stripped. A knot is made at the tip of the bundle of fibers, and it is then divided into two parts. Both are turned by hand in the same direction and then twined by rotation in the opposite direction. This produces /154/ -- conditioned by the naturally thickening material -- a two-strand rope of steadily increasing strength. Since it is twisted only by hand, it threatens to lose its tightness with greater thickness. Hence, after about 50 centimeters, the hank is divided into three parts and plaited for about the same length in the manner of a three-strand braid.

286 284 To make the net for holding the sling stone (Fig. 29 /see p.255 /), the three plaiting strands are divided into seven strands which, in each case, are separated from the plaited part by a simple finger knot. From each of these knots two double strands continue, which, put diagonally, are tied together by a double finger knot.

The length of the net part is about 20 centimeters. At its end it changes back to a three-strand braid by way of a simple finger knot. It should be noted in this connection that the middle strand at the beginning of the braid is caught in the threads of an adjacent knot. This prevents the plaiting from loosening up as it goes into the net and losing its tightness. The same

/161 cont./
286 show the same design, but rather one that results from the cross-
531 ing of the twisted warp threads.

g) Dyeing

386 The Paez feel that black is the most beautiful color.
824 Hence almost all the home-woven garments of the men and
[822] women are dyed black, and only rarely does one see articles of clothing in the yellowish-white natural color of sheep wool.
[462] Dyeing is women's work and is done with certain plants, which, however, dye only the animal material used in weaving, but
[294] not that from plants. This peculiarity of the dyes is utilized by the Paez to make patterns in their clothing by weaving into the sheep-wool fabrics a few cotton warp threads, which, in the subsequent dyeing, retain their original color.

Every woman is in a position to dye her home-woven fabrics black. To do this the pieces of fabric are boiled in a pot for about two hours, along with the leaves of the šal tree or the zóte tree (according to Hernandez, 1946, p. 944, with the leaves of a Phyllanthus) and then buried for two days and two nights with these leaves in a pit in black, rich humus earth (ašáktič). Then they are taken out again, washed thoroughly, and allowed to dry. The black dye is now lightfast and waterproof. The cotton ornamental stripes in the women's clothing, which are not affected by this dyeing process, are either natural
[283] in color, red, or green. They are bought by the women in the desired color, since cotton is not spun by the Paez.

586 The threads of different colors used to make the coca bags
824 and the women's belts were originally all dyed by the Paez
177 women with vegetable dyes. Today this is done only in part,
[439] for anyone who has the money buys aniline dyes at the market in Inzá or Belalcázar; they are more popular because of their stronger coloring and greater luminosity. Similarly, the cotton purchased in thread already dyed is more popular for making women's belts, since it is brighter or more brilliant.

/167 cont./

484 while the /168/ woman on foot lugs the goods behind. From
439 Calderas more men than women visit the market. For both it
482 is a very welcome occasion to become intoxicated. The
[273] owners of the taverns try to prevent the stealing of the much
[275] coveted beer and whiskey glasses, popularly practiced by the Paez, by chaining the glasses to the tavern tables.

On market days it is customary to leave very early and to transport the loads in the fiber bags in the customary way: the men take the carrying belt diagonally across their chests and the women hold it with their foreheads. In both cases the bag hangs on their backs. Then generally travel in groups of twos or threes, but not infrequently one also meets solitary
[432] individuals. Provisions are taken along, for, as a matter of
[273] principle, nothing is bought on the way except chicha or brandy.
[485] If it is necessary to stay overnight, nothing is paid for this. They sleep either at the entrance of a house of acquaintances or spend the night in the open field.

439 For traveling and for the visit to the market they try to wear
484 at least one article of European clothing, a felt hat, a shirt, or
[291] a blouse. The quality plays only a minor role, since the worst
[177] shirt is still more desirable than the finest ruana. A person who cannot buy anything in the way of clothing at least ties a black
[262] band around his hat, such as the felt hats have. Provisions are carried along in the fiber bag, roasted maize, cabbage, potatoes,
[415] arracacha. A person who can carries with him two or three of
484 the woolen coca pouches, in one of which there is coca and lime,
461 in another one money, and in the third the plaiting material
[285] for the straw hat. Almost all the men do this plaiting work, which actually is not work at all, but more like a "blind occupation," when they have nothing else to do, either when visiting, on the way to market, or also during the shaman ceremonies.
[283] The women, no matter where one meets them, are equally in-
[285] dustrious and always busy with spinning or plaiting the fiber bags or the wool coca-pouches. Like the men, they carry their work material with them in a second wool pouch.

/169 cont./
491 rivers (*), for example, the Rio Kokiyó, which flows through

[114]

* I did not see anywhere the simplest form of a bridge mentioned by H. Pittier (p. 320) /see the bibliography in the foreign text, p. 326/ in the northern part of Tierradentro, a bridge which people cross hand over hand on a liana stretched across the river.

the Calderun region, there are strong bridges over which even
491 loaded horses may go without trouble. This type of bridge
499 consists of two tree trunks placed a good meter apart, upon which poles are tied crosswise as planking. Only about every fifth planking pole is lashed, while the ones in between are held fast by a longitudinal beam laid over each of the main supports. On either side of the bridge, poles are tied vertically and horizontally as a railing and at the same time serve to support the roofing. The latter is a characteristic of all such bridges (Ills. 194 and 195 /see pp. 285 and 286/). One finds it not only on the bridges in the colonists' region of Tierradentro, but /170/ also, for example, on the bridges of the upper Magdalena River, the region around San Agustín.

The third type of bridge is found in two artfully constructed arched bridges made of bamboo over the Rio Paez at Belalcázar and Avirama (Ills. 191 to 193 and 196 /see pp. 285 and 286/).
[284] They are both quite similar in construction and, like all the other bridges of the Paez, made without nails or other iron parts, but simply lashed with bast and lianas. For reinforcement, however, two wire cables have now been stretched underneath.
491 Although even the Spaniards at the time of the conquistadors
● 177 report on the "weak and flexible bamboo bridges" and on the
499 "liana bridges" of Tierradentro (Hernandez, 1944, p. 189), in
[175] the case of the two above-mentioned arched bridges, which are relatively difficult to construct, it seems not to be a matter of an original Paez technique. Indeed, these would be the only suspension bridges of this type in pre-Spanish South America.

/170 cont./

491 Rather, these constructions seem to be a borrowing from the
177 Negro slaves who were brought into the region around Belalcázar
499 in very early times in order to work the gold and salt mines there. Both bridges would then be an African culture element in the Tierradentro region. They are suitable only for people. Larger animals are pulled through the river with ropes and must swim part of the way.

499 The two groups of posts on each bank -- a very modern method of bridge anchorage -- upon which the arch of the bridge hangs, are supported by a number of stakes driven into the ground farther up the bank. Bamboo poles serve as joining and holding material. The footway held from above is made with split bamboo, pounded flat. Additional bamboo tubes, secured by
[476] lianas, form the railing. For the construction of such an arched bridge the inhabitants from the adjacent villages along both shores come together. They bury the ends of two long and strong bamboo tubes in the ground, so that their tips lean
[623] slightly toward the river. Then the gobernadores /see the glossary, p. 249/, as the heads of the town councils at the time, start climbing up the poles, which, as a result of the weight, lean toward the center of the river, until the poles touch and the two gobernadores can shake hands from either side. With one hand they then quickly tie the joined tips of the bamboo poles together by means of lianas, which is the first step in the bridge construction. It is completed by the rest of the people (from Hernandez, 1944, p. 190).

/171/

III. Society

1. Political Organization

619 The tribe of the Paez consists of the inhabitants of a number of villages of the Tierradentro region who regard themselves as belonging together because of language, clothing, habits, and
621 traditions. Their present-day political organization is based on the village community. It corresponds roughly to the original

/171 cont./

621 tribal organization. Even at the time of the Conquista the Paez
[622] did not form a common, cohesive community and were similarly independent from village to village and without a chief,
[623] just as today. Only in times of war did a few villages join together
[648] in a sort of loose federation, in order to be able to offer stronger resistance to the Spanish intruders. Afterwards, however, the
177 "alliance for convenience" dissolved. The political influence
361 of the Spaniards during the colonial period had the effect of
131 fixing the boundaries of the villages that had existed up to that time, each of which occupies the area of a valley basin, in order to create clear relationships with respect to the white landowners. The former arrangement of the villages was essentially the same, as one may see from the large number of old native names.

621 The control of the community at that time -- in keeping with
622 the character of the Paez -- was probably in a democratic village management, in a fashion similar to that of today. In times of war leadership was in the hands of men who were called caciques /see "Kazike" in the glossary, p. 249/ by the Spaniards -- as was the case generally in their colonies. The Paez have also taken over this name as a rank designation for the heroes of their traditions. Actually, their own word "sāt" for the political leaders in their mythology corresponds more to a war leader with shamanistic abilities than to a regular hereditary chieftainship of a society organized by classes, such as we find among the tribes of the Cauca Valley or the sacred principalities of the Chibcha at the time of the Conquista.

621 The present-day composition of the village council (cabildo)
623 as the administrative head of each village varies in strength according to the size of the village. It seems to be the most nearly complete in Calderas. Its composition and its tasks show
[565] that it is the head of a democratic community. The village is
[626] not organized by classes or by occupations. The consciousness of the equality of all is so strong /172/ that outsiders who distinguish themselves from others through personal achievement or personal acquisition are brought down to the common level by
623 force or killed. The leader of the cabildo has the grand Spanish

/174 cont./

624 In addition to the cabildo, there was introduced in Spanish
[177] colonial times, as the trusted agent of the missions, the post of capitan, who was not subordinate to the secular authorities and often was not democratically elected, but appointed by the church for life. Appointed to this office, if possible, are the members of an old, influential family, in which a son or nephew then succeeds the capitan in office, so that in practice this position was often hereditary within a family. The capitan in Calderas, who died February 18, 1953 and who had held this office for about 20 years, was named Manuel José Guagáz. His predecessor was his father, Bruno Guagáz. And though the gobernador told me that the family of the Guagáz were feeble-minded and no longer fit for any work, he admitted that it was probable that the successor of the old capitan would nevertheless be another Guagáz.

623 The deceased capitan was ill and weak during the last years
624 of his life, and thus it came about that the gobernador played the leading role in the cabildo. The weekly council meetings were also held in his house. According to conditions in other villages, however, the capitan in practice not only presides in the cabildo, but his voice also has somewhat more weight. At least, he is able to prevent a bridge from being built, for example, through his veto. /175/ True, he cannot accomplish it or even order it by himself, against the will of the cabildo.

623 Another functionary, who is likewise appointed by the mis-
651 sions for life, is the síndico, who fixes the ecclesiastical tax assessments and administers the funds.

623 The election of the cabildo takes place every year on the
293 first of December. On the following January first, the elected
[666] cabildo must appear before the administrative authorities of the municipio /see the glossary, p. 249/, where each member is given his staff of office and is sworn in for his duties. The staffs of office (kampo) belong to the village and are handed on from year to year. They are round in diameter, about 80 to 100 centimeters long and three to five centimeters thick, and carved out of the black, hard wood of the chonta palm. The tips of the sticks are fitted with a brass or iron cap for their protection. The handle is somewhat thinner than the rest of the stick and enlarged at the end to form a knob which is covered with silver leaf. Below the

601 /179 cont./

my father	ãtc táta	my mother	atc máma
your father	inc táta	your mother	inc máma
his father	kyec néi	his mother	kyec nihí
our fathers	kweš táta	our mothers	kweš máma
their fathers	kyáñweš néi	their mothers	kyáñweš nihí

It is interesting that in address the foreign father or the foreign mother of the partner in conversation is called táta or máma, like one's own parents.

The relatives in the parents' generation, who correspond to our "uncles" and "aunts," are differentiated in address, /180/ depending on whether they are relatives in the maternal or paternal line. In the case of the female relatives in the maternal line the prefix "pe" is placed in front of the corresponding designations for the male relatives. It is also striking that for stepfather and stepmother no word combinations with "father" or "mother" are used, but rather the same words as for the father's brother and mother's sister, or the spouses of the father's sister or the mother's brother.

father's brother	nyok	father's sister	pétsots
mother's brother	ká'ka	mother's sister	pényok
stepfather	nyok	stepmother	pényok
father's sister's husband	nyok	mother's brother's wife	pényok
father-in-law	táta	mother-in-law	máma

In the children's generation the absence of designations for [177] nieces and nephews is noteworthy. For lack of specific Paez words and concepts, Spanish ones are used. It is possible that in pre-Spanish times the entire children's generation, either that of an extended family /Grossfamilie/ or at any rate that of the maternal or paternal line, was designated by the same name by members of the parents' generation in the manner of the "classificatory kinship

/186 cont./

[77 Today all children are obliged to attend school in the
797 mission schools, where they are taught the catechism and the
871 Spanish language and must bathe once a day under supervision.
515 The mother nurses her child exclusively during the first six
853 to eight months; only then is the giving of more solid food begun, which, however, does not differ in any way from that of adults, that is to say, the child is given yuca, beans, chicha, brandy, etc., like the adults. The mother suckles the child until the next one arrives, namely, three to four years, and sometimes beyond that, along with the one born next. Every woman who has a child generally also has milk, we were told. Only if the mother should be far away, /187/ for example, on an errand at the market or out fetching wood, may another woman help the child with her milk. In the rare cases in which a woman does not have enough milk to feed her child, she may give it to some
853 other woman, who, however, does not receive anything for it. It
855 may also happen that a family with ten children has become so
[593] large that the food is no longer adequate. In this case the woman may leave one or several children in the care of her mother. If she no longer has a mother, however, she must keep them herself. In case the mother of small children dies and leaves a baby of less than two or three months who still cannot eat any food other than milk, the father looks for a woman who likewise has a nursing baby and who brings up the strange child with her milk for two or three years, until it can talk. Then the father takes it back, and the wet nurse is given a cow as "milk money."

854 Ordinarily the children are carried by the mother. The
482 colored woven belt (táw) and the large shawl (panyelón or séntyatc), in which the child is wrapped and carried by the mother on her back, are needed for this.

857 The games of the children are generally instructive for their
868 later life. The boys go bird hunting with the blowgun (pāt), the plaited stone-sling (ísot), or the elastic sling (kaučéro), or they practice catching each other with the lasso, during which the child
[231] to be caught represents a cow or a horse. The ability of the children, and of the adults, too, by the way, in the use of the lasso is not

/194 cont./

585 those of my husband, and you are not to say bad words either to your husband or to us!

The wedding celebration is as brilliant as possible, which means entertaining the guests lavishly as long as possible. In some families the celebration goes on for more than a week. [535] There is no dancing in Calderas, but in other Paez villages [177] Colombian folk dances, usually the open bambuco, are danced.

586 A dissolution of the marriage through divorce is said not to occur even among the non-Christian Paez. Also there is no separation of married people, since man and wife are dependent on each [837] other for economic reasons. Yet it not infrequently happens -- [848] as reported above -- that married men have children outside their marriage with other unmarried girls.

587 In case of the death of one partner, the surviving spouse may remarry. But whereas for the first marriage he merely could not marry a partner of the same name, in the second marriage he also may not marry a partner bearing the name of the deceased. Thus, for example, Juán Piñakué, who in his first marriage was wed to Ascensiona Kiskué, may not marry a Kiskué a second time.

589 /195/ Widowers continue to live in their houses and, if the 591 children are not yet grown, usually marry a second time; otherwise they live in the house of one of their grown sons. Widows, if [587] they are older, usually do not marry again. With their children they go back to where they came from, namely, the house of their parents. If the latter are no longer living, they have the right, for the time being, to live in the house of whichever brother happens to be living at the time in the house of the deceased father. If the house is no longer standing, the widow lives with one of her brothers or with other relatives. In any case, she cannot, as a woman, live alone in a house, but always only in one belonging to a man.

/195 cont./

d) Death

761 According to the belief of the Paez, death occurs chiefly
776 through the action of the evil shamans (nyic) or the evil spirits
165 ec, tus, and gělyómp (see "Religion" /see pp. 191ff./). Included
164 here also is the not infrequent cause of death through consumption.
[262] Causes of death of children are chiefly whooping cough, as well as stomach and intestinal disorders, the latter brought about by a
[762] diet very unsuitable for children. Suicide is completely unknown.

764 The death of a member of the community is passed on from
[763] man to man by members of the family and neighbors. There is
[203] no public mourning or lamentation; upon the death of small
[765] children, people act as though they were glad, since the children
[192] are now "little angels." (Among the colonists, as well as among the Paez, the Spanish word "angelito" is used.) In former times it was customary to abandon the house when death occurred and to leave the deceased and some food in it (Castillo i Orosco, p. IX).

764 The manner of burial is the same for men, women, and
184 children; there are no social differences. A few customs in other Paez communities, however, differ from those of the Calderun. Therefore the burial of the dead in Calderas will be described first.

[177] For burial the deceased is dressed if possible in purchased,
[291] that is, "white" clothing, even if he was the poorest of the poor and had never worn such clothing. For this reason the relatives incur considerable expense, which often cannot be paid for a long time. Burial takes place the day after death. Only the feet of the deceased are washed. This work, as well as dressing the deceased, may be done by relatives or even by outsiders; they must, /196/ however, always be men, even in the case of female deceased persons. The body is taken by two men on a bier made of two tree trunks to the graveyard next to the church, where two other men, usually relatives, have already dug the grave. The latter is trapezoid-shaped, a good shoulder's breadth at head height and narrower at the foot end. Its length is determined by the size of the deceased. The direction of the grave is completely arbitrary.

/204 cont./

556 special sociological role within their community, for they are elected neither more frequently nor more rarely to the village offices. They have simply "always" been considered wealthy, though it should be noted that in the language of the Paez there [192] is no word at all for "rich" or "poor." The word used for "poor," "póre," comes from the Spanish (povre), and the word used for "rich," "čáčanas," at the same time means "strong" in the physi-
556 cal sense. Despite this apparent unimportance of wealth, how-
626 ever, it is jealously seen to that no other industrious man of a poor family will become rich and possibly put his wealth -- by means of Colombian dress or something similar -- on display. The evil shamans would put a spell on him or poison him, /205/ and the neighbors would devastate his fields by driving their cattle there. He would be cut by everyone, and people in a state of intoxica-
115 tion would start a fight with him in order to kill him. At any
556 rate, this is what happened and is happening to our interpreter,
626 Victoriano. He does not come from a wealthy family, but he wants to acquire money and livestock through diligence and [291] ability. From the money he earned among the whites he has [177] already bought himself the clothing of the whites, which he now proudly displays, and at festivals he sells wax candles and sweets. His fellow-villagers hate him on that account. The priest has had to protect him several times already from the machetes of drunken men who had started a fight with him; and in our presence, too, when we visited various houses with him, he was occasionally very rudely heckled by drunken men. Not least because, in the opinion
115 of the Calderun, he is not working. Again and again I tried to ex-
123 plain to the people that they, too, could "go walking" with me and
556 earn money if they were able to speak Spanish. Since this was
626 not the case, there was nothing else for me to do but always work with Victoriano. Nothing helped; Victoriano became more and more unpopular, and I, too, was regarded as a do-nothing. A
123 drunken man who, instead of the one cigarette he was given, vainly demanded an entire pack as a present abused me, too, as an "alko," a dog, who is always going from house to house and does not work.

/205 cont./

578 [123] I acted as though I did not understand the words, but observed the same thing as on other occasions of disputes among Indios, namely, that two who are quarreling are not separated by a third stepping in. Rather, a dispute is regarded as an affair of the participants and as an interesting diversion in the monotonous daily existence, and the outcome is observed with obvious interest. Apart from the native word "alko," the Paez, interestingly enough, have no abusive word in their own language. The only term of abuse, but used very frequently, is the Spanish "carajo!"

f) Division of Labor between Men and Women

462 As we have seen from what was said above, the individual left to his own resources cannot exist in the Paez communities. The men's work is supplemented by the women's work, and vice versa. Both men and women are dependent upon each other to make a living /206/ and rely on each other for their most primitive vital needs. A man needs a woman who weaves clothes for him, and a woman cannot clear a field -- to cite but one example. The traditional tasks in relation to the sexes may be [177] summarized once again here. Transitions toward newer ways of life are noticeable, as these have been taken over from the surrounding colonists.

428 guests. In case the deceased has neither sons nor brothers --
P which scarcely ever happens, it is said -- the villager who takes
[768] care of the burial inherits his entire property. The widow moves in with one of her brothers or sisters or some other relative.

T Disputes and misdemeanors, such as theft or adultery, are
692 judged within the communities by the cabildo; murder or serious
625 C bodily injury, by the Colombian state judiciary. It was said that
[692] murder and manslaughter did not occur in former times, the old
T 682 people told us; they are a consequence of "white" influences
623 and the weakening of the cabildo. One can well understand this,
182 for in Calderas where the village council still enjoys a certain
[177] amount of power and considerable prestige, it would be unthinkable
P for a son to stab his father to death. This happened in San Andrés
[177] where the cabildo exists only in the form of three functionaries who are basically powerless and without standing and where the young people, through the influences of the living conditions of the white colonists, no longer have any feeling for the old discipline and customs. It was in San Andrés in March, 1953, that the son of the capitan stabbed his father to death. The
P latter, after the death of his first wife, had married a second
[593] time, for which his children reproached him vehemently. In a drunken state, this led to a brawl, in the course of which the father struck off half of his son's right ear and the son killed his father with several knife stabs in the abdomen. After the deed, he fled; but since it was known that he could find shelter only with relatives, the /213/ gobernador of the town of Lame seized him
P a few days later in the house of his sister, where he had hidden.
[624] He was brought to San Andrés in chains and delivered over to the sindico, who was simultaneously occupying the position of gobernador. The latter, an older man of the age of the deceased capitan, tried for some time to reason with the murderer, who gave the impression of being uncommunicative and almost sullen; he pointed out to him the baseness of his deed, of patricide, and then he was led to the church in which the dead capitan was lying in state. The son resisted violently, but was forcibly led up to the corpse and broke down weeping before it. Before he was transferred

/224 cont./

193 no one: tēčanyópa; tēčanyópa máhiméta, "no one is working";

several, various: ko; ātya ko hímba hipt, "I several horses have";

many: tak; tak nása, "many people";

little: wé; very little: táwala wēha.

193 114 Verbs: The infinitive forms of the verbs end in -ya. The only data thus far published about the conjugation system are to be found in Castillo i Orosco, who conjugates the verb "to write" [177] in all paradigms according to Latin grammar. The word formation of the model verb and the conjugation are artificial and set [797] up for teaching at the mission schools. People do not speak that way in Calderas.

193 124 177 The conjugations of a few verbs given in the following do not represent all the conjugation possibilities, since -- as was mentioned -- the interpreter lacked a knowledge of Spanish grammar. Hence the schema of the paradigms is largely theoretical. Everyday speech is different, and especially in storytelling the interpreter used forms which he reproduced in Spanish with participial constructions. Nevertheless the forms reproduced here are /225/ "correct" in the sense that one "can" speak this way and be understood while using the forms.

193 [124] Besides the four tenses reproduced here (present, future, and two forms of the perfect), there are probably also forms corresponding to the conjunctive, which, however, the interpreter neither understood nor was able to reproduce in Spanish. The forms of the future are not always used. Very often the present is used with the addition of "tomorrow" or "later," for example, ātya gwágwan kúskay, "I speak tomorrow," instead of ātya gwágwahípt, "I shall speak." The forms of the two past tenses are apparently used arbitrarily. To my questions on this point I always merely received the answer: "one can say it this way and also that way." Here, too, the addition of ónna, "yesterday" (in context: ónnaha), or esé, "some time ago," is customary.

[126] The abstract, consecutive listing of the forms of a conjugation is hardly possible for the Paez. I always had to make

/253 cont./

539 When he came back, he saw the snake in its place. Then he changed back into a human being. The fiber bag was there, too. The bananas were there, too. The snake filled with water (that is, underdone, still watery) was there.

It was afternoon when he went into his house. The bag he brought to his wife. He came to his wife with this bag. When he had knocked, he entered.

2. Orientation and General Knowledge

772 776 177 Nothing definite can be said about the ancient Paez conception of the world, since Christian influence has had a strongly modifying effect. In any case, there is in the Paez vocabulary the word "tátyinas," which is sometimes translated as "god," and sometimes -- and corresponding better with the meaning of the word -- as "creator." The word "Dios" is used to designate the Christian God. Tátyinas, I was told, lives in heaven, on the earth, and in the earth. He made all human beings. He does not receive sacrifices. He is not mentioned in shamanistic ceremonies.

772 775 The vocabulary shows that, besides the earth and the conception of a heaven or of the firmament, there were also two places of the dead that were familiar. The happy land of death, mbéka kígwe, is like heaven. Literally it means "land of chicha," and if one knows the Paez, one realizes that in any case it must be /254/ a happy land. The land of the dead corresponding to [776] "hell" is called eč kígwe. The eč are the most evil of all spirits. They live in the earth; hence this designation must refer to a subterranean land.

804 461 As for natural periods of time, only days and months are known, as well as work days and non-work days (ki'sen). The latter designation is now used for Sunday. Originally this was not a fixed day; rather, people worked and celebrated as they could arrange the time within a larger or smaller community. Even today, during the times of clearing, the people sometimes work for weeks in the field, without inserting a work-free day.

/255 cont./
802 designated as "much" (teč kwát), literally "one stone." Today it is the designation for "hundred."

75 The medical knowledge of the Paez is not great. Almost all illnesses are regarded as based on magical causes and are treated by the shamans (see below//see pp. 190 ff./). Broken bones are treated by the midwife, who rubs on cow fat and wraps [845] leaves around them. The broken bone is never put in splints. In a difficult birth the midwife is able to turn the child into the right position; if then the birth does not go well, her skill is at an end. No remedy is known for snake bite. In the case of headaches, a leaf is tied to the front of the head. For flatulence some wood ashes are rubbed on the abdomen. For injuries caused by a machete and bleeding profusely, a tourniquet is applied to the affected limb, above the place of the injury, and the wound is covered with a small piece of cloth. The shaman has the injured person bite hard with all his teeth on the iron machete.

3. Religion

771 The Paez today are nominally Christians. They are baptized
797 and usually married by the Catholic priest. The Christian missionizing began as early as the sixteenth century, at first, to be sure, with little success, which did not increase when from 1630-1654 Jesuit missionaries took over the mission work. Only in the last decades
797 has there been greater progress. Hand in hand with the conversion
177 to Christianity go the introduction and teaching of the Spanish lan-
871 guage and the adoption of Colombian customs and habits. Today in almost every village there is a mission station and a school, the teachers of which are mostly women missionaries. In general the parents do not send their children to school unwillingly, for they have realized that knowledge of Spanish and of reading and writing is accompanied by certain advantages in their relations with the
[178] whites. In connection with the /256/ schooling, of course, there is
[756] some alienation from the old habits and customs of the Paez, especially those of a religious and sociological nature. Nevertheless,

/256 cont./

797 in all Paez communities in which Spanish is not understood by the
177 majority of the population, the old functionaries of the original
178 Paez religion are needed to maintain the social life in particular.
871 In accordance with their activity, they are designated as "shamans"
756 by theologians. Because of the dissimilar nature of their religious activity, they do not by any means represent unbridgeable competition for the Christian missions; rather, both, the Christian faith and shamanistic activity, can exist side by side in the present stage of culture of the Paez.

771 If one considers existing theological convictions, one finds
793 that the office and dignity of the cult priest rest on the performance
756 of sacred acts which must of necessity be fulfilled so that the
182 natural and normal development of human existence is not obstructed. His task is to confirm the existing world order through the consecration of sacerdotal acts. The shamans, however, -- on the contrary! -- want to outdo and break through the given order of nature and the environment. Their greatness and authority rest on the fact that they do supernatural things, that they heal the sick, struggle with spirits, yes, awaken the dead to new life. This, at any rate, is said of the greatest of their kind, whose talent lies in their spiritual, supernatural powers, in their mastering of extraordinary circumstances. Over against the cult priest's "thus it is," the shaman puts his "thus it should be" (A. Friedrich).

a) Characteristics of Paez Shamanism

756 The Paez shamans, in the sense given, are not functionaries
754 of a sacrificial cult, but persons who do supernatural things. There are two types of them, the teyu and the nyic. Whereas the teyu (tepits as a man, téoi as a woman) is a good shaman, a good doctor and helper of human beings, the nyic is an evil shaman, an evil sorcerer, a hexer. The shamanistic activity of both, however, as a religious phenomenon, is not nearly as distinctive as, for example, the shamanism that we are familiar with in Siberia or North America.

/256 cont./

771 It is not certain whether in former times the Paez had a cult
[793] priesthood besides shamans such as are practicing today. In any
[756] case, to designate the priests and missionaries they use the word
[797] tikwe, /257/ which is not used for anything else. The present-
771 day characteristic thinking of the Paez, their entire mental atti-
754 tude, revolves around magic and countermagic, despite mission-
[797] izing and Christianity. No injury, no illness, no deformity, no
[177] poor livestock is traced back to natural causes, but rather every-
thing is the work of evil magic. Since the people themselves
are fully convinced of this belief and ensnared by this idea, the
actual achievement of the evil sorcerers corresponds to what is
desired; that is to say, a person who knows he is bewitched,
being mindful of the inevitability of his fate, actually becomes
554 ill and dies. The victims are almost always the most thrifty
and industrious members of the community, those who tower
above the others because of their success.

754 There are no persons who are privileged because of age,
177 sex, or social position -- with the exception of the good shamans,
who are incessantly the target of the evil ones. Anyone who, in
dress and way of living, adopts the customs of the whites, is in
the habit of associating with them, no longer chews coca, works
with modern tools, and wants to carry on his farming according
to the principles of the colonists is opposed by the nyic.

754 It is not only the outward superiority of the individual over
554 the masses that evokes the envy of the nyic, but also the general
popularity of an individual, and with it a certain personal influ-
ence within the village. Thus, for example, the father of our
Victoriano was the victim of an evil charm. He is regarded as very
intelligent, is a good worker, knows best how to build houses and
bridges, and has even undertaken a journey to the city of Popayán.
On account of his popularity and the good advice he always gives --
so it is reported -- a nyic tried to kill him out of envy. One
[755] night when he was asleep the nyic robbed him of his soul. His
brother noticed it, however, and spat coca on it. The next day
the eye of the bewitched one became white and was close to
running out, if a teyu had not helped. He is blind in that eye,
however, to this day.

/265 cont./

756 right ring finger up the arm to the heart, the person concerned
826 will bury a relative on the next day. Signs in the palm of the
787 right hand mean that the sick person will get well; signs in the
[763] palm of the left hand, that the mountain spirit is not accepting the gifts and the patient must die. By means of signs on the back of the left hand the mountain spirit makes it known that the offerings are insufficient. If the signs go from the palm of the right hand to the neck, this means "pest" from the Pijao. Signs in the right thumb and in the hand announce the appearance of a lost or strayed animal; signs in the corner of the left eye, that the lost animal has been stolen and has already been eaten by the thief; signs in the left arm announce the arrival of the ec spirit; signs in the right upper arm announce to the shaman that good people are asking him to be the sponsor at a christening. Signs on the head of the shaman announce that the nyic will send the pest, and if the signs go from the head into the left hand, the
756 person is already bewitched. In these and similar ways of
787 interpreting their signs, the shamans discover the nature of all illnesses and the means required to cure them. Thus their signs are their only treasure of experience, and if they do not feel them, or no longer feel them, they have lost the essential characteristic of being shamsns.

787 Besides the shamanistic signs described, for the teyu as well
828 as for ordinary human beings of every age and sex dreams are an essential means of experience for looking into the future, as well as for confirmation of a foreign -- usually evil -- influence on one's own person. Just as the effects of evil magic on the individual are brought about through auto-suggestion, so, too, what is seen in a dream. The latter perhaps even more intensively because of a person's own, direct dream experience; only in this way can one understand the positively fatalistic attitude of the persons
115 concerned. Our interpreter Victoriano, for example, is one of the
787 most industrious and capable Calderun. He is determined not to
828 remain socially on the Indio level of his village. He therefore
554 [770] takes /266/ work from time to time among the white colonists,
[764] in order to earn money for Colombian clothing. He is therefore

/268 cont./

756 without leaving a trace. In vain the father tried to find out where
773 he was staying. After eight days, however, the son again appeared in the hut. He said that he had been with his grandfather, who had given him brandy, medicines, and this staff that he held in his hand and that was called tama. The "brandy" was cold water from a lake, and the medicines in the fiber bag were mountain herbs. After he had said this, he fell into a trance and lay there as though dead. Fourteen days later, as he lay dying, he asked his father to hand him his tama, for Thunder had told him that he could defend himself with it and that, in case of illness, he should take the medicines that he had given him. He squeezed /269/ out the juice and drank it. Quickly he became well. When he gave it to other sick persons, they, too, became well immediately. With his staff and his medicines he became the best doctor far and wide. He died at an advanced age.

775 Another shaman said that the tama stems from a lifesaving
773 act of the Holy Virgin Mary. Once when the sea rose constantly
177 higher and had covered almost the entire earth, human beings were in great danger. The Virgin Mary took pity on them. She drew forth the tama and with it made the same motions that the shamans make with it today. The masses of water then receded. She left her staff behind for the person who became a shaman. This is supposed to be the origin of the tama.

Although in the latter story not only the figure of the Virgin Mary, but possibly also the motif of the Deluge did not originate in the thought of the Paez, nevertheless the origin of the tama as
756 a gift from a higher power is noteworthy. This power, which,
776 for the shamans, is of the greatest significance as a spirit being
787 and as the first shaman, is Thunder. According to reports, he also positively has the character of an assistant spirit, even though he is almost only feared by the present-day shamans. "The old shamans," the present ones constantly assert, "were still powerful enough magically to establish communication with Thunder directly and at any time; we today are no longer able
778 to do it." In former times the members of the cabildo, under the
756 guidance of a shaman, bathed together in the lagoon of Juan Tama
623

/280 cont./

755 755c that his signs tell him that his efforts will be in vain, because the patient must die. Only if the signs are favorable, do he and the patient start chewing the little packet of medicinal herbs. The shaman now takes his staff and spits some of the chewed medicinal herbs on it, to prevent the pest sent by nyiç from possibly being transferred to him and killing him. Then he thrusts the tama into the ground with the point, in order to announce to Thunder that he does not wish to act badly and carelessly, but exactly in accord-
[824] [787] ance with his shamanistic rules. He sets the bottle of /281/ brandy, into which he puts a stalk of the čayuts herb, beside his shaman's staff. If the stalk remains vertical, it is a good sign; if it falls to one side and goes under, it is a very bad omen. On the mouth of the bottle he also places a small calabash vessel, likewise containing the čayuts herb, which is supposed to prevent the pest from taking the shaman by surprise and killing him. He now puts a handful of coca into his mouth and starts to chew. Motionless, he gazes at his staff, ready to receive his signs. From time to time he takes more coca and lime, tells the patient that his signs are favorable, that his illness, which comes from the pest, will soon get better. Then he gets up, goes to his tama, and vigorously spits out the chew. He empties a whole calabash of brandy and squirts it into the air. Again he returns to his seat, once again takes coca and lime and a little cigar tobacco into his mouth, and again remains squatting motionless. After about an hour he spits the chew in the direction of the staff, the patient does the same, and then both get up. The shaman now tells the
[783] patient that Thunder has shown him the possibility of a cure. He will now go and gather his special medicinal herbs, and for a good purification the patient will have to bring a pound of coca leaves, six cigars, a liter of brandy and chicha, and, in addition,
[177] [186] a few pounds of meat. The teyu urgently enjoins him not to take any of the medicine of the whites under any circumstances, for otherwise he must surely die. At this séance, as well as at others, the shamans all agreed that neither did they themselves leave the place of the séance nor did their souls leave their bodies to go wandering. The signs, to which alone they give heed, are the only characteristic of their experience.

/289 cont./

534 by cuts with a machete (Ill. 203 /see p. 290/). In spite of the
322 relatively correspondent holes, each flute has a slightly different tone caused by the varying diameter of the tube.

533 According to the investigation kindly undertaken by my
534 brother Wilfried on the sample flute of Vicente Puche that I acquired, it is tuned between C and C-sharp. Its six finger-holes produce a nonsemitonic seven-tone scale. All the tone steps, however, are somewhat inexact, that is, not exactly a whole tone-step apart. This is particularly noticeable from the third to the fourth tone where we perceptibly have less than a major second, but considerably more than a half step. This is noteworthy because in our diatonic major scale there is also a definite half-step between these two tones.

The blowing is on the right or left side. The extended fingers, work-worn by the heavy field work, cover the finger holes with the first or second joint.

534 The value of the flute is not very high. On festive days
[578] people are in the habit of becoming intoxicated in the festival
[796] houses and in the subsequent brawls the flutes are used as striking
[273] instruments and thus broken.

/290/ Every music group has at least one small cylindrical drum (káka) or a bass drum (kut), both of which are covered with skin on two sides and are wider than high in their dimensions.
[177] Drum and bass drum in this form are probably borrowed and were
[194] taken over throughout South America from former Negro slaves. Their manufacture among the Paez is specialist's work. At
[463] present Vicente Puche makes the flutes as well as the drums. In former times, however, there was a special expert who made only
[461] drums and bass drums. The work time for their manufacture amounts to 10 to 14 days, since one day is allowed for each operation (cutting wood, drying it, for the various processes in treating
[824] the skins, etc.). The cylindrical body of the drum is made from
[237] the wood of the utsé tree. The two drum-skins (katc) are made of calfskin. They are stretched with cords made of agave fiber, which run in a zigzag from one stretcher to the other over the body of the drum. They are tightened by a continuous loop that encircles two strands of the stretching cords at a time and at the same time

/290 cont./

534 is wound around the entire body of the drum. A string with a small piece of wood as a rattle device is stretched across the lower skin. The method of construction of the drum and the bass drum [184] is the same in Calderas. A drum in Santa Rosa differs in that each of the stretchers, upper and lower, consists of a switch used double, with the edges of the drum skin clamped in between (Fig. 37 /see p. 258 /). The measurements of the small drum are 16 centimeters in height and 22 centimeters in diameter, those of the bass drum 40 centimeters in height and about 60 centimeters in diameter.

533 In playing the music, for which no text is (any longer) known, the drum and the bass drum beat the same rhythm, but in a different manner. The drum is beaten on the skin with two drumsticks, which are simply two ordinary, inarticulated pieces of wood. The bass drum is beaten with one hand with a regular drumstick consisting of a stick with a wrapping of cloth, while the other hand beats against the frame with a little stick. In three-quarter time, the principal kind of time, the bass drum is beaten with the drumstick in one hand, the first and third quarter regularly and the second quarter in eighths. The other hand beats afterwards with the other stick on the frame.

533 173 Whether this Paez rhythm is original or was taken over with the drum cannot be determined with certainty. According to the tradition of the Paez, as told in the story "The Paez with the Ax," the Pijao women in former times, when as yet /291/ there were no drums, beat out the rhythm on their breasts with their hands during the dances. We may assume that this was also in part the case 533 among the earlier Paez. According to E. Castillo i Orosco, the [175] Paez formerly used hanging chichacanoas /chicha troughs/ as drums [534] (kwimb). They consisted of hollowed-out tree trunks and during the kwimbkó dance were beaten by all the men together, while the women sang. The rhythm beaten on the drums at the present time, however, seems to be less firmly anchored than the melody. They [797] are so fond of the latter that they do not sing hymns at the Mass in [177] the mission church, but play the customary melodies on the same instruments, albeit disproportionately slower. The drum and the bass lose the beat in doing this; they do not know how to begin

P /291 cont./
533 properly with their instruments and simply uniformly beat sixteenths.
[177] Thus it seems that the melody is more original and hence more
534 firmly anchored in the tradition of the Paez, and that with the borrowing of the drum, the corresponding modern rhythm was also
C 533 adopted. This has been corroborated for me by an observation per-
534 taining to the music of the Negroes of Tumaco in the Colombian
[177] port city on the Pacific coast. There, among the descendants of onetime slaves, West African musical instruments with corresponding Negro designations are still in use today, among others the xylophone-like marimba and two drums, the conical konuno with skin stretched over one side and the cylindrical bass drum covered with skin on both sides, the bombo. The latter shows the same type of stretching as the Paez bass drum and is also played with two drumsticks, one of which, provided with a raw-rubber knob, is struck on the skin and the other, a simple stick, on the frame of the body of the drum.

P 533 The musicians are always men. They play the music as
[462] amateurs who learn one or another instrument because they have taken a fancy to it. The drum is the more popular instrument, whereas flutists are less numerous and primarily limited to certain families.

P 535 The dances danced today, which, by the way, not everyone
[171] masters, correspond to the Colombian bambuco, though they do not show the dexterity and lightness of movement required for that, such as is found among the Colombian rural population in other parts of the country.

P 535 By way of a note, there should be cited the dances which H.
114 Pittier de Fabrega (based on E. Castillo i Orosco) mentions for the Paez and which in some of the designations, point to an independent culture: onza-kó, /292/ "mouse dance," nwi-kó "buzzard dance," itsa-kó, puberty dance of the girls, eč-koi-kó, dance of the spirit-flute, tel-koi-kó, dance of the long flute or war dance, la-kó, dance to dedicate a house, etc.

* /312 cont./

539 when the thief again came, took down some potatoes, kindled a fire, and roasted them in it, he took out both of his eyes "out of foolishness" before he ate and laid them on one of the three hearth-stones. Then the owner of the potatoes, whom the thief, of course, could not see, stepped up, saw the eyes, and kicked them into the fire, so that they burned with a bang. The thief heard the bang, to be sure, but thought to himself, how fine the potatoes are popping and sizzling!

When the thief had eaten all the potatoes, he looked for his eyes, but could not find them. He then left the house very sadly, without eyes, and set out for his own house. On the way he met a rat who was out walking there, and they started a conversation. The thief complained that he had lost his eyes and that, without eyes, it was very difficult to find them again. He begged the rat to lend him one of hers only until he had found his own eyes again. The rat lent him one, but since both of his eyes were burned, he could not, of course, find them. The man then turned himself into wind.

The rat searched for the thief of her eye for a long time, but could not find him. Her son, like his mother, also had only one eye. The son in turn had a son, and he, too, had only one eye. Since that time the descendants of this rat family have only one eye. And that is why one can still find rats today who, to be sure, have the nose, mouth, feet, skin, and ears of a rat, but only one eye or none at all; they go back to that rat who once lent one of her eyes.

/313/

105 V. Summary and Culture-historical Classification of Paez Culture

[161] [621] [177] [197] If we briefly summarize the sketch of Paez life and the elements of their culture, we find before us a democratic agricultural people of 25,000 persons, among whom no one is master and no one servant. Surrounded for centuries by Spanish culture, they have preserved their language in extensive sections of their area of settlement.

/314 cont./

105 The clothing of the men and women covers the upper and lower body. The men's upper garment, called "ruana" in Colombia, "poncho" in Peru, is a sleeveless shirt open at the sides. It is ancient American, known both from the relief of the so-called "sun god" of Tiahuanaco and from a grave of the pre-Spanish [291] period in Arica (northern Chile) (Montell, pp. 173-183). Soon [171] after the Conquista, since the second half of the sixteenth century, this Andean article of clothing, which consists simply of a square piece of cloth with an elongated slit for the head, was distributed throughout the area of the Andean mountain cultures. Its name, "atç," among the Paez, however, has no parallel linguistically. [177] The men's trousers are clearly Spanish. The women's costume is most simple: as an upper garment to a skirt a rectangular piece of cloth is simply put crosswise over their upper bodies.

[241] From an economic point of view, field cultivation is primary. It is carried out by the men in the form of the burned-clearing system with a ten-year clearing cycle. The only field tool is the [433] digging stick. The minimal area of cultivated land for one family is about one hectare. The principal crops are maize and sugar [177] cane. The latter was not introduced until after the Conquista. The Paez word means "sweet." The Paez designation for maize, "kotç," has no parallel with the corresponding words of the Chibcha, Carib, or Aruac /Arawak/ language groups, but with Kechua /Quechua/, where maize is called "kuts" (Birket-Smith, pp. 22-30). The stimulants are coca and chicha made of sugar-cane juice. Both Paez words, eẽ and mbéka, respectively, have no parallels in other language groups.

105 241 There are no outstanding festivals indicative of a planter's culture or rites associated with the products of field cultivation, nor does anything indicating an agricultural rhythm of life appear in the myths and religious customs of the Paez. The mythology and ceremonial customs are remnants of a hunter's attitude of mind. It appears as though the Paez did not adopt their primitive agriculture until the time of the Conquista or shortly before, and adopted only the mechanical application of the methods of simple digging-stick farming, without the ceremonial customs associated

/316 cont./

105 601 The kinship nomenclature shows remnants of a "classificatory" system, into which the individual is fitted as part of a living structure and does not stand out in profile, detached within the family. Persons are differentiated in address according to certain circumstances of age and life, and, among others, siblings are differentiated in address, according to whether they are younger or older than the speaker.

105 53 In art and mythology a considerable impoverishment has taken place. There is neither song nor any peculiar dance. The music of transverse flutes and drums, performed with great enthusiasm, is to be stressed. The cylindrical drum with skin stretched on two sides, which is used at the present time by the Paez, is in all parts of America a loan from the Negroes. In earlier times hanging, hollowed-out tree-trunks were used for the dance and for conveying information, such as /317/ are used today as troughs for making chicha. The rattles formerly present are no longer used today. The transverse flutes with six blowholes used by the Paez are post-Columbian; at any rate they are not found in this form either archeologically or recently among uninfluenced Indians. The only transverse flute form known from pre-Spanish and modern times are flutes that are stopped at both ends and provided with two blowholes (Izikowitz, pp. 298 ff.).

105 773 776 In the fund of tales no comprehensive picture of the world emerges. The chief figure in the myths is Thunder, who appears as the first shaman and as a war leader. He is not, however, an exalted, numinous figure, but rather to some extent has characteristics attributed to forest spirits in other parts of South America. [784] There is also a special forest spirit (gĕlyŏmp) among the Paez. He [224] has the figure of an old man with large, exposed sexual parts, and his stings inflicted as punishment for ritual uncleanness in connection with hunting cause the human being sickness and pain. He does not, however, appear mythologically. Fragments of larger myth-complexes are the story of the woman from whose body useful plants arise, the story about the ghostly human head that comes rolling along, stories about transformed animals and human beings, and stories about werejaguars.

101 only it might be necessary to modify it slightly if we were able
103 to localize all of the thirty-four villages or hamlets reputed to be of Paez stock and included in the following systematic list:

1. *Paez Basin*

As-at	Inzá	Suín
Chinas	Lâme	Tálaga
Chitoco	Mosoco	Toés
Cuetandó	Nátaga	Vitoncó
El Pital	San Andrés de la Plata	Yaquirá
El Naranjal	San José	

2. *Palo Basin*

Jambaló	San Francisco	Toribío
Pitaió	Tacueyó	

3. *Orejas, Corre, and Picudama Mountains*

Cajibio	Caldonió	Paniquitá

4. *Vagnará Basin*

El Retiro		Iquirá

5. *Locality Uncertain*

Abirama	Osyó	Ricaurte
Caldera	Pueblo Nuevo	Tobóima
La Troja	Pusó	

101 The principal neighbors of the Paez Indians, according to the above description of their territory, were to the north — the Quimbayas on the western slope of the central cordillera, and the Pijaos on the eastern slope. To their east were the Manipos, in the Magdalena valley; the Guanacos were on both watersheds of the central cordillera southward; and westward on the plains of the Cauca valley, the Kitšua and the Jamundies. The Kitšua were probably the most advanced in culture of all these different stocks, and the ones whose influence is more easily recognized
[177 in the customs and idiom of the Paez. Their language is also
191] the only one which has come down to us in its integrity.

There is no positive proof of the identity of the Paez and
101 Pijaos, and it is fair to state that there are many data pointing to
174 the fact that originally they were merely neighbors, and allied against the Spaniards, as, for instance, in 1641, when they de-

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

164 cient testimony, they have their share of physical ailments. Besides itch (*lel*), tumors of several kinds (*lol-sek*, tonsilitis; *koü*, tumor in the groin), they have original names for smallpox (*buzgné*), which I was told often rages among them, for diarrhœa (*u-tsitš*), dysentery (*mengné*), and intermittent or malarial fevers (*ya-ya-gné* in the ancient dialect, *kné-kné-né* in that spoken at the present day).

757 114 Of the practices and superstitions made use of in the cure of these diseases I could gain no information, but it is very probable that the Paez still have their own medicine-men.

Clothing. Personal Adornment

291 286 [231] At present the wool obtained from the numerous sheep kept by the Paez Indians plays the most important part in the clothing of both sexes. I cannot find any direct information on the fabrics used before the introduction of sheep by the Spaniards, [174 439] but it is most likely that the Paez obtained cotton from the Indians of the Cauca and Magdalena plains, the cultivation and the manufacture of which into thread must have formed one of the principal industries in the latter. I have already referred [172 174] to the great number of clay spindle-whorls found in the graves and on old dwelling sites throughout the Cauca valley. Judging by these we may feel sure that the former inhabitants were great spinners. On the other hand, the present Paez Indians still weave most of their own clothing, and there is no reason why they should not have done so formerly.

291 [177] The dress of the men consists of a pair of short trousers (*hiü*), that are evidently a concession to modern civilization. These are made of raw cotton cloth, or of imported fabrics, and reach from the waist to about the knees. Over the shoulders is worn a broad rectangular piece of white woolen homespun cloth, split in the middle in the form of a poncho so as to allow the head to pass through, and hanging free front and back. This is called *tund-atš*, i. e., 'the cloth that binds, or covers.' It is generally worn next to the skin, but sometimes a light cotton shirt, called *atš-petš*, is first put on. Over the *tund-atš* they carry on their left [276] side, hanging by straps that pass over the right shoulder, the coca

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

302 extracted from the seeds of *Bixa orellana*, which they applied
[824] by means of a cylinder of clay (*kaanda*) on which certain designs were carved. Specimens of such cylinders are often found in graves.

291 Children are very scantily clothed. The boys go about naked
515 until they reach their twelfth year, and the little girls wear only a short *atš-tul*. The clothing of the male and female adults seems to be worn as long as it lasts. As is the case with all Indians living at high altitudes, the Paez are not especially fond of bathing, and cleanliness is not a cardinal virtue with them.
[513] In retiring for the night, they simply wrap their garments tighter around them, the children using old rags in lieu of blankets.

386 The ornamentation of the *vilia*, or sash, with several brilliant
[182] colors and the desire of giving a uniform hue to the darker clothing of the women, gave origin to the art of dyeing, which very likely is to-day in its decline. The dyes were derived chiefly from plants. Black was obtained from *šal*, an arborescent *Phyllanthus* that has a semi-domesticated appearance and forms characteristic thickets around inhabited places, like Vitoncó; the same color is also contained in the young pods of the *huarango* (*Cæsalpinia tinctoria*), a spiny tree often seen near the houses and extensively used at the present time for dyeing wool. The roots of *tuk-uĉtse*, a Rubiacea (*Relbunium hypocarpium* Hemsl.) akin to the madder, produce a scarlet color. Different kinds of blue dyes were extracted from the fruit of the jagua (*kii*, probably *Genipa* sp.) and from an *Indigofera*.
[177] Many other tinctorial plants very likely escaped my observation and are gradually passing out of use on account of the introduction of foreign fabrics.

Dwellings

342 The Paeces have permanent houses in their thirty-four villages and temporary abodes on their corn plantations. These latter are merely small huts, the walls of which are more or less elaborate according to the altitude, being made tighter near the upper limit of culture. They represent the primitive type of

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

They represent the primitive type of habitation, the agglomerations being the result of the efforts of the missionaries. 342 [177]

The villages are generally in the open grazing districts at the bottom of the valleys, on side plateaus, or on broad ridges. They are not compact in the common sense of the word, but consist of isolated groups of houses, the approximate common center of which is often indicated by the whitewashed thatch-roofed church (plate v). 361

The walls of the permanent houses are made of a kind of *bajareque*, i. e., a skeleton of canes filled in with clay. In the better homes the interior is divided into two or more rooms, usually very small, with a hearth in the middle; but oftener there are no interior partitions, the dwelling consisting of a single square apartment. In every case that came under my observation the interior was very untidy. 342 353 [354] [356]

The Indians openly objected to our entering their houses, hence I could gain only casual glimpses of their domiciles, the furnishing of which seems to be an imitation of that of the dwellings of the few Spanish people living among them or in the immediate neighborhood. 352 123 177

Outside the houses they generally have a cane-crusher of primitive type, with horizontal smooth cylinders moved by means of levers at each end. A loom and a grinding stone are also seen occasionally under an adjacent shelter (plates iv,[1] and vi).[2] 407 286 412

There may often be seen, either about or inside the housse, very large jars used as receptacles in the elaboration of the chicha. These utensils seem to be almost the only survival of the ancient earthenware industry. The smaller pottery vessels which were seen occasionally had been taken from old graves. 415 [192]

Each group of houses, in which several generations of a single family dwell, is surrounded by a small enclosed field, planted with sugar-cane, plantains, oranges and other fruits, and greens and roots of daily use. The garden enclosure is formed by a ditch, inside of which is a wooden fence or a stone wall, the latter often crowned by a hedge of maguey (*Furcræa*), lechero (*Euphorbia*), borrachero (*Solanum*), and other bushes. 351 [592] [247]

[1] [See plate facing p. 317 — Analyst]

[2] [See plate facing p. 320 — Analyst]

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

deserted savannas. It must be said, in extenuation, that they have been subjected to much abuse by their neighbors of the "superior race." Moreover, the Paeces are naturally hostile to strangers, descending, as we have seen, from a warlike people. The old Paeces always went about armed, carrying a lance or javelin in the hand and ready to protect their bodies from the darts of an enemy by means of a shield of basket-work (*opimb*), or of tapir hide (*χimba-kdt*). The warlike tendencies of the tribe were stimulated by means of periodical contests in which the most valiant warriors fought each other in the presence of the multitude.

To-day, as we have seen, the descendants of these have abundant opportunity to satisfy their fighting propensity by taking sides in the frequent quarrels of the political parties that thus far have kept Colombia in an almost continual turmoil.

Sexual intercourse between Paez women and men of other races is said not to exist; barbarous chastisement would be the fate of the offending female. It is to be expected, however, that the closer contact brought about by the gradual penetration of the Tierra Andentro by whites and negroes will soon overcome the purity of the Paez blood and open the way to amalgamation with the neo-Colombian race.

Reclus, cited above (page 311), gives us to understand that the Paez were cannibals, and the tradition current in the villages along the western foot of the cordillera confirms his intimation with reference to the Pijaos; for the coming of "el Pijao" is still a menace to children. The early chroniclers tell us of several anthropophagous tribes which lived in this region, and it is not unlikely that the Paeces had a share in that custom.

GRAMMATICAL NOTES

Castillo's *Nociones gramaticales* is limited to a list of the personal pronouns and the conjugation of the verbs 'to be' and 'to write.' A few more grammatical indications are incorporated in the vocabularies, but on the whole these data are very meager, and much remains to be done in this direction.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193

Perfectum

1st p.	*anki-t fis*, I wrote;	*kuè-k-uel ta-u fis*, we wrote;
2d p.	*inui-ng fis*	*ik-uel ik-u fis*
3d p.	*kinâ-k fis*	*kinâ-g-uel tink fis.*

Futurum

1st p.	*anki fis an-et*, I shall write;	*kuè-k-uel fis an-et ka-u*, we shall write;
2d p.	*inui fis an-eng.*	*ik-uel fis an-ek*
3d p.	*kina fis an-en*	*kinâ-g-uel fis a-tin.*

Castillo gives two more forms for the Præsens:

1st p.	*fis ats-it*, I am writing, or painting;	*fis ats-i-ta-u*, we are (etc.);
2d p.	*fis ats-ing*	*fis ats-ik-ua*
3d p.	*fis ats-ik*	*fis ats-i-ta*

and

1st p.	*fis n-op-t*, I am writing, or painting;	*fis op-ta-u*, we are (etc.);
2d p.	*fis op-nga*	*fis n-op-kua*
3d p.	*fis n-op-a*	*fis n-op-ta.*

The infix *ats* is an affirmative particle; *ôp* is a kind of auxiliary verb, corresponding with 'to be,' or 'to have.' The *k* and *g* of the plural forms (1st and 3d pers.) are simply euphonic intercalations.

The imperative tense is often formed by prefixing or suffixing *mä*, with a frequent elision of the *ä*, as in the following examples:

Tund-e-mä! Run! (Hurry up!)
Tata mä-palla! Go (and) call (your) father!
Atta-mä! Go away!
Kla m-ue (mä-ue)! Catch the cow!
Io m-pts! Give (me) water!
Mi-io! Come!

E. — *Borrowed Words*

192
177

(1) *From the Spanish.* — As might have been expected, we find in Paez quite a number of Spanish words, most of which are included in the following list:

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

192
.177

kmisa,	for *camisa*,	shirt.
kneia,	" *guineo*,	a variety of banana.
kiso,	" *queso*,	cheese.
ktiil,	" *cuchillo*,	knife (machete).
kutti,	" *coche*,	pig.
letti,	" *leche*,	milk.
mama,	" *mamá*,	mother.
mil,	" *miel*,	honey.
pango,	" *banco*,	bench.
sap,	" *sapo*,	toad.
senda,	" *cinta*,	ribbon.
tlapon,	" *eslabon*,	fire-steel.
ticle,	" *tigre*,	jaguar.

(2) *From the Kitšua.* — In describing the territory occupied by the Paez and the neighboring tribes which later became consolidated with them, we have seen that it was, and is still, in close proximity to the northern end of the area occupied by the Kitšua (see the map, plate 1). Intercourse between these peoples has been necessarily frequent, and many words have become common to both languages. Castillo's editor, the late Professor Uricoechea, obtained a list of some of these words from Mr G. Pacheco Zegarra, who had perused Castillo's vocabulary. To these I added a few, notwithstanding which the list still remains very incomplete, as the lack of an extensive Kitšua dictionary, including the northern dialects, forbade any further effort on my part to make it longer:

D77]

Paez	*Kitšua*
akets, cinder	*akku*, cinder
atsi, to sneeze (onomatope)	*atsii*, to sneeze
atall-pits, rooster	*atall-pa*, rooster
anaku, part of woman dress	*anaku*, part of woman's dress
ds-a, to stink	*as-nana*,
atia, very	*átia* (*antia*), much, very
alko, dog	*allko*, dog
aú, yes	*aú*, yes
kipa-ki, to overtake by following	*kipa*, behind, after
killim, drivel, dirt	*kelli*, drivel, dirt
kandul, vulture (condor)	*kuntur*, vulture
ia-yi, blooming sugar-cane	*ia-yin*, blooming sugar-cane, also a vine

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

killka, paper, letter, book	*killka*, paper, letter, book
kaftoni, to lick	*kaftoni*, to bite
kikin, again	*kikin*, again
kakka, father-in-law	*kakka*, father-in-law
laki, lax, feeble, lazy	*llaki*, feeble faint, sad
mutlai, to kiss	*mutlai*, kiss
mil, cat	*misi*, *mitti*, cat
miski, honey	*miski*, honey
muti, boiled corn	*muti*, boiled corn
lla, to complete, to finish	*lla*, so (Span. *ya*! ya se acabó = *lla*)
llusa, sugar-cane, sweet cane	*llak-llu*, sweet, applied to any fruit
pillu-skia; to hate, to quarrel	*pilla-tsina*, to be angry
pisko, turkey	*pilku*, bird
puki, watershed	*pucyu*, watershed
pein, to ask	*pin ?* who is it?
tlumbe, sash to support the *anaku*	*tlumbi*, sash, girdle
tlpi-pi, turkey	*tlumpi*, brown
ukupa-ki, to push	*ukupa-tlii*, to push
uás, a hut	*huási*, house
vite-pasak, one hundred	*patlak*, one hundred

(3) *From other Languages.* — It is likely that the Paez language borrowed many other terms from neighboring tribes, but thus far we lack the necessary material for comparison. As explained above, since Castillo's residence among these Indians their language seems to have undergone considerable change, especially in its vocabulary, a fact readily explained if we admit that the present Paez are composed of the remains of several tribes, greatly reduced in number by their wars with the Spanish conquerors and the hardships they suffered after their submission to the new rule. With the Chibcha, the analogies seem reduced to the rules of construction, the vocabulary being totally distinct.

F. — *The Numerals*

1. *Jas*, *vitetl*	*tetl*
2. *Ens*	*ens*
3. *Tek*	*tek*
4. *Pans*	*tans*

2: Pittier de Fábrega E-4, 5 (1906) 1907

/284 cont./

132 gives rise to cold local winds that blow through the valley of the Páez, affecting chiefly the areas of Vitoncó, Suin, Chinas, San José, Mosoco, and also the parcialidad /a territorial division/ of Calderas itself. The variation in temperature is noticeable in these zones sometimes having hot days and very cold nights. Nebulosity is almost constant, especially in the northern zones.

241 Economy.--The topographic and climatic characteristics permit the cultivation of various plants, such as maize, beans, bananas, sugar cane, yuca, arracacha, and gourds in the temperate zones, and in the cold ones potatoes, maize, ullucos, [433] beans, gourds, and cabbage. The produce barely leaves a [439] surplus for trade with the parcialidades and urban centers of [438] Belalcázar, Inzá, and Valencia. The potato crops of Mosoco, Vitoncó, and San José serve for an active trade with the Paez of the western slope of the cordillera, across the Páramo de Moras.

433 Coffee and the production of panela are important lines 245 in the economy of the colonists and also of numerous groups 249 of acculturated natives. The coffee of Tierradentro is con- 177 sidered one of the best in the country, owing to the quality and mildness of the bean.

231 /285/ The raising of livestock flourishes among the civilized 437 groups. For the natives it serves for maintaining a barter trade with their neighbors, the white and mestizo colonists.

311 On the whole, native production is relatively scant, 433 giving rise to times of "hambruna" /ravenous hunger/ when [731] the summers or winters are rather harsh. The workable land lies in the small plains and valleys of rivers and streams, on the alluvial terraces, and on the plateaus. Comparing the size of Tierradentro with that of its arable land, the latter appears scant, a problem that is aggravated by the increase in population and the habitual burning.

101 Population.--Tierradentro is the country of the Paez, 36/ who at the time of the Conquest were settled to the north of

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
361 Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166 193] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17,578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

000 /288 cont./
756 medicine men. To cure the patient, he divines which of the
755 supernatural beings caused the illness, proceeds to placate him,
[787] and then prescribes medicines to the patient. If the placation
is not successful, the patient literally sinks into despair. The
indispensable articles for all curing are coca, tobacco, and
[462] aguardiente. The medicine men are persons well along in years
[754] and belonging to the masculine sex. They cannot cure the
effects of sorcery, although they can protect themselves against
it.

754 c) Fifty per cent of all illnesses, the informants state,
[753] are caused by sorcery, and by the same token 50 per cent of
[761] the deaths, since sorcery is incurable. The sorcerers conceal
their activities, and it seems that all adults are potential sor-
754 cerers. The institution of sorcery is a true escape valve for the
154 strong aggressive impulses of the natives and to some extent
plays the role of a social regulator. Through it are channeled
the jealousy, resentment, and vengefulness of the natives.
The victims of sorcery are the most skillful and hard-working
individuals, those who have a good house, good crops, and a
growing number of domestic animals. Harvests and plantings
[683] generally are the object of sorcery. Sorcerers who are publicly
unmasked are exposed to the anger of the community and even
to exile, a measure taken not so much on account of their be-
[685] ing sorcerers as of their being thieves. All sorcerers are thieves.
Sorcery appears with considerable frequency in the symbolism
of dreams.

583 Marriage.--Marriage is monogamous and patrilocal. Both
[595] the chroniclers and Dr. Gregorio Hernández de Alba speak of
[591] the custom of the year of probation to acquaint the man with
[177] the skill, energy, and fecundity of his future wife. A thriving
[797] institution in times past, it is now in sharp decline owing to the
action of mission work. Obviously, the purpose of this insti-
tution is to find out whether the woman is hard-working, faith-
ful, not a thief, and to understand her ways in order to establish
a lasting union. Nowadays the Paez, before being married

/288 cont./
583 in the church, live together for a period of indeterminate duration, explaining that /289/ the man does not have enough money at hand to marry as soon as he asks the woman, and it is necessary to work in order to obtain it.

771 Religion.--The religion of the Paez is formally Catholicism,
177 but many of their traditions are hidden in it. The principal
[796] fiestas of the natives are religious ones, which acquire true strokes of splendor. The Catholic priest is called upon for the ceremonies of baptism, marriage, and cases of death.

Chapter II

631 Calderas.--Incrusted in the very heart of Tierradentro is the
131 Parcialidad of Calderas, bounded on the north by a high ridge
133 that separates it from Chinas and Avirama; on the east, La Muralla, the very model of a fault, separates it from Avirama, just as a ridge separates it from Togoima; to the south, deep gorges and high peaks separate it from San Andrés and Togoima; to the west, the Quebrada Guacharaca divides it from the Parcialidad of Lame.

133 It is crossed from west to east by the Quebrada Kukiyú,
631 actually a river in terms of the volume and violence of its waters, whose bed is deep, enclosed, and inaccessible. Its
[423] left bank is somewhat softened by a beautiful plateau of about 20 hectares, with fertile lands, abundant waters, and on which the pueblo rises; it belongs to the community, whereas the other lands are private property guaranteed by the fact that the owner either personally cleared the montaña or inherited it from his ancestors who cleared the forest. The right bank is steep, harsh,
[161] rugged. Numerous clearings are to be seen on these sloping
[311] lands, indicating the increase in population that compels them to cultivate lands of low fertility and great danger for the laborer.

[Parcialidad of Calderas]

/289 cont./

142 The Calderuno /native of Calderas/ is rather tall, with a light copper skin, straight black hair, a straight nose somewhat flattened and broad at the base, slightly prominent cheekbones, dark brown eyes reminiscent of the Mongolian eye, a broad forehead, long and robust extremities, a slightly pentagonal face; many have mustaches, and, on the whole, the 157 features are rather /290/ handsome. On the other hand, he is talkative, communicative, deeply traditionalistic, proud [361] of himself, and has a deep love of the land. Isolated as they [177] are from the other parcialidades by natural accidents and far removed from the urban centers of Inzá and Belalcázar, they are shy, sullen, and withdrawn with the white, stubbornly opposed to contact with him, and, as a result their institutions, have suffered less from the impact of cultural mestization. 797 Not even the very church that has worked so persistently for the 177 catechization of these tribes, especially in this century through the Lazarist missionaries active since 1905, has been able to penetrate fully into the soul of these people.

114, I have carried out my research in this parcialidad since 773 the month of August of last year, with several interruptions. [124] The myths and tales which I now present were gathered with patient labor after much waiting, for the natives, when questioned about these themes, nearly always reply with the word himeto ("I don't know"). There is no need to stress the importance of mythology as an institution in the so-called "primitive" cultures. Nor is it my intention to theorize on the subject. It is enough to say, in the words of Herskovits, that "mitología es como la carta constitucional de las creencias y presta sentido a la conducta ritual que se deriva de sus consagraciones /mythology is the constitutional charter of beliefs and gives meaning to the ritualistic behavior that is derived from its consecrations/" (1). The chroniclers tell

1. Herskovits, p. 409 /see the bibliography in the foreign text, p. 309/.

/177/

I

Point of Departure

631 To the north of the municipio of Inzá and to the west of
[361] the confluence of the Ullucos and Páez rivers, two hours on horseback from the points just mentioned, the corregimiento /district governed by a corregidor/ of San Andrés is found on the left bank of the Pisimbalá torrent, an affluent of the
[175] Ullucos. Its name has been registered in the parochial books
[63] since 1736, when the priest José Fernández Belalcázar, as the
[797] representative of the Bishop of Popayán, initiated in San Andrés de Pisimbalá pastoral visits to the Paez pueblos.

361 San Andrés de Pisimbalá is a pueblo with the same characteristics that we have noted in other Paez centers; that is to say, it consists of a church, a school, the rectory, the house of the cabildo, and some others used solely for the celebration of religious fiestas. It is located on a small plateau, a ledge hanging on the declivity..

563 At the present time it is inhabited by whites and mestizos
177 whose ways of life, norms of behavior, and labor practices
361 have been imposed on the natives. Resistance to contact has
[648] been overcome, but active resentment against the white still
[566] crops out among the old people. Almost completely acculturated, many of them have sunk to the state of tenant farmers. The phenomenon of the colonization of Indians and land is the same everywhere. The Indian loses his land and sinks into servitude.

In 1926 the Municipal Council of Inzá created a settlement area with clearly delineated boundaries in a common agreement /178/ between the municipal authorities and the cabildo. The colonists established themselves in that area. The valley of the Pisimbalá torrent is narrow, but extremely fertile. It belongs in its entirety to a few families of colonists,

/178 cont./

361 who have established coffee and sugar-cane plantations and
[563] cattle ranches. The natives occupy the steep and barren sec-
[177] tions.

The pueblo of San Andrés consists of 23 bahareque houses
[342] /houses with walls made with two faces of sticks with mud and stone between them/ with thatched roofs. Only one is of brick and tiles. In its general lines the plan is reminiscent of that of Spanish centers: a central plaza with houses around it.
346 The church, which is large, thatched, and white, has a hand-
361 some façade, with a bell tower, arches and columns, a style reminiscent of colonial architecture; it stands in the center of the plaza and was built in the first decade of the nineteenth century by Padre Joaquín Núñez y Tobar. On its south side there stands a large, very old and dilapidated building where the school and the rectory functions; on the other sides it is surrounded by the colonists' houses.

366 There are two stores with a regular supply of merchandise, and on Wednesdays there is a small market where one beef, a few agricultural products, and chicha are sold.

133 Toward the end of the Pisimbalá valley are found the not
175 very extensive plateaus of Argentina and El Rodeo. El Rodeo has marked historical significance; for a long time it was called Segovia. In the spirit of conquest and colonization, the town of Nueva Segovia was founded there by Captain Hernando Arias Saavedra in accordance with the mandate of Governor Sancho Espinar, who in 1578 gave up these lands after his vainglorious campaign against the Paez. It was short-lived. On this same plateau Mosquera's rebellion against the government of Don Mariano Ospina Rodríguez was won by his spectacular victory over the government forces headed by
[317] General Joaquín París (1). In spite of this, the markets for

1. González, David. Los paeces /The Paez/, manuscript.

/184 cont./

342 bear its entire weight. Over this frame are placed transversally
335 the pikas, beams that go from one wall to another, to strengthen
476 the entire structure. Then the four-slope roof will be raised and covered with bundles of sugar-cane leaves (flushets) or straw (sits) which are fastened around the frame, starting at the bottom; it is completed by the ridgepiece, more massive and notched in a straight line on both sides to a depth of some 50 centimeters; at the apex, some mounds of straw are piled up at regular intervals and a cross is set in each one of them. The man in charge directs the last touches from the ground: "There is not enough straw over there; there is too much here," he notes in a commanding voice.

The walls are made with tall stalks of maize placed in a row between the posts and tied with crosswise bindings, likewise of stalks. The partitions of the interior rooms and the doors, generally one, which leads to the exterior, are made in the same way.

342 In the construction all do the same tasks, except for the
476 man in charge, who supervises. Neither the man in charge nor
465 the workers are paid anything, "it is not customary to pay among the Indians"; they are merely treated to chicha, aguardiente, a meal with meat, and coca. A calabash of chicha and a bottle of aguardiente are presented to the man in charge and shared with the helpers. When the work is done, they get drunk and dance.

342 The women do not participate directly in the /185/
462 /illustration appears here/ construction work; they cook, distribute
476 food, keep the house supplied with firewood and water, talk, and delouse and comb one another.

342 Three types of dwellings may be differentiated among the
177 Paez, in accordance with the greater or lesser introduction and acceptance of foreign architectural features, since nowadays elements of foreign origin are spreading and taking root: bahareque construction, interior division into rooms, the square

/185 cont./

342 house-plan, the use of nails, plank doors, and even locks and
177 keys to safeguard the dwelling; likewise, whitewashing is not unknown.

342
516

342 The rectangular hut is the most primitive type of dwelling:
352 tiny and light, crude and totally artless; a two-slope roof, walls
353 of stalks laced together with an /186/ entrance door; an earthen
231 floor; a kitchen in the center, with hides all around it; pouches suspended from the posts; on a three-legged beam, the grinding stone; a smoke-blackened interior; and living intimately with the guinea pigs.

/186 cont./

with the guinea pigs. These ranchos give the impression of extreme poverty in their dwellings. None of them is of bahareque.

The second type of dwelling, which is more widespread and shows a larger number of foreign architectural elements, is the large rectangular house with a four-slope roof, 15 to 20 meters long by four or five meters wide, with one or two doors and two or three rooms, one of which takes up two-thirds of the space made, and the last third is subdivided into the room intended for the kitchen and the other for the chicha troughs and pantry. Not a few of the dwellings of this type have a compartment for menstruating women (du yate léchukue), although as a rule small huts are built outside the house for this purpose.

In this type of dwelling one commonly finds bahareque, sleeping platforms, plank doors, and sometimes whitewashed walls.

The settlement of Calderas is made up of this kind of dwelling. It consists of 14 houses scattered at random on a beautiful plateau of some 20 hectares, covered with pastures and crossed by drainage ditches that bring water to five of the houses, which are permanently occupied; the others, although they have owners, serve only for religious fiestas when the fiestero /fiesta leader/ moves there with his retinue of mayordomos, laborers, cooks, and the utensils for serving aguardiente, chicha, and food. These houses are spacious, 25 meters long by six meters wide; thick mud walls, with a plank door at the entrance; the enormous sala, fiuhne wala, is 13 meters long; here stand the sugar mill, the metate (ũkukuat), the notched ladder for climbing to the garret, the pango pil, crudely hewn rectangular beams on which the men sit, one of which is 10 meters long; firewood is piled in one of the corners; the floor is of earth unevenly smoothed. The concentrations of people who visit the fiestero in a daily stream gather in these spacious salas; here music echoes, the albacero /fiestero's assistant/ is taken care of, the dances take place, the drunks sleep, and the sugar cane is milled.

/186 cont./

346 There are four other small rooms, five meters /187/ long
796 by three meters wide. Two of them are independent of each other, with their respective doors opening into the sala; one serves as a kitchen and the other to roast the maize griddle-cakes. At the other end of the house are the two other rooms, connected with each other by one door and with the sala by another. The workers sleep in one, and in the other are the troughs of chicha, the bottles of aguardiente, and the laurel candles.

342 The third type of dwelling, very scarce in Calderas, has
249 a square floor plan. It has the sala, two kitchens, and the du yate léchukue. Whatever type of dwelling a Paez family may own, they all have as an indispensable accessory the sugar mill,
[262] either inside the house or outside it. Actually, if it is kept in
[273] mind that the basic sustenance of the natives is provided by
[276] maize, cabbage, chicha, and coca, this instrument is indispensable.

342 In addition, each house is supplied with water, taken from
312 springs, streams, or falls, through the extremely skillful construction of ditches which skirt the valleys, hills, and slopes. Their lands have abundant water. They are not familiar with artesian wells.

342 In a way, the enormous salas in the houses of Calderas
● 177 represent the ramadas which are found among the whites,
249 mestizos, and acculturated Indians of San Andrés; they are built independently of the dwellings, with a sugar mill and an oven to boil down the cane juice and make panela. In this parcialidad, the panela industry is quite well developed. In Calderas it does not exist.

584 Among the Paez, land, marriage, family, and house form
583 a close and indissoluble unit. It lends warmth and meaning to
[183] a number of emotional, sentimental, and sociological complexes. This begins when the pubescent boy feels the need for a partner who will help him in his work and assuage to some extent the rigors of solitude. The love awakened by a dark, shapely maiden impels him to ask her parents for her. "Give my your daughter. I am alone and need help in my work,"

/190 cont./

372 cult of fire. In times past, fire was obtained with "steel and
773 tinder." Whatever the case may be, the mythical accounts

346
291

372 disclose the usury of the owner of fire and anxiety when they were
773 on the verge of losing it. Nowadays, when through carelessness
[177] it goes out in a household, the matches of the whites are used to revive it.

513 The Indians go to bed early. At seven o'clock at night the
512 parents and the children lie down in a common bed on the dry hides of cattle, keeping on their bodies the clothes that covered

The Race for the Rooster at Tumbichukue

103 The name of Tumbichukue is familiar to the colonists throughout Tierradentro. It is synonymous with fabulous treasures. In this place, it is said, the Paez buried all the gold and silver that they collected in the ill-fated settlement of Sebastián Quintero destroyed by them.

[131] Tumbichukue is a pass /vereda/ formed by the eastern slopes of the paramo of San Lucas and located between the Kukiyú and the Yusayú gorge (Guacharaca). It belongs to the parcialidad of Lame, and the road that goes from San Andrés [491] to Lame passes precisely there. This road is well traveled, its people more accessible to the whites.

796 On June 24 the men race their horses along the road.
541 It is a custom of Indians and whites "to race on the day of San Juan." The whites say that those who do not race their horses on the day of San Juan get scabies. The small, husky horses pant under the demands of their drunken riders. A wild race and shouts in an unsteady voice: Viva San Juan!

The people of the pass go to a small square along the road, near which lives the capitán of Lame. Indians from
184 San Andrés come to watch the race for the rooster. On the
796 other hand, in spite of the nearness, no Calderun /person from
291 Calderas/ is seen there. The women who are seen are clean,
177 with neatly braided hair; they wear black skirts, navy-blue
301 rebozos, pink blouses, numerous multi-colored necklaces,
541 bright earrings, and cloth hats. The monotonous dark or black necklaces characteristic of Paez apparel are nearly absent among these people. The classic pindo hat worn by the [91] Calderas people is absent. Spanish is spoken more frequently.

796 All the riders are concentrating on the cage and the
541 roosters.

/220 cont./

XXVI

Religious Fiestas

796 Among the Paez there are no secular collective celebrations. All are religious. They celebrate with pomp and grandeur: San Andrés, Semana Santa, San Juan, San Pedro and San Pablo, La Santa Cruz, El Día de Difuntos, La Inmaculada Concepción...

[178] The Lazarist missionary, David González, says that as [179] far back as 1689 the fiestas were organized as they were found in 1905, that is to say, as they are today. Each pueblo was [177] granted a patron saint and various other protectors. In spite of this, only San Juan Bautista and San Pedro and San Pablo, whose fiestas are celebrated when maize is eared /en macollaje/, the rains are heavier, and the winds are violent, the day of the dead /el día de difuntos/ with its offerings to the souls, the Inmaculada Concepción, when grain is abundant, and the Semana Santa (El Resucitado /The Resurrected/) were the fiestas and saints that aroused the most enthusiasm and sank the deepest roots in the souls of these natives.

771 The Paez, and especially those of Calderas, are religious 796 in externals, not in conviction; they are more concerned with 182 form than with substance. This is revealed in the religious fiestas of these natives. /221/ Few of them attend mass, and fewer yet pray at vespers. To the great majority of them, religious fiestas mean a squandering of gunpowder, lights, aguardiente, and chicha. An abundance of food. The pleasure of getting together. The joy of contact. The music, which assuages hardship, and the dancing, an exteriorization of feelings. It is the expansiveness that leads to gatherings, the sexual jokes that spring up among them without misgivings; it is the continuous drunkenness. It is the display of generosity, the exercises in co-operation and altruism.

796 The priest, as a punishment for failure to attend the Mass 793 on the part of the chief fiestero and albacero, refused to carry 718

/229 cont./

75 from time to time he puts in more coca and more mambe,
[276] which he takes from a small calabash (kuetand tuka), pours on his right fist, and throws with force into his mouth. He watches. Sorcerers work systematically to send him the ptans, and they must not catch him unprepared. The signs warn him as to when he must blow the chew in order to contain the ptans.

He tells the patient that the signs are favorable; there will be an immediate improvement. The pains which assail him are due to the ptans which he has from the vertex to the nape.

After 20 minutes in a motionless and expectant state, the curer stands up with his face raised, as though illuminated, walks jauntily to the tama, blows the chew violently; he fills the small gourd with aguardiente and tosses it into the air. This is the invitation to Thunder.

He returns again to his place, takes a cigar and crushes more than half of it, puts more mambe in his mouth, and remains quiet, his hands folded and his arms resting on his knees. Only the deepness of the night with its characteristic sounds disturbs this decisive moment. No carelessness. It might have fatal consequences. He remains in this position for about 40 minutes.

Then he takes the chew from his mouth with his hand and tosses it in the direction of the tama, after having passed it around his body. The patient does likewise. He immediately tells the sick man that he must return with all the remedies. He interrupts his work. Thunder has shown himself to be
75 favorable. Since the patient has ptans, a good "cleansing"
783 must be done, for which he must bring three pounds of meat to be eaten after the cleansing, chicha, one pound of coca, one liter of aguardiente, and six cigars. The curer himself must
• [177] go to the lagoon in search of the remedies. He advises the patient that for a period of three months at least he must not use the drugs of the whites, for if he did so, he would die.

The cleansing of the ptans. At 7:00 P.M. the patient comes to the house of the curer. He hands over the medicines

* /251 cont./

756 In any case, "the curers have something and are kind,"
554 said one informant. They are respected, and at entertainments they are attended to in the room where important people (síndico, capitán, gobernador, eminent old people) are received, and they are served on larger plates.

Prestige is an advantage of the curer. It is not unusual for the curer to command more devotion than the capitán of the Parcialidad.

All the curers claim to be happy in their profession, and many are grateful to their teacher for his instruction. The advantage of being a curer is to be waited on by people, to be singled out from among the others, and also to be pursued for his knowledge, says one Calderun curer. Everyone seeks him out as a good curer; many of them are regarded as priests, for people come daily to their homes to look for them. They have more power than other people.

The curer has a high social status by virtue of his functions. But for no reason other than these functions. He commands respect and recognition for services rendered. No one can treat him badly. If during a drinking bout he is offended in some way, on the following day they hasten to make amends.

* 756 /252/ Psychological characteristics of the Té eu. The
157 curers vary in age from 30 to 70 years old. As a rule, they
156 have eyes deeply set in the orbital sockets, a penetrating gaze, a readiness to converse and laugh, a gentle manner, not at all aggressive; they are temperate and show much self-control and sureness in their movements.

A characteristic motor habit: seated on a very low log, they give the impression of squatting; their arms rest on their knees and with their hands they stroke their temples or chin. This motor habit is prevalent among Paez men.

[177] Their clothing is typically Paez; they do not favor change,
[291] although they are friendly enough with whites. They always
[757] advise their patients not to use the remedies of the whites or they will die.

/257 cont./

757 554 152 598 A curer from Santa Rosa, while taking a spell off a sick person, explained that this man owned much land and that they had cast a spell upon him in order to appropriate it.

In Calderas a man who can read, write, and make memorials for the Alcaldía of Inzá, a maker of fireworks, builder of houses, and good farmer, was naturally the cause of envy. A sorcerer wanted to kill him. He called his soul while he was asleep. But the one called was aided by the soul of his brother, who blew mambe toward him. On the following day his left eye became white and was on the point of dropping out. A curer was able to cure him, but he remained one-eyed. The two brothers remained enemies of the sorcerer.

754 813 623 On another occasion and in the same parcialidad, two brothers gave a sorcerer a beating. In revenge he cast a spell on both within a year. Fearful of punishment, the sorcerer went to other parcialidades, but on his return the cabildo put him in the stocks.

In the old days -- says a curer from Santa Rosa -- the cabildos punished the sorcerers. Those of today are afraid of them. The elders /mayores/ have died bewitched. Actually, the Indians refuse to serve on the cabildo or to accept the post of capitán for fear of the sorcerers.

754 685 The sorcerers are all thieves. They often steal under the very eyes of the owner, who, fearful that they will cast a spell upon him, does not make the slightest protest. But the sorcerers, in turn, fearful that he might complain to the white authorities, cast a spell upon him.

754 In Calderas, those who purchase livestock to expand their small hacienda have been attacked by sorcery.

754 177 554 The Indian who has lived with the whites, who has adopted their clothing, their dietary habits, and their agricultural and cattle-raising techniques, /258/ and who has given up the habit of consuming coca and chicha is not only the victim of magical attacks, but is the direct recipient of offensive words and deeds.

/258 cont./

754 Thus, the victims are "the most skillful, the most charitable
554 toward travelers, the friends of the whites, those who display the most friendliness among the natives, those who have much livestock, large tracts of land, good plantings." In this phrase are listed almost the full gamut of the victims of sorcery. From previous examples, we see that those who have land, animals, mental ability and manual dexterity, and good fields, the energetic numbers of the cabildo, those who take the path
[182] of transculturation, are victims of sorcery. In addition, revenge and resentment are evened up by means of sorcery.

754 It is not surprising that undesirable whites are victims of
648 sorcery. The undesirable ones are those who covet their lands. The curers, on their own initiative or supported by the cabildo, call the soul of the white at a strategic spot, capture it, whip it with pringamoza (Urticaceae) and put bad remedies on it so that it will never return to the region. They say that the white begins to feel too lazy to travel in the area and finally decides to return to his country.

[177] In parcialidades such as Calderas, where much resistance is shown against living with and contact with the white, there are some people who are such sorcerers and such enemies of the white that even in the church they leave enchanted eggs so that not even the priest will come.

754 Among the victims of sorcery are parturient women and newborn babies, when the sorcerer or other envious persons do not want a certain family to prosper.

The power of sorcerers extends not only to human beings
[433] and animals, but also to the plantings. The loss of a planting
[167] means suffering from hunger, a shortage of coca, and emi-
[464] gration of the parents to distant places in order to hire out as laborers.

In the clearing they may put enchanted eggs, salt, pubic hair, or capio maize in order that the planting be lost.

/263 cont./

182 754 The people perceive only the effects. Only the expectant attitude announces to us its presence. The latent fears tell us of its vigor. The members of the cabildo, the capitán, the té eu, the working men, the parturient women have a strong fear of sorcery.

When the pest spreads through the community, when the elders die and their experience and advice are lost, thoughts [761] turn inevitably to the power of the sorcerers. Most deaths are brought about by sorcerers, the informants say.

754 182 177 Sorcery is a powerful barrier against the introduction of the customs of a capitalist economy and also against the intrusion of the whites in their parcialidades. It is strange that sorcery should exist in the less acculturated parcialidades, while in San Andrés it has practically disappeared. It is said to have been vigorous until 1926, the year when the Municipal Council of Inzá established in the parcialidad a settlement area in which the whites settled. With this measure living together was inescapable and they chose to accept them. Nevertheless, during the drinking bouts of the old people, the tremendous resentment that has become natural to them still crops out.

182 754 423 [554] [152] Furthermore, it makes its influences felt in the distribution of land. Each family has lands from which it lives. With the increase in population the problem of their unequal distribution has become prominent. Those who have the most land are the targets of envy and sorcery; they are more prone to magical attacks aimed at taking away their land. Intrasocial tensions 754 182 appear to be brought into equilibrium by means of this institution. The fear of reprisals checks aggression. Revenge is too prejudicial, since it can be manifested not only against [184] individuals, but also against animals and plantings. It is [177] perfectly true to say that while in Calderas acts of bloodshed [675] are rare and suicide is unknown, in San Andres, a parcialidad which is largely acculturated, the homicides, murders, and [762] cases of arson are hair-raising.

/293 cont./

221 on the fincas of the "whites" (1). The social life and the re-
[166]
[464]
[192]
[177]
[128]

1. Generic term with which the natives designate all those who observe the norms of western culture, without any distinction as to race. For convenience we have adopted this usage, putting the term in quotation marks.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[570] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

/294 cont./

311 passes through Topa, Turminá, Guanacas, El Cabuyo, Malvasá,
133 Pisimbalá, Lame, La Troja, and Irlanda, from where it twists eastward. The contour line of 3,000 meters, approximately parallel to the previous one, is very close to the ridge of the
[361] Central Cordillera. These two contour lines form a narrow zone that corresponds to the cold thermal level and within which are found the parcialidades of Toez, Huila, Vitoncó, San José, Mosoco, Lame, and Yaquivá, aside from a considerable area from the extinct parcialidades of Guanacas and Turminá.
311 This entire zone represents a "culturally influenced zone" in
[487] the literal sense that Professor Guhl gives it (2). A fine bridle-

2. Guhl, E. "Ambiente Geográfico-Humano de la Costa del Atlántico /Geographical-human Environment of the Atlantic Coast/," Revista Geográfica, p. 159.

[489] path joins Mosoco and Silvia, crossing the Paramo de Moras. The traffic of people is intense and constant during almost every /295/
311 month of the year. In the last decades, this has been an active zone
648 of native and "white" colonization. It still remains so. Coscuro
361 and Malvasá, in the Parcialidad of San Andrés, are purely "white" regions of colonization. But Tumbichukue, the high parts of Lame, Mosoco, San José, Huila, and Toez are zones of exclu-
361 sively native colonization. The importance of Mosoco is out-
311 standing. It was a great center of Páez settlement and still is, in the same manner as Pitayó and Tacueyó are on the other side of the Cordillera, but we cannot state on this account that "the major part of the settlements and the most important ones for the Paeces" are located in the cold region, as was stated
[177] categorically by Professor José Pérez de Barradas. Mosoco,
[433] fully in the process of acculturation, is a good producer of potatoes, wheat, and maize. It is the true Tierradentro in
[648] physiography, production, and progress. But in the times of
[175] the Conquest it was the people of Tálaga, Avirama, Calderas, and Togoima who defeated Ampudia and Belalcázar, and the

/310 cont./

243 As may be noted, the magical practices of the té eu are
756 absent, although there still exists that of the eating, which in
789 other parcialidades complements his practices.

249 The cultivation of sugar cane is quite widespread in the
273 temperate thermal level, although the plantings are not extensive and are not pursued for commercial purposes; they serve only for obtaining guarapo (fermented cane juice) for individual and collective labor and for social affairs. Guarapo is an essential part of the domestic economy, in the same manner
249 as coca. It is not produced for public pay. Each house has its
257 sugar mill, either outside or in its interior, but there are no ovens or other accessories for producing panela. The latter industry belongs exclusively to the white or mestizo people.

249 The cultivation of the cane requires three weedings before the first cutting. Three cuttings with good results are generally obtained from each planting.

245 The cultivation of coffee is also very widespread. Its expansion is of recent date, but it already has strong and universal acceptance, like cane and plantains. The method of cultivation suffers from certain deficiencies: the shade is insufficient and inadequate; there is no pruning; the care is not very satis-
[433] factory; many do not have pulping machines. The coffee
245 plantings produce several arrobas per year. The monetary in-
434 come of the natives in the temperate zone is provided basically by
[439] coffee. They sell it to steady and familiar customers for prices
[452] that are usually low. The coffee plantings secure credit for the natives; they often collect money or merchandise against a future
245 harvest. Coffee has permitted them /311/ to acquire dishes, to
434 modify their clothing, to enrich their agricultural equipment,
177 to buy every once in a while the drugs of the "whites." At harvest time they eat meat regularly, and they are also able to pay wages for the improvement of their fincas. But, above all,
[273] it opens the doors of the liquor stores to them. They consume considerable amounts of alcoholic beverages. They have not yet learned to make good use of their monetary income.

/316 cont./

105 Guambianos. They adorn themselves with showy necklaces and
178 pins. Not a few of them wear fine gold earrings.

[232] Livestock-raising has intensified and is in full swing. Norman cattle are replacing and being crossed with the native cattle. The same thing has happened with the wool-bearing livestock. The /317/ saddle and pack horses are indispensable for every family. The natives also possess fine breeds of hogs and domestic fowl.

[565] Social stratification is in full progress. Rich and poor families can already be named.

Mosoco women seldom marry natives from other, less acculturated parcialidades. People speak of mingas, and even of burials, of the rich and poor, a larger number of people going to those of the former.

They live on good terms with the whites and treat them as equals. There are many good native dealers.

These natives are thoroughly familiar with the methods of curing, the use of remedies, and sorcery. But the té eu and even more the nara jihi (sorcerer) are on the wane. Many consult the doctor of the "whites" in Silvia and use the drugs of the "whites." They are less superstitious.

They are believers by conviction. A few are Protestants with great reasoning powers.

The cabildo retains its power and is duly respected.

The properties are duly parceled out. Many of them are planted with pastos de selección /literally, choice pasture grasses/. Fences with barbed wire are frequently encountered.

Agricultural implements

412 Among the implements used in agriculture, only the
[241] digging stick for planting maize (uhach) is of native manufacture.
[177] The others are of European origin.

The universal implement among the Paez is the machete. With it the clearings are made, the ground is cleaned, and the fields, the montañas are felled, sugar mills are made, and bridges are laid over rivers and streams. They prefer it large and with a leather sheath that they fasten to the belt. They are

/333 cont./

417 bags full of frijoles, which are also suspended from the wall
353 posts. This is also where the grains (lumps) of salt are kept.
251 The amounts kept for the months of scarcity are not sufficient, but there are other comestibles that help them: domestic ani-
[244] mals, cabbages, onions, sugar cane, and coca. In Lame and Mosoco they cultivate a plant which they call ijuca de pijao. It
[464] is an edible discoria /Dioscorea/. We have also seen that want is avoided by going to work as laborers on the fincas of the "whites."

[263] Meat is also kept on the frame above the hearth. They utilize the smoke to preserve it. Salt is not used for this purpose.

251 In the parcialidades of Mosoco, Vitoncó, and San José, where large quantities of wheat are planted, one frequently finds under the eaves of thatched houses bundles of wheat that remain hanging for several months. In this way they preserve it from the attacks of small rodents, and the grain is of excellent quality because it dries out thoroughly.

261 During times of scarcity, the natives do not seek solace in
273 religion. Actually, their defense is in the sale of their own work-
276 ing capacity for a small daily wage, a few eggs of coca, and
[771] food. It should be noted that guarapo and coca are splendid
[464] sedatives against the pangs of hunger. It is curious that one of the
[465] most noted religious fiestas of Calderas is held precisely during a time of scarcity. Large quantities of guarapo are consumed for nearly a month.

Provision of water and firewood

312 In Tierradentro the rainfall is relatively high. As a result, water abounds in small and /334/ large watercourses. This geographical factor leads the natives to bring the water close to their homes by means of a system of drainage ditches that are true engineering works. The distances that have to be faced or the accidents of the terrain make no difference. When necessary,
• [177] they use bamboo tubes as artificial channels. This system has been adopted by the "whites" and even by the towns. Since the high parts on both margins of the Paez River are bare of vegetation,

/353 cont./

262 The Indians like meat, but they state that they eat any type of food; they believe that the "whites" eat better, because the Indians cannot eat meat every day nor spend money on lard or meat. They only eat the produce that they cultivated.

264 The Indians have two meals a day: one at dawn and the other one in the afternoon when the sun is setting. The women and children have one meal at midday, from what was left over from the morning. The principal and large meal is cooked at [252] night. Before lying down the women hang from a wooden or iron hook, or from a wire, the pot with mote or frijoles and stir up the fire at least three times during the night; at four in the morning they add the easily cooked products and eat at the first light of day.

574 The natives are generous and hospitable among themselves; 262 no sooner does a visitor enter a home than they offer him whatever they have available: chicha or food.

● 177 /354/ In the parcialidad of Mosoco, which is undergoing 262 complete acculturation, the diet is changing visibly and the 264 eating hours have changed fundamentally. Coffee, panela, bacon, meat, and maize griddlecakes are consumed regularly.

Trading

43 Except for the parcialidad of Mosoco, the natives produce primarily for internal consumption; but the self-provisioning is insufficient, for they suffer a few months of scarcity. As a result, trading must necessarily be restricted and scanty. In Calderas, Suin, and Chinas, animals are ordinarily exchanged, large, fat cows being surrendered for smaller, thin, fertile heifers and a few pesos besides. We have already referred to this extensively in discussing the livestock. We have also seen how the only industry intended exclusively for trade, that of laurel wax, was a patrimony of San Andrés, Calderas, Tumbichukue, Lame, Suin, and Chinas, and that the drop in price was a fatal blow for the industry. Thus, aside from coffee, potatoes, wheat, and garlic, which are intended almost entirely for trade, nothing remains but small amounts of manioc, arracacha, plantains,

/364 cont./

511 in the cantinas, in lawsuits over land, or for religious fiestas.
434 These arguments are confirmed, on the other hand, by the
454 statistical table on income in that only five native families in the three parcialidades made up the deficits in their budgets of last year with sums saved in 1952.

Economy and acculturation

121 Before closing the present work we wish to describe in
177 broad outline the process of acculturation which is now going on in some Páez parcialidades.

[101] The material on Páez culture which we have published and that which we are now elaborating on were collected in the parcialidades located on the right bank of the Paez River, leaving aside those located on the left bank of this river, owing above all to factors of public order which have been disturbing their peace for several years.

[178] The native communities of San Andrés, Santa Rosa, Togoima, Calderas, Avirama, Suin, Chinas, Lame, Vitoncó, Huila, Toez, and Tálaga are more traditionalistic, live in accordance with the institutions of the culture, and for this reason we regard them as more "primitive." On the other hand, the community of Mosoco, suspended on the slopes of the Central Cordillera itself and extending into the very heart of the Paramo de Moras, is fully in the process of transformation.

[648] /365/ Our research was begun in the parcialidad of Calderas,
[101] isolated, by reasons of a geographical nature, from the principal centers of the "white" population and whose inhabitants have defended their independence at all costs and have been hostile to living with the "whites" (39). From here comes the greater part

39. Bernal Villa, S. "Mitología y cuentos de la parcialidad de Calderas, Tierradentro /Mythology and tales from the parcialidad of Calderas, Tierradentro/," pp. 289 ff.

[101] of our materials. But we also carried out systematic investigations in San Andrés, Santa Rosa, Togoima, Lame, Vitoncó, Tálaga, and, lastly, in Mosoco.

/365 cont./

177 For our outline of acculturation, we understand by diffusion
[121] achieved cultural transmission, and by acculturation cultural trans-
[127] mission in process, terms expounded by Professor Melville J. Herskovits in his book, El Hombre y sus obras /Man and his Works/.

Within Páez culture there is widely diffused, to the point of constituting an integral part of the cultural body, the following economic elements of alien origin and, more concretely, of European origin:

[231] All of the domestic animals with the exception of the
[137] guinea pig, bananas, sugar cane (the variety known as "criolla"), wheat, barley, garlic, coffee, peaches, apples, and oranges, the agricultural implements, the hydraulic mills, sugar mills, the guadua bamboo, and some varieties of pasture grass, such as orejuela /Alchemilla pectinata/, kikuyu, and poa.

177 Throughout the pages of this work, we have emphasized in
361 particular the cultural developments in process, that is to say, the
563 phenomenon of acculturation. It is obvious that this phenomenon has appeared, with greater or lesser intensity, in those parcialidades where there have been created areas of settlement, within which a specific number of "white" families have settled. But the intensity of the acculturative phenomenon does not rest merely on this fact or on the number of families who live by the norms of Western culture. San Andrés, for example, had its settlement area established for all practical purposes in 1928 and now reckons with more than 20 "white" families, with its nearness to the settlement of Inzá, and, for nearly 15 years, with the Parque Arqueológico of Tierradentro, to some extent a tourist attraction, and yet the process of acculturation is minimal and cannot be compared with the intensity of the same phenomenon in Mosoco, where the settlement area /366/ was created in 1923 and where
177 nowadays there are not more than 12 families of "whites." In
[487] Mosoco there is another factor: the riding path that joins the
[491] municipio of Belalcázar with that of Silvia, a road that has existed since pre-conquest times. Mosoco has been and still
[628] continues to be the mandatory stopping place. In addition, this parcialidad has had intensive contacts with the Guambiano group and the Páez group from the other side of the Cordillera, who are more accutturated.

/366 cont./

[77] are more acculturated. All of these circumstances have permitted the extensification of the cultivation of garlic, wheat, and especially potatoes, as well as the extensification and intensification of livestock-raising, which, in turn, has given rise to a series of phenomena now in the full process of development, such as the modification of work schedules and agricultural cycles, the regularization of trade and transport, the appearance of the habit of capitalization and of the use of credit, the use of barbed wire for fencing, reforestation on a eucalyptus base, the development of household industries, modification of the diet and eating times, adoption of specific objects of adornment by the women (gold earrings), disappearance of coca consumption ("deculturation," to use Fernando Ortiz's neologism), social stratification, the undermining of the institutions of the té eu and the nasa jihi, the calming of the real and magical aggressiveness against the "whites," intensification of primary education, and greater conviction in religious beliefs.

In the temperate zone in general and in San Andrés in particular, the cultivation of coffee is in full swing, and the consequences of this economic fact are beginning to be visible. The palm hat, very common in the parcialidad of Calderas, is not seen very much among the Andresunos, who are adopting the cloth hat of the "whites"; some of them already wear sandals or shoes, and likewise the use of the poncho and of the bag of a manufacture foreign to the culture is spreading; the agricultural implements are being enriched in the same manner as modern housewares; although the most widespread labor system in the parcialidad is that of the mingas, some already pay daily wages for work on their fields; the consumption of meat and panela is [756] quite frequent when there are coffee harvests. It is also interest- [554] ing that in the entire parcialidad there are only two té eu, who are not greatly respected, though they utilize the services of the té eu of Calderas.

[137] /367/ The "criolla" is the most widespread variety of sugar cane and the one which has been fully accepted by the natives, to the point of being regarded as their own, but other new

/367 cont./

177 [137] varieties are being introduced, such as "java," for example, which, although the natives call it "wild," they nevertheless praise for its quality and recommend its cultivation.

Such are the general outlines of acculturation in some parcialidades of Tierradentro.

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
● 177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

12/ A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

13/ The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

7:Hernández de Alba E-5,4(no date) 1946 SC15 Paez SC15

The King of Spain, receiving word of the troubles in this region, ordered Don Juan de Borja, his Governor at Santa Fé, to carry out the "pacification of the province," meaning the extermination of its inhabitants. The decisive war started in Chaparral in 1605 and ended in 1608 when a Spanish witness wrote of this territory, where the *Páez* had remained free for so many years, that the provinces "were so desolated that the troops could not find Indians to fight, houses to plunder, or roots or grain to eat, and, if some Indian remained, instead of daring to plant boldly, he sowed four handfuls of grain here, two more there in the shadows and cover of the trees . . . they went about harrassed, thin, and emaciated until life was ended, for the soldiers saw corpses of people dead of hunger or sickness at every step" (Simón, 1882–92, Septima Noticia, ch. 49, vol. 5, pp. 314–15). A document in the ecclesiastical archives of Páez, dated July 17, 1638, states that in the lands adjoining the *Páez* there lived a *Pijao* Indian named Ambrosio, who had said that Captain Andrés de Zúñiga could now well enjoy this country because there were *Pijao* but not *Páez* Indians in it and because the *Pijao* saw themselves doomed and the land had no proprietor. 175 648

The *Guanaca*, who, because their chief was an enemy of the *Páez* chief, had allied themselves with the Spaniards in order to attack the *Páez*, were the first to surrender and join a Spanish colony. The first road between Popayán and Santa Fé passed through their territory, where the Spaniards established a hostelry for traders. This district was given to the Jesuits, who established the Church of Guanacas and, later, a town of the same name. But the Indians felt another lethal force of European origin—disease which they were unable to withstand. In 1790, a smallpox epidemic so reduced them that they abandoned their town, and the few survivors retired to the narrow mesa, where the modern town of Inza is situated. Here they gradually disappeared altogether. [797] [177] [164] [731]

The *Páez* continued to resist and defend their lands against Spanish missionization, so that the road to Guanaca never became secure. The extinction of the *Pijao*, the lack of important quantities of gold in the area, and the difficulty of the terrain, which was such that the Chronicler Pedro de Aguado said "to travel through *Páez* territory is to go up and down," caused the Spaniards to abandon interest in dominating these peoples. They were content to establish the Guanacas mission, and, a little later, the parish of Tálaga. Subsequently, as these Indians, who were isolated in their high mountains, were allowed to retain their customs and beliefs without interference, they did not protest when small groups of Whites peacefully occupied certain places in their lands. 175 648 797

Thus began the true Colonial Period for those tribes which survived the wars of the Conquest. The encomienda system was inaugurated, 175 648

?:Hernández de Alba E-5,#(no date) 1948 SC15 Paez SC15
Pasto SC17

in which a Spaniard held a territory occupied by Indians. The natives, under a chief who was protected by the White authorities and who made contact between the master, or encomendero, and his subjects, had to give a certain number of days' work and a specified tribute in products of the lands, animals, gold, or manufactures. The encomiendas made no effort to Hispanicize the Indians, but continued to loot and massacre them. The Indians, reduced to utter misery, gave up all their artistic and industrial activities, and devoted the greater part of their time to the service of the master or to seeking products to pay the obligatory tribute. To remedy this situation, the Spanish Crown decreed the native "parcialidad," giving surviving groups reservations and prohibiting their employment in transporting men and goods over the highways. This reform was never entirely carried out, however, and the Indians, in spite of having their own government, the cabildo or Indian council, continued in servitude or debt slavery.

The native Indian government consisted generally of a governor, a first mayor (alcalde mayor), a second mayor (alcalde segundo), a trustee (sindico or fiscal), and constables (alguaciles), the last a kind of police who transmitted to the people the orders which the Whites gave through the governors or mayors, and who carried out penalties of imprisonment, of placing in stocks, and whipping, which the first Spaniards introduced into the punishment of the natives. At the same time, the Christianization of the Indians began. It succeeded in an imperfect way, however, for the Indian attended Masses, arranged and participated in processions, and did not miss the solemn ceremonies a single Sunday largely because on the same day he brought his own products to the pueblo for sale, bought salt or meat which he needed, and devoted himself to drinking chicha, the traditional drink which he had always taken on religious or social occasions.

The Indians of Nariño, descendants of the *Pasto*, lost their language and many of their customs during the Colonial Period, although they continued to live as natives on their reservations, which daily became smaller because of the encroachments by the neighboring Whites or Mestizos. They became farmers with small landholdings and, occasionally, masons in the cities. The *Moguex* and *Páez*, however, retained their language and the greater part of their customs. Some of them, especially the men who had to deal with the Whites, learned a little Spanish, and they continued throughout the Colonial Period to defend their lands and their traditions. To religious practices introduced by the missionaries, they added such elements as the offer of food to the souls of the dead. They added to the Colonial council (cabildo) the office of captain, an official who, unlike the rest of the council, was not responsible to civilian authorities but had life tenure, sometimes a hereditary position, and more authority within the group.

Moguex

SUBSISTENCE ACTIVITIES

241 **Farming.**—The main subsistence of these tribes was and still is based on the cultivation of potatoes, which grow in great quantities in the higher portions of the territory known as Tierradentro, and maize, which is acclimated to the temperate and cold zones. There are three varieties of maize: sweet, soft, and hard. Additional crops were and are yuca or manioc, sweet potatoes, auyamas, ullucos, purutos, frijoles, arracacha, and various other vegetables, and a variety of fruits, including bananas, guayavas, avocados, papayas, [178] pineapples, and passion fruit. Today the *Páez* and *Moguex* are be- [433] ginning to grow wheat, coffee, which is an important item in their [273] economy, and sugarcane, from which is made a coarse sugar and molasses for their fermented drink, guarapo.

241 The men and women of each family generally cultivate the family 476 plot, but for large-scale maize or coffee planting, and for cultivation of the lands of the Church or saint, they work communally, and have meetings called "mingas." Communal work for any particular individual is truly loaned labor, with obligatory recompense. The [782] beneficiary must feed his helpers, generally sacrificing a pig and pre- [273] paring great quantities of chicha for the libations and nocturnal dances after the work. All adults must participate in working the Church lands, but each brings his own food.

241 Implements of cultivation are the digging stick, or macana, for 412 making holes for planting, machetes and axes for destroying vege- 407 tation, and picks and shovels for removing earth, except where re- 492 placed by plows pulled by animal traction.

Domesticated animals.—Domesticated animals include chickens, 231 turkeys, some pigs, dogs, and a few horses and cows. All but the [177] turkeys are of European origin. These animals are rarely sold or killed for food, except for feast days, magical ceremonies, meetings, and visits of relatives, friends or distinguished White men. But [438] sometimes the Indians buy meat in the weekly market and hang it [251] over the hearth, where it is preserved by the smoke.

A custom which has persisted since the beginning of the Colonial 574 Period is that of always giving a guest the "camarico" or "cariño" 431 (affection), a present varying from an egg to a chicken, together with some potatoes, vegetables, and coffee beans.

262 Formerly, meat was obtained from wild rather than domesticated 136 animals—boars (zaínos), guaras, guatines, birds, and guinea pigs, the 231 last being true domesticated animals kept in some numbers in the native houses.

252 **Food preparation.**—Food was cooked in pottery ollas, but metal and [415] enamel ware is now often used. The *Páez* make "mute," a soup of [177] boiled maize, cabbage, squash, and potatoes, and "cocido," a soup

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

of manioc, arracacha, potatoes, beans, sweet maize, and pieces of meat. Meat is sometimes roasted. Maize, the staple, is made into tortillas or soup, or is roasted on the ear. Coffee, much of which is consumed, is roasted in a pottery vessel, ground, and made into an infusion sweetened with coarse sugar. 252 [272]

Kitchen utensils include pottery ollas and vessels, and a footless elliptical stone metate with a central concavity, which lies directly on the floor or is supported on sticks driven in the soil. Meat is kept smoked over the fireplace, and other food is stored on shelves of cane woven into the roof sticks or in hanging hemp bags or gourds. Each gourd has a broad half-gourd suspended above it, open side down, so that a rat descending from above slides off the gourd onto the floor. 415 251 [353] [825]

The first daily meal is taken at daybreak and consists of "mute." There is no noonday meal, but the evening repast resembles breakfast. Between meals, the Indians chew coca two or three times to sustain their strength and allay hunger. For refreshment and stimulation, they drink guarapo, carrying it to work in gourds. 264 [276] [273]

They cultivate pepper (ají) for a condiment, but purchase salt in the weekly market. The latter is so scarce that instead of mixing it with food they pass a lump around, each person licking it. Before the Conquest, three salt deposits were exploited in this territory, the most important being that near the modern municipality of Belalcázar or Páez. Here the local chief had the salt water boiled down to obtain blocks of salt, which he traded with other tribes for diverse products, or with which he bought help in his wars against the neighboring *Pijao*. Sometimes he permitted other *Páez* to exploit the deposit. Near the present-day Indian center of Ricaurte on the Ullucos River is another salt works that was much used in ancient times, but today is abandoned. Another source of salt was at Huila, where, during the Conquest, the Indians ambushed the Spaniards who sought it, and killed their horses. 317 263 [244] [439] [648]

HOUSES AND VILLAGES

Each *Páez* and *Moguex* family has its own house, located on a point or flat place in the mountains some distance from its neighbors. The aboriginal house seems to have been rectangular, which still is the only form. It was so lightly constructed of cane and sticks with thatched roof that the Spanish soldiers during the foundation of San Vicente de Páez "carried some Indian houses to their barracks because they were small and suited to it" (Aguado, 1931, vol. 3, book 16, ch. 9). Some distance from the dwelling, they always built a small woman's house. Under Spanish influence, some houses were divided into rooms, and built more solidly of "bahareque" construction, i. e., walls consisting of two faces of sticks with mud and rocks between (pl. 185). 342 [361] 177 342

7:Hernández de Alba E-5,V(no date) 1946 SC15 Paez SC15
Moguex

342 [177] Some had wooden doors and windows, and were built with nails and wires, though most were still made with vegetable materials.

The modern *Moguex* house has two rooms. The main one, entered through a small door, serves as storeroom for goods to be sold, reception hall, dancing place, and a room in which to keep watch over the dead. The other is a pantry for provisions and drinks; here are kept kitchen utensils. In the center is the fireplace and around it dried cowhides or platform beds made of horizontal poles tied to stakes driven in the ground. One's neighbors aid him to build his house, transporting heavy timbers over light rollers and singing rhythmically as they heave together. If the owner of a new house is a man of means, he pays for a feast of benediction or consecration carried out with a Catholic priest, a godfather, and a godmother.

354 352 476 461 554 778

The *Páez* does all this and in addition puts some pieces of silver money under his house to assure his good fortune. In the main house he places the metate on stakes, and in a secondary house, the press for extracting wax from laurel, one or more troughs or hollowed trunks, and large jars for chicha and guarapo. From the roof frame hang bags, or "mochilas," of netted hemp for belongings. There is also a bamboo candlestick, the wooden feast drum, sometimes a tiple or small guitar, and, nailed to the wall, a spindle. Outside, the loom stands against the wall Beyond it is the sugarcane mill, which is made of a section of tree trunk with a hole above a projection on which the cane is pressed by hand with a rod which crosses the hole. Some mills consist of two or three wooden cylinders rotated by animal power.

352 415 353 354 524 283 404 286 249

In each maize field is a small, temporary house and a high platform where a watchman frightens the parrots and parakeets with periodic cries and motions.

243 342

Each *Páez* group today has its communally built pueblo, with "bahareque" buildings grouped around a rectangular plaza: a church, with its arched portico and small tower in imitation of Colonial architecture, a house for the priest, a school, and two or three large houses for meetings and fiestas, where they dance, sing, and sleep during fiesta days. But ordinarily, the people remain at their distant houses and fields, and do not live at the pueblo, the only permanent inhabitants of which are a few Whites and Mestizos.

177 361

ENGINEERING WORKS

The Spaniards found bridges which they described as "weak and flexible bridges of bamboo" and "bridges of vines." A territory so broken and crossed with so many rivers and canyons naturally stimulated the *Páez* in the construction of bridges and the laying out of roads. Today they make four kinds of bridges: (1) A simple vine or cable stretched across the river; (2) a kind of wooden stairs placed

491 499

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

obliquely across the rocks; (3) an arched bridge of bamboo floored with spaced sticks, equipped with a hand rail on each side, and supported with stones, bamboo braces, and vines (pl. 185, *bottom, right*); and (4) a covered bridge with thatched roof, built of heavy logs supported by sticks and stones and floored with boards—a marvel of calculated strength, which, like the third type, is made entirely of vegetable materials yet can support loaded animals. To build an arched bridge, two groups of Indians approach opposite sides of the river and each plants a long, strong pole sloping out over the stream. The chief of each group then climbs out his pole until his weight bends it down to meet that from the opposite side, whereupon, clinging with one hand, they lash the ends together with creepers. This constitutes the main element of the bridge which is then completed by the other Indians. 491 499 499

TRANSPORTATION

Some Indians now have horses and use them for traveling and for transporting large burdens, but, in general, transportation is by foot, objects being carried on the back or in netted sacks hung by a strap, especially when visiting markets. A woman carries not only a heavy load but her small child suspended on her back in a blue woolen blanket held with a broad woven band, or "chumbe." Peculiarly Andean is the custom that the man travels on horseback while the woman follows on foot with a large burden. 489 482 492

DRESS AND ORNAMENTS

The *Moguex* and *Páez* formerly wore only small cotton blankets (mantas), although most of them "went about naked even on the cold mountains" (Rodríguez, 1684, bk. 2, ch. 1). They painted their bodies with bixa, using, according to Del Castillo i Orozco, stamps to apply the color. The paint also protected them against the strong sunlight and insects. They went barefoot, as all the natives in Colombia. According to one chronicler, their hair was "shorn" (Robledo, in Jijón y Caamaño, 1936–38). They wore breast and nose ornaments of pure gold or a gold and copper alloy, and necklaces of small figures, beads, small stones, and snails. 291 302 [757] [825] [291] 301

Soon after the beginning of the Conquest, the Indians commenced to use wide, long shirts of a very crude weave and hats which were so closely woven that they would hold water. The latter, which the Spaniards called "tacillas de Páez" (Páez bowls), are still in use. The Spanish encomenderos required that the Indians working on their haciendas near Popayán be dressed. This was the origin of the characteristic garment worn today, which combines the old small blanket (manta) with European dress. *Moguex* men wear short linen pants, and a blue flannel sash which covers them to their knees. 291 177

?:Hernández de Alba E-5f (no date) 1948 SC15 Paez SC15
Moguex

291 They protect the upper part of the body with a black poncho tied at
177 the belt, or a shirt with a poncho over it. Women wear two skirts, the under skirt being black and the outer one white or gray. Both are held at the waist by a sash woven with figures. They cover their busts with two blankets which are fastened at the shoulders with
[293] wood, copper, or silver pins. Both sexes carry pouches woven of
[415] hemp which, like these Indians, are called "guambías." Their straw hats are dish-shaped, with small brims hardly distinguishable from the shallow crowns. The hats, always too large for their heads, are held on by two cords, one passing under the chin and the other behind the neck, around the hair. The women also wear woolen shawls, silver earrings, rings, and heavy necklaces of glass, shells, and silver. For festivals they prefer hats with the brim divided into two parts, front and back. These are lined with dark-blue cloth, with red and yellow on the brim.

When working, the *Páez* wear short linen pants or long woolen ones and a large woolen poncho tied at the waist. When going to market, they wear an additional poncho and a woolen pouch for coca. When
[292] traveling on the páramos, they wear a knit hemp cloak covered with large, thin leaves of *Gynerium saccharoides*, which protects them from the rain. The women wear a narrow woven cotton band, passed between the legs and tied at the waist, one, two, or more black or gray woolen skirts gathered at the waist and held by a woven sash,
[482] and two small mantas, like those of the *Moguex*. In traveling, a
[854] shawl is worn for covering and to carry the child. They adorn themselves also with strings or necklaces of glass or other beads, or white chaquiras, and sometimes are added silver pendants of Colonial origin.
[292] During festivals the women wear brightly colored blouses of imported fabrics and the men linen shirts.

MANUFACTURES

285 **Basketry.**—The *Páez* and *Moguex* make a few twilled baskets of cane strips and two kinds of hats. The hats are woven with the coiled or sewed technique. The spiraled warp in one kind consists of a thin bundle of rush or straw, and in the other of a braid made with seven
[462] strands. The latter is more common. Both are made by men who prepare materials while resting at home or traveling on the road.
[292] Weaving also includes waterproof capes made by tying sheaves of
[824] leaves or straw to a net of hemp cord.

Cordage.—Rope making is practiced extensively. Hemp (fique)
283 is the raw material, and is made into cords for fishing nets, bird trap nets, bags or pouches for carrying belongings and products, foundation nets for the leaf rain capes, and cordage for various other purposes. The sisal or hemp (fique) leaves are scraped over the sharp edge of a board to loosen the fibers, which are then washed, dried, and twisted

7tHernández de Alba E-5,1 (no date) 1946 SC15 Paez SC15
Moguex

with the right hand over the naked thigh. Two strands are similarly twisted together until the desired thickness is obtained. 283

Gourds.—Gourds are still widely used. They are picked when ripe, cleaned out, and dried. With small openings, they serve as containers for beverages and powdered lime. Some are made into bowls and others are cut up to make spoons. Today these objects are undecorated, but formerly in Timaná they were painted with a resin varnish very similar to that used in Pasto. (See p. 930.) Before the Spanish domination, gourds were also used as frames over which were stretched the prepared skin of the heads of their enemies killed in war. 415 824 [314] [721]

Metallurgy.—The metallurgy of these Indians was the same as that practiced throughout most of Colombia. The metals were gold, copper, and an alloy of the two (tumbaga). It is recorded that the Indians "worked gold," but the processes are not described. Specimens found recently in the territory, however, show molding, casting, and hammering. Metal objects included nose ornaments, parrot-shaped breastplates, necklaces with small animal figures, and some anthropomorphic idols. Gold occurs in this territory, particularly on the upper Páez or the Suin River. 325 [301] [532] [135]

Ceramics.—These tribes made and still make coiled pottery. Modern vessel forms include large jars for storing beverages and poorly shaped, crudely decorated containers for preparing and serving food. There is no individual specialization in this task, women making pots for their own family and not for trade. 323

Stone and wooden artifacts.—The native Indians made stone axes of a simple design, but stonework disappeared during the time of colonization, when the Indians could obtain manufactured iron weapons and utensils such as machetes, axes, hoes, shovels, etc. The manufacture of wooden objects—weaving, cooking, and farming implements and weapons—was furthered by the use of metal tools, and now is well developed, as exemplified by the trapiche (cane mill), a true machine made of wood. 324 182 199 322 249 199

Weaving.—Weaving, little practiced before the Conquest, developed with the post-Contact need for wearing more clothes and with the introduction of sheep, whose wool was used in addition to cotton. Weaving was and is exclusively the work of women (pl. 186). They prepare fine, uniform yarn with a common spindle, which they handle as they walk along the road (pl. 187, *top*). The loom is vertical, made of two horizontal rods fastened to two uprights. The warp runs vertically with a continuous thread. The horizontal weft is pressed down with a wooden sword. They also weave hemp bands on the loom. Woolen blankets are woven in natural colors, but some sashes have bright colors made of imported wool or of home-dyed wool. For red, they use one of the Rubiaceae (*Relbunium hypocarpium*), and for 286 [177] [462] [386]

?:Hernández de Alba E-5)(no date) 1946 SC15 Paez SC15
Moguex

blue, the fruit of the jagua palm (kii), probably *Genipa* sp. A woven fabric is made black by burying it for several days with clay and branches of a *Phyllanthus* which they call "sal."

They make woolen bags by hand, using a kind of crochet technique without needles, and decorate them with rectangular and rhomboid figures. Some bags are made of hemp (fique), in which case the stitches are larger and the article has greater elasticity.

Weapons.—For weapons, the *Páez* used large, thick lances of black or chonta palm, 20 to 25 palms or more long, clubs or macanas, stones thrown with slings, large rocks rolled down from heights, spear throwers like those used by the *Chibcha*, and shields of jaguar, puma, or bear skin. The *Páez* quickly adopted iron arms from the Spaniards, and in the last wars of the Conquest they used steel swords and knives. In a recently discovered grave were copper bells, a golden breastplate, shield bars of tumbaga, a Spanish dagger, and a curved knife of the Arabian or north African type used by the conquistadors.

Today the *Páez* use the club or macana, ordinary guns, machetes, knives, and, for killing birds, the blowgun.

Fire making.—Fires are generally made today with flint and steel, but some Indians use modern matches. For both heating and cooking, the fire is made on the ground in the main house, surrounded by stones which help support the pots. It is covered at night, and almost never goes out.

Illumination is provided not only by the fire but by candles made of wax from the wax palm and from seeds of a wild laurel. The latter are cooked and pressed in a bag so that the wax drips into a half calabash or pot to form a semispherical lump. It is melted to make candles with cotton wicks. The *Páez* use these themselves and also sell them, for they are superior to candles made of animal tallow. A cruder means of lighting consists of transfixing a large number of "higuerilla" seeds on a long, thin bamboo splinter. When the splinter is laid horizontally and lighted, the first seed burns strongly, after which the flame passes from seed to seed, lasting some 15 minutes and throwing a fair light a few feet around.

COMMERCE

Each week a market is held in the municipio or in some of the small native villages (pls. 190, 191). The Indians sell vegetables, tortillas, eggs, chickens, and laurel wax, and buy salt, brown sugar, and especially lime (mambe) to be chewed with coca. Each product has a price in Colombian money, whether by quantity or weight. The unit of weight is called an "egg," and more or less equals the weight of a chicken egg. After his few customary transactions, paid for either in cash or in terms, in which the future coffee crop is mortgaged to the

Mogues

631 list presented by a council composed of former governors, the cap-
666 tain, and the síndico. The meeting may object to the list, but gen-
[651] erally accepts it. On the following January 1, the cabildo-elect must appear at the office of the municipal mayor to receive the staffs, their insignia of office, and to assume their duties and responsibilities. The offices are: Governor and alternate, commissioner, two mayors (alcaldes), two constables (alguaciles), and three prosecutors (fiscales), one of whom is a young man assigned to learn the ways of government. The mayors, constables, and prosecutors are something like bosses or policemen, and execute orders issued by the Governor or by the captain or the municipal authorities to a community through the Governor.

423 Property.—The Indians today do not own any real property in the usual sense. The land assigned to an entire community is allotted
[651] to each adult for his use when he becomes a macanero, that is, capable
[534] of giving one day's work each year for the collective planting for the benefit of the saint and as many days as may be required by the cabildo for the repair of roads, bridges, etc., or for work in the village. The right to the use of the land may pass to the heirs, wife and children, in the absence of which it reverts to the community or the cabildo.

422 The house was formerly typical personal or movable property, which could be easily abandoned, dismantled, or destroyed. The same holds today for fragile cane dwellings. There are few houses so solidly built that they constitute real or immovable property.
[764] Other personal property, such as utensils, clothes, weapons, adorn-
[428] ments, and jewels, was formerly buried with the owner. These things and livestock, planted fields, and crops are now inherited by the
[177] members of the deceased's family. In general, Colombian law is being implanted by the judges and municipal mayors, although the
[692] cabildo judges some minor offenses and punishes the offenders by
[623] whipping, imprisonment, or stocks (cepo), a form of torment retained
[681] from Colonial times.

Although the Indians' communities have in most cases titles of
691 limits of their lands dating from Colonial times, there are still liti-
648 gations on boundaries. An interesting case is the struggle of the
[423] Indians to dislodge a settlement of Negroes from the old salt works in Ambostá, where they were abandoned many years ago by a rich Popayán family who took them there to work the mines. The female Indian chief (cacica) of this territory allowed the Negroes to live on a hill, called "the hill of the fifteen Negroes." The Negroes are not organized under a cabildo, but have a chief who represents them. They all contribute to a special religious feast in the municipio, and provide means to continue the suit for the possession of the hill against the Indians.

7:Hernández de Alba E-5/(no date) 1948 SC15 Paez SC15
Moguex

881 heights of Cuetando, where they built a hut and planted a miniature field as proof of their masculine aptitude.

797 **Education.**—Today the Indians are educated principally by their
871 parents in the customs and tasks pertaining to each sex. Some boys
[868] and a few girls are sent to the few missionary schools, where they are given religious instruction and are taught Spanish, arithmetic, geography, the history of Colombia, and modern embroidery or light
[562] basketwork. The *Páez* are reluctant to send their daughters to the schools because they feel that women should keep the traditions of
[177] their people. The missionary schools strive to change the native language and the cultural traditions which have given the Indian community social cohesion.

595 **Marriage.**[11]—Formerly polygyny was prevalent, but now Catholi-
[77] cism has imposed monogamy. The Indians continue, however, to
583 practice trial marriage (amaño). A marriage is arranged as follows:

584 The bride is selected by the young man's parents or by himself. His parents and two witnesses or godparents then visit her house to request her for the groom. They also serve as advisors to the young woman, in case she disapproves the marriage. The visitors carry half-filled bottles of rum (aguardiente) and some special garments for the girl. The young man's father offers the girl's father a half-bottle, acceptance of which means, as usual among the *Páez*, that the second party is well disposed toward the proposal and the negotiations may proceed. If the girl's mother agrees, the boy's mother presents her a half-bottle of liquor. The godfather or witness gives another half-bottle to the girl's father and the
583 godmother gives one to the mother. The visitors now leave, taking the girl, who then begins a year of trial marriage, during which the young man seeks proof that the girl is able to bear children, is active, cooks well, can weave, and
585 can cultivate the land. After the trial period, the man may return the girl to her parents or they marry in the Catholic Church, holding a feast which, like all
527 such celebrations, is called a "cuido." The couple and their parents and godparents are accompanied by an orchestra (chirimía) to the house where the feast is to be held. Here the bride puts on a modern dress, a ribbon on her hair, necklaces, and earrings, while the groom is with his godfather. As the guests arrive, chicha is distributed frequently, music is played, and then there is a feast of thick soup, generally with chicken, cooked yuca, arracacha, and roast or baked meat. In the afternoon, after more music and chicha drinking, the "refresco," really a banquet or social communion, is served. Six bottles of wine made from cane molasses, cinnamon, and cloves, and cake are given to the bride, groom, godmother,
[782] and godfather, who give some to everyone present. A prayer, led by the head of
[775] the house, then asks the souls of the dead to bless the marriage and give permission to dance. First, the godfather dances with the bride, then the godmother with the groom, after which everyone dances. The feast lasts 5 days, depending on the wealth of the family. Chicha is served and accepted with the phrase, "May God pay you, compadrito, for accompanying us. Accompany us more."

764 **Death.**—At a death, the family formerly buried the deceased inside the house with his possessions, and abandoned it. Some communities, however, preferred to cremate the body or dry it over the fire. The

[114] [11] I thank my wife and companion, Helena Ospina de Hernández, for her research in 1956 on matrimonial
[127] matters.

ESTHETIC AND RECREATIONAL ACTIVITIES

Art.—Arts included sculpture, small, cast gold idols and figures, and painting. Their best known art objects are those decorated with lacquer or resin, found in the Timaná region, and the stylized representations of beings which women still weave on cotton sashes. 532 [3/4]

Music.—These tribes formerly played on trumpets, drums, large sea shells called "fotutos," cornets, and cane flutes. These instruments were played not only to accompany dances but also when going into battle. The sea shell trumpet was used during the Colonial Period but has been abandoned. The drums are made of hollowed trunks, and the drumheads of animal skins The flutes are made of cane, and vary in length and thickness. They are capable of such variation in tonality that the musical combination is pleasant to the ear. 534

A kind of orchestra, known as a "chirimía," today consists of a large drum to beat time, a small drum to play a rhythmic roll, and flutes to carry the tune. Each community has its orchestra, but every Indian is a flute player and loves to play his instrument when traveling over the hills. The music is nearly always sad and has absorbed some of the regional Colombian popular airs. It has few variations, and changes to a solemn tone on funerals. The *Páez* love their own music so much that, instead of using the Gregorian music of the Catholic rites, they have imposed their own music on the religious ceremonies. Thus, at Mass, they play the special music used when an animal is to be killed and eaten. Other music accompanies the bursting of skyrockets and firecrackers. There is music for the Elevation, for the Creed, and for the Requiem Mass. Certain musical pieces are called simply "bambuco" (local airs), though they have some variations. 533 [177]

Native songs narrated the triumphs and feats in war, but none have been collected, and all are now forgotten. Today the Indians sing only some modern Colombian airs or religious songs. [177]

Dances.—Dances were very important to these Indians, being held for war, for religious ceremonies, for weddings, and for sexual initiation. During Colonial times, Del Castillo i Orozco reported the following dances, most of which, as their names show, apparently had not suffered any change under Spanish influence: 535

Guaya coo, a dance to ask for money.
Vite coo, a dance of the rod or stick.
Xeita coo, a dance of sea shells or of the armadillo. It was accompanied by two sea shells of different tones.
Onse coo, a dance of rats.
Imaguari coo, a dance of the sparrow hawk.
Ech cori coo, a dance of the phantom's flutes.
Bel cori coo, a dance for great festivities.
Quimb coo, a dance of the drum.
Itsa bó, added by Pittier de Fábrega, a dance of girls' puberty.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Moguex

535 There is much dancing today. The sexes perform in couples or separately. Among the *Moguex*, some of the expert dancers are paid to dance with all couples in a sort of "bambuco." Dancing is always a part of *Páez* ceremonies for the death of children, baptismals, weddings, saint holidays, and meetings for collective work (mingas) held in the evening when people return from their plantations.

Dancing, as other social events, is subject to a special ceremony [585] or etiquette, strongly connected with religious beliefs. For example, in the wedding celebration, a prayer is first said in which the souls of [608] the dead are asked permission to dance, or "scrape the floor," as they call dancing. Only the godparents and the bride and groom may [527] dance at the beginning.

526 The *Páez* do not masquerade, but the *Moguex* always masquerade during the period of carnival preceding Holy Week.

[524] **Games.**—Games do not hold an important place among these peoples. The children amuse themselves by imitating the activities [857] of their elders. The only game recorded is simulated warfare, performed as a part of a rite in honor of the dead after a communal [769] feast. Two teams under their captains or caciques attacked and shot arrows at each other. Even if some contestants were killed or wounded, no one bore a grudge.

276 **Narcotics.**—The *Páez* and the *Moguex* chewed coca leaves mixed in the mouth with lime powder. Coca chewing is widespread among men, but very little practiced by women. It is used especially by [756] the shaman when he is practicing. In Colonial times the use of coca [177] spread to the rural population of Mestizos and Whites in Nariño, Cauca, and Huila.

273 **Alcoholic beverages.**—These Indians formerly made chicha of maize, but today they ferment it with sugarcane molasses. They also have [178] fermented sugarcane juice (guarapo), and a sort of rum (aguardiente). The latter is distilled clandestinely in their huts from guarapo and certain herbs fermented together in earthenware crocks. The Indians drink guarapo every day, but restrict the use of chicha and the stronger guarapo and aguardiente to market days, religious feast days, burials, weddings, mingas or meetings for work, and witchcraft [462] ceremonies. Guarapo and chicha are made by women, who sometimes chew the maize to increase its fermentation. They are stored in large, hollowed tree trunks and in large earthen jars, which are kept in a special place in the hut. There is never a lack of these beverages for home use and for welcoming an unexpected visitor.

RELIGION

175 The early Spaniards had little understanding of the religion of these 771 people. They reported that the Indians had but few idols and no temples or places of worship. Castillo mentions that they wor-

7:Hernández de Alba E-5,4 (no date) 1948 SC15 Paez SC15
Moguex

Castillo mentions that they wor-

shiped the sun, in whose honor they met and danced in places called "Itaqui-finó," i. e., the place where the sun revealed its mysteries; and that they venerated a kind of culture hero called Guequiau. It was he who instructed shamans (mohanes).

This hero has a counterpart in the religious legend of Juan Tama, the Son of the Star. One day when the Morning Star shone very brightly, some Indians found a child in a gorge—ever since called the Gorge of the Star. This was Juan Tama. They picked him up and entrusted him to a woman to nurse, but he nursed so much that her milk dried up. He was given to another woman, whom he also made very weak. They then said that he could not be nursed by a woman, and gave him food. After he grew up, he married the female chief of Huila, Doña María Mendiguagua, and became chief of all the Indians. He instructed people and explained to them how to keep the land for themselves and not mix with White people. He pronounced them invincible and summoned a chief from Pitayó, called Calambás, whom he appointed his manager. Calambás rebelled,[13] but was defeated by Juan Tama, who pardoned him on account of his bravery, and conferred on him and his heirs the right to rule the *Páez* in Bitoncó. As death approached, Juan Tama went to the lake on the páramo of Moras and sank into the waters. He had come out of this place and returned to it, leaving no heirs.[14]

In the neighborhood of Bitoncó there is a rock with what appears to be human footprints. When the Indians pass it, they uncover their heads and say, "The Holy One came this way." Another remnant of the cult of Juan Tama is the custom that each member of the council spends one week at the shores of the lake before the end of his term to render an account to Juan Tama of his actions in office. Likewise, newly elected officers, as soon as they receive their staffs or insignia of authority, spend a week at the lake. They toss silver coins into it, wash their staffs, and pray for strength to rule well. This ceremony, performed with the greatest secrecy, is called the "curing of the staffs." Recently, however, the Indians have stopped "curing" their staffs in the lake, for they say that Juan Tama is angry, and whenever they approach the lake, it rains and storms badly.

In the Guanacas section there was another sacred lagoon, called Tumbachí, which was recently drained because a snake that lived there attracted girls and kept them for a whole year, and then returned them when they were about to become mothers.

These tribes believed that the soul comes back to life.

Witchcraft was strongly developed among these Indians, who still believe in most of its practices, in spite of the catechization forced upon them by the missionaries.

[13] During the War of Independence, as well as in subsequent revolutions, the Indians of the family named Calambás distinguished themselves as warriors.

[14] We are indebted to Father David González for this legend, told to him by an old Indian in Lame.

7:Hernández de Alba E-5,4 (no date) 1948 SC15 Paez SC15
Moguex

cluding vegetables, cornbread, eggs, and chicha, which he piles on the church floor, together with wax candles—one if the person does not have anyone in particular to remember, two for each deceased relative. When Mass begins, they throw flowers on the presbytery, as an offering to the souls of children. Afterward, they go to the cemetery in procession, and the souls of the departed come down to the empty church to take the food. Later, the people sell whatever the souls left or failed to eat. Everyone buys something, the captain's assistant collecting the money, while the constables of the council, raising their whips and shouting insults, prevent frauds in the general disorder. The money from the sale is given to the priest to pay him for the work in the rites. As each person leaves the church, he kisses a crucifix held by the sacristan at the church door. They kiss it once for each dead person whom they wish to remember and pay a cent each time. In addition to offering food at the church, the *Moguex* cover their tables at home with food, which is also intended for the souls of their dead, and at the end of 2 or 3 days they eat the food, saying that they are eating what the souls have left.

Christmas and Holy Week are both great occasions for the Indians, who celebrate them with music and some of their ancient rites. Even though a priest may not be present, they conduct the rites in a manner that dates from Colonial days, when a *Páez* Indian named Undachí tried to combine Catholicism with their own religion. The man claimed to be able to see God, who used to come among the Indians and talk to him in his own *Páez* language. The new religion included a chapel, Mass, and candle and flower offerings.

Sickness.—Sickness was always thought to be caused by witchcraft or by someone's will. The evil force entered the body and made it impure; it had to be expelled or "cleansed," lest death ensue. If a delirious person told who was killing him, the individual mentioned was thought guilty; or, if, after a death, the face of the deceased should appear to somebody, the person was considered responsible. These beliefs are still in force today, and the Indians avoid the causes of sickness, such as having sexual intercourse with a menstruating woman, exposing the body to bad weather while there is a rainbow, and neglecting to bathe after a burial or to purify a house where a death occurred.

To fight disease they still have shamans. *Moguex* shamans use tobacco, coca, plants known as yacuna and chundar, and rum in their practice. After remaining shut up in a dark room for a night, they either confess their inability to cure the sick person or proceed to administer the traditional medicines. Sickness is conceptualized as an animal, which enters the stomach, head, or other part of the body. In former times, the shaman fasted with the sick person, abstaining from salt and fats and taking only coca and chicha. Today, he requires that only the patient fast.

/178 cont./

The Family

594 361 The social group par excellence in Páez culture is the nuclear family. Its importance stands out if we consider that 175 the Páez live dispersed within their geographic area. Both the 594 chroniclers and the parish priests who concerned themselves 361 with them emphasize this characteristic. In 1751 the priest of Tálaga, Licenciado Eugenio del Castillo y Orozco, wrote in his report to Don Juan Francisco de Eguizaval, Governor and Captain General of the city of Popayán and its provinces, "that by command of his Illustrious Lordship Don Francisco José de Figueredo y Victoria on the Council of His Majesty, currently Bishop of this Diocese, I reported to the Governor previous to your Lordship, stating that since the year 1719, when I was in these Provinces assisting as interpreter for the Very Excellent Don Pedro Felipe García, then inspector for them, and afterwards in 1731 the same for Dr. D. Francisco Gómez Constantino, I learned that the Indians of this province had been inclined to live dispersed at various distances and only sat together at drinking parties in the homes of their Caciques or Capataces when they came from some Riria (which they call Necue) or to celebrate the first menstruation of a woman (which they call Izacó) or for another cause for vain observance, and, after finishing, they again separate" (3). Multiple efforts were made by the

177 797 361

3. Archivo Nacional de Bogotá. "Cartas de contrabando /Contraband Letters/," Vol. 14, Fol. 228.

parish priests and by the governors of the colonial period to " "reducirlos a vida sociable" /reduce them to a social life/, but the "bárbara naturaleza" /barbarous nature/ of these natives made their efforts fruitless. And this cultural trait is still

/178 cont./

177 effectively maintained (4). In each house, scattered over the
797
361

4. Bernal Villa, S. "La fiesta de San Juan en Calderas Tierradentro /The fiesta of San Juan in Calderas, Tierradentro/," 1953, p. 182.

In each house, scattered over the
594 ruggedness of the prominences, live a pair of adults of the op-
[361] posite sex and their children. It is this nuclear family that cares for and maintains its old parents and attends to their burial when they die, that completes the religious festivals with traditional pomp and rigor (5), that defends its /179/ interests from the

5. Ibid., pp. 192 ff.

attacks of strangers, that in former times celebrated the "Riria" (which they call Necue) (6) or the first menstruation of a woman

6. In the Vocabulario Páez-Castellano /Spanish-Páez Vocabulary/ of del Castillo y Orozco there is the word Nécue, which has the following textual definition: desafío; pelea que es un desafío solemne tan antiguo como el jentilismo entre los páeces, de dos campeones cada uno con el común de su bando /competition, a fight that is a solemn competition as old as paganism among the Paez, of two champions, each one with the community of his faction/.

(which they call Izacó), and, finally, that manufactures its troughs for chicha ("another cause for vain observance," of which del Castillo y Orozco speaks) in order to carry out the "bebezones"
594 /drinking parties/ with all who seek to participate. It is this
574 nuclear family that "cuida" /takes care of/ relatives who arrive,
609 that offers hospitality to the native traveler and that shows cold silence toward the visitor from Western culture.

/182 cont./

462 13. (cont.)
594 Revista Colombiana de Antropología, Vol. III, 1954.

361 In this manner, among the Paez, marriage,
182 family, land, and house form an intimate unit, indissoluble and
594 in part explaining the above-mentioned phenomenon of the re-
581 luctance to live grouped in towns or cities.

473 Basically the residence of the nuclear family is patrilocal-
591 neolocal. When the man, accompanied by his escort, goes to
[584] ask for his future consort, and, after certain definite formalities are fulfilled, the future parents-in-law hand her over, she is taken to live in the house of his parents (when he has not built
591 his own). In it he arranges a separate room with a kitchen for
596 cooking, a cowhide to sleep on, and space in which to keep their provisions, their kitchen utensils, and work tools. The new
[583] spouses are independent of their respective parents. The man assists in the work of his parents-in-law and the woman in the work of hers, but in neither case does it constitute an obligation
[594] for them. When a bachelor, the man works to take care of his own needs and to assist in the support of the paternal economy; once married he works to support his family.

582 The man chooses his wife within the parcialidad, although
● 177 he may marry women from other parcialidades. But neither men nor women may marry persons from Western culture ("whites"). In Calderas there was a case of a possible marriage between a native woman and a "white." The cabildo removed this possibility, obliging the native woman to marry a member of the parcialidad. If it is a man who wishes to try to marry a "white" woman, he must leave the village. They consider that when the "whites" enter the community, they invariably appropriate their land.

582 The selection of spouses within the parcialidades is /183/ determined by the laws of incest. Unions between parents and children and real brothers and sisters are incestuous and severely prohibited. Also relations between cousins of the first degree of both lines and those of uncles and nieces are condemned, although not

prescribed.

/184 cont./

0-00 stereotyped conduct. It should nevertheless be stated that the
551 present-day Páez surnames were still given names in the eight-
178 eenth century, chosen capriciously by the mother and not trans-
[177] missible to the descendants (14). The adoption of surnames and
[797]

14. Castillo y Orozco, E. de., op. cit., p. 75.

their heritability through the paternal line is the result of the doctrinal work of the Catholic missionaries, and their assimilation and integration into Páez culture must have been carried out in accordance with certain aspects of a sociological nature
595 existing previously. The same /an unpaginated genealogical
177 chart appears here/ /185/ present-day monogamy of the Páez
797 appears to be the result of a strong Catholic Christian influence, since in pre-Colombian times they were polygamous (15).

15. Hernández de Alba, Gr. "The Highland Tribes of Southern Colombia," 1946, p. 948.

594 The supreme authority in the nuclear family rests with the father; when he is missing, with the mother; and, when both are missing, with the most intelligent of the group. The
[562] husband orders, the woman only asks. The woman is always under the control of the man: the father, the brother, the hus-
623 band. She has no liberty of movement. The cabildo has au-
736 thority over orphaned women, including that of having them
562 marry. One of our informants in Calderas was a fatherless orphan
583 and had been brought up in Avirama in the company of her stepfather. Being of age, an Avirameño asked for her in marriage, but the cabildo of Calderas stopped the marriage, brought her back to the parcialidad, made her spend the night in the quarters of the cabildo, and on the following day made her marry a lad of 14 whom she did not know. Since she resisted, they beat her, admonishing her at the same time that if she did not do it, she would be married to a black dog in the future life. "There being

[text continues on p. 33]

/102 cont./

175 glossary, p. 248/, and, by means of reservation laws, protected
177 the Paez from the gradually advancing colonists. In this way the
648 Paez were able to preserve their language and customs to a con-
[178] siderable extent, in contrast to the other mountain tribes of Colombia, who have long since been absorbed in the Spanish-
175 Colombian culture. In the struggles for independence from the
648 Spanish crown under Simon Bolivar from 1812 to 1824, the Paez fought for their liberation on the republican side under Gregorio Calambás. Their leader was captured and shot. After the victorious termination of the struggles for independence, Gregorio Calambás became one of the martyrs of Colombian independence (*).

* According to V. A. Bedoya, P. J. Ramirez Sendoya, and G. Hernandez de Alba (VII).

175 The Pijao perished like the Guanaca. After having oc-
101 cupied, before the Conquista, almost the entire area of the
648 present-day department of Tolima east of the Central Cordillera,
[151] as the eastern neighbors of the Quimbaya, they perished in countless battles with the Spaniards. As late as the eighteenth century, remnants of them lived in the valley of the Rio Negro de Narvaez, as neighbors of the Paez. They, called Bemb by the Paez, as well as the Guanaca, spoke languages that differed from the Paez. They could not understand one another.

178 Besides the Paez, the culture of the Guambiano, a
101 neighboring tribe called Mogweš by the Paez, has been preserved
114 to a certain extent up to the present day. The Guambiano inhabit the west side of the Central Cordillera and today live in the valley of the Piendamó around Silvia. The life and customs of his tribe have been recently represented by the Guambiano Francisco Tumiña Pillumbe in a number of very instructive /103/ drawings, each of which was provided with a brief text by Gregorio Hernandez de Alba.

/188 cont./

524 causes the unwinding of the string and its revolving motion. The rule of the competition is to knock over the turning top with another turning one.

A simpler kind of top, which, like the hole game, is also called hénde, consists of a round seed capsule into which a vertical rod is inserted and protrudes about five centimeters. To set it in motion, a twisted string and a small board are required. One end of the string is wound spirally around the stem of the top and the other is knotted to the board and then pulled off.

526 Besides these games, wrestling is greatly enjoyed by the
• [178] boys. Youths and young men no longer wrestle. On the occasion of the festivals, however, when they have drunk a little, the young men hit each other on their bodies, with arm outstretched, with the hand or fist. Several of them form an irregular circle, but without taking sides, and each tries to hit the other from behind.

524 The girls play with dolls (ločinyi) about 20 centimeters high, which they make themselves out of wood and remnants of cloth. It is remarkable that these dolls do not represent children, but adults fully dressed. /189/ A doll man, for example, consists of a forked stick, the longer part of which represents the body, and the forks, the legs. A cross-stick tied on indicates the shoulders. The clothing consists of a man's shirt, which is tied and "fitted" at the height of the hips with an agave string. A rectangular piece of cloth with a horizontal hole in the center is drawn over it as a ruana. A face is not indicated on either the male or the female doll. The doll woman consists of only a straight rod, around the lower part of which a piece of cloth is wrapped as a skirt and tied with a red thread as a belt. On her back the woman carries a child, represented by a small piece of wood wrapped in a piece of cloth. The cloth is fastened around the child with a red thread in the way children are wrapped. The doll woman carries her child wrapped in the large shawl, which is held fast by a red thread which serves as the belt.

/189 cont./

b) Maturity

881 Today no rites or ceremonies for the youths take place any
[178] more. In former times they were led to the sacred lagoon of Juan
[778] Tama or to the heights of Cuetando, and there they had to build a hut and lay out a small cornfield as proof of their capabilities as a man and father of a household (Hernandez, 1944, p. 203).

[582] A girl comes of age with puberty, that is to say, she may
[836] marry. Before that and before marriage, intercourse is not per-
[535] mitted. On the occasion of the first menstruation in former times a special dance was performed (itsa-kó), during which the young girl was bathed naked in chicha in a pit outside the festival house
881 (Castillo i Orosco, p. 85). Today this no longer takes place;
285 rather, a girl, when she goes to the dúyat for the first time at
787 about 15 years of age, takes along agave fibers and during the
[178] approximately five days that she stays there plaits a very pretty,
[262] small fiber bag (yāhalečkwe) about the size of a fist. There are no additional food prohibitions or similar things. After that she goes to a distant river to bathe. On the way there she lets the bag fall. A married man passing by lets it lie, for he knows that it belongs to a young girl. A young man, however, who happens to be coming that way sees the beautifully worked bag, picks it up, and uses it as a small money-bag. Without knowing who made the little bag, he will -- people are convinced -- marry this girl.

/190/ c) Marriage

595 The present form of marriage of the Paez is monogamy.
114 H. Pittier de Fábrega (p. 314), however, concludes from their traditions that the Paez were formerly polygamous and were converted to monogamy only through education on the part of the missionaries. I could find no clue in their mythology for actual
595 polygamy in former times. The social structure and way of life
591 of the Paez, however, prohibits living alone for unmarried girls.
[589] In case they have no relatives or do not find lodging in the house of relatives, another man takes them into his family. The girl

/190 cont./ The girl

595 then helps with household tasks and the father of the house may
591 have children by her, without his marrying the girl -- today at
● 178 any rate -- as his second wife in a regular marriage ceremony.

584 If a young man wants to marry, he speaks -- in the normal case -- to his father, and the latter with the father of his chosen one. Courtship through a third person outside the family is not customary, and the relatives on the two sides do not enter into communication with one another and exchange presents until after the official wedding ceremony. As a rule, the two young people have reached an agreement earlier, before the fathers speak to each other. The consent of the girl, however, is not required, for the agreement of the young man with the two fathers is fully adequate, and in this case the girl is given in marriage
584 even against her will. But this is said to be the case very rarely
754 or never, for it is dangerous for a girl to refuse a young man's
539 proposal of marriage. In this case he would spit and utter the following curse: "Toblel (untranslatable), I wanted to marry you, but you did not want it; now you must die!" I told the men of Calderas that I doubted whether this curse could have any effect, but then I was told the story of the girl who did not want to marry
[832] a Paez. This girl was very beautiful. (By the way, only unmarried girls are called beautiful; a married woman is never described as beautiful.) She was slightly fat -- being thin is regarded as ugly -- was always washed clean and well combed, and wore beautiful necklaces and earrings, handsomely woven clothing, and an exquisite belt that she herself wove. Many young men of Calderas wanted to marry her, but she did not want to marry a Calderun, only a white. She therefore left her village to go to Popayán (the only larger, well-known city). She walked very fast. On the way, however, in the páramo (bordering mountains) there was a Pijao. He /191/ seized her and took her into his house alive. There he kindled a fire, killed her, and devoured her. By way of explanation the storyteller added: A girl who does not want to marry a Calderun but a white, because the Calderun men are not handsome enough, would, on the way to

/192 cont./

581 around the hearth fire, and this must be stirred and provided with
462 wood every two hours. This is the task of the wife, who, there-
513 fore, sleeps next to the fire. Throughout practically her whole life, she is never able to sleep all through the night.

583 If during the trial year the bride does not meet the demands of the man, if she either cannot cook or is lazy or /193/ does not like to get up in the morning, he sends her back to her father. Since no wedding celebration has taken place, sending back the girl leads to no resentment of any kind. It does, however, if children have resulted from the trial marriage and the young man
[684] nevertheless changes his mind. In this case, to be sure, nothing
[623] can be changed with regard to his decision -- after all, he has not yet been officially married -- but, since such an action is condemned, he is beaten by the cabildo. He may then begin a
583 new trial marriage with another girl. The children of the previ-
848 ous trial marriage (they are designated by the Paez with the
[557] Spanish term hijo natural) are given the name of the mother. There are not a few such "natural children." The mothers, however, are not scorned or judged harshly on that account and do not by any means have poorer prospects for a subsequent marriage. The children are not adopted in case of a subsequent marriage by the
[761] mother and keep their mother's name. It is believed, however,
[851] that such "natural children" will soon die. They are not baptized, since the priest baptizes only legitimate children, or else demands such a large sum for the baptism of an illegitimate child that the unmarried mother cannot raise it.

585 The actual wedding celebration takes place after the period
[178] of the trial marriage. Today the prior marriage service by the Catholic priest in the church is usually combined with this wedding celebration. The money for this, as for the expenses of the wedding celebration, must be raised by the young man himself.
[435] This takes him many months. First of all, besides the cost of ten pesos for the marriage service, he must have collected the money for an ox, then prepare chicha in sufficient quantities, for which sugar cane is milled for about a month, and also provide for the rest of the food. In general his father or brothers do not

/198 cont./

764 protected from the earth above it as if it were lying in a lateral
184 niche (Ill. 206 /see p. 291/). It was expressly confirmed to me
[178] that this form of grave has been used for only about 20 years, and that previously regular niche-graves had been made. The transitional character of this covered pit from the shaft grave with the lateral niche becomes even more apparent from the fact that an additional niche was dug about 30 centimeters deep at the head end of the pit, into which the capitan was laid part way, "so that at least the head is lying in a niche."

/199/ The corpse, wrapped in Colombian clothing, was carried on a bier on the shoulders of two men. The bier consists of two poles held by cross-sticks lashed crosswise one above the other at intervals of 30 centimeters. The cross-sticks are lashed with lianas in pairs, each one above the one longitudinal pole and below the other one (Ill. 205 /see p. 291/). After the burial, the bier was chopped up and then left lying in the graveyard.
[201] Shortly before the lowering of the corpse, the members of the
[516] family take leave of it by kneeling down and moving one or both hands before them from above downward and saying: "You are now going to heaven, and we shall not see each other again; we hope it may go well with you!"

After the corpse was lowered and its head pushed into the small niche, the bamboo covering was very carefully and tightly laid over it. Then the pieces of sod as the bottom layer were packed next to each other as closely as they had been when lying on the surface of the ground. The members of the family and the friends, with their left hands, then tossed as many handfuls of earth into the grave as the person concerned has family relatives. Together they fill the grave with all the rest of the earth with their hands. This is an honor for the friends of the deceased; if a person has no friends, the members of his family must do this work themselves. After a few handfuls of earth, the filling of the pit is always stamped down long and thoroughly with tree trunks. This is a very long and exhaustive occupation, and the more beloved the deceased was, the longer the stamping. In the case of the burial of the capitan, this lasted almost two hours. As a

/202 cont./

461/ villagers know these "strollers," and even say that they are
574 sluggards who do not work; but if they then come at mealtime, they
156 get their food and are usually kept there gladly, because they know how to tell stories well and amusingly, go around everywhere, and always have news to impart. If a man is married and has a wife and children, he must, of course, cultivate his own field, in order to be able to feed his family. In Calderas, however, there is even a married "stroller" who has neither a house of his own nor his own field. He lives in the house of a good-natured man whom he helps in the field and in the house. But this is regarded as an exception.

829 Thanks for favors or benefits bestowed, which, according
571 to the view of the Paez, are taken for granted, were not custom-
[576] ary originally. Today, however, thanks are often expressed with
[178] a word of Spanish origin "slopage" (Dios se lo pague), without, however, any feeling of a debt of gratitude, such as toward a
[621] wealthy person or a person in a superior position. Within the Paez communities there is, to be sure, no sociologically established authority; similarly, there is no chief or employer of a number of people who would be dependent upon him and owe him obedience. Hence no one is forced to obey anyone whom he does not like or to do anything that he may not care to do. Accordingly, there is no respect for strangers to the place or even for the priest, for when the Calderun are in their village, "on their soil," everyone regards everyone else as equal. Not the least important in this connection is the general understanding of one another by the inhabitants, their strengths and weaknesses, which makes pretense, any spurious authority simply assumed by an official, impossible. This is one reason -- perhaps the principal reason -- why the Calderun purposely do not want to have anything to do with the "blancos" and their officials. An attempt to trace this back to an awareness of their own inferiority indicates a complete misunder-
[565] standing of the character of the Paez. Their lack of social classes, and therefore the impossibility of looking down on /203/ another person, explains their general respect for one another, which is bestowed on everyone equally. Everyone grants everyone else

/209 cont./

4. Law

671 Although the legal life of the Paez cannot be compared to a well-developed jurisprudence, on account of its being interwoven with all manifestations of life, they nevertheless have fixed regulations adapted to their vital needs, /210/ the preservation of which is guaranteed by the entire community. To these legal regulations belong the political and family organization already described, as well as the customs in the course of life and of daily living. In the following the regulations governing property and inheritance and the views of the Paez concerning punishable acts and punishments are to be described.

423 In Calderas there is community land and private land. The former consists of the river lowlands with the territory of the church, school, community house, and festival houses, whereas the mountain slopes are the private property of those families who cleared them for the first time. Basically, everyone may have an interest in the community land, which consists essentially of pasture land. Here the families can pasture their animals, build themselves festival houses, and stake off a piece of land for [178] themselves anywhere they like and build dwellings. The latter was not customary formerly when a person built his own house only on his own land. Today there are already three families, those of Cerbeleón Guagáz, of Clemente Lis, and of Agustín Muse, who live on community land near the church and the school. They built their houses there and staked off a piece of land on which they cultivate vegetables and some sugar cane. There is no need to ask anyone for permission to do this. The situation is different in the 423 case of private property on the mountain slopes. True, no one 427 builds his house on a piece of land that does not belong to him; yet it may happen that one's own land is very far away, and then a person will ask the owner of a parcel of land nearby for permission ("licencia": Spanish "authorized permission") to plant a field for a harvest. This is not often the case, for generally there is enough land in each family. A few families, however, have

/255 cont./
802 designated as "much" (tec̆ kwát), literally "one stone." Today it is the designation for "hundred."

75 The medical knowledge of the Paez is not great. Almost all illnesses are regarded as based on magical causes and are treated by the shamans (see below//see pp. 190 ff./). Broken bones are treated by the midwife, who rubs on cow fat and wraps [845] leaves around them. The broken bone is never put in splints. In a difficult birth the midwife is able to turn the child into the right position; if then the birth does not go well, her skill is at an end. No remedy is known for snake bite. In the case of headaches, a leaf is tied to the front of the head. For flatulence some wood ashes are rubbed on the abdomen. For injuries caused by a machete and bleeding profusely, a tourniquet is applied to the affected limb, above the place of the injury, and the wound is covered with a small piece of cloth. The shaman has the injured person bite hard with all his teeth on the iron machete.

3. Religion

771 The Paez today are nominally Christians. They are baptized
797 and usually married by the Catholic priest. The Christian missionizing began as early as the sixteenth century, at first, to be sure, with little success, which did not increase when from 1630-1654 Jesuit missionaries took over the mission work. Only in the last decades
797 has there been greater progress. Hand in hand with the conversion
177 to Christianity go the introduction and teaching of the Spanish lan-
871 guage and the adoption of Colombian customs and habits. Today in almost every village there is a mission station and a school, the teachers of which are mostly women missionaries. In general the parents do not send their children to school unwillingly, for they have realized that knowledge of Spanish and of reading and writing is accompanied by certain advantages in their relations with the
[178] whites. In connection with the /256/ schooling, of course, there is
[756] some alienation from the old habits and customs of the Paez, especially those of a religious and sociological nature. Nevertheless,

/256 cont./

797 in all Paez communities in which Spanish is not understood by the
177 majority of the population, the old functionaries of the original
178 Paez religion are needed to maintain the social life in particular.
871 In accordance with their activity, they are designated as "shamans"
756 by theologians. Because of the dissimilar nature of their religious activity, they do not by any means represent unbridgeable competition for the Christian missions; rather, both, the Christian faith and shamanistic activity, can exist side by side in the present stage of culture of the Paez.

771 If one considers existing theological convictions, one finds
793 that the office and dignity of the cult priest rest on the performance
756 of sacred acts which must of necessity be fulfilled so that the
182 natural and normal development of human existence is not obstructed. His task is to confirm the existing world order through the consecration of sacerdotal acts. The shamans, however, -- on the contrary! -- want to outdo and break through the given order of nature and the environment. Their greatness and authority rest on the fact that they do supernatural things, that they heal the sick, struggle with spirits, yes, awaken the dead to new life. This, at any rate, is said of the greatest of their kind, whose talent lies in their spiritual, supernatural powers, in their mastering of extraordinary circumstances. Over against the cult priest's "thus it is," the shaman puts his "thus it should be" (A. Friedrich).

a) Characteristics of Paez Shamanism

756 The Paez shamans, in the sense given, are not functionaries
754 of a sacrificial cult, but persons who do supernatural things. There are two types of them, the teyu and the nyic. Whereas the teyu (tepits as a man, téoi as a woman) is a good shaman, a good doctor and helper of human beings, the nyic is an evil shaman, an evil sorcerer, a hexer. The shamanistic activity of both, however, as a religious phenomenon, is not nearly as distinctive as, for example, the shamanism that we are familiar with in Siberia or North America.

/315 cont./

105 "Araucanian" type (O'Neale, p. 115). In place of the shed rod we have a simple loop; in place of the heddle rod, a bundle of loops.

105 The warp threads are stretched in the form of the "false spiral warp,"
286 a mixture of the method of the continuous, circular warp with the
171 method of the terminating flat warp. This genuinely American way of stretching the warp is found among the Northwest Coast Indians as well as among the tribes of the Gran Chaco (Olson, pp. 114-121). Culture-historically H. Nevermann regards the various forms of American weaving /316/ as having originated on the basis of a native or pre-Polynesian plait-weaving. Among the Paez we find this technical stage in the plait-weaving of the carrying bands of the coca bags.

105 For dyeing, vegetable dyes are used, which dye only sheep wool, but not cotton.

Pottery is very simple. There are only hemispherical pots and bowls made with the spiral coil technique, both without any ornamentation.

The present political organization of the Paez is based on the village community. It is led by a village council (cabildo), whose members are chosen for a year from among the men of the village. The designations for the members of the cabildo and their functions are in part Spanish. In former times the leaders of the Paez were
[621] often men with shamanistic abilities. The village is not organized
[565] by either classes or occupations. No one need serve another for
[463] pay; the word and the thing are unknown to the Paez. The father
[464] of the family with his sons or brothers works his fields, and if
[476] friends or neighbors lend their help, it is compensated for by assistance in their fields.

[594] The family organization is basically the patrilineal,
[178] monogomous nuclear family, consisting of the parents and the unmarried children. Here there has probably been the least
[851] change in Paez culture. The children are given the family of the
[533] father. For her marriage the woman receives no dowry of any kind from her parents, and she keeps her maiden name. Since there are no social or financial reasons for concluding a marriage, a woman has only the merit of her personality and abilities. These are tested during a "trial year" before the actual conclusion of the marriage.

/220 cont./

XXVI

Religious Fiestas

796 Among the Paez there are no secular collective celebrations. All are religious. They celebrate with pomp and grandeur: San Andrés, Semana Santa, San Juan, San Pedro and San Pablo, La Santa Cruz, El Día de Difuntos, La Inmaculada Concepción...

[178] The Lazarist missionary, David González, says that as far back as 1689 the fiestas were organized as they were found [179] in 1905, that is to say, as they are today. Each pueblo was [177] granted a patron saint and various other protectors. In spite of this, only San Juan Bautista and San Pedro and San Pablo, whose fiestas are celebrated when maize is eared /en macollaje/, the rains are heavier, and the winds are violent, the day of the dead /el día de difuntos/ with its offerings to the souls, the Inmaculada Concepción, when grain is abundant, and the Semana Santa (El Resucitado /The Resurrected/) were the fiestas and saints that aroused the most enthusiasm and sank the deepest roots in the souls of these natives.

771 The Paez, and especially those of Calderas, are religious 796 in externals, not in conviction; they are more concerned with 182 form than with substance. This is revealed in the religious fiestas of these natives. /221/ Few of them attend mass, and fewer yet pray at vespers. To the great majority of them, religious fiestas mean a squandering of gunpowder, lights, aguardiente, and chicha. An abundance of food. The pleasure of getting together. The joy of contact. The music, which assuages hardship, and the dancing, an exteriorization of feelings. It is the expansiveness that leads to gatherings, the sexual jokes that spring up among them without misgivings; it is the continuous drunkenness. It is the display of generosity, the exercises in co-operation and altruism.

796 The priest, as a punishment for failure to attend the Mass 793 on the part of the chief fiestero and albacero, refused to carry 718

* /221 cont./
756 vision she was at a 'minga' /communal work-party/ cooking
757 pork for the laborers.

"There was no doubt but that this was a spirit telling me that I should become a curer. The pouches that she carried indicated this to me. This is why I never fail to take my medicine pouches."

Another curer, from the Parcialidad of Calderas, relates his vision as follows: "One night I saw a beautiful child, fair, with the hair of a woman, reddish, and dressed in a wrapper. This child was the Ghost /Duende/, /222/ from whom the
● [178] curer's power comes. He is the same Kallumb as is seen by true curers, because nowadyas there are some who learn to cure through the teaching of others."

In the Parcialidad of San Andrés they say that the Ghost visits the curer when someone goes to consult him, to tell him what brought him and the advice that he should give.

It may also happen, says a Calderuno /native of Calderas/
[262] 19 years old, that someone wishes to become a curer. Then,
[263] he subjects himself to a diet. For one month he eats no salt or ají /Capsicum/. He goes at once to the mountain, alone, his head lowered, lost in thought, with the hope of finding a good friend whose counsel he can ask. At a magnificent spot, pleasant to the senses, he meets a man advanced in years, short of stature, good, generous, amiable in conversation, and amply educated, who chews coca like other Indians and, like them, also carries kuetand yahas (pouches). Filled with trust, he explains his wishes to become a curer, arguing that there are many people who are dying. He asks about the good remedies. The one questioned answers that there are good remedies for curing the sick and presents him with a pouch of them. This one is for such-and-such an illness, he says, this other one for that one, and so on successively, specifying the medicinal value of the remedies in the pouch. He instructs him in their use, technique and method. Up to the way of

The cultivation of potatoes on a large scale
/305 cont./ began more
244 or less two decades ago. "From 1925 to 1930 the one who
433 planted the most potatoes was Ezequiel Mulcué, who caused amazement among the people; now the least planted is 20 arrobas," says one informant. Nowadays there are natives who sow up to 200 arrobas in a year, of which only 70 are planted in the "paramo," and they yield better results than the other arrobas planted. Then, we ask, why do the people of Mosoco have their months of hunger?

262 The basic product of the Paez diet is maize. It was in
154 the past and it continues to be so in the present. Psychologi-
[198] cally, they feel completely satisfied when they have maize for consumption. Its absence causes a sensation of dietary dissatis-
[243] faction. Before the era of the potato, the cultivation of maize and wheat predominated.

461 During the months of July, August, September, and Octo-
464 ber, the natives have little work. This is why those from
166 Vitoncó, San José, Lame, and Suin go and sign up as peons on the fincas of the "whites" on the other side of the Cordillera (Popayán, Corinto, and even in the Cauca Valley). They return toward the end of the year, when the maize and wheat harvests are drawing near. The natives of Calderas, San Andrés, Santa Rosa, and Togoima go to the fincas of Inzá or La Plata. They return in October when the maize harvests are approaching. It must be said that this labor force is excellent and cheap. And for this reason very much in demand.

The natives of Mosoco have sufficient work in their own country.

Clearings /rozas/

241 The term roza is used generically for the extent of land
433 cleared, burned, cleaned, and fenced, ready for planting. It is found on every private property. It has an area of approximately one hectare. Clearings of two or more hectares are rare. An increase in production does not reflect an enlargement of the clearings, but rather their multiplication and the utilization of ever more rugged and /306/ sterile lands. The natives, to

/316/

105 Potatoes are the principal crop in the parcialidad of Mosoco
178 and the primary source of the natives' monetary income. It has
[244] made possible the establishment of intensive trade with the municipio of Silvia and has plainly had repercussions in the modification of rules of behavior and the restructuring of institutions. The transformation embraces nearly all aspects of Páez culture.

In the first place, work has intensified. The people of Mosoco have permanent work throughout the year. The women participate directly in the preparation of the soil, the planting, and the harvesting.

The children of both sexes go to school regularly, learn basic skills, and utilize them in everyday life. Mosoco is the only part of Tierradentro where there is a private school supervised by a native.

[191] Bilingualism is general. The "chontales," that is to say, persons who do not speak Spanish, are very few. There are not more than ten.

[276] The consumption of coca has disappeared among all the youthful elements.

[262] The alimentary diet and schedule have been altered con-
[264] siderably. They have breakfast very early in the morning, lunch at noon, and dinner at nightfall. Milk, panela, lard, meat, and bread are consumed regularly.

The utensils are completely modern, consisting of aluminum and iron pieces.

There are wooden beds for sleeping, and blankets as well.

The houses are better built and furnished. There are houses of adobe and tile. Two tile-works inclusively already exist in the parcialidad.

The people are hospitable and generous toward foreign visitors.

[291] The clothing of the men is almost completely transformed. They dress like any Colombian peasant. The palm hat worn in other parcialidades has disappeared from this region. The women are clean, orderly, and talkative. They retain the slit skirt and sash, but have adopted chemises and the blue rebozo of the

/316 cont./

105 Guambianos. They adorn themselves with showy necklaces and
● 178 pins. Not a few of them wear fine gold earrings.

[232] Livestock-raising has intensified and is in full swing. Norman cattle are replacing and being crossed with the native cattle. The same thing has happened with the wool-bearing livestock. The /317/ saddle and pack horses are indispensable for every family. The natives also possess fine breeds of hogs and domestic fowl.

[565] Social stratification is in full progress. Rich and poor families can already be named.

Mosoco women seldom marry natives from other, less acculturated parcialidades. People speak of mingas, and even of burials, of the rich and poor, a larger number of people going to those of the former.

They live on good terms with the whites and treat them as equals. There are many good native dealers.

These natives are thoroughly familiar with the methods of curing, the use of remedies, and sorcery. But the té eu and even more the nara jihi (sorcerer) are on the wane. Many consult the doctor of the "whites" in Silvia and use the drugs of the "whites." They are less superstitious.

They are believers by conviction. A few are Protestants with great reasoning powers.

The cabildo retains its power and is duly respected.

The properties are duly parceled out. Many of them are planted with pastos de selección /literally, choice pasture grasses/. Fences with barbed wire are frequently encountered.

Agricultural implements

412 Among the implements used in agriculture, only the
[241] digging stick for planting maize (uhach) is of native manufacture.
[177] The others are of European origin.

The universal implement among the Paez is the machete. With it the clearings are made, the ground is cleaned, and the fields, the montañas are felled, sugar mills are made, and bridges are laid over rivers and streams. They prefer it large and with a leather sheath that they fasten to the belt. They are

/343 cont./

462 woman can weave the kuetand yaha (mambe pouch) for carrying coca and mambe /lime for the chew/, weave the fique bags for carrying things, weave the ponchos and the skirts, spin wool and cabuya. Naturally, these differences in activities are observed by children, and they practice them from the earliest age, especially if there is stimulation /344/ by the persons who live with them. The differences in daily, technological, and economic [241] activities are strictly observed. In agriculture, however, men [178] and women are beginning to share the work equally. This phenomenon is, of course, recent.

The scheme that we present below shows the distribution of activities according to sex.

Activity	Men	Women
Construction of houses	yes	
Construction of roads, drainage ditches, bridges	yes	
Preparation of fique and making lassos	yes	
Making hats	yes	
Making plates and spoons of wood	yes	
Making troughs and sugar mills	yes	
Slaughtering animals and drying hides	yes	
Use of weapons	yes	
Spinning		yes
Weaving		yes
Cooking		yes
Making kuentand yaha (wool)		yes
Making yahas (fique)		yes
Making calabashes	yes	yes
Sewing men's underdrawers	yes	
Washing and mending	yes (28)	yes

28. Rarely.

Ceramics	yes or	yes

The people of
/356 cont./
43 Mosoco have numerous droves of pack animals for handling the
628 import and export traffic, in which the Guambianos (with their
492 horses), called kasukos by the people of Mosoco, who regard them as good friends and not very different from themselves, also participate. The fact is that they live together, work together, and do their trading jointly.

563 The relations between "whites" and natives in Mosoco
621 seem to be cordial and based on mutual respect.

Family economy

594 The Paez family is basically an economic unit. It is made up of the parents and the children, and it represents a
[602] closed but effective circle. They do not go beyond their own
[476] limits in any way, so that the mingas and the distribution of the
[431] first fruits of the harvests are carried out primarily with consanguineal and political relations.

594 The manner in which this economic unit functions and in
462 which its members collaborate can be clearly understood from the division of the activities by sex. The supreme management of the family economy rests in the hands of the man; it is he who owns the land, the house, the tools, and the domestic animals. His arm has not been taught to wield anything but the machete, the axe, and the shovel. He is the owner of the crops and the one who determines where, how, and when work is to be done. His primary work is outside the house: on the land itself. The woman, on /357/ the other hand, remains inside the house, and her basic work is connected with the administration and working up of the products handed over to her by the man. Cooking and
[464] weaving are her specialities. It is true that the woman hires
● [178] herself out as a day laborer on the fincas of the "whites" and that in some parcialidades, such as Mosoco, she participates directly in the preparation of the land and the weeding of the crops, but this is a relatively new phenomenon and is not yet universally accepted among the natives.

261 In general terms, the primary incentive for economic activity
594 dealing with food is the satisfaction of the basic needs of the individual and the survival of the family group. It is the security

/357 cont./

261 that is provided by having what is to be consumed. An abundance
594 of guarapo and maize undoubtedly gives them great gratification. When these products are abundant the religious fiestas, mingas, and "entertainments" are good, the natives say, and they describe at great length the incidents as they unfold.

●178 But, in spite of the fact that the work capacity of the in-
241 dividual is acknowledged, that the possession of domestic animals
433 lends a certain prestige within the group, and that the abundance
[554] of food and guarapo brings gratification, the agricultural cycle
[231] remains stationary within the lineaments of time, of the systems of labor, and of the quantity of seed. They produce essentially
178 for consumption. The stimulation of prestige does not exist. In
433 many parcialidades, the habits of a capitalistic economy are openly
[754] combated by the sorcerers (32). Nevertheless, we have already

32. Bernal Villa, S. op. cit., p. 256.

had the opportunity to state that the introduction of the cultivation of coffee (temperate zone), the development of livestock-raising and of the cultivation of potatoes in Mosoco, and the creation of settlement areas in the very heart of the native parcialidades are rapidly modifying all of the institutions of Páez culture. The family economy of self-provisioning and of small barter operations is changing perceptibly into a purely money economy. By the same process the routine monotony is disappearing from production and is being replaced by new techniques of work, a greater quantity of production, and a greater volume of trade.

434 In the parcialidades of Mosoco, Lame, and San Andrés, we
121 made an investigation of familial income and expenses /358/ for
124 the year 1953, on the basis of questionnaires prepared by the Comisión de Planeamiento de la Seguridad Social Campesina of the Ministerio del Trabajo, questionnaires that were filled out by us for the said commission with reference to Tierradentro.

/361 cont./

276 The consumption of coca has disappeared almost completely
511 in Mosoco; the few data on expenses that appear in the statisti-
[178] cal table pertain exclusively to elderly informants. /362/ In Lame and San Andrés, on the other hand, the consumption is general and considerable sums, in comparison with the total income, are spent to procure this article. In San Andres, the expenses for this fancy would be higher if there were not a cer-
511 tain number of coca trees in each garden. The monies invested in improvements on immovables and livestock-raising are frequent in Mosoco, while in the other two parcialidades they are practically absent. This already implies a veritable process of capitalization, an activity unknown to the majority of the native population of Tierradentro.

The largest and most constant expenses were paid out, in this order, for food, clothing, amusements, and the acquisition of candles and soap.

511 As far as food in Mosoco is concerned, purchases of panela,
43 coffee, lard (fat), and salt appear for all 25 families; the purchase of maize and rice appears for 12 families. They also buy chocolate, bread, and plantains with some frequency. They do not consume manioc. For the eight families of Lame purchases of panela, salt, and coffee appear, and in one case or another the acquisition of rice, lard, manioc, plantains, and meat. In San Andrés the articles most in demand for the home are meat, panela, and salt, which appear for more than half the families investigated, but the purchase of maize, lard, potatoes, manioc, and plantains also figures with some frequency. On analyzing the statistical table of expenses for the three parcialidades, we find rather interesting coincidences that exist between the higher percentages for food and the deficiencies in agricultural production, either because of the loss of harvests or the scarcity of seed. In the former case, which refers primarily to Mosoco, we have already seen that the budgetary imbalance is compensated for by the sale of domestic animals, especially cattle, and in the latter case, which refers to the other two parcialidades, the low production is compensated for by the sale of labor.

/364 cont./

511 in the cantinas, in lawsuits over land, or for religious fiestas.
434 These arguments are confirmed, on the other hand, by the
454 statistical table on income in that only five native families in the three parcialidades made up the deficits in their budgets of last year with sums saved in 1952.

Economy and acculturation

121 Before closing the present work we wish to describe in
177 broad outline the process of acculturation which is now going on in some Páez parcialidades.

[101] The material on Páez culture which we have published and that which we are now elaborating on were collected in the parcialidades located on the right bank of the Paez River, leaving aside those located on the left bank of this river, owing above all to factors of public order which have been disturbing their peace for several years.

● [178] The native communities of San Andrés, Santa Rosa, Togoima, Calderas, Avirama, Suin, Chinas, Lame, Vitoncó, Huila, Toez, and Tálaga are more traditionalistic, live in accordance with the institutions of the culture, and for this reason we regard them as more "primitive." On the other hand, the community of Mosoco, suspended on the slopes of the Central Cordillera itself and extending into the very heart of the Paramo de Moras, is fully in the process of transformation.

[648] /365/ Our research was begun in the parcialidad of Calderas,
[101] isolated, by reasons of a geographical nature, from the principal centers of the "white" population and whose inhabitants have defended their independence at all costs and have been hostile to living with the "whites" (39). From here comes the greater part

39. Bernal Villa, S. "Mitología y cuentos de la parcialidad de Calderas, Tierradentro /Mythology and tales from the parcialidad of Calderas, Tierradentro/," pp. 289 ff.

[101] of our materials. But we also carried out systematic investigations in San Andrés, Santa Rosa, Togoima, Lame, Vitoncó, Tálaga, and, lastly, in Mosoco.

Moguex

SUBSISTENCE ACTIVITIES

241 **Farming.**—The main subsistence of these tribes was and still is based on the cultivation of potatoes, which grow in great quantities in the higher portions of the territory known as Tierradentro, and maize, which is acclimated to the temperate and cold zones. There are three varieties of maize: sweet, soft, and hard. Additional crops were and are yuca or manioc, sweet potatoes, auyamas, ullucos, purutos, frijoles, arracacha, and various other vegetables, and a variety of fruits, including bananas, guayavas, avocados, papayas, pineapples, and passion fruit. Today the *Páez* and *Moguex* are beginning to grow wheat, coffee, which is an important item in their economy, and sugarcane, from which is made a coarse sugar and molasses for their fermented drink, guarapo.

[178] [433] [273]

241 476 The men and women of each family generally cultivate the family plot, but for large-scale maize or coffee planting, and for cultivation of the lands of the Church or saint, they work communally, and have meetings called "mingas." Communal work for any particular individual is truly loaned labor, with obligatory recompense. The beneficiary must feed his helpers, generally sacrificing a pig and preparing great quantities of chicha for the libations and nocturnal dances after the work. All adults must participate in working the Church lands but each brings his own food.

[782] [273]

241 412 407 492 Implements of cultivation are the digging stick, or macana, for making holes for planting, machetes and axes for destroying vegetation, and picks and shovels for removing earth, except where replaced by plows pulled by animal traction.

231 **Domesticated animals.**—Domesticated animals include chickens, turkeys, some pigs, dogs, and a few horses and cows. All but the turkeys are of European origin. These animals are rarely sold or killed for food, except for feast days, magical ceremonies, meetings, and visits of relatives, friends or distinguished White men. But sometimes the Indians buy meat in the weekly market and hang it over the hearth, where it is preserved by the smoke.

[177] [438] [251]

574 431 A custom which has persisted since the beginning of the Colonial Period is that of always giving a guest the "camarico" or "cariño" (affection), a present varying from an egg to a chicken, together with some potatoes, vegetables, and coffee beans.

262 136 231 Formerly, meat was obtained from wild rather than domesticated animals—[illegible] (zaínos), guaras, guatines, birds, and guinea pigs, the last being true domesticated animals kept in some numbers in the native houses.

252 **Food preparation.**—Food was cooked in pottery ollas, but metal and enamel ware is now often used. The *Páez* make "mute," a soup of boiled maize, cabbage, squash, and potatoes, and "cocido," a soup

[415] [177]

Hernández de Alba E-5,√ (no date) 1946 SC15 Paez SC15
Moguex

civilized tradesman, the Indian turns to drinking guarapo or chicha and becomes drunk. Often a heated discussion, always spoken in Spanish and not in *Páez*, leads to insults and perhaps to blows and injuries. A man's wife usually maneuvers him from the village and, if he falls asleep on the road, she sits by him warding off dangers.

SOCIAL AND POLITICAL ORGANIZATION

Political structure.—The *Moguez*, *Páez*, *Guanaca*, *Timand*, and *Yalcón*, despite their great similarity in language and culture, formed separate groups at the time of the Conquest. Each was divided into several communities (parcialidades), of which those of the *Páez* were the most numerous. The *Guanaca* were split between two principal caciques, one of whom, Anabeima, joined the Spaniards against the *Páez* of Avirama. The other cacique was Esmisa, Anabeima's brother-in-law. Each *Páez* community had its own chief, but the communities were grouped into three great divisions. One consisted of the *Páez*, *Tálaga*, *Simurga*, and *Taravira*, on the shores of the Páez River. The chiefs of three of these groups were brothers; that of the fourth was their sister, whose name was Taravira. Another group was headed by Suin, and his son, Esmisa. In the third group, Avirama was joined by other neighboring chiefs of less importance.

Each community (cacicado) consisted of several polygynous families under a male chief (pl. 185, *top, left*). Each family had its own house located some distance from its neighbor's. All the members of a community gathered for general work, and all or several of the communities united for war, either against the *Pijao*, their feared neighbors, or against the Spaniards.

The place of a cacique's residence was a sort of focal point and meeting place, and today most of such places are Indian villages with the same names, such as Suin, Tálaga, Avirama, Togoima (formerly Toboima), etc. The present *Páez* Indian reservation of Tierradentro is divided politically into two municipios—Páez or Belalcázar and Inzá—with 22 communities, each governed by its own councils (cabildos, of Colonial origin) and by the municipal authorities. The cabildo is elected annually. The Indians, however, are jealous defenders of their traditions, and insist on a captain and síndico, each with life tenure, to act as their own leaders and as true representatives of the cacique. Their duties are moral and fiscal and carry a certain divine authority, as they are inaugurated in the local church. The cabildo, on the other hand, has only administrative and police powers; it divides the land, orders work to be done, and executes the municipal orders. The members of a cabildo hold office for 1 year and receive no remuneration. They are elected on the first of December by all the male adults, or "macaneros," that is, the Indians who participate in the communal work according to a

1:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

The graves were "large and deep," and chiefs were buried with some of their wives and with food and chicha (Cieza, 1932, ch. 32). 764 766

In Colonial times, according to Del Castillo, the *Páez* removed a dying person from his hut but burned the house if anyone died in it. They had given up cremation, however, and buried in the earth, building a fence around the grave. Today, they cover the corpse with a white shroud and place it in the middle of the house with candles and flowers. Here it is watched over one night by relatives and friends, and then buried in a cemetery, where each relative tosses some earth into the grave saying, "Go with God." The mourners then bathe in the river without disrobing, and in the evening hold a banquet with chicha, sancocho (vegetable stew), meat, and tortillas. For 9 days a cross, a container of water, and a candle must be kept on the deceased's bed, the water being kept there so that the soul may drink. The relatives pray every night. A month after the death, a shaman purifies the house. The relatives and friends kill a pig, cut it lengthwise in two halves, one for the shaman, the other for the ceremonial banquet. The shaman sweeps the house floor with the pig's legs and some special branches, which are later buried. He chews coca, says some unintelligible words, and spits leaves on the house walls. The residents and guests then enter the house for the final proof of purification. The shaman, standing in the center of the house, gives a dog half a tortilla. If the dog does not die, he divides the other half among those present. He does the same with a piece of cooked meat, and if the dog still does not die, he blows chicha in all directions in the hut, and then divides what remains with those present. The hut and food are then declared clean The food is then eaten and much chicha drunk.

178 764 [763] 765 764 765 756 783

The modern burial customs of the *Moguex* differ somewhat from those of the *Páez*. The former dance for 9 days before and after burying a dead child. Because of the special ceremonies for adults, young Indians gather and prepare wood to be burned at their own funerals. When an adult dies, relatives and friends bring wood, food, and money to the house, and work for his family, who pray and weep for 3 days over the body. On the fourth day, they carry the body in a procession to the cemetery. Upon passing a house or inn where the deceased was accustomed to take chicha, they stop and drink. The burial procedure is like that of the *Páez*. Back at the house, they purify the objects used by the deceased over the fire, and leave his clothes and the hide he used as a bed at the river 9 days, after which they may be used. Meanwhile, the guests remain with the deceased's family, helping them. On the 9th day, they extinguish all lights and go to the nearest hill to mourn, while a shaman remains in the house to catch the soul of the deceased. He chews coca, spits it in all directions, and beats around with sticks to make the soul come out. Then he lights

764 184 [766] [535] [275] [783] 765 756 787 775 184

7:Hernández de Alba E-5/(no date) 1946 SC15 Paez SC15
Moguex

535 There is much dancing today. The sexes perform in couples or separately. Among the *Moguex*, some of the expert dancers are paid to dance with all couples in a sort of "bambuco." Dancing is always a part of *Páez* ceremonies for the death of children, baptismals, weddings, saint holidays, and meetings for collective work (mingas) held in the evening when people return from their plantations.

Dancing, as other social events, is subject to a special ceremony [585] or etiquette, strongly connected with religious beliefs. For example, in the wedding celebration, a prayer is first said in which the souls of [608] the dead are asked permission to dance, or "scrape the floor," as they call dancing. Only the godparents and the bride and groom may [527] dance at the beginning.

The *Páez* do not masquerade, but the *Moguex* always masquerade 526 during the period of carnival preceding Holy Week.

[524] **Games.**—Games do not hold an important place among these peoples. The children amuse themselves by imitating the activities [857] of their elders. The only game recorded is simulated warfare, performed as a part of a rite in honor of the dead after a communal [769] feast. Two teams under their captains or caciques attacked and shot arrows at each other. Even if some contestants were killed or wounded, no one bore a grudge.

276 **Narcotics.**—The *Páez* and the *Moguex* chewed coca leaves mixed in the mouth with lime powder. Coca chewing is widespread among men, but very little practiced by women. It is used especially by [756] the shaman when he is practicing. In Colonial times the use of coca [177] spread to the rural population of Mestizos and Whites in Nariño, Cauca, and Huila.

273 **Alcoholic beverages.**—These Indians formerly made chicha of maize, but today they ferment it with sugarcane molasses. They also have [178] fermented sugarcane juice (guarapo), and a sort of rum (aguardiente). The latter is distilled clandestinely in their huts from guarapo and certain herbs fermented together in earthenware crocks. The Indians drink guarapo every day, but restrict the use of chicha and the stronger guarapo and aguardiente to market days, religious feast days, burials, weddings, mingas or meetings for work, and witchcraft [462] ceremonies. Guarapo and chicha are made by women, who sometimes chew the maize to increase its fermentation. They are stored in large, hollowed tree trunks and in large earthen jars, which are kept in a special place in the hut. There is never a lack of these beverages for home use and for welcoming an unexpected visitor.

RELIGION

175 The early Spaniards had little understanding of the religion of these 771 people. They reported that the Indians had but few idols and no temples or places of worship. Castillo mentions that they wor-

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

cluding vegetables, cornbread, eggs, and chicha, which he piles on the church floor, together with wax candles—one if the person does not have anyone in particular to remember, two for each deceased relative. When Mass begins, they throw flowers on the presbytery, as an offering to the souls of children. Afterward, they go to the cemetery in procession, and the souls of the departed come down to the empty church to take the food. Later, the people sell whatever the souls left or failed to eat. Everyone buys something, the captain's assistant collecting the money, while the constables of the council, raising their whips and shouting insults, prevent frauds in the general disorder. The money from the sale is given to the priest to pay him for the work in the rites. As each person leaves the church, he kisses a crucifix held by the sacristan at the church door. They kiss it once for each dead person whom they wish to remember and pay a cent each time. In addition to offering food at the church, the *Moguex* cover their tables at home with food, which is also intended for the souls of their dead, and at the end of 2 or 3 days they eat the food, saying that they are eating what the souls have left.

769 782 [624] [625]

Christmas and Holy Week are both great occasions for the Indians, who celebrate them with music and some of their ancient rites. Even though a priest may not be present, they conduct the rites in a manner that dates from Colonial days, when a *Páez* Indian named Undachí tried to combine Catholicism with their own religion. The man claimed to be able to see God, who used to come among the Indians and talk to him in his own *Páez* language. The new religion included a chapel, Mass, and candle and flower offerings.

796 771 177 [781]

Sickness.—Sickness was always thought to be caused by witchcraft or by someone's will. The evil force entered the body and made it impure; it had to be expelled or "cleansed," lest death ensue. If a delirious person told who was killing him, the individual mentioned was thought guilty; or, if, after a death, the face of the deceased should appear to somebody, the person was considered responsible. These beliefs are still in force today, and the Indians avoid the causes of sickness, such as having sexual intercourse with a menstruating woman, exposing the body to bad weather while there is a rainbow, and neglecting to bathe after a burial or to purify a house where a death occurred.

753 754 [787] 753 178

To fight disease they still have shamans. *Moguex* shamans use tobacco, coca, plants known as yacuna and chundar, and rum in their practice. After remaining shut up in a dark room for a night, they either confess their inability to cure the sick person or proceed to administer the traditional medicines. Sickness is conceptualized as an animal, which enters the stomach, head, or other part of the body. In former times, the shaman fasted with the sick person, abstaining from salt and fats and taking only coca and chicha. Today, he requires that only the patient fast.

756 [753] [785]

/184 cont./

stereotyped conduct. It should nevertheless be stated that the present-day Páez surnames were still given names in the eighteenth century, chosen capriciously by the mother and not transmissible to the descendants (14). The adoption of surnames and

14. Castillo y Orozco, E. de., op. cit., p. 75.

their heritability through the paternal line is the result of the doctrinal work of the Catholic missionaries, and their assimilation and integration into Páez culture must have been carried out in accordance with certain aspects of a sociological nature existing previously. The same /an unpaginated genealogical chart appears here/ /185/ present-day monogamy of the Páez appears to be the result of a strong Catholic Christian influence, since in pre-Colombian times they were polygamous (15).

15. Hernández de Alba, Gr. "The Highland Tribes of Southern Colombia," 1946, p. 948.

The supreme authority in the nuclear family rests with the father; when he is missing, with the mother; and, when both are missing, with the most intelligent of the group. The husband orders, the woman only asks. The woman is always under the control of the man: the father, the brother, the husband. She has no liberty of movement. The cabildo has authority over orphaned women, including that of having them marry. One of our informants in Calderas was a fatherless orphan and had been brought up in Avirama in the company of her stepfather. Being of age, an Aviramen̜o asked for her in marriage, but the cabildo of Calderas stopped the marriage, brought her back to the parcialidad, made her spend the night in the quarters of the cabildo, and on the following day made her marry a lad of 14 whom she did not know. Since she resisted, they beat her, admonishing her at the same time that if she did not do it, she would be married to a black dog in the future life. "There being

[text continues on p. 33]

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive T fashion with wooden pans, the workers standing up to their knees [563] in water. The Paez do not generally intermarry with the Negroes, [186] but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 b) The Paez who north of the Rio Ullucus have settled 361 both banks of the Rio Paez as far north as Nevado del Huila. 563 They have in part intermarried with the white and mestizo colonist P population. The /106/ places inhabited by them are: Araujo, [103] Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

T c) The pure Paez villages of Calderas, Chinas, Huila, 162 Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez 103 of Calderas have preserved their cultural individuality most P purely. We worked primarily among them, and the present ma- 114 terial, insofar as nothing is said to the contrary, refers to the 121 culture of the Paez of Calderas. The Calderun, as the inhabitants P of Calderas are known in the country, are by far the most unap- 181 proachable of all the Paez. They have best kept to this day the 648 three laws of Juan Tama, the mythical hero of the Paez, which 101 were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

/106 cont./

648 it was impossible for the Spaniards to conquer Tierradentro and
[101 181] subjugate the Paez.

Even today the Paez love their independence above all. And even though they cannot accomplish anything by force against the "whites," by which they mean the colonists and the Colombians in general, they nevertheless hate them with impotent fury. "Muiska pešu" (*), "white robber," is what they call the

* Concerning the transcription and phonetics of Paez words, cf. pp. 154-156.

colonists who took their land from them. The latter, however, more industrious than the Paez, need land for their numerous children. They cannot see why the best and virgin soil should remain unused in the hands of the Paez.

361 The rivers arising in the heights as a result of the water flowing down in the mountainous country form enclosed valley basins, each of which contains a village politically. These are, however, not villages in our sense, since the houses do not lie together, but separately, scattered on the slopes of the entire
123 valley basin as individual farms. This decentralized position of
361 a village rendered the ethnological work considerably more difficult, since one cannot keep an eye on "his" village and survey all the inhabitants together. Hence it is very difficult to become acquainted with all the people of the village, since in each case one must go great distances from one house to another and at the same time usually very laboriously climb a slope. How often it happened that the inhabitants were not at home at the moment or did not want to be seen or spoken to. For, at first, the Calderun did not by any means care to see us, and even after months of life and visits among them, the old people looked back with nostalgia on the times when /107/ all intruding whites were killed.
123 Today, moreover, not only whites, but even foreigners come to
[177] Calderas. "If we speak to them and treat them well," they said, "then more and more whites will come here." How often it happened that we visited one of the old men, who, I was told,

If someone

/266 cont./

787 dreams of peté squash, he will be devoured by the Pijao, for this
[266] squash has black seeds, and the Pijao as man-eaters have /267/ black teeth. If one has been greatly amused in a dream at night and has laughed a great deal, he will have a great deal of vexation during the day. If it rained heavily in a dream at night, a chicken or something similar will be stolen the next day. If in a dream someone has ridden very fast all night long on a brown horse, the day will be beautiful, for the brown or red color is the color of the sun (the same word is used for brown and red); dreaming of riding a black horse, on the other hand, will cause a black cloud to come up the next day, and then it will rain. If, before sowing, someone dreams of a big lagoon that appears all green or has a great deal of green growth around it, this means that the subsequent sowing will produce a good harvest. Anyone who sees a black pig in his dream has in reality seen the heart of an evil shaman, that is to say, he, as a good human being, has met the wandering soul of an evil shaman; this is not a good sign, but neither is it so bad that one would have to fall ill on account of it. Dreaming about the slaughtering of a pig means that an evil sorcerer will die. If one dreams that a thorn entered his foot on
[763] the road, a snake will bite him. If one's tooth drops out in a dream, a close relative will die. If someone else kills a large rooster, his father will die, for the rooster is the heart of the father. But if a person himself slaughters a large rooster in a dream, he will murder his own father. If one dreams that he has worked a great deal in his field on one day, then wild animals will break
[754] into this field and destroy the entire crop. If a person dreams that
[763] he is falling into a deep hole and cannot get out again, this is a sign that he will die, for an evil sorcerer has thus stolen the soul of a human being, buried it in a deep hole, and stamped down the earth again.

756 If dreams and shamanistic signs of a relatively advanced spiritual attitude lead to the conclusion that there is a corresponding external ceremonial outfit for the shaman, we shall be disap-
[181] pointed. The shaman's staff (tama), to which a liana (nika) is added for certain ceremonies, is unadorned, poor, and inartistic, like the entire culture of the Paez.

/287 cont./

4. Music

533 In no area of Paez culture is poverty evident to such an ex-
535 tent as in song and dance, the predominant expressions of the character and spirit of all peoples. No peculiar dance is per-
[173] formed among the /288/ Paez, and I heard no song sung. This undoubtedly represents an impoverishment, for it may be seen
533 from the folklore that in former times there was dancing. A similar conclusion must also be drawn about the playing of very
[173] agreeable music. Their knowledge of music, however, makes it
[181] highly probable that song also existed, especially among a people
[581] that is basically jolly and constantly disposed to jest. In fact,
[521] it is very difficult for a girl who is slow in jocular conversation to
[522] get a husband. And to my question about the Paez word for "sing
[192] house" listed in Uricoechea, the amiable Victoriano, to his own great surprise, was immediately able to give me a special word in his language, "mẽmyat."

534 It is not possible to say with certainty which of the musical
[171] instruments used by the Paez today is an original one. The absence of any kind of rattle, the outstanding instrument of the American natives, is surprising (*).

* Pittier de Fábrega (p. 325) /see the bibliography in the foreign text, p. 326/, however, mentions among the musical instruments of the Paez a rattle (tsoóts) in the form of a calabash with a handle, which was filled with small stones. Whether this may not perhaps be an instrument of the Negroes of Belalcázar is still undecided.

534 The cow horn (kǎčn) found in every house is not in the true
202 sense a musical instrument, but one for signaling. It is completely undecorated and, consisting of a horn sawed off at the tip, gives only one tone, which is produced in the same manner as the tone of a bugle or fanfare. This horn is used by the men when they come down from the mountains after a joint felling of the trees needed for housebuilding, in order to notify the village of their return.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

Former Occupants. "Planos de Indios." Huacas

101 In addition to the still existing tribes, traces of the former
174 occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed
[172 descendants still live in the villages of Las Pavas and Vijes,
181 near Cali; the "Paveños" have become inveterate legal fighters,
162] keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 Of the Jamundies I was told that they were indefatigable
114 warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town
[103] of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have
[135] been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes.
172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

stroyed the city of Caloto, then on the Magdalena river, according to Alcedo. But it is not unlikely that, later on, during their decline, the Pijaos, Paés, and perhaps several other tribes became mixed, and those whom we now call *Paez* are the survivors in blood, customs, and traditions, of all these frequently named *parcialidades* or *naciones*. 101 174

Physical Characteristics

There is no special reference by former writers respecting the physical characteristics of these Indians, probably because of the apparent uniformity in type of all the tribes of tropical South America. According to my own very fleeting observations the Paez are small, broad-shouldered, with small bony hands, and feet broadened toward the extremities. Their skin is very dark, a character common to all Indians living at great altitudes. In the case of almost every adult, both male and female, coming under my observation, I observed a fine black pubescence covering all visible parts of the body. They appear to be generally strong and healthy, and their physical endurance is not below the average. On our trip across the cordillera each adult man carried at least thirty kilograms, and many of them more than fifty, and none complained of being too heavily laden, although the trail up to nearly 4,000 meters and down again was exceedingly rough and steep, requiring at times not only much exertion but equal presence of mind. 142 147

It is well to mention, after Uricoechea, that the Paeces are naturally inclined to warfare, and invariably join one side or the other in the unceasing Colombian revolutions. In early times they raided the Spanish establishments, the destruction of Caloto on two occasions (the first time in 1641) being still held by them in vivid remembrance as glorious feats of their ancestors. I was even assured that not long ago, during the last war, they were with difficulty prevented from making an incursion on the neighboring Cauca cattle ranches. 181 721

I was quite surprised to find among the Paez Indians a character that I had noticed previously in Central America, but of which no record could be found in current literature. I refer to 147

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

deserted savannas. It must be said, in extenuation, that they have been subjected to much abuse by their neighbors of the "superior race." Moreover, the Paeces are naturally hostile to strangers, descending, as we have seen, from a warlike people. The old Paeces always went about armed, carrying a lance or javelin in the hand and ready to protect their bodies from the darts of an enemy by means of a shield of basket-work (*opimb*), or of tapir hide (*yimba-kât*). The warlike tendencies of the tribe were stimulated by means of periodical contests in which the most valiant warriors fought each other in the presence of the multitude.

To-day, as we have seen, the descendants of these have abundant opportunity to satisfy their fighting propensity by taking sides in the frequent quarrels of the political parties that thus far have kept Colombia in an almost continual turmoil.

Sexual intercourse between Paez women and men of other races is said not to exist; barbarous chastisement would be the fate of the offending female. It is to be expected, however, that the closer contact brought about by the gradual penetration of the Tierra Andentro by whites and negroes will soon overcome the purity of the Paez blood and open the way to amalgamation with the neo-Colombian race.

Reclus, cited above (page 311), gives us to understand that the Paez were cannibals, and the tradition current in the villages along the western foot of the cordillera confirms his intimation with reference to the Pijaos; for the coming of "el Pijao" is still a menace to children. The early chroniclers tell us of several anthropophagous tribes which lived in this region, and it is not unlikely that the Paeces had a share in that custom.

GRAMMATICAL NOTES

Castillo's *Nociones gramaticales* is limited to a list of the personal pronouns and the conjugation of the verbs 'to be' and 'to write.' A few more grammatical indications are incorporated in the vocabularies, but on the whole these data are very meager, and much remains to be done in this direction.

/293 cont./

221 on the fincas of the "whites" (1). The social life and the re-
[166]
[464]
[192]
[177]
[128]

1. Generic term with which the natives designate all those who observe the norms of western culture, without any distinction as to race. For convenience we have adopted this usage, putting the term in quotation marks.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[571] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

mother and daughter together (by other persons)	pĕndyīs

3. Customs during the Course of Life and of a Day

182 The Paez generally give the impression of being contented
593 human beings, and it seems that marriage and family life are
[159] better than average. Of course, the observations on this are very
[114] scanty, for, on account of the remote location of the individual dwellings, the research worker always has only a brief glimpse of family conditions at any one time. This very solitude, however, and the consciousness of greater dependence on one another within the family favors its cohesion, even as it reduces the conflict and irritation which arise through women's gossip when people live too closely on top of one another.

842 Basically every family wants a great many children -- at
[123] any rate so said all the men questioned. Two Calderun women, however, /184/ confided to my wife that there was a remedy -- which they and other women, too, naturally did not use! -- that
[825] would with certainty prevent conception: One must eat some of
[237] the spittle of a mula (the female, infertile cross between horse and donkey), and then one would no longer have children. They said that a woman does this only when she has already given birth to a great many children. In general every girl desires a great

/212 cont./

guests. In case the deceased has neither sons nor brothers -- which scarcely ever happens, it is said -- the villager who takes care of the burial inherits his entire property. The widow moves in with one of her brothers or sisters or some other relative.

Disputes and misdemeanors, such as theft or adultery, are judged within the communities by the cabildo; murder or serious bodily injury, by the Colombian state judiciary. It was said that murder and manslaughter did not occur in former times, the old people told us; they are a consequence of "white" influences and the weakening of the cabildo. One can well understand this, for in Calderas where the village council still enjoys a certain amount of power and considerable prestige, it would be unthinkable for a son to stab his father to death. This happened in San Andrés where the cabildo exists only in the form of three functionaries who are basically powerless and without standing and where the young people, through the influences of the living conditions of the white colonists, no longer have any feeling for the old discipline and customs. It was in San Andrés in March, 1953, that the son of the capitan stabbed his father to death. The latter, after the death of his first wife, had married a second time, for which his children reproached him vehemently. In a drunken state, this led to a brawl, in the course of which the father struck off half of his son's right ear and the son killed his father with several knife stabs in the abdomen. After the deed, he fled; but since it was known that he could find shelter only with relatives, the /213/ gobernador of the town of Lame seized him a few days later in the house of his sister, where he had hidden. He was brought to San Andrés in chains and delivered over to the sindico, who was simultaneously occupying the position of gobernador. The latter, an older man of the age of the deceased capitan, tried for some time to reason with the murderer, who gave the impression of being uncommunicative and almost sullen; he pointed out to him the baseness of his deed, of patricide, and then he was led to the church in which the dead capitan was lying in state. The son resisted violently, but was forcibly led up to the corpse and broke down weeping before it. Before he was transferred

/213 cont./

682 to Inzá by two members of the cabildo of San Andrés, friends and
623 relatives, as well as members of his own family, slipped him a
●182 few coins so that he would be able to buy himself food in prison. His guards did not prevent anyone from doing this, and in general the feeling for the murderer was commiserating, but not unfavorable.

623 The punishments inflicted in Calderas by the cabildo are al-
692 ways floggings. In earlier times they were very rigorously carried
[681] out. There is no imprisonment. Today the cabildo judges only
[697] social misdeeds, debtors, and the theft of field crops, a chicken, or a sheep. Horse and cattle theft goes to the court in Inzá for punishment. The injured one himself may not punish the malefactor -- not even if caught red-handed - but must report everything
[693] to the cabildo. There the capitan and gobernador are the judges.
[624] The other members of the cabildo must likewise be present, but they have no vote. The sentence is very quickly passed. The malefactor is locked into one of the two rooms of the community
623 house, and the trial takes place on the next day at the latest. The
685 punishments are fixed. They consist of lashes with the whip, which
692 are increased for repetition. Thus, the thief receives ten lashes the first time, 20 the second time, and 30 lashes the third time; in case of further lapses he is shackled in the tree trunk. The theft of a sheep is punished with ten lashes and the replacement or giving up of the stolen object. If the accused protests, a house search is carried out with a member of the cabildo. If nothing is found, he must be set free again.

426 Loans up to ten pesos are given without security; beyond that the creditor is given a cow, a horse, a pig, wheat, or sugar cane as security. Loans are given only up to a year, so that the matter is not forgotten. Interest is not charged. If the debtor is unable to pay, a definite term is /214/ set for him; if he does not pay then, the lapse is reported to the cabildo, which punishes the offender with the whip. Denial is useless, for every loan transaction is concluded only before witnesses. If the debtor dies, the claims of the creditor are taken from his estate, for example, a machete, coca bag, or clothing. One may also ask relatives, for example brothers, to settle the debt. They are not obliged to repay it,

/256 cont./

797 in all Paez communities in which Spanish is not understood by the
177 majority of the population, the old functionaries of the original
178 Paez religion are needed to maintain the social life in particular.
871 In accordance with their activity, they are designated as "shamans"
756 by theologians. Because of the dissimilar nature of their religious activity, they do not by any means represent unbridgeable competition for the Christian missions; rather, both, the Christian faith and shamanistic activity, can exist side by side in the present stage of culture of the Paez.

771 If one considers existing theological convictions, one finds
793 that the office and dignity of the cult priest rest on the performance of sacred acts which must of necessity be fulfilled so that the
756 natural and normal development of human existence is not ob-
● 182 structed. His task is to confirm the existing world order through the consecration of sacerdotal acts. The shamans, however, -- on the contrary! -- want to outdo and break through the given order of nature and the environment. Their greatness and authority rest on the fact that they do supernatural things, that they heal the sick, struggle with spirits, yes, awaken the dead to new life. This, at any rate, is said of the greatest of their kind, whose talent lies in their spiritual, supernatural powers, in their mastering of extraordinary circumstances. Over against the cult priest's "thus it is," the shaman puts his "thus it should be" (A. Friedrich).

a) Characteristics of Paez Shamanism

756 The Paez shamans, in the sense given, are not functionaries
754 of a sacrificial cult, but persons who do supernatural things. There are two types of them, the teyu and the nyic. Whereas the teyu (tepits as a man, téoi as a woman) is a good shaman, a good doctor and helper of human beings, the nyic is an evil shaman, an evil sorcerer, a hexer. The shamanistic activity of both, however, as a religious phenomenon, is not nearly as distinctive as, for example, the shamanism that we are familiar with in Siberia or North America.

/286 cont./

75 possible. After his soul has thus been killed, the sorcerer, too,
774 must die.

754 The same type of soul-capture as is reported here by the teyu
774 is also the most common method of evil sorcery practiced by the nyiç. The nyiç digs a hole and stations himself above it, in order to await the wandering soul of his victim. It is visible, like a lighted candle. When it is over the hole, the nyiç gives it a powerful blow with his staff, so that it falls into the hole. If it is supposed to die very quickly, the nyiç throws strongly efficacious herbs over it and covers the hole with graveyard soil. If not, he has many possibilities of inflicting on the soul, and therefore on
754 his victim, injury that takes effect more slowly. If he sprinkles
774 the herb baw (Araceae) over it, the stomach of its owner becomes so
824 distended that he dies. If the nyiç sprinkles lime over the soul, the person becomes blind. In the case of the poisonous herb boračero (Datura sp.), the owner of the soul becomes insane; the stinging smoke of the agave also produces insanity. Putting the leaves of the čuwět (Krameria ixina?) and the soul together brings death. The herbs kaspi (Toxicodendron striatum Kuntze), lečero (Euphorbia cotinifolia L.), and Pringamoza also cause death.

f) The Sociological Aspect of Shamanism

● 182 Although the shamanistic ceremonies and the conceptions
756 underlying them are of a religious nature, nevertheless the activity of the shaman is a definite sociological fact. Without the activity of the teyu, neither the family nor the village community can exist. It is only the shaman who, through his personal abilities, is able to counteract the evil effects of the nyiç, the tũs, eč, and gělyómp spirits and turn them into something good. His activity, however, consists not only in the repulsion of what has already appeared, in the healing of what has happened, but his activity is also preventive, in fact, prophetic, for he predicts future sicknesses or deaths. Moreover, no house construction,

/286 cont./

182 no new harvest may be undertaken until the teyu has first cleansed
756 of the pest the building site or the crops, respectively.

/287/ He is, however, not only the protector of the individual or the individual family, but is also responsible for the beneficial
[773] co-existence of the members of the whole village. Thus, it is not surprising that it was the shamans -- besides Thunder under his various names -- who were the war leaders in the mythical tradi-
[726] tions. Thanks to their magical gifts and strength, they successfully led their people against the Pijao and the Spaniards. Several times the elders of the various villages told us that one day Thunder will again drive the white intruders out of the Tierradentro of the
[648] Paez and kill them. And it is only logical that, as late as 1952,
[789] on the occasion of an impending attack by an armed group of white revolutionaries, the shaman of Santa Rosa, as the successor of the mythical Thunder, should spit his magic herbs on the road leading to the village, in order to destroy them. Old Felisa Ipia is behaving in a similar manner when she keeps the souls of all the village inhabitants gathered together in the threads of her shaman's staff, in order to be able to protect them better against evil, magical influences.

756 On account of these certain supernatural abilities of theirs, the
554 effects of which no one in the community can evade, the teyu
[885] have a certain unofficial authority. In addition, they are all at least 30 to 40 years old and thus, by their very age, fulfill one of the natural prerequisites for recognition by the community. Not a few of them feel honored by this, set apart from the great mass of people, but many assured me that they were shamans only unwillingly, that though they were called by their ability to receive signs, they were nevertheless oppressed by the weight of the burden of their responsibility.

756 During times of epidemics of disease or inexplicable, "super-
124 natural" deaths, they are the focal point of the community, to
[182] which no one appeals in vain. And in conversations with them we generally had the distinct impression of facing unselfish, helpful human beings. They make no secret of their activity, and they tried, as best they could, to tell us about their experiences and knowledge which they use for the good of the community.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

302 extracted from the seeds of *Bixa orellana*, which they applied
[514] by means of a cylinder of clay (*kaanda*) on which certain designs were carved. Specimens of such cylinders are often found in graves.

291 Children are very scantily clothed. The boys go about naked
515 until they reach their twelfth year, and the little girls wear only a short *atß-tul*. The clothing of the male and female adults seems to be worn as long as it lasts. As is the case with all Indians living at high altitudes, the Paez are not especially fond of bathing, and cleanliness is not a cardinal virtue with them.
[513] In retiring for the night, they simply wrap their garments tighter around them, the children using old rags in lieu of blankets.

386 The ornamentation of the *vilia*, or sash, with several brilliant
[182] colors and the desire of giving a uniform hue to the darker clothing of the women, gave origin to the art of dyeing, which very likely is to-day in its decline. The dyes were derived chiefly from plants. Black was obtained from *Ital*, an arborescent *Phyllanthus* that has a semi-domesticated appearance and forms characteristic thickets around inhabited places, like Vitoncó; the same color is also contained in the young pods of the *huarango* (*Cæsalpinia tinctoria*), a spiny tree often seen near the houses and extensively used at the present time for dyeing wool. The roots of *tuk-uitse*, a Rubiacea (*Relbunium hypocarpium* Hemsl.) akin to the madder, produce a scarlet color. Different kinds of blue dyes were extracted from the fruit of the jagua (*kii*, probably *Genipa* sp.) and from an *Indigofera*.
[177] Many other tinctorial plants very likely escaped my observation and are gradually passing out of use on account of the introduction of foreign fabrics.

Dwellings

342 The Paeces have permanent houses in their thirty-four villages and temporary abodes on their corn plantations. These latter are merely small huts, the walls of which are more or less elaborate according to the altitude, being made tighter near the upper limit of culture. They represent the primitive type of

/287 cont./

631 climate and vegetation. Although Paez culture is certainly unitary, each parcialidad presents different nuances which are evident even in the mythology and language. The antropomimia is quite different in each parcialidad.

Nowadays there are 16 parcialidades, four of which belong to the municipio of Inzá and the remaining 12 to that of Páez (Belalcázar).

771 Magic and medicine.--There are three institutions which
●132 go in unison and encroach upon others, which explain the causation of sicknesses, the treatment for them, and serve as escape valves for aggression. They are:

a) The one made up of the trilogy of supernatural beings named Duende /ghost/, Echi, and Arco /rainbow/;

b) The institution of the medicine man, and

c) Sorcery.

753 a) Duende, Arco, and Echi are the causers of illnesses,
776 each of them producing a specific symptomatology which serves
[755] as the basis for the diagnostics of common people, a diagnostics
[787] corroborated by the divining activities of the medicine man. These supernatural beings cause illnesses by puncture, aroused by the annoyance that they suffer because of the sorcerers' practices, or by those who had contact with corpses and did not go through the mandatory purification, or because people have passed through places that are taboo, such as bogs and lagoons, or have failed to comply with the rites and ceremonies when slaughtering cattle or when harvesting new clearings, or because they have not observed "custom" at the first menstruation or childbirth.

756 b) In the institution of the medicine man the functions of
787 divination, magic, and medicine are entwined. More precisely, the medicine man is a diviner-shaman-curer who has undergone an /288/ apprenticeship in the profession with an esteemed and experienced master or with the help of a guardian spirit seen in actuality or in dreams; the latter are the best

medicine men.

VII

The Milling, the Chicha and the Chicha-makers

796
249 It remains to be said that the fiesta begins with the milling.
461 Although it is common to use a horse to operate the sugar mill,
[492] it is more usual at fiesta time to move it with human arms, masculine or feminine. It makes no difference. The two laborers for the milling squat on either side of the sugar mill, and one hands over the cane while the other receives the bagasse, which is piled up at one side to be handed back again; this is done up to 12 times in order to extract as much juice
[273] as possible. The millers do their work in silence when they are not drunk; while they do it with diligence, there is relaxation, laughter, shouts, and imprecations when they are under the influence of alcohol.

273 The juice is gathered in troughs, or less frequently in
249 calabashes and pots; it is heated to near the boiling point and
796 then emptied into the troughs, in which, inasmuch as they
[415] are well "cured," fermentation is rapid. The troughs are made of huge tree trunks that reach up to one meter and 50 centimeters in thickness and four or five meters in length. As they are depleted through consumption, they are refilled with fresh
[285] cane juice. The troughs are covered with small mats made
273 exclusively for the purpose. On the following day it is bubbly,
796 yellowish, with a pungent, sweetish flavor. It is the beka pes (strong chicha) of the natives, who drink it with relish and delight. Five gourdfuls of this liquor are sufficient to make them
273 drunk. Elsewhere called guarapo, while the Paez call it chicha,
●182 it is of great importance in their social life and diet. With its
796 help the religious fiestas gain meaning, the mingas are carried
[262] out, baptisms and weddings are made more pleasant, and visitors are entertained.

273 Work without chicha is inconceivable, and while they work
461 they get no food whatever; they merely drink chicha and chew
262

Religious Fiestas

796 Among the Paez there are no secular collective celebrations. All are religious. They celebrate with pomp and grandeur: San Andrés, Semana Santa, San Juan, San Pedro and San Pablo, La Santa Cruz, El Día de Difuntos, La Inmaculada Concepción...

[178] The Lazarist missionary, David González, says that as [179] far back as 1689 the fiestas were organized as they were found [177] in 1905, that is to say, as they are today. Each pueblo was granted a patron saint and various other protectors. In spite of this, only San Juan Bautista and San Pedro and San Pablo, whose fiestas are celebrated when maize is eared /en macollaje/, the rains are heavier, and the winds are violent, the day of the dead /el día de difuntos/ with its offerings to the souls, the Inmaculada Concepción, when grain is abundant, and the Semana Santa (El Resucitado /The Resurrected/) were the fiestas and saints that aroused the most enthusiasm and sank the deepest roots in the souls of these natives.

771 796 ●182 The Paez, and especially those of Calderas, are religious in externals, not in conviction; they are more concerned with form than with substance. This is revealed in the religious fiestas of these natives. /221/ Few of them attend mass, and fewer yet pray at vespers. To the great majority of them, religious fiestas mean a squandering of gunpowder, lights, aguardiente, and chicha. An abundance of food. The pleasure of getting together. The joy of contact. The music, which assuages hardship, and the dancing, an exteriorization of feelings. It is the expansiveness that leads to gatherings, the sexual jokes that spring up among them without misgivings; it is the continuous drunkenness. It is the display of generosity, the exercises in co-operation and altruism.

796 793 718 The priest, as a punishment for failure to attend the Mass on the part of the chief fiestero and albacero, refused to carry

/241/

824 The plants marked with an asterisk were identified by the
[128] Herbario Nal. Colombiano, in particular by Dr. Jesús M.
[137] Idrobo.

[127] For the others, we were guided by the work, Plantas Utiles de Colombia /Useful Plants of Colombia/, by Dr. E. Pérez Arbeláez, published by the Imprenta Nacional de Bogotá in 1947.

75 The tẽ eu and the community. In every culture, medicine
● 182 performs an eminently humanitarian function. Its nature is
171 sociological. No matter what its methods may be, its purpose is to save human lives. It combats illness, but also prevents it.

75 Among the Paez, medicine cures and prevents. The
182 community and the family perform special ceremonies intended to achieve these two purposes of medicine.

755 When the pest (epidemic) has spread through the com-
*756 munity, threatening its subsistence, the authorities (cabildo)
182 invite the curer to conjure away the danger by performing the
[731] wẽ kã.

When the illness prevails in a single family, markedly decreasing its members, the eldest invites the curer to perform
[765] the ut kã. After every burial the people must remove the ptans
[783] from their bodies and from the house where the death occurred. The curer is the only one who can do this.

241 The first fruits of plantings made on new lands not culti-
*756 vated before cannot be consumed until the curer has performed
783 the cleansing ceremonies. Thus, it is the curer who defends
182 the family -- preservation of the species -- who purifies the
789 harvests -- preservation of the individual -- and who also defends the community, warding off by means of his conjurations
*756 the epidemics and the individuals who threaten it. In 1952,
789 before an imminent attack by subversive armed groups on the
182 Parcialidad of Santa Rosa, the curer warded it off with maní de montaña /literally, "montaña peanut"/, chewed and blown on the path by which they were to come.

/258 cont./

754 554 Thus, the victims are "the most skillful, the most charitable toward travelers, the friends of the whites, those who display the most friendliness among the natives, those who have much livestock, large tracts of land, good plantings." In this phrase are listed almost the full gamut of the victims of sorcery. From previous examples, we see that those who have land, animals, mental ability and manual dexterity, and good fields, the energetic numbers of the cabildo, those who take the path [182] of transculturation, are victims of sorcery. In addition, revenge and resentment are evened up by means of sorcery.

754 648 It is not surprising that undesirable whites are victims of sorcery. The undesirable ones are those who covet their lands. The curers, on their own initiative or supported by the cabildo, call the soul of the white at a strategic spot, capture it, whip it with pringamoza (Urticaceae) and put bad remedies on it so that it will never return to the region. They say that the white begins to feel too lazy to travel in the area and finally decides to return to his country.

[177] In parcialidades such as Calderas, where much resistance is shown against living with and contact with the white, there are some people who are such sorcerers and such enemies of the white that even in the church they leave enchanted eggs so that not even the priest will come.

754 Among the victims of sorcery are parturient women and newborn babies, when the sorcerer or other envious persons do not want a certain family to prosper.

The power of sorcerers extends not only to human beings [433] and animals, but also to the plantings. The loss of a planting [167] means suffering from hunger, a shortage of coca, and emi- [464] gration of the parents to distant places in order to hire out as laborers.

In the clearing they may put enchanted eggs, salt, pubic hair, or capio maize in order that the planting be lost.

/260 cont./

754 If a person kills himself in a fall, it is believed that the
[783] sorcerer sent him ptans.
[761] h) To cast a spell on the plantings, they use tobacco, matches, and other remedies with which they are burned and destroyed.

As will be noted, in their enchantments the sorcerers do not use any parts or objects belonging to the victim, such as hair, nails, clothing, etc. Most of the remedies that they use are herbs or objects that have properties noxious to man or can cause him harm.

The sorcerer believes that putting them in contact with the soul or simply with the body produces the desired effects.

754 /261/ Paez sorcery is a clear case of imitative or
789 homeopathic magic, according to Frazer's classic definition. It is "desire dominating the world with instruments born of desire" (10).

[18] 10. Ponce, Aníbal. Estudios de Psicología /Psychological Studies/, El Ateneo, Buenos Aires, 1947, p. 363.

757 The Paez fear illness and death and live in the fear that
●182 the whites may take from them their land, their ranchos, their plantings, that is to say, their very sources of survival.

While the sorcerers attack the customs of a capitalist economy and transculturation openly, the curers protect the community against sickness and against the attacks of individuals or groups, by means of their divinations and their vigorous and constant conjurations. In this sense sorcerer and curer are identical. They protect the community.

683 Punishment of the sorcerers. The sorcerer is feared by
754 the entire population; identified throughout by it, he suffers general enmity; torrents of hatred arise against him, ending most of the time in violent punishment: confinement in the stocks, whippings, dunkings, and even exile.

/262 cont./

683 and finally exiled him. The sorcerer nearly died. He com-
184 plained to the Alcadía of Inzá about the brutality of the cabildo. The Alcadía had the stocks destroyed by force, in spite of the protests of the natives. The punishments of the sorcerers in the Parcialidad of San Andrés were about the same up to some 30 years ago.

683 Often, when there is a very dangerous sorcerer, the curers
754 band together in order to kill him. They call his soul, and
756 when it draws near they hit it with a stick smeared with chayuts.
774 The soul leaves with a whistling sound. When a volcano erupts,
[823] it is a sign that the devil is punishing the souls of sorcerers.

754 Psychological characteristics of the sorcerers. Broadly
157 speaking, the sorcerers are timid, resentful, aloof, with a very
156 strong persecution complex; they try to avoid contact with people, believing that they see in each of them a presumed accuser; they tend to be self-supporting; suspicious to a high degree, they roundly deny the accusations of their victims, regarding themselves furthermore as good persons, sound and inoffensive; they pretend to know nothing about remedies, and it is very difficult to obtain any information from them about sorcery. Most of them are intelligent. Endoculturally they are at odds with their own group, insofar as they embody the struggle against the influences of foreign cultures.

The nasa are convinced that no sooner has the sun gone down than the sorcerers are already at work. The most dangerous ones sleep during the day. For this reason they regard as peculiar characteristics of the sorcerers red eyes, an evasive look, aloofness, an unpleasant appearance, egoism, and suspiciousness. They look like criminals, informants say.

182 /263/ Socio-dynamic value of sorcery. Within Paez
754 society, sorcery is vital, overly active, and gravitates into all the social interstices. But, as must be evident, at all times and places it pertains to the realm of concealment. Its executors are surreptitious. They always act in the shadows.

/263 cont./

182 754 The people perceive only the effects. Only the expectant attitude announces to us its presence. The latent fears tell us of its vigor. The members of the cabildo, the capitán, the té eu, the working men, the parturient women have a strong fear of sorcery.

When the pest spreads through the community, when the elders die and their experience and advice are lost, thoughts [761] turn inevitably to the power of the sorcerers. Most deaths are brought about by sorcerers, the informants say.

754 182 177 Sorcery is a powerful barrier against the introduction of the customs of a capitalist economy and also against the intrusion of the whites in their parcialidades. It is strange that sorcery should exist in the less acculturated parcialidades, while in San Andrés it has practically disappeared. It is said to have been vigorous until 1926, the year when the Municipal Council of Inzá established in the parcialidad a settlement area in which the whites settled. With this measure living together was inescapable and they chose to accept them. Nevertheless, during the drinking bouts of the old people, the tremendous resentment that has become natural to them still crops out.

182 754 423 [554] [152] Furthermore, it makes its influences felt in the distribution of land. Each family has lands from which it lives. With the increase in population the problem of their unequal distribution has become prominent. Those who have the most land are the targets of envy and sorcery; they are more prone to magical attacks aimed at taking away their land. Intrasocial tensions 754 182 appear to be brought into equilibrium by means of this institution. The fear of reprisals checks aggression. Revenge is too prejudicial, since it can be manifested not only against [184] individuals, but also against animals and plantings. It is [177] perfectly true to say that while in Calderas acts of bloodshed [675] are rare and suicide is unknown, in San Andres, a parcialidad which is largely acculturated, the homicides, murders, and [762] cases of arson are hair-raising.

/The headings are obviously in error on this table./

38. Deficit compensated for by $65.00 saved in 1952, or 14.1% of the income.

511 In the statistical table of expenses, the first thing that we observe in the three parcialidades is the small amount of money spent under the headings "Drugs," "Medical Service," "Taxes," and "Education."

75 The protection of the health of adults and children is fundamental among the Páez. Child mortality has a high percentage, and parasitosis, diarrhea, and tuberculosis are almost endemic. But in Páez culture the care of the té eu (good curer) and the nasa jihi (sorcerer); the former protects people from illness and from the curses of the latter; the sorcerer with his magic powers can take people's lives. On the other hand, the té eu openly condemn the use of the drugs and the medical service of the "whites." These two institutions still enjoy great power and basically govern almost all of the institutional life of the Páez. In Mosoco seven heads of families spent small sums of money for the purchase of drugs. /The following table and illustrations appear between p. 360 and p. 361 in the original text./

511 [165] [164] [182]

Moguex

with the right hand over the naked thigh. Two strands are similarly twisted together until the desired thickness is obtained. 283

Gourds.—Gourds are still widely used. They are picked when ripe, cleaned out, and dried. With small openings, they serve as containers for beverages and powdered lime. Some are made into bowls and others are cut up to make spoons. Today these objects are undecorated, but formerly in Timaná they were painted with a resin varnish very similar to that used in Pasto. (See p. 930.) Before the Spanish domination, gourds were also used as frames over which were stretched the prepared skin of the heads of their enemies killed in war. 415 324 [314] [727]

Metallurgy.—The metallurgy of these Indians was the same as that practiced throughout most of Colombia. The metals were gold, copper, and an alloy of the two (tumbaga). It is recorded that the Indians "worked gold," but the processes are not described. Specimens found recently in the territory, however, show molding, casting, and hammering. Metal objects included nose ornaments, parrot-shaped breastplates, necklaces with small animal figures, and some anthropomorphic idols. Gold occurs in this territory, particularly on the upper Páez or the Suin River. 325 [301] [532] [135]

Ceramics.—These tribes made and still make coiled pottery. Modern vessel forms include large jars for storing beverages and poorly shaped, crudely decorated containers for preparing and serving food. There is no individual specialization in this task, women making pots for their own family and not for trade. 323

Stone and wooden artifacts.—The native Indians made stone axes of a simple design, but stonework disappeared during the time of colonization, when the Indians could obtain manufactured iron weapons and utensils such as machetes, axes, hoes, shovels, etc. The manufacture of wooden objects—weaving, cooking, and farming implements and weapons—was furthered by the use of metal tools, and now is well developed, as exemplified by the trapiche (cane mill), a true machine made of wood. 324 182 322 249

Weaving.—Weaving, little practiced before the Conquest, developed with the post-Contact need for wearing more clothes and with the introduction of sheep, whose wool was used in addition to cotton. Weaving was and is exclusively the work of women (pl. 186). They prepare fine, uniform yarn with a common spindle, which they handle as they walk along the road (pl. 187, *top*). The loom is vertical, made of two horizontal rods fastened to two uprights. The warp runs vertically with a continuous thread. The horizontal weft is pressed down with a wooden sword. They also weave hemp bands on the loom. Woolen blankets are woven in natural colors, but some sashes have bright colors made of imported wool or of home-dyed wool. For red, they use one of the Rubiaceae (*Relbunium hypocarpium*), and for 286 [177] [482] [386]

/182 cont./

462 13. (cont.)
594 Revista Colombiana de Antropología, Vol. III, 1954.

361 In this manner, among the Paez, marriage,
182 family, land, and house form an intimate unit, indissoluble and
594 in part explaining the above-mentioned phenomenon of the re-
581 luctance to live grouped in towns or cities.

473 Basically the residence of the nuclear family is patrilocal-
591 neolocal. When the man, accompanied by his escort, goes to
[584] ask for his future consort, and, after certain definite formalities are fulfilled, the future parents-in-law hand her over, she is taken to live in the house of his parents (when he has not built
591 his own). In it he arranges a separate room with a kitchen for
596 cooking, a cowhide to sleep on, and space in which to keep their provisions, their kitchen utensils, and work tools. The new
[583] spouses are independent of their respective parents. The man assists in the work of his parents-in-law and the woman in the work of hers, but in neither case does it constitute an obligation
[594] for them. When a bachelor, the man works to take care of his own needs and to assist in the support of the paternal economy; once married he works to support his family.

582 The man chooses his wife within the parcialidad, although
177 he may marry women from other parcialidades. But neither men nor women may marry persons from Western culture ("whites"). In Calderas there was a case of a possible marriage between a native woman and a "white." The cabildo removed this possibility, obliging the native woman to marry a member of the parcialidad. If it is a man who wishes to try to marry a "white" woman, he must leave the village. They consider that when the "whites" enter the community, they invariably appropriate their land.

582 The selection of spouses within the parcialidades is /183/ determined by the laws of incest. Unions between parents and children and real brothers and sisters are incestuous and severely prohibited. Also relations between cousins of the first degree of both lines and those of uncles and nieces are condemned, although not

prescribed.

/186 cont./

346 There are four other small rooms, five meters /187/ long
796 by three meters wide. Two of them are independent of each other, with their respective doors opening into the sala; one serves as a kitchen and the other to roast the maize griddle-cakes. At the other end of the house are the two other rooms, connected with each other by one door and with the sala by another. The workers sleep in one, and in the other are the troughs of chicha, the bottles of aguardiente, and the laurel candles.

342 The third type of dwelling, very scarce in Calderas, has
249 a square floor plan. It has the sala, two kitchens, and the du yate léchukue. Whatever type of dwelling a Paez family may own, they all have as an indispensable accessory the sugar mill,
[240] either inside the house or outside it. Actually, if it is kept in
[273] mind that the basic sustenance of the natives is provided by
[276] maize, cabbage, chicha, and coca, this instrument is indispensable.

342 In addition, each house is supplied with water, taken from
312 springs, streams, or falls, through the extremely skillful construction of ditches which skirt the valleys, hills, and slopes. Their lands have abundant water. They are not familiar with artesian wells.

342 In a way, the enormous salas in the houses of Calderas
177 represent the ramadas which are found among the whites,
249 mestizos, and acculturated Indians of San Andrés; they are built independently of the dwellings, with a sugar mill and an oven to boil down the cane juice and make panela. In this parcialidad, the panela industry is quite well developed. In Calderas it does not exist.

584 Among the Paez, land, marriage, family, and house form
583 a close and indissoluble unit. It lends warmth and meaning to
[183] a number of emotional, sentimental, and sociological complexes. This begins when the pubescent boy feels the need for a partner who will help him in his work and assuage to some extent the rigors of solitude. The love awakened by a dark, shapely maiden impels him to ask her parents for her. "Give my your daughter. I am alone and need help in my work."

/188 cont./

462 from the plantings; she will laboriously make the multicolored
594 kuetand yahas which she will give as tokens of love to her hus-
[257] band. The children, who "are a blessing of God," will come and help the man work the land or lighten the woman's kitchen chores.

594 The household lends individuality, a sociological frame-
183 work, status, and function to the family. Land, a house, and a family are specific ambitions of the Paez people. Possibly they represent their most cherished ideals in life.

IV

Live Ritual Fire

372 In the mind of every individual, and in the spirit of the family, fire is a symbol, a symbol of the house and of the home. A house without fire is a dead, abandoned house.

372 In ancient times, when the Pijao went about spreading
773 terror and death, when the caciques came down on the /189/ /illustration appears here/ roaring waters of the great rivers beneath the imposing dark night sprinkled with stars, and even much earlier, the Indians began their daily round by requesting fire from an old, white-haired woman. This fire died out when night spread its dark cloak over the world. Only the old woman's fire was immortal. The monotony of this daily request for fire was transmuted into anguish when the wicked old woman decided to leave and take the fire with her in a piece of wood. They all ran after her, seized the firebrand, and obtained fire from it for all the Indian households. This fire could be preserved.

Thus run the mythical accounts of the origin of fire. They reflect its importance. The manner in which it is preserved, the care which is exercised so that a fire is always /190/ burning in the house, seem to be superstitious attitudes from an ancient

[177]
[128]

1. Generic term with which the natives designate all those who observe the norms of western culture, without any distinction as to race. For convenience we have adopted this usage, putting the term in quotation marks.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[578] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

/179 cont./

594 Associated with the nuclear family primordially are the functions of reproduction, the rearing of children, and the education of the latter. On procreation depends also the importance of economic functions.

581 The orientation of the sexual instinct is a secondary end.
589 Indeed, Páez culture demands that every individual form a
[183] family, once he has acquired the capacity for procreation. In
[842] the parcialidad of Caldenas they look upon children as a blessing
[775] from God, regarding celibates "como violadores de la cruz" /as violators of the cross/(marriage); celibacy is condemned, in the rationalization that the person who dies celibate goes to the
[757] Nevado del Huila, considered by them as hell. The celibacy of a woman is exceptional, and when it occurs they believe that she becomes a witch. They think something similar about some
581 widows. One woman of some fifty years of age says that
589 "marriage is fundamental and obligatory, for the grandfathers
775 used to say that to a woman who is not married the devil gives a black dog for a husband in hell" (7). Another woman declared

[825] 7. They regarded white dogs as companions and guides in the future life and fear that "if molested they will come out and bite them at the entrance to the future abode."

that at times she feels sorrow for the death of an unmarried daughter, "because the devil would give her a husband."

581 The culture considers it an obligation of parents to marry
183 off their daughters even if they are very young. Furthermore
[582] the young men aspire to "build their house, marry, produce children, have animals, coca in abundance, and sugar cane
[842] for their chicha" (8). The incentive to marry is to have children,

8. Bernal Villa, S. 1953, op. cit., p. 183.

for which purpose it is necessary to have assurance /180/ that the woman is fecund.

842 /180 cont./
583 the woman is fecund. For this the culture offers the institutional
581 device of "amaño," by which the man lives with the woman for a
183 time before legalizing the marriage. And we are given clear
175 and precise information about this by Licenciado Eugenio del
595 Castillo y Orozco and his brother, Licentiado Isidro del Castillo
583 y Hrozco /sic/, in their respective reports which they gave to the Governor and Captain General mentioned above: "that they followed the evil custom of living in intimate relations for a long time with the woman whom they were to marry, and if after the marriage they had no offspring they would leave her and seek another woman who might be fecund and whom they thought they might marry if they were not married to their own wives (as Manuel Bolza, an Indian of this village (9), wished

9. Tálaga.

to do), and as was done by Antonio Cofongo (an Indian of San Antonio de las Chinas), from whom he learned not to break up the legitimate religious marriage, which could be prohibited, and who suggested that they get out of the difficulty by any false means, even to arranging for others, from the lowest Indian to the highest, to testify to a lying statement, and if anyone dissented from it and would not follow the wish of the Cacique or Moján, fear caused the dissenters to escape to other parts; some fled with their concubines when they were not acceptable to her parents or relatives, others to avoid work, and others from necessity" (10) ..."and that they flee from all their vices and

10. Archivo Nacional de Bogotá, op. cit., Folio 228.

sins, which are: witchcraft, drunkenness, and concubinage" (11).

11. Archivo Nacional de Bogotá, op. cit., Folio 230.

/164 cont./

439 cloth for trousers, and all European clothing. Furthermore, every type of ornament must be bought, such as necklaces, earrings, and finger rings, then cotton, since it is finer and shinier than sheep wool, and aniline dyes for dyeing women's belts and coca bags, since they are more brilliant and clearer than the native vegetable dyes. The trip to market and the necessary trade, however, are not undertaken because of an inclination for business, pleasure in bargaining or in under-bidding or outbidding, but out of the necessity to procure an [438] article that they cannot make themselves. If it is at all [797] possible, one tries to buy the required things in the village, for example, from the missionaries, and the purchase with money or the trip to market is, so to speak, the ultima ratio.
437 They do not bargain. The man -- /165/ and it is almost al-
439 ways he who shops -- asks the price, and if it seems too high --
[462] as in most cases -- he says "too expensive." If the tradesman lowers the price, he usually buys; if not, he goes on to the next stand.

The traders are never Paez, but always white and mestizo colonists. They know, of course, about the disinclination of the Paez to bargain, and they charge too high a price to begin with, so as to ask a still inflated normal price after the obligatory "too expensive." Thus the Paez are naturally cheated. They let themselves be too easily dazzled by an attractive display or packaging, for example, by the polish or the silver paper; also a more expensive green or red comb is preferred over a black one. Fortunately, one might say, they never have much money and can therefore never spend too much.

126 The way in which I was obliged to acquire the women's
439 colored belts for our collection is characteristic. Since every woman possesses only two at the most, one to fasten her skirt and the other to carry her baby, any attempt to buy them was [101] always useless. I had therefore bought at the market in Inzá a few women's belts which are made by the Guambiano, the tribe neighboring the Paez on the west, and are sold in Inzá.
[184] They are made of cotton, the white color of which in the freshly

/165 cont./

126 worked state is considerably more brilliant than the somewhat
439 yellowish sheep wool. Moreover, their aniline dyes gleam much
184 more brightly than the vegetable dyestuffs of the Paez dyes.
126 Unfortunately, they are shorter than the Paez belts. Neverthe-
439 less, the trade was most happily made. The coca pouches of
437 our collection, too, we acquired entirely by way of barter, for example, for a pair of scissors at the Bogotá price of 50 centavos. At the market in Inzá such a pair costs about a peso. The Paez know this. Nevertheless, the same persons who had previously refused a sale for five pesos exchanged a pouch for a pair of scissors. It was the same with eggs. They would not sell them for 20 centavos, but traded them for a wax candle which was available everywhere for five centavos.

43 In the case of their own products, there is no trade from village to village. Nor is there any exchange of certain specialties outside the village, since the initiative for special achievements or the unusual always comes from the colonists or foreign traders. In general the Paez do not buy and sell among themselves, but only barter, since money is used very unwillingly among them. Their idea that an article sold, /166/ for example, an egg, may bring misfortune to the part retained, in this case the chicken, may play a role in this. Moreover, even today paper money is scarcely ever accepted, first because they usually do not have a special pocketbook, but put the bills in their coca pouch, where they may be easily torn, and, secondly, because many are in the habit of burying their money or hiding it somewhere. In this way the bills soon become moldy, whereas hard money lasts a long time. The latter is therefore extremely rare in the entire Tierradentro area.

435 In the barter of foodstuffs there are certain rates that every-
437 body knows. Since, furthermore, they always make an effort to furnish only satisfactory goods, there are no exaggerated claims or any reason for bargaining or haggling. It is simply: either-or, especially since market phenomena have no effects, and the barter rates are in no way increased in times of shortage or want. Thus, at the time of my visit, sheep and therefore wool were very

/195 cont./

d) Death

761 According to the belief of the Paez, death occurs chiefly
776 through the action of the evil shamans (nyic) or the evil spirits
165 ec, tus, and gělyómp (see "Religion" /see pp. 191ff./). Included
164 here also is the not infrequent cause of death through consumption.
[262] Causes of death of children are chiefly whooping cough, as well
as stomach and intestinal disorders, the latter brought about by a
[762] diet very unsuitable for children. Suicide is completely unknown.

764 The death of a member of the community is passed on from
[763] man to man by members of the family and neighbors. There is
[203] no public mourning or lamentation; upon the death of small
[765] children, people act as though they were glad, since the children
[192] are now "little angels." (Among the colonists, as well as among the Paez, the Spanish word "angelito" is used.) In former times it was customary to abandon the house when death occurred and to leave the deceased and some food in it (Castillo i Orosco, p. IX).

764 The manner of burial is the same for men, women, and
184 children; there are no social differences. A few customs in other Paez communities, however, differ from those of the Calderun. Therefore the burial of the dead in Calderas will be described first.

[77] For burial the deceased is dressed if possible in purchased,
[29] that is, "white" clothing, even if he was the poorest of the poor and had never worn such clothing. For this reason the relatives incur considerable expense, which often cannot be paid for a long time. Burial takes place the day after death. Only the feet of the deceased are washed. This work, as well as dressing the deceased, may be done by relatives or even by outsiders; they must, /196/ however, always be men, even in the case of female deceased persons. The body is taken by two men on a bier made of two tree trunks to the graveyard next to the church, where two other men, usually relatives, have already dug the grave. The latter is trapezoid-shaped, a good shoulder's breadth at head height and narrower at the foot end. Its length is determined by the size of the deceased. The direction of the grave is completely arbitrary.

/196 cont./

764 It is dug out about 1.50 meters and at the bottom provided with
● 184 a lateral longitudinal niche about 40 centimeters high. This niche is generally hollowed out on the left side, but sometimes on the right. The body is laid in this, without the bier and without accessories, horizontally on its back, so that it no longer extends into the shaft of the grave. The shaft and the niche are, in addition, separated by vertical stakes and rods placed side by side so that the deceased cannot be touched by the earth filling the grave. On the latter, a stone about one meter high is placed at the head or foot end for identification.

[793] The priest is not present at a burial, nor is the shaman who
[756] acts for the district of the deceased. The latter also does not enter a house in which there is a dead person. The participants in the funeral procession, men, women, and children, go to the graveyard together and then back again to the house of the deceased, where lavish entertainment with food, chicha, and brandy now follows. The latter was also drunk copiously on the way to and from the burial place. The mood during the entire time is
756 jolly and animated; people laugh and make jokes. Before the
764 participants enter the house upon their return from the burial,
783 they must go to the river where the shaman awaits them, in order
184 to "cleanse" them of the "pest" of the deceased for the first time (see "Religion"). Then they go together to the house of the deceased, which they may not enter, however, until the shaman has also cleansed this with the same remedies with which he freed the human beings of the "pest." These are water, to which special herbs and cow excrement are added, sprinkled everywhere, as well as brandy, which, mixed with herbs, the shaman squirts everywhere.

764 In Togoima we were able to take part in the burial of two
184 small children (angelitos). The graves of the cemetery in this town all have an east-west direction. The niche is always at the left, the body lies on its back with the head toward the west. The size of the grave required is measured with a bamboo stick that is
[273] as long as the deceased. Before the burial, there is drinking,
[535] music, and dancing in the house. /197/ Music is also played at
[533] the burial and on the way to the graveyard.

P /197 cont./

● 184 764 533 535 C 764 533 535 C 123 In this respect Calderas differs from all the other Indio or colonist towns known to me, for there neither music nor dancing is done on the occasion of a death. Both are done at the death of an "angelito," not only among the Paez living in the vicinity of colonists, but, above all, among the white and mixed-colored colonists. Thus, on January 1, 1953, soon after our arrival in the archeological park of San Andrés, two small girls of the neighborhood came to us and asked if I would photograph the "little angel." At first I was annoyed, for a short time before a group of children had come, carrying a doll on a flower-bedecked tray from house to house, and they presented it to us, too, as the child Jesus who was collecting contributions for the mass that was to take place on January 6. The girls told me, however, that this little angel was the deceased, two-months-old child of the colonists in the neighboring house, whose mother had already washed and adorned it beautifully. The house was 20 meters away from our own, and even from our door one could already hear jolly music from the neighboring house, such as we had already heard at Christmas and at the New Year's Eve celebration. In the house a large number of neighbors and relatives were gathered in the same room in C [534] which the child was laid out. People were laughing, drinking, singing, and dancing. The orchestra -- as always -- consisted of a guitar, a mandola, and rumba balls, and the usual musicians played in it. One of them was the father of the dead child, a second one, its uncle. Astonished at the bustle, I asked the mother whether she was not a little sad over the loss of her child. She admitted that she was, but at the same time said that her child was now a little angel and this was grounds for joy and dancing. I asked up to what age deceased children are called "little angels." I was told that if they are not yet two or three years old they "are" little angels and not merely called that. The small child, whom they always referred to only as the little angel, was laid out in the room on a table, flowers lay all around it, and at its head stood an image of the Virgin Mary with four candles in front C [273] of it. The people were not yet quite sober from New Year's Eve and already the inevitable liquor bottle was making the rounds again. On the next day the burial by the relatives took place.

Sp /197 cont./
764 The child had been laid in a coffin which was painted on the out-
C 123 side with stars. The female relatives had made a so-called "canopy,"
/198/ a pole two meters high, on the tip of which was fastened a white hoop decorated with flowers, from which hung eleven colored paper streamers, one of which was carried by each of the participants. I, too, was asked to take one, and then we set out -- without the mother of the deceased child -- with music, for the graveyard where the small coffin was opened once more and then lowered
P into the earth without formality.

764 Among the Paez of Togoima, too, there is drinking, dancing,
● 184 and singing at the death of a child, and here, too, the mother does
[273] not take part in the burial at the graveyard. The body is carried
[533] by a woman -- usually the godmother -- in a small sedan chair of
[535] bamboo, accompanied by the music of drum, timpano, and flute,
[608] to the burial place where several men have already scooped out a grave with the lateral niche (Ills. 204 and 207 /see pp. 290 and 291/). The deceased child has a few flowers in its mouth. It is wrapped in a cloth and is laid in a recumbent position, along with a bouquet of flowers, in the niche, which is separated from the shaft by the rods of the sedan chair placed vertically side by side. The earth thrown into the pit is stamped down very firmly with posts.

P In Calderas, too, the mother of a "little angel" to be buried
[608] does not go along to the graveyard. The small corpse is carried by the godmother, not in a sedan chair, but simply wrapped in a cloth, on her arm.

The burial of the Christian Indios of San Andrés shows transi-
P tions in the shape of the grave from the Paez niche-grave to the
[674] simple, rectangular pit of the other Christians. We took part in the burial of the capitan who had been stabbed by his drunken son during a quarrel. The direction of the grave in the cemetery of San Andrés is always east-west; the head lies on the west side with the ground sloping upward. Instead of a lateral niche, a trapezoidal hollow about 50 centimeters deep is dug at the bottom of the shaft, which is covered horizontally by bamboo put so closely together that no earth can fall down, and the corpse is practically just as well

/198 cont./

764 protected from the earth above it as if it were lying in a lateral
●184 niche (Ill. 206 /see p. 291/). It was expressly confirmed to me
[178] that this form of grave has been used for only about 20 years, and that previously regular niche-graves had been made. The transitional character of this covered pit from the shaft grave with the lateral niche becomes even more apparent from the fact that an additional niche was dug about 30 centimeters deep at the head end of the pit, into which the capitan was laid part way, "so that at least the head is lying in a niche."

/199/ The corpse, wrapped in Colombian clothing, was carried on a bier on the shoulders of two men. The bier consists of two poles held by cross-sticks lashed crosswise one above the other at intervals of 30 centimeters. The cross-sticks are lashed with lianas in pairs, each one above the one longitudinal pole and below the other one (Ill. 205 /see p. 291/). After the burial, the bier was chopped up and then left lying in the graveyard.
[201] Shortly before the lowering of the corpse, the members of the
[516] family take leave of it by kneeling down and moving one or both hands before them from above downward and saying: "You are now going to heaven, and we shall not see each other again; we hope it may go well with you!"

After the corpse was lowered and its head pushed into the small niche, the bamboo covering was very carefully and tightly laid over it. Then the pieces of sod as the bottom layer were packed next to each other as closely as they had been when lying on the surface of the ground. The members of the family and the friends, with their left hands, then tossed as many handfuls of earth into the grave as the person concerned has family relatives. Together they fill the grave with all the rest of the earth with their hands. This is an honor for the friends of the deceased; if a person has no friends, the members of his family must do this work themselves. After a few handfuls of earth, the filling of the pit is always stamped down long and thoroughly with tree trunks. This is a very long and exhaustive occupation, and the more beloved the deceased was, the longer the stamping. In the case of the burial of the capitan, this lasted almost two hours. As a

/199 cont./

764 result of the very hard stamping of the earth, the burial place
● 184 does not stand out from the surrounding terrain either because of a regular grave mound or because of any kind of slight elevation. A stone 30-60 centimeters in size serves as a marker, which is set either at the head or the foot end of the grave.

769 Whereas the deceased is given no accessories at all in the
[764] grave to take with him and no offerings are given this is done in
[796] the following year on December 8, the festival of the Immaculada. On this day, and each year recurrently, the relatives offer the spirits (âhimos) of their deceased, whom they think of as wind or shadows living in their former houses, their favorite foods: meat, yuca, potatoes, maize, chicha, brandy, coca, etc. These gifts are laid on a banana leaf on the floor of the church, and a candle is lighted and placed beside them. Small children do not get food, but flowers as gifts.

/200/

e) The Course of a Day

461 Men and women perform the tasks appropriate to them.
462 Those of the women are the least varied, since meals must be prepared daily and wood and water must be fetched regularly for cooking or for maintaining the nightly fire. Moreover, the work of the woman is more bound up with the house, whereas the men have shorter or longer pauses in their work and during these they visit neighbors, help them mill sugar cane, and drink chicha.
461 Steadiness is not the strong point of the Paez to begin with. It is but seldom that tasks are completed in an uninterrupted process; rather, we almost always found that on the following day the men were busy with something different from the previous day. To be sure, field work always requires long pauses between the clearing, the drying of the felled trees, burning, erecting the fences out of the remaining wood, and sowing. But even within each of these stages of work they generally take their time. True, there are said to be persons who can work for several weeks, up to a month, uninterruptedly in the clearing of a field, but I found again and again that after two to four days of work, a day of rest is inserted.

/290 cont./

534 is wound around the entire body of the drum. A string with a small piece of wood as a rattle device is stretched across the lower skin. The method of construction of the drum and the bass drum
• [184] is the same in Calderas. A drum in Santa Rosa differs in that each of the stretchers, upper and lower, consists of a switch used double, with the edges of the drum skin clamped in between (Fig. 37 /see p. 258 /). The measurements of the small drum are 16 centimeters in height and 22 centimeters in diameter, those of the bass drum 40 centimeters in height and about 60 centimeters in diameter.

533 In playing the music, for which no text is (any longer) known, the drum and the bass drum beat the same rhythm, but in a different manner. The drum is beaten on the skin with two drumsticks, which are simply two ordinary, inarticulated pieces of wood. The bass drum is beaten with one hand with a regular drumstick consisting of a stick with a wrapping of cloth, while the other hand beats against the frame with a little stick. In three-quarter time, the principal kind of time, the bass drum is beaten with the drumstick in one hand, the first and third quarter regularly and the second quarter in eighths. The other hand beats afterwards with the other stick on the frame.

533 Whether this Paez rhythm is original or was taken over with
173 the drum cannot be determined with certainty. According to the tradition of the Paez, as told in the story "The Paez with the Ax," the Pijao women in former times, when as yet /291/ there were no drums, beat out the rhythm on their breasts with their hands during the dances. We may assume that this was also in part the case
533 among the earlier Paez. According to E. Castillo i Orosco, the
[175] Paez formerly used hanging chichacanoas /chicha troughs/ as drums
[534] (kwimb). They consisted of hollowed-out tree trunks and during the kwimbkó dance were beaten by all the men together, while the women sang. The rhythm beaten on the drums at the present time, however, seems to be less firmly anchored than the melody. They
[797] are so fond of the latter that they do not sing hymns at the Mass in
[177] the mission church, but play the customary melodies on the same instruments, albeit disproportionately slower. The drum and the bass lose the beat in doing this; they do not know how to begin

The Race for the Rooster at Tumbichukue

103 The name of Tumbichukue is familiar to the colonists throughout Tierradentro. It is synonymous with fabulous treasures. In this place, it is said, the Paez buried all the gold and silver that they collected in the ill-fated settlement of Sebastián Quintero destroyed by them.

[131] Tumbichukue is a pass /vereda/ formed by the eastern slopes of the paramo of San Lucas and located between the Kukiyú and the Yusayú gorge (Guacharaca). It belongs to the parcialidad of Lame, and the road that goes from San Andrés [491] to Lame passes precisely there. This road is well traveled, its people more accessible to the whites.

796 On June 24 the men race their horses along the road.
541 It is a custom of Indians and whites "to race on the day of San Juan." The whites say that those who do not race their horses on the day of San Juan get scabies. The small, husky horses pant under the demands of their drunken riders. A wild race and shouts in an unsteady voice: Viva San Juan!

The people of the pass go to a small square along the road, near which lives the capitán of Lame. Indians from
●184 San Andrés come to watch the race for the rooster. On the
796 other hand, in spite of the nearness, no Calderun /person from
291 Calderas/ is seen there. The women who are seen are clean,
177 with neatly braided hair; they wear black skirts, navy-blue
301 rebozos, pink blouses, numerous multi-colored necklaces,
541 bright earrings, and cloth hats. The monotonous dark or black necklaces characteristic of Paez apparel are nearly absent among these people. The classic pindo hat worn by the [491] Calderas people is absent. Spanish is spoken more frequently.

796 All the riders are concentrating on the cage and the
541 roosters.

/261 cont./

683 The aversion that the people of Santa Rosa have for the
554 sorceress Ipia is expressed clearly in the words of one té eu:
754 "This old woman should be brought to the pueblo, her remedies burned, she should be bathed in ají water, manacled, and kept like this overnight to prevent her from running away, bathing with her remedies, and turning back into a sorceress."

683 In this same parcialidad the sorcerers accused of having
[623] killed the former gobernador with their tricks were given the following punishment by the Cabildo.

The sorcerers, taken from their houses with all their pouches of remedies, were led to the pueblo. In the plaza and in the presence of the people, the capitán took from the pouches remedy after remedy, showing it to the public and asking about its uses. The remedies were unknown in most cases and the sorcerers gave no information about them. They made a large pile. The gobernador of the cabildo says that they even had earth from the cemetery. He sprinkled the remedies with gasoline, put the sorcerers in the middle, and lighted the fire. The frightened sorcerers begged for forgiveness, claiming that they were innocent.

It is said that in the pouches they found flowers of sulphur, with which they /262/ prepared a drink that they forced them to take in order to rid them of evil spirits. The sorcerers, on their part, say that the drink in question was a mixture of the excrements of domestic animals and human feces.

The sorcerers had to remain at the wake overnight and dig part of the grave. After the burial they were invited to the meal which is offered on such occasions, an invitation which they refused, but they were forced to attend. With the food it is said that they were given pubic hair, according to the sorcerers. Then the people tossed them into a pond.

683 In Calderas the punishments are more violent. In 1951,
184 they took a sorcerer, put him in the stocks for two days, forced him to take the drink of excrements, whipped him,

/262 cont./

683 and finally exiled him. The sorcerer nearly died. He com-
184 plained to the Alcadía of Inzá about the brutality of the cabildo. The Alcadía had the stocks destroyed by force, in spite of the protests of the natives. The punishments of the sorcerers in the Parcialidad of San Andrés were about the same up to some 30 years ago.

683 Often, when there is a very dangerous sorcerer, the curers
754 band together in order to kill him. They call his soul, and
756 when it draws near they hit it with a stick smeared with chayuts.
774 The soul leaves with a whistling sound. When a volcano erupts,
[823] it is a sign that the devil is punishing the souls of sorcerers.

754 Psychological characteristics of the sorcerers. Broadly
157 speaking, the sorcerers are timid, resentful, aloof, with a very
156 strong persecution complex; they try to avoid contact with people, believing that they see in each of them a presumed accuser; they tend to be self-supporting; suspicious to a high degree, they roundly deny the accusations of their victims, regarding themselves furthermore as good persons, sound and inoffensive; they pretend to know nothing about remedies, and it is very difficult to obtain any information from them about sorcery. Most of them are intelligent. Endoculturally they are at odds with their own group, insofar as they embody the struggle against the influences of foreign cultures.

The nasa are convinced that no sooner has the sun gone down than the sorcerers are already at work. The most dangerous ones sleep during the day. For this reason they regard as peculiar characteristics of the sorcerers red eyes, an evasive look, aloofness, an unpleasant appearance, egoism, and suspiciousness. They look like criminals, informants say.

182 /263/ Socio-dynamic value of sorcery. Within Paez
754 society, sorcery is vital, overly active, and gravitates into all the social interstices. But, as must be evident, at all times and places it pertains to the realm of concealment. Its executors are surreptitious. They always act in the shadows.

/263 cont./

182 The people perceive only the effects. Only the expectant
754 attitude announces to us its presence. The latent fears tell us of its vigor. The members of the cabildo, the capitán, the té eu, the working men, the parturient women have a strong fear of sorcery.

When the pest spreads through the community, when the elders die and their experience and advice are lost, thoughts
[761] turn inevitably to the power of the sorcerers. Most deaths are brought about by sorcerers, the informants say.

754 Sorcery is a powerful barrier against the introduction
182 of the customs of a capitalist economy and also against the
177 intrusion of the whites in their parcialidades. It is strange that sorcery should exist in the less acculturated parcialidades, while in San Andrés it has practically disappeared. It is said to have been vigorous until 1926, the year when the Municipal Council of Inzá established in the parcialidad a settlement area in which the whites settled. With this measure living together was inescapable and they chose to accept them. Nevertheless, during the drinking bouts of the old people, the tremendous resentment that has become natural to them still crops out.

182 Furthermore, it makes its influences felt in the distribution
754 of land. Each family has lands from which it lives. With the
423 increase in population the problem of their unequal distribution
[554] has become prominent. Those who have the most land are
[152] the targets of envy and sorcery; they are more prone to magical attacks aimed at taking away their land. Intrasocial tensions
754 appear to be brought into equilibrium by means of this insti-
182 tution. The fear of reprisals checks aggression. Revenge is too prejudicial, since it can be manifested not only against
[184] individuals, but also against animals and plantings. It is
[177] perfectly true to say that while in Calderas acts of bloodshed
[675] are rare and suicide is unknown, in San Andres, a parcialidad
[762] which is largely acculturated, the homicides, murders, and cases of arson are hair-raising.

/307 cont./

241 April, May, June, October, November, and December. Natu-
132 rally, these periods of summer are relative and correspond in reality to the temperate zone. In Mosoco and the high parts of the Cordillera, /308/ a fine rain is falling almost constantly, if not an actual downpour. In July, August, and September, the winter is harsh, influenced entirely by the trade winds from the southeast.

Bearing these climatic factors in mind, planting is done during the months of March, April, and May. They take advantage of the rains of these months. This agricultural cycle is common for all of Tierradentro including Mosoco proper. The "páramuna" part of Mosoco is excepted, for the reasons listed earlier.

243 Of the cultivable species, maize occupies the dominant place in the agricultural activity of Tierradentro. The preparation of the soil differs somewhat in the temperate and cold thermal levels. Whereas cleaning out and burning the underbrush are sufficient in the temperate one, planting beds are made in the cold one. Maize seed is selected from the best and most filled-out ears, avoiding the small kernels at the points. They believe that they would not fruit, calling them, for this reason, "maize-man," and, on the other hand, calling the big kernels
[842] that yield produce "maize-woman." They make the association that it is the women who have children, even though they do not conceive of fertility without concourse with the man.

243 It is common to have mingas for sowing. In this way the
244 work is soon finished. On the appointed day, eight to ten
476 laborers assemble, with bags full of maize tied at their waists;
[462] they start sowing very early. This is a masculine activity, al-
[184] though in Lame and Mosoco women also participate. The holes are made with a strong, pointed stick at intervals of one meter and 50 centimeters and to a depth of 10 to 15 centimeters. Six or seven kernels are placed in each hole. They bury the frijole next to the logs that remain from the clearing. Peas are also commonly sown there. The seeds of bottle gourds and ahuyama/ squash, /Cucurbita maxima/, which are sown in the maize fields,

/332 cont./

476 From the data on the mingas in the three parcialidades,
184 we see that on the whole they have similar rules. But in Mosoco there is already a modified procedure, both in the rewards and in the form of the work. In San Andrés, Calderas, and Lame, a minga is relatively cheaper than paying wages, since they actually buy only salt and coca, when they do not cultivate it on their own fincas.

Communal tasks

476 Among the Páez there is another type of co-operative labor
651 different from the system of the mingas. It might be called communal work, and it pertains basically to the execution of tasks for the common welfare, such as, for example, the construction and maintenance of the roads, bridges, public buildings (schools, church, rectory, house of the cabildo) and the cultivation of the clearing of the saint.

To this end, the cabildo calls upon all the able-bodied men in the parcialidad, who come supplied with their respective rations of coca and work tools.

The execution of the works of communal interest is a duty of every member of the parcialidad, and anyone who refuses to lend his aid is punished by the cabildo and often taken before the Colombian authorities. The greater or lesser effectiveness of this obligation naturally depends on the moral authority of the members of the cabildo and, above all, of the Capitán of the parcialidad. In many parcialidades, the members openly refuse to give their share of labor, and in such cases the roads and public buildings are in precarious condition.

/333/

Foresight and storage

487 In all of the native dwellings there are frames plaited with
353 rods and vines above the hearth and also at what we might call
251 the open ceiling. The ones of the fireplace are suspended, while the others rest on the braces or crosspieces that give strength to the walls of the house. This already clearly indicates to us that the natives have foresight. On these frames there are ears of maize tied by their own husks, bundles of wheat, and

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

The graves were "large and deep," and chiefs were buried with some of their wives and with food and chicha (Cieza, 1932, ch. 32). 764 766

In Colonial times, according to Del Castillo, the *Páez* removed a dying person from his hut but burned the house if anyone died in it. They had given up cremation, however, and buried in the earth, building a fence around the grave. Today, they cover the corpse with a white shroud and place it in the middle of the house with candles and flowers. Here it is watched over one night by relatives and friends, and then buried in a cemetery, where each relative tosses some earth into the grave saying, "Go with God." The mourners then bathe in the river without disrobing, and in the evening hold a banquet with chicha, sancocho (vegetable stew), meat, and tortillas. For 9 days a cross, a container of water, and a candle must be kept on the deceased's bed, the water being kept there so that the soul may drink. The relatives pray every night. A month after the death, a shaman purifies the house. The relatives and friends kill a pig, cut it lengthwise in two halves, one for the shaman, the other for the ceremonial banquet. The shaman sweeps the house floor with the pig's legs and some special branches, which are later buried. He chews coca, says some unintelligible words, and spits leaves on the house walls. The residents and guests then enter the house for the final proof of purification. The shaman, standing in the center of the house, gives a dog half a tortilla. If the dog does not die, he divides the other half among those present. He does the same with a piece of cooked meat, and if the dog still does not die, he blows chicha in all directions in the hut, and then divides what remains with those present. The hut and food are then declared clean. The food is then eaten and much chicha drunk.

178 764 [763] 765 764 765 756 783

The modern burial customs of the *Moguex* differ somewhat from those of the *Páez*. The former dance for 9 days before and after burying a dead child. Because of the special ceremonies for adults, young Indians gather and prepare wood to be burned at their own funerals. When an adult dies, relatives and friends bring wood, food, and money to the house, and work for his family, who pray and weep for 3 days over the body. On the fourth day, they carry the body in a procession to the cemetery. Upon passing a house or inn where the deceased was accustomed to take chicha, they stop and drink. The burial procedure is like that of the *Páez*. Back at the house, they purify the objects used by the deceased over the fire, and leave his clothes and the hide he used as a bed at the river 9 days, after which they may be used. Meanwhile, the guests remain with the deceased's family, helping them. On the 9th day, they extinguish all lights and go to the nearest hill to mourn, while a shaman remains in the house to catch the soul of the deceased. He chews coca, spits it in all directions, and beats around with sticks to make the soul come out. Then he lights

764 184 [766] [535] [275] [783] 765 756 787 775 184

7:Hernández de Alba E-5Y (no date) 1946 SC15 Paez SC15
Moguex

765 756 787 775 784 the fire and turns on the lights, and everyone returns to examine a layer of fine ashes placed beforehand at the door. If the ashes shows the footprints of an angel, they believe that the soul is saved, but if the footprints are those of a bird, they believe that the soul is condemned to hell. In some cases they ascertain the fate of the soul by the kind of bird prints.

WARFARE

726 The *Páez* and *Moguex* were particularly warlike. Their attacks were staged in the morning, accompanied by yells and the sound of trumpets, horns, sea shells, and drums. They were generally armed with great spears or pikes, spear throwers, and slings. When fighting, they would first hurl javelins with their spear throwers, then use their slings, the missiles for which they carried in a pouch, and finally pick up their spears or pikes for man-to-man struggle. They also formed closed squadrons, men with clubs alternating with spearmen. The former would step forward to wield their clubs, and then draw back to their positions for protection. Their best defense was on high ridges, from which they rolled large stones on their enemies. They perfected these natural defenses by cutting or camouflaging paths on which they prepared ambushes. They built trenches or pitfalls, which caused the attacking Spaniards much trouble.

[411]

628 The principal enemies of these peoples were the *Pijao* and the Spanish soldiers. The *Páez* remember the *Pijao* well, and call the stone statues in their territory "portraits of Pijaos," and the painted tombs, "houses of Pijaos." They are afraid to see the statues or visit the tombs.

[648] [632] [764]

To insult an enemy killed in war, they cut off his penis and placed it on the road.

727

266 Some historians ascribe cannibalism to the *Páez* and the *Moguex*, which seems to have no basis in fact. They kept trophy heads and stuffed the skins of their enemies, but did not eat their foe. There are, however, numerous historical references which state that in the wars against the Spaniards, the *Páez* left the bodies of dead enemies for the *Pijao* to eat, and that they cremated their own dead or dried them over a slow fire, which Friar Pedro Simón (1882–92, ch. 23) mistook for a means for preserving the flesh so that it could be eaten later.

[175] [648] [764]

[114] As war trophies, they kept enemy heads, which they preserved with resins, and the skins of their entire bodies, which they filled with ashes (Aguado, 1931, vol. 3, book 16, ch. 3). They even preserved the heads of the Spaniards' horses. They carried these trophies to wars, meetings, and feasts.

727 [314]

/180 cont./

583 In Paris on the first of March, 1877, Esequiel Uricoechea
[175] wrote in his introduction to the Vocabulario: "Marriage in the sense in which we accept it today did not exist among the Páeces: two people lived a married life for some time and the marriage was not legalized without the previous certainty that
[192] the woman was fecund. It is natural then, that we find among the Páeces, as among the Peruvians, two verbs (imi and iyó) which indicate respectively the woman accepts the man and the man takes the woman. The woman was obliged to give clothing to the husband, and he "to provide sustenance for the family" (12).

12. Castillo y Orozdo, E. del. Vocabulario Páez-Castellano /Paez-Spanish Vocabulary/, 1877, p. XIV.

Our informants from Calderas confirm the effectiveness of this custom, some justifying it by the need of the future husband /181/ to obtain the money to pay the expenses of the wedding, others in order to "catear" /sample, find out/ if the woman is honest, a worker, and faithful, and there was no lack of those who clearly stated that this trial marriage "is customary because if the woman should turn out to be machorra /barren/ there is no marriage." When such occurs the man returns the woman to her parents without any problem standing in the way, which would not be the case if they were married by the Church, in which case the return is not possible.

162 Our investigations concerning the frequency of the "amaño"
583 in the established families of some parcialidades of Tierradentro
595 showed the following results:

184 Calderas: 42 families (28% of the approximate total of Calderun families). 57.1% of these families practiced the amaño: 42.9% were married first by the Church.

San Andrés: 13 families (6.5% of the approximate total of San Andrés families). 92.3% were married first by the Church; 7.7% practiced the amaño.

/181 cont./

162 Lame: 8 families (6.2% of the approximate total of Lame
583 families). 87.5% were married first by the Church; 12.5% prac-
595 ticed the amaño.
184 Mosoco: 26 families (10.4% of the approximate total of families in Mosoco). 88.1% followed the Catholic law; 11.6% practiced the amaño.

Although the percentages for the parcialidades of San Andrés and Lame may not reflect fully the real situation concerning the custom owing to the paucity of data, one can clearly see the vigor that it still has in Calderas, a parcialidad less acculturated,
581 of course, than the others. Once the man is convinced of the
594 fertility of his mate, the marriage is legalized at the altar of the
[585] Catholic Church. Then the economic co-operation of the spouses, initiated at the beginning of their married life, is stabilized and gains strength, and the marriage becomes, as one of our informants remarked, an association for the "mutual benefit of the contracting parties, to serve each other, without in any way
594 being a burden to either of them." The man enlarges his clear-
462 ings in order to take care of "the sustenance of the family," plants sugar cane and coca in order to obtain chicha and narcotic for holding mingas /work parties/, in order to celebrate religious festivals, in order to "cuidar" his relatives and to relax with his friends; he hires himself out as a peon /182/ in order to acquire money and to buy shawls for his wife, wool and cloth that the woman makes into camisas for herself, her husband, and her sons, and trousers for these last, begins to build his house, if he does not have one, on the lot that his father has assigned to him, to make a home for his family. The woman, on her part, administers the products that her husband brings to her, weaves the ruana /poncho/ and kuetand-yaha (mambe pouch /a bag for the ingredients of chews/) for the husband and children, prepares the food, raises hens and pigs, and cares for her children less than three years old (13). In this manner, among the Páez, marriage,

13. For the division of activities according to sex, see our work "Economía de los Páez /Economy of the Paez/," /published in the

/167 cont./

435 Livestock can be exchanged for other livestock or for food-
437 stuffs. For example, a stallion has the value of 20 pounds of coca leaves or a man's ruana; a mare, however, is much dearer and is exchanged for the maize harvest of a field about 100 square meters in area, to be harvested by the buyer himself. Similarly, one can exchange the harvest of a maize field for a steer or a heifer. (The latter has a monetary value of 30 to 40 pesos.) The exchange or sale of a cow, on the other hand, is not possible under any circumstances. Pigs have the relatively low value of only three to five pesos; they are exchanged for five pounds of coca, ten bags of maize, or ten tomín of sugar cane. One may also exchange a small sow or a full-grown hog for a steer. The latter has the value of about 15 pesos, a mare about 20 to 30 pesos. Stallions are gladly exchanged for a foal. They are valued at 15 pesos. Whereas the exchange of a stallion for a cow is impossible because of the latter's higher value, stallions are often exchanged for bulls, especially by hosts who need beef to feed their guests.

It is significant that a head of cattle or a horse cannot be exchanged for quickly consumed foodstuffs, such as maize, arracacha, beans, potatoes, bananas, etc., since the latter do not last long enough and the buyer of the foodstuffs feels that he will not get sufficient use out of his exchange. On the other hand, coca leaves still on the tree, maize on the stalk, or a sugar cane field are quite possible as media of exchange. Victoriano, for example, exchanged for a foal a sugar cane field about 50 by 50 meters in area, which the new owner may harvest as needed. Such an exchange, however, is possible only for
• [185] persons who are as industrious as Victoriano. In general the Paez is much too disinclined to work for a future supply, especially if he is not even to have the use of it later on; besides, he is much too fond of drinking his own chicha to give away a two-year old sugar cane field.

439 The goods are transported to the market by men and women,
482 albeit more by the former than by women. This seems quite
484 surprising, for the civilized Indios, as well as many colonists, are in the habit of riding to market unencumbered by any load,

Fire is also set to the vegetation on
/306 cont./
241 the ridges, crests, and windings, where no obvious advantage
85 can be gained and where, instead, it destroys a vegetation that virtually /307/ could be turned into a barrier that would prevent the danger of the animals.

The clearings are also laid out on the banks of brooks, streams, rivers, springs, and damp hollows, which, from a lucrative standpoint, is excellent, since it is precisely there that the harvest yields the most, but it is very harmful, since it destroys the vegetation that preserves the moisture and holds the soil, thus avoiding erosion.

241 The clearing is done by all the male members of the
476 family. But more generally the mingas /communal work-parties/ do it. In this case, the workers first cut with their machetes the grasses, branches, vines, etc., in the lower part of the forest; then, with axes and machetes, they fell the trees. It should be noted that these trees are not cut at the base, but more or less at eye level. The fallen trees are allowed to dry for approximately one month and then are burned. The thick logs remain intact, as does the brush. This is piled up, and sticks are cut to make fencing. This work is also done by mingas. First the stakes are driven in about a meter apart. Then sticks and branches are woven in. The fences are made so tight that they prevent dogs,
[417] pigs, and other animals from entering. People enter by means of a stick with notches that leans against the fence on either side. These sticks are called afa, and they are also placed at difficult spots on the paths, chiefly for crossing obstructions.

241 In Mosoco, where the lands are cleared and divided into lots, clearings do not exist. Only in the "paramo," the mountainous region, can they be observed. But the custom of leaving the land uncultivated for several years has not disap-
[824] peared. The fences are made of lechero /Euphorbia/ stakes, a tree that has the peculiarity of taking root and continuing to live. But the use of barbed wire is steadily increasing.

Planting and harvesting

[152] Planting is conditioned by the pluviometrical conditions in Tierradentro. The summer months are January, February, March, July, August, and September, and those of winter are

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive T [563] fashion with wooden pans, the workers standing up to their knees in water. The Paez do not generally intermarry with the Negroes, [186] but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 361 563 b) The Paez who north of the Rio Ullucus have settled both banks of the Rio Paez as far north as Nevado del Huila. They have in part intermarried with the white and mestizo colonist P [103] population. The /106/ places inhabited by them are: Araujo, Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

T 162 103 c) The pure Paez villages of Calderas, Chinas, Huila, Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez of Calderas have preserved their cultural individuality most P purely. We worked primarily among them, and the present ma- 114 121 terial, insofar as nothing is said to the contrary, refers to the culture of the Paez of Calderas. The Calderun, as the inhabitants P 181 of Calderas are known in the country, are by far the most unap- 648 proachable of all the Paez. They have best kept to this day the 101 three laws of Juan Tama, the mythical hero of the Paez, which were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

/254 cont./

804 The period of a day is subdivided into the day (ēn) and the
192 night (kos). Early morning is called kosē; afternoon at the time when work is at an end, which is reckoned by the position of the sun, is called fi'nze. Other subdivisions of the day are made according to the interval of an ěšnetc, meaning the time it takes to chew a dose of coca. In translation this designation is used for "hour." The largest period of time is the month, ãte, which is designated by the same word as for "moon." For the period of a year the Spanish word año is used. In former times the word
[221] enzte was used. It is the designation for the large annual com-
[226] munal fishing at the weir during the dry season in February. The
[132] two rainy seasons, called nospá'nye, and the two dry seasons of the year, called sek, are not regarded as time intervals, but as seasons. The latter is at the same time the word for "sun."

823 No large geographical orientations or regional, individual
[491] divisions of any kind could be discovered. Moreover, all of Tierradentro is enclosed by civilized areas -- there is even an auto road leading to Belalcázar -- so that many Paez men have seen the surrounding countryside and even cities with their own eyes.
601 Only the western bordering mountains of the Central Cordillera,
[186] in the direction of Popayán, are conjectured to be the habitation
123 area of the dreadful man-eaters, the Pijao. Geographical means
484 of orientation are unknown. Traveling is done only during the day, in groups, and in company with a person who knows the way.
821 Of the stars it is only known that there stars that move and fixed ones, without their being distinguished in greater detail or according to constellations.

202 It is amazing that, in spite of their settlement pattern of
[361] individual farms, the Paez do not have any optical or acoustical
[203] means of communication over larger distances. /255/ In case of urgent news or questions, children are sent.

802 There are numbers only from one to six and ten. For the designations seven to nine the corresponding Spanish numbers are used. The Paez word for "ten" (kóse pémba) literally means "no more hands" and indicates that the fingers were used for counting. The toes are not used for counting; anything beyond ten is

/280 cont./

755 756 that his signs tell him that his efforts will be in vain, because the patient must die. Only if the signs are favorable, do he and the patient start chewing the little packet of medicinal herbs. The shaman now takes his staff and spits some of the chewed medicinal herbs on it, to prevent the pest sent by nyiç from possibly being transferred to him and killing him. Then he thrusts the tama into the ground with the point, in order to announce to Thunder that he does not wish to act badly and carelessly, but exactly in accord-
[824] ance with his shamanistic rules. He sets the bottle of /281/
[787] brandy, into which he puts a stalk of the čayuts herb, beside his shaman's staff. If the stalk remains vertical, it is a good sign; if it falls to one side and goes under, it is a very bad omen. On the mouth of the bottle he also places a small calabash vessel, likewise containing the čayuts herb, which is supposed to prevent the pest from taking the shaman by surprise and killing him. He now puts a handful of coca into his mouth and starts to chew. Motionless, he gazes at his staff, ready to receive his signs. From time to time he takes more coca and lime, tells the patient that his signs are favorable, that his illness, which comes from the pest, will soon get better. Then he gets up, goes to his tama, and vigorously spits out the chew. He empties a whole calabash of brandy and squirts it into the air. Again he returns to his seat, once again takes coca and lime and a little cigar tobacco into his mouth, and again remains squatting motionless. After about an hour he spits the chew in the direction of the staff, the patient does the same, and then both get up. The shaman now tells the
[783] patient that Thunder has shown him the possibility of a cure. He will now go and gather his special medicinal herbs, and for a good purification the patient will have to bring a pound of coca leaves, six cigars, a liter of brandy and chicha, and, in addition,
[177] a few pounds of meat. The teyu urgently enjoins him not to take
[186] any of the medicine of the whites under any circumstances, for otherwise he must surely die. At this séance, as well as at others, the shamans all agreed that neither did they themselves leave the place of the séance nor did their souls leave their bodies to go wandering. The signs, to which alone they give heed, are the only characteristic of their experience.

SC15 Paez SC15

157 pipes they play while walking along, unless their hands are kept
583 busy plaiting braids of gynerium bark in the manufacture of
[463] their hats. This is the exclusive occupation of the men. Women almost invariably walk along spinning wool, their distaff under the left arm and the spindle in the left hand, while the right hand is busy at the wool.

883 The Paez maidens are fond of flowers and are very playful.
157 On one occasion I observed several of them going up the hill
481 beyond the river, in front of the church at Huila, their arms entwined about one another's necks; then they began running up the steep hill as in a contest of endurance. As they became exhausted they threw themselves on the grass, while their movements showed that they were playing and joking all the time. These children of Nature are not unpleasant to look at,
[515 except for their usual lack of cleanliness; nor are they wanting
142] in coquetry, and they are often pretty. But in the presence of
[609] strangers they are extremely bashful, doing their utmost to keep in the background.

291 The old women are generally very ugly. Their clothing con-
515 sists only of dirty rags, and their skin is covered with the filth of years.

593 Relations between the sexes, especially between husbands
562 and wives, seem to be easy and without an air of superiority on the part of the former. On the few occasions that I had to entertain these people at their houses, the women took the same interest and the same part in the proceedings as the men, which was very different from what I observed among the Central American Indians.

609 Toward strangers, and especially toward Colombians of other
186 races, the attitude of the Indians is decidedly hostile. Unless induced by the prospect of profit they will neither sell anything nor lend any service, often refusing money and accepting only articles which they especially desire. They will not allow white
[563] or black people in their homes, and at Huila they are even unwilling that the only white family living there should share the practically inexhaustible supply of fuel scattered about in the near-by forest, or have horses or cattle pasturing on the almost

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

deserted savannas. It must be said, in extenuation, that they have been subjected to much abuse by their neighbors of the "superior race." Moreover, the Paeces are naturally hostile to strangers, descending, as we have seen, from a warlike people. The old Paeces always went about armed, carrying a lance or javelin in the hand and ready to protect their bodies from the darts of an enemy by means of a shield of basket-work (*opimb*), or of tapir hide (*yimba-kdt*). The warlike tendencies of the tribe were stimulated by means of periodical contests in which the most valiant warriors fought each other in the presence of the multitude.

To-day, as we have seen, the descendants of these have abundant opportunity to satisfy their fighting propensity by taking sides in the frequent quarrels of the political parties that thus far have kept Colombia in an almost continual turmoil.

Sexual intercourse between Paez women and men of other races is said not to exist; barbarous chastisement would be the fate of the offending female. It is to be expected, however, that the closer contact brought about by the gradual penetration of the Tierra Andentro by whites and negroes will soon overcome the purity of the Paez blood and open the way to amalgamation with the neo-Colombian race.

Reclus, cited above (page 311), gives us to understand that the Paez were cannibals, and the tradition current in the villages along the western foot of the cordillera confirms his intimation with reference to the Pijaos; for the coming of "el Pijao" is still a menace to children. The early chroniclers tell us of several anthropophagous tribes which lived in this region, and it is not unlikely that the Paeces had a share in that custom.

GRAMMATICAL NOTES

Castillo's *Nociones gramaticales* is limited to a list of the personal pronouns and the conjugation of the verbs 'to be' and 'to write.' A few more grammatical indications are incorporated in the vocabularies, but on the whole these data are very meager, and much remains to be done in this direction.

/290/

114 us nothing about the religion and mythology of the Paez. Nor
773 do systematic modern studies exist. Nor do those who have had the opportunity to be in contact with them and to describe their customs and ways of life tell us about their religion and mythology. Furthermore, there are those who state that the Paez have no mythology. José Pérez de Barradas collected the myth of Juan Tama. Gregorio Hernández de Alba refers to it, and the Lazarist missionary Fr. David González also collected it and has it in his unpublished work, Los Paeces /The Paez/, in quite elaborate and synthetical form, as does G. Burg. It is obvious that a large part of the myths and tales which I am presenting, not to say all of them, have suffered modifications in the avatar of time, as the institutions also changed. Since mythology is the rationalization of conflicts created by the culture itself, it is subject to the directives /291/ of that society and culture. Its roots are inevitably of a sociological and cultural nature.

773 Many of the myths collected have a marked similarity to
776 that of Juan Tama. The predominant central motifs refer to
538 sex and aggression. The personages in the myths are Thunder, Llíban, Juan Chiracol, Chaute, and Santo Tomás. Llíban is regarded as Thunder's son, but everyone maintains that he is Thunder himself; he was a cacique, and the natives state that many of their caciques took refuge in the turbulent waters of the river. The last two personages merge and in reality form a single being. It is to be noted that in some accounts the tricky personage presented is not Tomás, who is a saint, but Pedro Dimales, his brother.

●186 There is no need to emphasize the role played by the Pijao
793 in these accounts. The recollection of this people inured to
628 war is still fresh in the memory of the Calderunos, the characteristics of the struggle sustained against them still manifest, the fear that the name Pijao awakened still alive. To the Calderun mentality they seem like monsters, like animals of uncommon size and power, who drew fire from their armpits.

[Parcialidad of Calderas]

/291 cont./

773 They are in fact legendary personages who go beyond the
[186] boundaries of legend to enter the territory of myth, not only
[628] by their symbolism, but in their dramatic force, their socio-
logical framework, and their cultural function.

The mythology gravitates around the behavior of the natives, their attitudes toward the whites, the organization of the cabildo, illnesses, and death. Of Juan Chiracol, a 23-year-old informant says: "He warns when the mob is coming, he no longer warns, so." And of Thunder, it is said that he almost killed a padre because he went to the montaña to get wood to board up the school. "Thunder was defending the
538 wood," they say. The tales were always told around the fire,
773 with men, women, and children present, who sometimes laughed, at other times kept silent, but always corroborated, corrected, elaborated, or confirmed. The storytellers sometimes put on a serious face, accompanied their tale with mimicry, and once in a while they would burst into mocking laughter, as if to signify that what they were saying was worthless and they did not believe it. I was soon able to ascertain
115 their sociological and cultural value. The myths and tales
773 were collected with the help of an interpreter, a mestizo from San Andrés, about 35 /292/ years old, tall, muscular, quiet in manner, intelligent, calculating, with great charm and a knowledge of Paez and the Spanish language; he was familiar with the customs of the Calderunos, esteemed by them, and
773 skilled in his questioning. We present below the myths and
128 tales collected, leaving the other aspects of the culture for presentation in a complete monograph.

1. Thunder

*539 The old people related that at one time the area was full of Pijao. Thunder lived in Sukafi. In view of the growing number of Pijao, he decided to kill them. He stood on a tall stone that is to be found there, threw his lariat /boleadora/

273 and tasteless."
[784] The distillation is done on any day and at any hour; the tax collectors do not go this far; control of this kind has never been permitted, and anyone who dared to do it would risk his
[186] life. Children drink this liquor from the age of three. Abstainers are inconceivable; "only Protestants do not drink," they conclude.

Colombia SC1
Tierradentro

C /104 cont./
632 includes 15 villages with Belalcázar as the administrative seat.
[103] Belalcázar, which takes its name from the conquistador Sebastian de Belalcazar, but not altogether correctly, since the latter was unable to conquer the Tierradentro area, is at the same time the
P 162 seat of the Apostolic Prefect for Tierradentro. According to the
C 162 census of 1938, the population of Tierradentro, consisting of mixed-
632 colored colonists and racially pure Indios, contains 17,578 inhabitants, distributed over Belalcázar with 13,861 and Inzá with 3,717 inhabitants. The more recent count of 1951, with a total of 25,495 inhabitants, showed a considerably larger figure, of which 15,388 fall to the municipio of Balalcazar and 10,103 to
C [114] the municipio of Inzá. A comparison of the two counts of 1938 and 1951 shows /105/ a notable error in the count in the municipio of Inzá for the year 1938 (figures cited in Bernal Villa [I], p. 285).

P 641 Of this number about 80 per cent are natives who today
[162] are largely civilized, that is, they are baptized and speak some
[851] Spanish. Politically they, too, are basically full citizens of the
● [191] country; they may vote and be drafted into military service, but
P do not pay any taxes. In one respect, however, fortunately for
641 them, they are regarded as "minors" before the law; in their
423 totality they own all the landed property of Tierradentro, but
P the individual man is not in a position to sell his land. This is
641 supposed to keep the Paez from losing their settlement area to
423 the whites. In practice this law is not always strictly observed,
691 for otherwise neither the colonists nor the large landowners, who
648 are slowly but surely pushing their pasture and agricultural lands into the territory of the natives, could be in Tierradentro. The latter cannot in fact defend themselves against this, for, due to lack of money, no one among them is in a position to complain in court. If a complaint is nevertheless made, the Indios always lose, as, for example, in Itaibe, in the southeastern part of Tierradentro, where the Spaniards began to colonize as early as 1636 and where for many years lawsuits were carried on by the Indios in vain. Moreover, no judge is able to undertake anything against a rich landowner or against the missions likewise owning land.

/107 cont./

123 knew tales he could tell, and to whom we gave tobacco and salt and a few other small gifts, a knife, a hoe, or an aluminum cup. At the moment he had a headache, he said. I gave him a few tablets, and we agreed that I would come back the next morning and he would tell me a few tales. When we arrived the next day, after hours of tramping, his wife told us that her husband had gone into the mountains very early that morning in order to cut wood.

115 Our first visit in Calderas took place in the company of the interpreter, Marcos Antonio Penkue, a Paez about 40 years old from San Andrés, who regarded himself as very civilized and who had reached a certain position of wealth. He served as a [191] soldier on the Brazilian border and speaks Spanish well. On his [245] finca /see the glossary, p. 249/ he has about 2,000 coffee trees, [439] whose yield he sells in Inzá on the market. He also carries on [464] other business there by functioning as an interpreter and middleman for the non-Spanish-speaking and generally unbusinesslike Paez. During our work in Calderas he combined business with his services. [233] The Paez are ardent cattle-raisers, albeit not in our economic sense, but purely for sport and the pleasure of numbers. A cow-calf is much more valuable to them than a full-grown bull, for [437] it will produce another calf and increase the herd. Thus, Marcos Antonio exchanged calves for bulls in Calderas and, indeed, bought [434] some cattle himself. These business transactions bring him about 200 to 250 pesos profit per head, since among themselves the Paez ask only low prices, about 50 pesos for a bull. His selling price on the market in Inzá amounts to about 300 pesos. He re- 115 124 garded the work with us as highly troublesome, but he knew what he was worth to us. His fee rose from three pesos a day at the beginning to ten pesos. Translations that seemed to him too complicated or explanations that were too long for him he would give "in essence" in a few words, after which my counterquestions obviously annoyed him. One day when I had planned some important work, but he some important business, he hid our horses and calmly let us look for them all day long, while he, under the pretext of searching for the horses, carried on his business until he "found" them in the evening.

/108/

115 We then looked for another interpreter, the Calderun Victoriano Piñakué, about 17 years old and very open-minded with regard to "white" civilization. His father even once visited Popayán, the capital of the department of Cauca. Through this he had a somewhat broader outlook and became involved in a quarrel with a bad shaman, in which the latter took one of his eyes by magic. Since then old Piñakué has been blind in one eye. A younger brother of Victoriano is going to school in Inzá and is the helper of the sacristan there. Victoriano is very much interested in one day becoming acquainted with Popayán or even Bogotá. He speaks Spanish quite well and has already earned money on occasion in the service of the white colonists and in La Plata as a construction worker, in order to buy clothing of the whites for himself. By "white" the Paez mean the Spanish culture of the Colombians, namely, clothing, education, and corresponding customs, not, however, skin color or other characteristics of the white race.

[191] [464] [829]

Victoriano set great store by dressing, not like a Paez, but like a white. He was an enthusiastic fellow-worker, not, however, out of greed for money, but out of sincere interest, and at every opportunity he would ask how things were among us in Germany. With a great craving for knowledge, he would again and again have our photos of Europe explained to him, and he even made an effort to learn German.

115 156 554 In his native village of Calderas the work with Victoriano was very difficult, since he was very unpopular because he dresses like a white. Several times, when his fellow villagers were drunk, they even wanted to murder him. Once when we visited a house together, he was heckled by some tipsy men: he was called a sluggard who does nothing the whole day but talk with the "doctores" and go for walks. Besides, they said, he thinks that he is better than the rest of the Paez because he wears "white" clothing. When Victoriano replied that in his work among the whites it would be impossible for him to wear the Calderun costume, but that in his dress he was obliged to adjust to his environment, they retorted that he went to the whites merely in order to be able to eat more meat.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

101 only it might be necessary to modify it slightly if we were able
103 to localize all of the thirty-four villages or hamlets reputed to be of Paez stock and included in the following systematic list:

1. *Paez Basin*

As-at	Inzá	Suín
Chinas	Líme	Tálaga
Chitoco	Moosco	Toés
Cuetandó	Nátaga	Vitonció
El Pital	San Andrés de la Plata	Yaquirá
El Naranjal	San José	

2. *Palo Basin*

Jambaló	San Francisco	Toribío
Pitaió	Tacueyó	

3. *Ovejas, Corre, and Picudama Mountains*

Cajibio	Caldonió	Paniquitá

4. *Vagnará Basin*

El Retiro		Iquirá

5. *Locality Uncertain*

Abirama	Osyó	Ricaurte
Caldera	Pueblo Nuevo	Tobóima
La Troja	Pusó	

101 The principal neighbors of the Paez Indians, according to the above description of their territory, were to the north — the Quimbayas on the western slope of the central cordillera, and the Pijaos on the eastern slope. To their east were the Manipos, in the Magdalena valley; the Guanacos were on both watersheds of the central cordillera southward; and westward on the plains of the Cauca valley, the Kitšua and the Jamundíes. The Kitšua were probably the most advanced in culture of all these different stocks, and the ones whose influence is more easily recognized
[177 in the customs and idiom of the Paez. Their language is also
191] the only one which has come down to us in its integrity.

There is no positive proof of the identity of the Paez and
101 Pijaos, and it is fair to state that there are many data pointing to
174 the fact that originally they were merely neighbors, and allied against the Spaniards, as, for instance, in 1641, when they de-

The Race for the Rooster at Tumbichukue

103 The name of Tumbichukue is familiar to the colonists throughout Tierradentro. It is synonymous with fabulous treasures. In this place, it is said, the Paez buried all the gold and silver that they collected in the ill-fated settlement of Sebastián Quintero destroyed by them.

[134] Tumbichukue is a pass /vereda/ formed by the eastern slopes of the paramo of San Lucas and located between the Kukiyú and the Yusayú gorge (Guacharaca). It belongs to the parcialidad of Lame, and the road that goes from San Andrés [491] to Lame passes precisely there. This road is well traveled, its people more accessible to the whites.

796 On June 24 the men race their horses along the road.
541 It is a custom of Indians and whites "to race on the day of San Juan." The whites say that those who do not race their horses on the day of San Juan get scabies. The small, husky horses pant under the demands of their drunken riders. A wild race and shouts in an unsteady voice: Viva San Juan!

The people of the pass go to a small square along the road, near which lives the capitán of Lame. Indians from
184 San Andrés come to watch the race for the rooster. On the
796 other hand, in spite of the nearness, no Calderun /person from
291 Calderas/ is seen there. The women who are seen are clean,
177 with neatly braided hair; they wear black skirts, navy-blue
301 rebozos, pink blouses, numerous multi-colored necklaces,
541 bright earrings, and cloth hats. The monotonous dark or black necklaces characteristic of Paez apparel are nearly absent among these people. The classic pindo hat worn by the [491] Calderas people is absent. Spanish is spoken more frequently.

796 All the riders are concentrating on the cage and the
541 roosters.

/231 cont./

75 the neck, he exerts some pressure and the icy water runs down
783 the body. He goes down the left side and then goes to the hole to bury these remedies. With these remedies the body absorbs coolness. After having buried them, he blows aguardiente into the air and then drinks some more.

Once more at his place, he gives the patient a few herbs (shu and siempre viva?) to hold in his hand. He goes to the right of the patient and from there points to him with the tama and blows; he draws nearer, and he makes the familiar passes with the tama and the remedies named. He rubs the crown of the head (vertex), throat, and the nape of the neck.

[782] They go to the hole and toss the herbs into the hole. The curer takes a mouthful of aguardiente, stretches the tama toward the horizon, rises proudly, sets his eyes in the direction of the tama, blows violently several times, and soon his atti-
[191] tude becomes entreating. /232/ Actually, he prays in Spanish: "Lord, help us; I implore you for everyone." The té eu said later that he had prayed to Thunder, so that he would help him and would not permit the sorcerer to discover this hole where the "dirt" was buried. He drank a swallow. The patient blows a mouthful of aguardiente into the air and drinks a second one. They return to their places. The curer picks up the calabash of chicha, goes to the hole, and pours it out. It is a gift to Thunder.

Once more in his place, he puts yacuma, shu, and tashú into a calabash of cold water. He goes to the patient's right and from there sprinkles this water first on the house and then on the patient, who first removed his hat by order of the curer. This is a veritable bath, so that if any ptans should remain, it would be removed and he would be completely clean. The remaining water is poured into the hole. He blows aguardiente and drinks some more, the patient proceeding in the same way. The curer raises the tama and implores: "I pay you; I shall pay you." The curer said that he had spoken as follows:

/316/

105 Potatoes are the principal crop in the parcialidad of Mosoco
178 and the primary source of the natives' monetary income. It has
[244] made possible the establishment of intensive trade with the municipio of Silvia and has plainly had repercussions in the modification of rules of behavior and the restructuring of institutions. The transformation embraces nearly all aspects of Páez culture.

In the first place, work has intensified. The people of Mosoco have permanent work throughout the year. The women participate directly in the preparation of the soil, the planting, and the harvesting.

The children of both sexes go to school regularly, learn basic skills, and utilize them in everyday life. Mosoco is the only part of Tierradentro where there is a private school supervised by a native.

[191] Bilingualism is general. The "chontales," that is to say, persons who do not speak Spanish, are very few. There are not more than ten.

[276] The consumption of coca has disappeared among all the youthful elements.

[262] The alimentary diet and schedule have been altered con-
[264] siderably. They have breakfast very early in the morning, lunch at noon, and dinner at nightfall. Milk, panela, lard, meat, and bread are consumed regularly.

The utensils are completely modern, consisting of aluminum and iron pieces.

There are wooden beds for sleeping, and blankets as well.

The houses are better built and furnished. There are houses of adobe and tile. Two tile-works inclusively already exist in the parcialidad.

The people are hospitable and generous toward foreign visitors.

[291] The clothing of the men is almost completely transformed. They dress like any Colombian peasant. The palm hat worn in other parcialidades has disappeared from this region. The women are clean, orderly, and talkative. They retain the slit skirt and sash, but have adopted chemises and the blue rebozo of the

7:Hernández de Alba E-5,4(no date) 1946 SC15 Paez SC15
Pasto SC17

P 175 648 in which a Spaniard held a territory occupied by Indians. The natives, under a chief who was protected by the White authorities and P [652] who made contact between the master, or encomendero, and his subjects, [651] had to give a certain number of days' work and a specified P tribute in products of the lands, animals, gold, or manufactures. The [177] encomiendas made no effort to Hispanicize the Indians, but continued to loot and massacre them. The Indians, reduced to utter misery, gave up all their artistic and industrial activities, and devoted the greater part of their time to the service of the master or to seeking products to pay the obligatory tribute. To remedy this situation, the Spanish Crown decreed the native "parcialidad," giving surviving P groups reservations and prohibiting their employment in transporting [623] men and goods over the highways. This reform was never entirely carried out, however, and the Indians, in spite of having their own government, the cabildo or Indian council, continued in servitude P or debt slavery.

[621] The native Indian government consisted generally of a governor, [631] a first mayor (alcalde mayor), a second mayor (alcalde segundo), a trustee (sindico or fiscal), and constables (alguaciles), the last a kind of police who transmitted to the people the orders which the Whites gave through the governors or mayors, and who carried out penalties P of imprisonment, of placing in stocks, and whipping, which the 175 first Spaniards introduced into the punishment of the natives. At the 648 same time, the Christianization of the Indians began. It succeeded 797 in an imperfect way, however, for the Indian attended Masses, ar- 438 ranged and participated in processions, and did not miss the solemn 273 ceremonies a single Sunday largely because on the same day he brought his own products to the pueblo for sale, bought salt or meat which he needed, and devoted himself to drinking chicha, the traditional drink P which he had always taken on religious or social occasions.

175 648 The Indians of Nariño, descendants of the *Pasto*, lost their language and many of their customs during the Colonial Period, although they Po continued to live as natives on their reservations, which daily became [463] smaller because of the encroachments by the neighboring Whites or [333] Mestizos. They became farmers with small landholdings and, occasionally, masons in the cities. The *Moguez* and *Páez*, however, P 175 retained their language and the greater part of their customs. Some 648 of them, especially the men who had to deal with the Whites, learned a little Spanish, and they continued throughout the Colonial Period P to defend their lands and their traditions. To religious practices in- ●[191] troduced by the missionaries, they added such elements as the offer P of food to the souls of the dead. They added to the Colonial council (cabildo) the office of captain, an official who, unlike the rest of the [622] council, was not responsible to civilian authorities but had life tenure, sometimes a hereditary position, and more authority within the group.

276 137 Coca (ēs) is a shrub whose alkaloid leaves, containing cocaine, tanning substances, and various volatile oils, were used as stimulants even before the time of the Conquista, chiefly among the natives of the Cordilleras region. Almost 200 species of it are known, most of which, namely 137, occur in America (Walger, p. 9). It flourishes almost without exception between the tropics, from Honduras to Bolivia, in a temperature that generally remains between 15 and 20 degrees. In too low a temperature the leaves are small and worthless; in too hot a climate they lose strength and content. The most favorable elevation is between 700 and 1,700 meters.

P 279 192 171 The word coca comes from the Kechŭa /Quechua/ language (coca or cuca), which, however, does not state anything definite about the origin and use of the plant, for the Kechŭa-speaking tribes of Ecuador are the very ones who do not use the plant (Cooper, p. 549). In the northern part of South America the designation hayo, hahiu is customary, in northeastern Peru ebee, hibia, hibio, and in the Amazon region generally, names like ypadu, ypatu, ipado, or batu (Bühler, p. 3344).

P 175 276 The first information about coca reached Europe as early as 1499 through the report of the Spanish priest, Thomas Ortíz, to his spiritual superiors, according to which the natives of the northern coast of South America used a plant called hayo as a means of enjoyment. The first detailed description of the cultivation and use of the plant is found in a work, printed in 1553, by Pedro de Ciéza de León, who for the first time calls attention to the fact that coca bestows strength and vigor and drives away hunger (Bühler, p. 3353).

P 276 171 P C 276 C 656 At the time of the Conquista, coca was known in Colombia among the Cauca Valley tribes between Popayán and Cali, near Ibagué in the Magdalena Valley, on the savanna of Bogotá, and among the tribes of the Sierra Nevada de Santa Marta. Today the use of coca is officially forbidden in Colombia on account of its harmful effects. According to Decree No. 95 of 1938, the sale of coca, except in apothecary shops and drugstores, was forbidden

60/ In addressing persons outside the family the following designations are used:

/182/

father's brother's son or mother's brother's son	pokatenyák
mother's brother's daughter or father's brother's daughter	pokatépěnyí (pokats = side)
stepbrother yakté	stepsister peš

The designations for brothers-in-law and sisters-in-law are the following:

If the brother speaks:

wife of the brother	só'ov	husband of the sister	tsóom

If the sister speaks:

wife of the brother	tyínas	husband of the sister	só'ov

More distant in-law relationships which in our kinship nomenclature are no longer distinguished as such are still taken into account by the Paez in the following instances:

father's brother's daughter's husband	tsóom	father's sister's son's wife	só'ov
mother's brother's daughter's husband	tsóom	mother's sister's son's wife	só'ov

In the generation of the grandparents or grandchildren, the following terms are used:

father's father	ísi	father's mother	péndyi
mother's father	ísi	mother's mother	péndyi
son's son	nzón	son's daughter	nzón
daughter's son	nzón	daughter's daughter	nzón

[192] The designations for persons at various age levels or circumstances of life are highly differentiated among the Paez; the

d) Death

761 According to the belief of the Paez, death occurs chiefly
776 through the action of the evil shamans (nyic) or the evil spirits
165 ec, tus, and gělyómp (see "Religion" /see pp. 191ff./). Included
164 here also is the not infrequent cause of death through consumption.
[262] Causes of death of children are chiefly whooping cough, as well as stomach and intestinal disorders, the latter brought about by a
[762] diet very unsuitable for children. Suicide is completely unknown.

764 The death of a member of the community is passed on from
[763] man to man by members of the family and neighbors. There is
[203] no public mourning or lamentation; upon the death of small
[765] children, people act as though they were glad, since the children
● [192] are now "little angels." (Among the colonists, as well as among the Paez, the Spanish word "angelito" is used.) In former times it was customary to abandon the house when death occurred and to leave the deceased and some food in it (Castillo i Orosco, p. IX).

764 The manner of burial is the same for men, women, and
184 children; there are no social differences. A few customs in other Paez communities, however, differ from those of the Calderun. Therefore the burial of the dead in Calderas will be described first.

[177] For burial the deceased is dressed if possible in purchased,
[290] that is, "white" clothing, even if he was the poorest of the poor and had never worn such clothing. For this reason the relatives incur considerable expense, which often cannot be paid for a long time. Burial takes place the day after death. Only the feet of the deceased are washed. This work, as well as dressing the deceased, may be done by relatives or even by outsiders; they must, /196/ however, always be men, even in the case of female deceased persons. The body is taken by two men on a bier made of two tree trunks to the graveyard next to the church, where two other men, usually relatives, have already dug the grave. The latter is trapezoid-shaped, a good shoulder's breadth at head height and narrower at the foot end. Its length is determined by the size of the deceased. The direction of the grave is completely arbitrary.

/201 cont./

461 Whereas the men for the most part plait straw hats when they
28 have nothing else to do, the women are busy with spinning and making the coca bags or the fiber bags. But even at this they do not work steadily in the sense, say, that they complete first one bag, for example, or make all the preparations from the outset for weaving an article of clothing; rather, they always work a little at a time on each task. Thus, for example, first a little spinning is done, then wood is fetched, then a coca bag is worked on, and then perhaps a brief hour is spent at the loom in order to weave a few centimeters more on the carrying band of the fiber bags, if the fiber material is at hand. No preparations are made for this plaiting and weaving for a long period in advance, but rather one provides herself with wool, spins it, weaves a bit farther, and then drops the work again for a week or more. Nevertheless, the women do not have periods of out-and-out idleness, like the men.
461 This doing-nothing is designated among the Paez with a word of
574 Spanish origin pasnyándo (paseando). To be sure, one must not
156 overdo the inactivity, that is, not "go for a walk" longer than
[192] about two weeks in succession, for otherwise one is called "alko" (dog), who runs from house to house, sniffs about everywhere, and gets his food from other people by begging. This is encouraged by the unwritten law of the Paez, to give food to a starving person,
[773] wherever it may be, until he is satisfied. This is taken very seriously, not only when adults are the petitioners, but also in the case of small children, in memory of an event in prehistoric times when Chauté /202/ turned a number of persons into stones because they had not given a begging child anything to eat out of their surplus (see the myths /see p. 224/). Hence if anyone enters a house "pasnyándo," he is given something to eat. Younger, unmarried people in particular take advantage of this and sometimes do not work at all, but go to a different house every day. They inquire as to where sugar cane is being milled, help there, are given chicha to drink and food to eat, and the next day go somewhere else. Thus there are some men who have neither house nor field, but nevertheless live quite well. To be sure, the

/204 cont./

556 special sociological role within their community, for they are elected neither more frequently nor more rarely to the village offices. They have simply "always" been considered wealthy, though it should be noted that in the language of the Paez there [192] is no word at all for "rich" or "poor." The word used for "poor," "póre," comes from the Spanish (povre), and the word used for "rich," "čačanas," at the same time means "strong" in the physi-
556 cal sense. Despite this apparent unimportance of wealth, how-
626 ever, it is jealously seen to that no other industrious man of a poor family will become rich and possibly put his wealth -- by means of Colombian dress or something similar -- on display. The evil shamans would put a spell on him or poison him, /205/ and the neighbors would devastate his fields by driving their cattle there. He would be cut by everyone, and people in a state of intoxica-
115 tion would start a fight with him in order to kill him. At any
556 rate, this is what happened and is happening to our interpreter,
626 Victoriano. He does not come from a wealthy family, but he wants to acquire money and livestock through diligence and [291] ability. From the money he earned among the whites he has [177] already bought himself the clothing of the whites, which he now proudly displays, and at festivals he sells wax candles and sweets. His fellow-villagers hate him on that account. The priest has had to protect him several times already from the machetes of drunken men who had started a fight with him; and in our presence, too, when we visited various houses with him, he was occasionally very rudely heckled by drunken men. Not least because, in the opinion
115 of the Calderun, he is not working. Again and again I tried to ex-
123 plain to the people that they, too, could "go walking" with me and
556 earn money if they were able to speak Spanish. Since this was
626 not the case, there was nothing else for me to do but always work with Victoriano. Nothing helped; Victoriano became more and more unpopular, and I, too, was regarded as a do-nothing. A
123 drunken man who, instead of the one cigarette he was given, vainly demanded an entire pack as a present abused me, too, as an "alko," a dog, who is always going from house to house and does not work.

/216/

IV. Spiritual Culture

1. Language

124 According to A. v. Humboldt, languages are differentiated by the elements of content and form, and, accordingly, languages are divided into three groups, which in the following period were erroneously interpreted as stages of the development of language. According to this, the oldest stage was represented by the isolating languages, which express form elements by means of independent words with the meaning still recognizable as far as content is concerned. Their words, as in Chinese, are monosyllabic, isolating. The second group is made up of the agglutinative languages, in which the element of form is added to the element of content, the stem, through clearly recognizable affixes. The Ural-Altaic and the Bantu languages in particular are put here. The inflected languages occupy the third stage. In them the form element is expressed by inner changes of the stem or by affixes closely intergrown with the stems, as, for example, in the Indo-Germanic and Hamito-Semitic languages.

Even though this classification of languages was subsequently abandoned as the schema of a sequence of development, it is nevertheless quite applicable as an initial, practical orientation. For the more precise classification of a language, the working out of the phonetics and syntax is required.

197 193 Paez is an agglutinative language. The grammatical forms are built up by a succession of syllables. The pronunciation is difficult for a European. It is similar to Kechua /Quechua/, from which a number of loanwords have been adopted.

175 797 192 193 114 The oldest linguistic reports about the Paez come from P. Eujenio del Castillo i Orosco, who collected his linguistic material around 1735, as a missionary in Tálaga. It was supplemented and published by E. Uricoechea in 1877. The collected data include a catechism, a vocabulary, and a grammar with information about personal pronouns and the conjugations of "to be" and "to write." The grammar and vocabulary contain some forms and word formations that are alien to the original Paez language.

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of the Paez from Pitayó collected by French missionaries.

197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic classification of Paez within the language groups of Colombia and classified it in the southwestern group of the six Chibchá language groups. (These Chibcha-speaking tribes correspond neither archeologically nor ethnologically to the true Chibcha (Mwiska) of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic recording lay, aside from the brief time at our disposal, in the lack of grammatical training of the interpreter, who otherwise spoke Spanish very well, but who, during dictation or in translations, often said the same sentence entirely differently when repeating it; possibly because he could translate it better this way. When his attention was called to this, the stereotyped answer was: "One can say it that way, too" or "that is the way we speak." Another thing was that the interpreter was able to summon up the unusual mental concentration for linguistic recording for only two or at most three hours daily, distributed over the forenoon and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collection of ethnological data, the following word list was also made with my Calderun interpreter, Victoriano Piñakuĕ.

In the Paez alphabet the complete palatal range, which includes all consonants, is noteworthy. Almost as numerous are the consonant combinations with the English "w." In the

/254 cont./

804 The period of a day is subdivided into the day (ẽn) and the
● 192 night (kos). Early morning is called kosẽ; afternoon at the time when work is at an end, which is reckoned by the position of the sun, is called fí'nze. Other subdivisions of the day are made according to the interval of an ẽnetc, meaning the time it takes to chew a dose of coca. In translation this designation is used for "hour." The largest period of time is the month, ãte, which is designated by the same word as for "moon." For the period of a year the Spanish word año is used. In former times the word
[221] enzte was used. It is the designation for the large annual com-
[226] munal fishing at the weir during the dry season in February. The
[132] two rainy seasons, called nospá'nye, and the two dry seasons of the year, called sek, are not regarded as time intervals, but as seasons. The latter is at the same time the word for "sun."

823 No large geographical orientations or regional, individual
[491] divisions of any kind could be discovered. Moreover, all of Tierradentro is enclosed by civilized areas -- there is even an auto road leading to Belalcázar -- so that many Paez men have seen the surrounding countryside and even cities with their own eyes.
601 Only the western bordering mountains of the Central Cordillera,
[186] in the direction of Popayán, are conjectured to be the habitation
123 area of the dreadful man-eaters, the Pijao. Geographical means
484 of orientation are unknown. Traveling is done only during the day, in groups, and in company with a person who knows the way.
821 Of the stars it is only known that there stars that move and fixed ones, without their being distinguished in greater detail or according to constellations.

202 It is amazing that, in spite of their settlement pattern of
[361] individual farms, the Paez do not have any optical or acoustical
[203] means of communication over larger distances. /255/ In case of urgent news or questions, children are sent.

802 There are numbers only from one to six and ten. For the designations seven to nine the corresponding Spanish numbers are used. The Paez word for "ten" (kóse pémba) literally means "no more hands" and indicates that the fingers were used for counting. The toes are not used for counting; anything beyond ten is

/287 cont./

4. Music

533 In no area of Paez culture is poverty evident to such an ex-
535 tent as in song and dance, the predominant expressions of the character and spirit of all peoples. No peculiar dance is per-
[173] formed among the /288/ Paez, and I heard no song sung. This undoubtedly represents an impoverishment, for it may be seen
533 from the folklore that in former times there was dancing. A similar conclusion must also be drawn about the playing of very
[173] agreeable music. Their knowledge of music, however, makes it
[181] highly probable that song also existed, especially among a people
[581 521 522] that is basically jolly and constantly disposed to jest. In fact, it is very difficult for a girl who is slow in jocular conversation to get a husband. And to my question about the Paez word for "sing
[192] house" listed in Uricoechea, the amiable Victoriano, to his own great surprise, was immediately able to give me a special word in his language, "mẽmyat."

534 It is not possible to say with certainty which of the musical
[171] instruments used by the Paez today is an original one. The absence of any kind of rattle, the outstanding instrument of the American natives, is surprising (*).

> * Pittier de Fábrega (p. 325) /see the bibliography in the foreign text, p. 326/, however, mentions among the musical instruments of the Paez a rattle (tsoóts) in the form of a calabash with a handle, which was filled with small stones. Whether this may not perhaps be an instrument of the Negroes of Belalcázar is still undecided.

534 The cow horn (kǎčn) found in every house is not in the true
202 sense a musical instrument, but one for signaling. It is completely undecorated and, consisting of a horn sawed off at the tip, gives only one tone, which is produced in the same manner as the tone of a bugle or fanfare. This horn is used by the men when they come down from the mountains after a joint felling of the trees needed for housebuilding, in order to notify the village of their return.

/318 cont./

105 assumed Chibcha language in particular. The difficulty of language
114 comparison in the northern Andean area lies in the wholely in-
197 adequate material for comparison. The majority of the tribes investigated have died out long ago, and there is seldom sufficiently complete material available from the few living ones. Even the true Chibcha (Mwiska) on the plateau of Bogotá has not been spoken for two and a half centuries and is known only from the literature. Beuchat and Rivet choose the lexicographic and grammatical method for their language comparison. The total vocabulary of the languages investigated contains about 200 words. These serve as comparative material for 49 languages, namely, for true Chibcha (Mwiska) and 23 other languages and dialects in northern Colombia and Panama, as well as for 25 languages and dialects of southern Colombian languages! Methodologically the procedure was to find a lexicographic agreement between language A and language B, another agreement between language B and language C, a further agreement between language C and language D, etc. In the proof, language A is related to languages B,
105 C, D, etc. Applied to Paez: In the vocabulary given by Beuchat
114 and Rivet there is no Paez word in direct agreement with Chibcha!
192 Nor was there even a choice of words according to their qualita-
197 tive significance. Thus it is especially noteworthy that there is a complete lack of corresponding designations for food, animals, useful plants, metals (gold), parts of the body, kinship designations, etc. /319/ On the basis of the vocabulary, therefore, it is not possible to designate Paez as a Chibcha language. To what extent this applies to the other southern Colombian tribes, for whom there usually exists only a very limited vocabulary, cannot be discussed here. In any case, there is a large number of Kechua /Quechua/ words in all these languages -- as a result of the close proximity to Kechua-speaking peoples. (For Paez, cf. the
105 compilations in Castillo i Orosco and Pittier de Fábrega.) Gram-
197 matical agreements between Chibcha and Paez do exist. At the
[114] same time, however, Beuchat and Rivet expressly point out that,
[193] of the languages compared, Paez shows the greatest grammatical differences with Chibcha (pp. 190/191). In summary it may be

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

FOOD. CULTIVATED AND OTHER USEFUL PLANTS

The principal food of the Paez Indians is maize, or Indian corn, of which they grow several varieties, belonging to three distinct types, namely, a sweet corn (*tšulpi*), a soft corn (*kapio*), and the common flint corn. The words *tšulpi* and *kapio* belong to the Kitšua language, a fact that points to the southern origin of these varieties. Judging from tradition, as well as from the varietal names used elsewhere in the Cauca valley, the flint corn that is grown all over the country may possibly be of northern origin. The Paez language has only one word to designate all varieties of corn, and it is interesting to note that the one now in use (*kutš* or *kukì*) is quite distinct from that employed in Castillo's time (*kokavi*). It is not unlikely that the present name was introduced by some of the tribes subsequently incorporated with the Paez. 262 243 [192] [174] [192]

The *tšulpi*, or sweet corn, is usually eaten roasted or boiled on the cob. Of soft corn, or *kapio*, they make a kind of dough called *χhiontš*, which is the base of several culinary preparations, among them the tortilla (*kuáts*). *Kaš* is a gruel made of black corn; *mutši*, or *motši* (the Kitšua *motc*), is prepared by shelling the kernels without disintegrating them. Last, but not least, large quantities of the grain are used in the preparation of chicha (*beka*). 262 252 [273]

Beans are generally cultivated along with maize. I noticed two varieties — *us kutš*, black beans, and *us bì*, red beans. The *osgual*, cited by Castillo as special to the village of Suin, are the seeds of the *Erythrina edulis* Triana, which I collected under the name of *us ual*; they are large, and when boiled taste almost exactly like the common horse-bean (*Faba vulgaris*). 244 262 [252]

Of scarcely less value as a food-staple are the several varieties of squashes, so generally cultivated and eaten as to have caused Castillo to express the opinion that "most of the Indians would perish should these fail in the province." The larger variety, *ápe-tots* (*Cucurbita maxima?*), is less common, and may have been introduced, although it already existed in Tierra Adentro in Castillo's time; *ápe*, the zapallo or pumpkin (*Cucurbita pepo*), is perhaps indigenous to the region, since the last native name,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

initial like *ll, ft, kb, kl, kn, kp, ks, kt, mb, pk, pl, pš, pt, št, tsk,* 194
or terminal like *fχ, kχ, pχ, mk, nš, nt.*

A further comparison of Castillo's material with my own 194
shows three chief points of divergence in the transcription of 114
words. One of them, namely, the prefixing of an initial *g* to words beginning with *ne* or *ne*, is general among Spanish authors, there being as much difficulty for a Spaniard to pronounce correctly that broad diphthong as to express any foreign word beginning in *st, sp*, etc., without an initial *e*. Just as a Spaniard will say 'estreet,' 'esprout,' 'estyle,' he is sure to pronounce 'gwatchman,' if not 'gwatchiman,' 'gwarbler,' and so on. This misspelling, then, may be regarded as an idiosyncrasy of our author.

A second difference, often repeated and which must be considered as an error in the reproduction of the original text, is that the words ending in my vocabulary in *ts, fχ, kχ*, etc., end respectively in *ti, fi, ki*, etc., in Castillo's vocabulary, the terminal *s* and *χ* having almost uniformly been mistaken for an *i*. Examples: [192]

efi	for	*efχ*,	eye-tooth.
equi	"	*ekχ*,	fuel.
cafi	"	*kafχ*,	gargante de.
cati	"	*kats*,	hide, skin, peel.
conchi	"	*kuntl*,	black.
miti	"	*mitl* or *mits*,	pot.
tambi	"	*tampχ*,	flank.

Unwritten languages are subject to rapid alteration. This is sufficient to explain the frequent change of *o* to *u*, and the suppression of the initials *a, e*, and *i*, in certain words. Following are a few examples of both cases: [192]

doj	has become		*duχ*,	weight.
rito	"	"	*ftu*,	tree.
guaco	"	"	*nāku*,	tick.
ouza	"	"	*kuuza*,	mouse.
ioc	"	"	*iuk*,	wood, fuel.
aloch	is now		*lutl*,	child.
alaueck	"	"	*lauetl*,	lizard.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194 *epeuch*	is now	*pent,*	old (applied to female only).
114 *isos*	" "	*sus,*	urine.
[192] *atamp*	" "	*taap,*	fog, cloud.

In Castillo's vocabularies *rs* stands for *ʒ*, *z* for *ts* and *tz*, *ch* for *tſ*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mis-a*, it is not; *ishe* for *its-é*, to join, to marry, etc.

II. — Word-formation

192 114 *Remarks.* — A few preliminary remarks as to the vocabulary given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's 114 192 vocabulary and their orthography adapted to our own.

197 174 Among those words not included in Castillo's, some have simply escaped him, as, for instance, a number of plant names. But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 114 [171] *Compound Nouns.* — The Paez language, like most of the languages belonging to the Chibchan group, has suffixes indicative of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

easy to determine the words that form such families, and it remains for the future student to systematize and complete them. 193 114
We are able, however, to give a few examples:

Kuć is indicative of smallness, fragility, and is found also in several terms referring to childhood or parental relations. 192 193
Examples:

kuć	child.
a-kuć	monkey.
ala-kuć	child.
anl-kuć	nephew.
anl-tsun-kuć	grandson.
atl-kuć	nephew.
dry-kuć	nephew.
etl-kuć	orphan (phantom's son).
ñu-kuć	uncle, father's brother.
ñe-ñu-kuć	aunt, father's sister.
ñuñu-kuć (onomatope)	a small dove.
uesa-kuć	girl.
ues-kuć	thread.
uitta-kuć	bird.

In the following words, however, the signification of the suffix is not apparent:

ak-kuć	burial.
eij-ka-kuć	ant.
ia-kuć	ceremonial feather-dress.
ka-kuć	body.
imeta-kuć	dorsal spine.
ne-kuć	challenge, contest.
sa-kuć	heart of a tree.

Gui, meaning disease, is found as a suffix in a few known cases:

atta-gui	hectic fever (lit. hot-ache). [164]
buts-gui	smallpox.
iuia-gui	intermittent fever.
su-gui	a medicinal plant.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193
192

Ñin signifies a small, round object, and is found in:

ipi-ñin	ember, red-hot coal (lit. fire-seed).
kigue-ñin	clay bullet, used with the blow-gun.
sogua-ñin	powder.

The verbal desinence *nās*, corresponding to the gerund tense, is largely used to form nouns that indicate condition or state, as in the following examples:

aknuk-nās	coward, from *aknuk*, to be frightened.
atš-kats-nās	tailor (*atš*, a piece of dress; *kats*, to sew).
do-nās	lying-in woman (*do*, to bring forth, to give birth).
fis-nās	the writer (*fis*, to write).
iās-nās	the one named (*iās-a*, to call oneself).
iāse-nās	he who baptizes (*iās-e*, to baptize).
ikas-nās	the chief, he who commands (*ikas-a*, to command).
ipons-nās	he who is powerful (*ipons*, the Pleiades).
χip-nās	the owner (*χip*, to have, to own).
pang-nās	he who is sentenced (*pang*, to sentence, to condemn).
pas-nās	the stranger, he who arrives (*pas*, to arrive).
sikia-nās	he who knows (*sikia*, to know).
tōte-nās	the governor, he who talks loud (*tōt*, to yell, to talk loud).
ukoments-nās	a kind of wasp.

193 It is also found that large groups of compound nouns have the same initial word, generally in the form of a monosyllabic prefix. Among them, two are of peculiar interest, on account of the apparent specialization of the prefixes *ne* and *pe*, the first of which seems to indicate only relationship, while the second is still more restrictive and refers almost exclusively to relations between father, mother, and children. The signification of *ne* is obscure; while *pe*, used as a prefix before a noun, evidently indicates the coming together of two or of several things or persons. Both groups have been incorporated in the vocabulary, as have a large group of verbs with the same prefix *pe*, but which have seemingly no relation to each other.

Formation of Adjectives.—A good number of adjectives also end in *kuí*, but this suffix seems to correspond to a form of the

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

verb 'to be,' following what may be a noun or another adjective, and may be regarded as a predicate adjective or denominative verb: 193

ampa-kuł, lean, sad.
ditł-kuł, pretty (Cast.).
dtitł-kuł, pretty (Pitt.).
dzuns-kuł, frail, slender.
its-kuł, lean.
łała-kuł, small.
nu-kuł, small, low, of a river. [192]
o-kuł, plane, even.
pats-kuł, ugly.
pets-kuł, thin, like paper.
uáts-kuł, lazy.

It should not be inferred from the scarcity of this class of words in the examples given that the Paez language is lacking in them. On the contrary, a few examples show that, like many other primitive idioms, the Paez distinguishes gradations and categories in the qualities he attributes to an object or to different objects or persons. Thus, Castillo gives four different words for 'thick,' all of which, and one more, are still in use to-day. Now it is found that every one of them has a distinct signification or is applied in distinct cases:

fitse, thick, viscous, semi-liquid (of soup, mud, etc.). [192]
ɣot, thick (of a tree).
ñiš, thick, stout (of a person).
iot, thick, bulky.
tat-a, thick or dense (of a forest, a jungle).

In the same way we have four expressions for 'large' three for 'soft,' etc., but without data to exemplify their use.

Reduplication is frequent in adjectives and seems to correspond to a superlative gradation.

The adjectives for 'young' and 'old' differ according to the sex of the person to whom they apply. The first is translated by *taki* when it applies to males, as in *pits-taki*, 'young man,' and by *kue-nas* when applied to females. 'Old' is *inš*, or *teĭ* when referring to males, and *pcnš* (or *e-pcnš*) when used for females. [562] [561]

Formation of Verbs. — Owing to the brevity of my stay among the Paez Indians, I felt from the first a certain reluctance to enter into the intricate study of the verbs, fearing that, should 193 114

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 114 I begin it, I might be induced to accept *a priori* as true apparent rules which would then draw me into further mistakes. My former experience shows that a reliable comprehension of the infinite variations of the verbs, as bearing on flexion, derivation, etc., is not really acquired until one is fully cognizant of the spirit of the language to which they belong and is able to handle this almost as easily as his own.

In consequence of this, the few notes that follow are based mainly on the verbal terms included in Castillo's vocabulary.

193 192 (*a*) *Primitive Verbs.* — We find first that there are terms, expressive of condition, action, or motion, that can be considered as essentially verbal, and could be called, for simplicity's sake, "primitive verbs." Here are a few of them:

di, to sleep	*ôts*, to burn.
gigw, to run	*pcâ*, to beg, to ask.
ies, to fly	*pas*, to stretch.
kis, to fast	*pot*, to breathe.
ktond, to carry	*ti*, to attend, to serve.
o, to eat	*ts*, to take, to receive.
ô, to die	*tunt*, to soften, to knead.
ôp, to shut, to close	*tet*, to beat, to knock.
os, to give	*tett*, to lick.
ôt, to plant	*vis*, to touch.

ots, to work wood (labrar madera).

It is not unlikely that most of these verbs were originally nouns or adjectives, and that a few of them are still in use as such, although they do not so appear in the vocabulary. The following are given with a nominal, or a qualificative, and a verbal signification, and may be considered as true

(*b*) *Denominative Verbs* — susceptible of all flexions corresponding to person, mode, or time:

ampô-kud, sad, to be sad.
atkatl, warm; *atkad*, to be warm (*ô-atl*, to warm one's self).
ies-ô, standing, to be standing.
ipe-inka, thoughtful, to be thoughtful.
yacud, laying, to be laying.
paio-ki, careless, to be careless.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

A3
A2

thitan, hung, hanging, to be hanging.
ti, hiccough, to gasp, to breathe one's last.
ii, rut, menstruum, to be in heat (applied to a female animal).
hami, to lie, lie.
hit-hi, light, to dawn.
hit, tooth; *hit-ik*, to lie on the abdomen (estar boca abajo).
ke-ia, food, to cook.
netta, be merry, to be merry.

(*c*) *Verbal Prefixes.* — But more generally the transition from the adjective or from the noun is indicated by the prefix *i*, the exact sense of which is not clear. Thus —

ne-io, wife;	*i-io*, to marry (when the man marries).
ne-mi, husband;	*i-mi*, to marry (when the woman marries).
puns-a, arm-pit;	*i-puns*, to carry under the arm.
sus, urine;	*i-sus*, to urinate.
tiu, short;	*i-tiu*, to shorten.

Sometimes the radical word is already a verbal form, as in —

i-pi-ttas-a, to be jealous, to accuse; derived from *ttas-a*, to hit.
i-pot, to smell like; derived from *pot*, to stink.

In other cases of this class the prefix is *pe*, or *ka*, the meaning of which is equally obscure:

ftuts, to fix, to nail;	*pe-ftu*, to put together.
hit, a tooth;	*pe-hit*, to masticate.
ttantl, to suck;	*petlantl*, to suck.
gógu, to run;	*ka-gó*, to roll down.
itse, to join;	*ka-itse*, to join, to put together.
hond, to break;	*ka-hond*, to carry off violently.
pang, to sentence;	*ka-pangó*, to punish.

III. — Parts of Speech

A. — *The Noun*

1. *Gender of Nouns.* — When gender is indicated, it is usually by means of suffixing the word *pits*, male, or *ii* (Cast. *ói*), female. Examples:

atall-pits, rooster;	*atall-ii*, hen.
de-pits, lover;	*de-ii*, sweetheart, concubine.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 This rule, however, applies only to persons or animals.
192 Plants and inanimate objects have no gender, so far as known. Moreover, many usual terms, mostly personal, have distinct forms according to sex. We have for instance:

doχ-kuĕ, nephew;	*doχ-uĕs*, niece.
inĕ, grandfather;	*nentĕ*, grandmother.
e-ĕĕ / *ne-ĕ* } father;	*ne-si*, mother.
ne-mĕ, husband;	*ne-ŭĕ*, wife.
ne-tson, brother-in-law;	*ne-soŭ*, sister-in-law.
sat, cacique, chieftain;	*oĕa*, woman principal, cacique's wife.

2. *Number of Nouns.*—The prefix *pe*, already alluded to, may be considered as indicating duality; at least such is distinctly the case in the following instances:

pe-ndii, to be or to go together sister and brother.
pe-niiĕ, son and father, or mother and daughter.
pe-peĕ, to be or to go together brother and sister.
pe-tam, male and female, together.
pe-tsik, son and mother, or son and father, together.

Plurality seems to be indicated in most instances simply by means of the determinative *uei* or *guei*, many, except in the case of nouns designating persons, when the suffix *neĕ*, or *gueĕ*, is used. But the same suffix appears also as a distinctive of collectivity, so that this point is not altogether clear. We have:

pits, man;	*pits-neĕ*, men.
teĕ, adult;	*teĕ-neĕ*, adults.

But also

E-ĕ-neĕ hus attatĕ meng-a? Did you annoy your father? (Lit. Did you make your father's hea t hot?)
father heart hot made

193 3. *Double Gender.*—It is interesting to find in the Paez lan-
601 guage a few cases of what De la Grasserie in a recent work[1] calls "double gender," i. e., nouns that express in a single word the sex of the person who speaks and the sex of the person

[1] Raoul de la Grasserie *De la Catégorie du Genre*, Paris, 1906.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193

Perfectum

1st p. *anki-t fis*, I wrote;	*kuł-k-uel ta-u fis*, we wrote;
2d p. *inui-ng fis*	*ik-uel ik-u fis*
3d p. *kinâ-k fis*	*kinâ-g-uel tink fis.*

Futurum

1st p. *anki fis an-et*, I shall write;	*kuł-k-uel fis an-et ka-u*, we shall write;
2d p. *inui fis an-eng.*	*ik-uel fis an-ek*
3d p. *kina fis an-en*	*kinâ-g-uel fis a-tin.*

Castillo gives two more forms for the Præsens:

1st p. *fis ats-it*, I am writing, or painting;	*fis ats-i-ta-u*, we are (etc.);
2d p. *fis ats-ing*	*fis ats-ik-ua*
3d p. *fis ats-ik*	*fis ats-i-ta*

and

1st p. *fis u-op-t*, I am writing, or painting;	*fis op-ta-u*, we are (etc.);
2d p. *fis op-nga*	*fis u-op-kua*
3d p. *fis u-op-a*	*fis u-op-ta.*

The infix *ats* is an affirmative particle; *ôp* is a kind of auxiliary verb, corresponding with 'to be,' or 'to have.' The *k* and *g* of the plural forms (1st and 3d pers.) are simply euphonic intercalations.

The imperative tense is often formed by prefixing or suffixing *mâ*, with a frequent elision of the *â*, as in the following examples:

Tund-e-mâ! Run! (Hurry up!)
Tata mâ-palla! Go (and) call (your) father!
Atta-mâ! Go away!
Kla u-ue (mâ-ue)! Catch the cow!
Io u-pts! Give (me) water!
Mi-io! Come!

E. — *Borrowed Words*

192
177

(1) *From the Spanish.* — As might have been expected, we find in Paez quite a number of Spanish words, most of which are included in the following list:

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

192
.177

kmisa,	for *camisa,*	shirt.
kneia,	" *guinea,*	a variety of banana.
kiso,	" *queso,*	cheese.
kitil,	" *cuchillo,*	knife (machete).
kutti,	" *coche,*	pig.
letti,	" *leche,*	milk.
mama,	" *mamá,*	mother.
mil,	" *miel,*	honey.
pango,	" *banco,*	bench.
sap,	" *sapo,*	toad.
senda,	" *cinta,*	ribbon.
slapon,	" *eslabon,*	fire-steel.
ticle,	" *tigre,*	jaguar.

(2) *From the Kitšua.* — In describing the territory occupied by the Paez and the neighboring tribes which later became consolidated with them, we have seen that it was, and is still, in close proximity to the northern end of the area occupied by the Kitšua (see the map, plate 1). Intercourse between these peoples has been necessarily frequent, and many words have become common to both languages. Castillo's editor, the late Professor Uricoechea, obtained a list of some of these words from Mr G. Pacheco Zegarra, who had perused Castillo's vocabulary. To these I added a few, notwithstanding which the list still remains very incomplete, as the lack of an extensive Kitšua dictionary, including the northern dialects, forbade any further effort on my part to make it longer:

D77]

Paez	*Kitšua*
akots, cinder	*akku,* cinder
atsi, to sneeze (onomatope)	*atsii,* to sneeze
atall-pits, rooster	*atall-pa,* rooster
anaku, part of woman dress	*anaku,* part of woman's dress
as-a, to stink	*as-nana,*
atša, very	*atša* (*antša*), much, very
alko, dog	*allko,* dog
aú, yes	*aú,* yes
kipa-ki, to overtake by following	*kipa,* behind, after
killim, drivel, dirt	*kelli,* drivel, dirt
kandul, vulture (condor)	*kuntur,* vulture
ia-yi, blooming sugar-cane	*ia-yin,* blooming sugar-cane, also a vine

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

killka, paper, letter, book	*killka*, paper, letter, book	192
kattoni, to lick	*kattoni*, to bite	177
kikin, again	*kikin*, again	
kakka, father-in-law	*kakka*, father-in-law	
laki, lax, feeble, lazy	*llaki*, feeble faint, sad	
mutlai, to kiss	*mutlai*, kiss	
mil, cat	*misi*, *mitti*, cat	
miski, honey	*miski*, honey	
muti, boiled corn	*muti*, boiled corn	
lla, to complete, to finish	*lla*, so (Span. *yá*! yà se acabó = *lla*)	
lusa, sugar-cane, sweet cane	*luk-lu*, sweet, applied to any fruit	
pilu-skia; to hate, to quarrel	*pila-tsina*, to be angry	
pisko, turkey	*pilku*, bird	
puki, watershed	*pucyu*, watershed	
pein, to ask	*pin?* who is it?	
tlumbe, sash to support the *anaku*	*tlumbi*, sash, girdle	
tlpi-pi, turkey	*tlumpi*, brown	
ukupa-ki, to push	*ukupa-tlii*, to push	
uás, a hut	*huási*, house	
vite-pasak, one hundred	*patlak*, one hundred	

(3) *From other Languages.*— It is likely that the Paez language borrowed many other terms from neighboring tribes, but thus far we lack the necessary material for comparison. As explained above, since Castillo's residence among these Indians their language seems to have undergone considerable change, especially in its vocabulary, a fact readily explained if we admit that the present Paez are composed of the remains of several tribes, greatly reduced in number by their wars with the Spanish conquerors and the hardships they suffered after their submission to the new rule. With the Chibcha, the analogies seem reduced to the rules of construction, the vocabulary being totally distinct. 192 174

F. — *The Numerals* 802

1. *Ias, viteti*	*teti*
2. *Ens*	*ens*
3. *Tek*	*tek*
4. *Pans*	*tans*

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

802

5.	*Tats*	*tats*
6.	*Sanki*	*tesets, teseki̇*
7.	*Ens-sanki*	
8.	*Tek-sanki, puki-pans*	
9.	*Pans-sanki*	
10.	*Kose-pemba*	*ksemba*
20.	*Ens-kose-pemba*	
30.	*Tek-kose-pemba*	
40.	*Pans-kose-pemba*	
100.	*Pasats-tla, vite-pasak*	
1000.	*kose-pemba-pasats-tla*	

As indicated by the above examples, the Paez Indians formerly counted upon their fingers, so that their numeration was necessarily decimal. It is difficult, not to say impossible, to determine the meaning of the word *sanki*, for 'six,' but it seems to have been, as Castillo expresses it, a base for the series between five and ten. Thus *ens-sanki*, means the 'second six'; *tek-sanki*, the 'third six'; *pans-sanki*, the 'fourth six.' We also find that *puki-pans*, a second expression for *eight*, means the 'return of four.'

Kose-pemba, ten, means 'the hands completed,' an expression similar to that found in many other primitive languages. At present this system is found only in a mutilated form, including the numerals one to six, and ten. For other numbers Spanish is used. *Vitetl* has become reduced to *tetl*; and another expression, meaning apparently 'second one' (*tetl-ens?*), has been substituted for *sanki*.

IV. — Vocabulary

192 [126]

The following vocabulary includes all words collected by the author and not found in Castillo's work, and also expressions of the latter that complete families of words with a common root. *H* means Huila, and *T* Tacueyó, villages in which words were collected. *Cast.* signifies Castillo; *Span.*, Spanish.

a, an (*anl, atl?*)	mine, my; our, ours
a-eu̇ (T), *ia-eu̇* (H)	eye — Cast.: *ia-fi*
á-eu̇ (T), *guá-gua* (H)	*Inga edulis*, a tree
alko (Kithus word)	dog

ālho + mut-kuł	*Solanum mammosum*, a plant; Span. *tetilla* 192 [601]
ain + do (T)	son-in-law. See *anł-indaχá*
ain + hēll-kua (T)	son — Cast. has *ne-tlik*; in the modern word is found the root of *a-łell*, medieval word for boy, or girl
anio + ūts (T), *pūs* (H)	the Pleiades, a constellation
anł (nasal *a*, *āł*)	may signify my, mine
anł + indaχá (H)	son-in-law [601]
anł + kuł (H), *atł + kuł* (T)	nephew — Cast.: *doχ-kuł*
anł + máma (H), *máma + señor* (T)	maternal grandfather
anł + táta (H), *táta + señor* (T)	paternal grandfather
anł + táta (H), *atł + háka* (T)	father-in-law
anł + tsún-kuł (H), *a-tsún* (T)	grandson
anł + uasáh-ua (H), *atł-uásset* (T)	niece — Cast.: *doχ-ues*
anł + āi (H), *atł-āi* (T)	wife — Cast.: *ne-iō*; see *āi* [601]
ap	fly
ap + uts	mosquito — (*uts* means worm)
ātā	moon, month
ātā-łułł	crescent moon
ātā-łułł-a	new moon
ātā-tansa (T), *ātā-tansia* (H)	waning moon
a-tsún (T), *anł-tsún-kuł* (H)	grandson — Cast.: *ne-tsom* (*tsom* = *tsún*) [601]
atł (onomatope)	to sneeze
atł	ruana, a piece of native dress
atł + kas-nas	tailor (*kats* = to sew)
atł + pètł	a piece of native male dress — Cast.: (*atipetł*)
atł + tul	a piece of woman's dress
atł + kuł (T)	nephew [601]
atł-ua-set (T)	niece
atł-āi (T)	wife; see also *anł*
atā, athu (H)	bed — Cast. has *de-ki-ue*; *dē* = sleep, *ki-ue* = place: a place to sleep
hamb (H)	shoulder — Cast.: *am-hamb*

Gourd Vessels and Etiquette

415 554 273 There are three types of gourd vessels in which chicha is distributed and whose traditional order of use reflects hierarchy, majority, and high status; some gourd vessels are used for all those present, of both sexes and all ages; others, only for a specific class of people.

[192] The first type is small with an ovoid opening, made of half a gourd. In the Paez dialect it is called shup /201/ /illustration appears here/ shachi. All visitors, without distinction as to sex, age, or status, are presented with two matés of this type: the first one contains "strong water" to quench thirst, while the second contains chicha, the authentic strong chicha.

The second type of container is the shachi pitán (gourd-vessel capitan), of greater capacity than the first, ovoid in shape, and open at one end. The most respected persons of both sexes, adults and elders, are given chicha in these gourd vessels, /202/ after taking it from the shup shachi. They indicate a certain deference on the part of the host, and by the same token he wishes them to get drunk. Those who are favored with these gourds offer them to all present, who take them, taste the contents, and return them to the hands of the owner. The shachi pitán has gone from mouth to mouth, but the contents remain practically untouched; the owner is to drink it.

The laborers and mayordomos who are in his service, the albacero, the síndico /trustee/, and the highly respected elders, after having received chicha in the shup shachi and in the shachi pitán, receive a larger gourd vessel in which there is a tiny one (shachi léchukue), which is called suilté. The presentation of this has an etiquette of its own. The host comes out with the suilté in his hands, fills the shachi léchukue with

/208 cont./

231 After skinning it, they quarter it following a definite
796 sequence: the lower part of the hind legs (chinda), the lower
192 part of the front legs (kuse), the upper part of the hind legs (himbé), the upper part of the front legs (pala), the tail (mens), the flesh of the neck (chikichichi), the fat (sepo), upper intestine (chunchullo), lower intestine (meto), stomach (tuchi), /209/ trachea (pechita), lungs (mechto), heart (ús), liver
[827] (mechi), the gall (muahi), pancreas (shape)... They are familiar with most of the organs and their names, but not with their specific physiology.

262 Some of the pieces of meat go directly into the pan of
796 "mute," which is boiling and which the workers will eat for
252 lunch; others, to the barbecue where they will get the smoke from the kitchen.

Inside the house, in the fluhne wala, the women grind shelled maize on two metates to make maize griddlecakes. With maize flour and water they make a dough which various women shape with their hands into circular form. In a separate kitchen, two women and two men are busy roasting them. First they let them harden on a piece of broken earthenware and then complete the cooking in the embers of the hearth. An elderly man gathers those that are cooked into a bag. Another one occupies himself with singing religious songs and praying. The maize griddlecakes are used to take care of the albacero on the following day.

796 This work is performed enthusiastically by the women.
[462] --The days of the fiesta are for talking, says one woman.
[829] --One can live through life only by getting drunk, says
[273] another.

[128]

1. Generic term with which the natives designate all those who observe the norms of western culture, without any distinction as to race. For convenience we have adopted this usage, putting the term in quotation marks.

ligious fiestas are frequent during this period. The work is done /294/ with devotion and perseverance. It is not done in haste, but there is no resting either.

423 Every Páez family has its lands. This is its ambition. The
[183] primary source of its security. Every crag has an owner whose title has been won by the sweat of his brow. Every crag harbors a rancho that shelters a family. Every inch of land is passionately
[571] defended by the native. The disputes stirred up by this fact are not few. In like manner the cabildos are never so zealous as in the defense of the lands of the parcialidad /a territorial division/.
[648] The areas of settlement /areas of colonization by whites/ are spearheads in the very heart of the community. They were established against the full opposition of the natives. On the other hand, the defense of the land and the prevention of contamination by foreign peoples are postulates of the doctrine. The distribution of the houses suggests in advance the profusion of paths and private property.

When they win the scarce land, the distances and difficul-
[464] ties that loom are not important. They are good colonizers, and it is rare that persons who lack land hire themselves out as permanent peons or become tenant farmers on the great haciendas.
[181] They prefer independence above all.

311 To study the economy of the Páez, certain factors of a
133 geographico-physical and cultural nature cannot be overlooked. They are:

1. Thermic levels. The lands now occupied by the Páez of Tierradentro correspond to the thermic levels of cold and temperate. The contour line corresponding to 2,000 meters

/299 cont./

245 year. Traders in Silvia sell the crops at up to 14 pesos an arroba.
[439] Lame produces perhaps the best peaches, but they are not suitable for export because they are easily damaged. There are also numerous plantings in Tumbichukue and Calderas, although they do not have much care.

247 Floriculture does not exist among the Páez, and they cannot understand the labor that the "whites" invest in their gardens. They are always of the opinion that food plants should be sown on such lands.

241 Among the cultivated plants, they regard as native maize ("the /300/ Pijao had maize"), the hartón /large-sized/ plantain ("the Pijao also had it"), frijoles, mejicano /squash, Cucurbita pepo/, cabbages, and the cane "criolla" /Creole, native/, while coca, they say, seems rather to have come from the "whites."

241 Species cultivated and zones of cultivation

137 Here is a list of the food plants cultivated by the Páez (5):

●192

[128]

222 In reality, as far as a certain type of frijole that the natives
241 call "kacha" is concerned, as well as the ground cherry, the chachafruto, fruits in general, and all the plants listed under "Other cultivated plants," with the exception of coca, the word "cultivated" is unsuitable, since they are practically in a semiwild state. The natives make use of their fruits, consumption thus being occasional and not always necessary.

133 Although it would appear that the territory of the Páez, at the
241 time of the Conquest, extended up to very close to the Magdalena
361 River, the principal nucleus of the population was located in the
[131] temperate zone and in the cold zone. The thermal levels determine
[161] the zones of cultivation. One of them goes from 1,000 to 2,000 meters and includes the entire valley of the Páez from Huila to La Plata, and the middle and lower courses of its tributaries Símbola, the river Negro de Narváez, Moras, Kukiyú, and Ullucos. Within it are located the capitals of the district, Inzá and Belalcázar, and the following native aldeas: Itaibe, Chitóquez (Ricaurte), Cuetando, Yaquivá, San Andrés de Pisimbalá, Santa Rosa, Togoima, Avirama, Chinas, Suin, Tálaga, Toez y Huila (Byla), as well as Valencia, Topa, Pedregal, and Turminá. They cultivate principally plantains, manioc, maize, sugar cane, frijoles, arracacha, coca, and coffee,

/180 cont./

583 In Paris on the first of March, 1877, Esequiel Uricoechea
[175] wrote in his introduction to the Vocabulario: "Marriage in the sense in which we accept it today did not exist among the Páeces: two people lived a married life for some time and the marriage was not legalized without the previous certainty that
[192] the woman was fecund. It is natural then, that we find among the Páeces, as among the Peruvians, two verbs (imi and iyó) which indicate respectively the woman accepts the man and the man takes the woman. The woman was obliged to give clothing to the husband, and he "to provide sustenance for the family" (12).

12. Castillo y Orozdo, E. del. Vocabulario Páez-Castellano /Paez-Spanish Vocabulary/, 1877, p. XIV.

Our informants from Calderas confirm the effectiveness of this custom, some justifying it by the need of the future husband /181/ to obtain the money to pay the expenses of the wedding, others in order to "catear" /sample, find out/ if the woman is honest, a worker, and faithful, and there was no lack of those who clearly stated that this trial marriage "is customary because if the woman should turn out to be machorra /barren/ there is no marriage." When such occurs the man returns the woman to her parents without any problem standing in the way, which would not be the case if they were married by the Church, in which case the return is not possible.

162 Our investigations concerning the frequency of the "amaño"
583 in the established families of some parcialidades of Tierradentro
595 showed the following results:

184 Calderas: 42 families (28% of the approximate total of Calderun families). 57.1% of these families practiced the amaño: 42.9% were married first by the Church.

San Andrés: 13 families (6.5% of the approximate total of San Andrés families). 92.3% were married first by the Church; 7.7% practiced the amaño.

/216/

IV. Spiritual Culture

1. Language

121 According to A. v. Humboldt, languages are differentiated by the elements of content and form, and, accordingly, languages are divided into three groups, which in the following period were erroneously interpreted as stages of the development of language. According to this, the oldest stage was represented by the isolating languages, which express form elements by means of independent words with the meaning still recognizable as far as content is concerned. Their words, as in Chinese, are monosyllabic, isolating. The second group is made up of the agglutinative languages, in which the element of form is added to the element of content, the stem, through clearly recognizable affixes. The Ural-Altaic and the Bantu languages in particular are put here. The inflected languages occupy the third stage. In them the form element is expressed by inner changes of the stem or by affixes closely intergrown with the stems, as, for example, in the Indo-Germanic and Hamito-Semitic languages.

Even though this classification of languages was subsequently abandoned as the schema of a sequence of development, it is nevertheless quite applicable as an initial, practical orientation. For the more precise classification of a language, the working out of the phonetics and syntax is required.

197 193 Paez is an agglutinative language. The grammatical forms are built up by a succession of syllables. The pronunciation is difficult for a European. It is similar to Kechua /Quechua/, from which a number of loanwords have been adopted.

175 797 192 193 114 The oldest linguistic reports about the Paez come from P. Eujenio del Castillo i Orosco, who collected his linguistic material around 1735, as a missionary in Tálaga. It was supplemented and published by E. Uricoechea in 1877. The collected data include a catechism, a vocabulary, and a grammar with information about personal pronouns and the conjugations of "to be" and "to write." The grammar and vocabulary contain some forms and word formations that are alien to the original Paez language.

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of the Paez from Pitayó collected by French missionaries.

197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic classification of Paez within the language groups of Colombia and classified it in the southwestern group of the six Chibcha language groups. (These Chibcha-speaking tribes correspond neither archeologically nor ethnologically to the true Chibcha (Mwiska) of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic recording lay, aside from the brief time at our disposal, in the lack of grammatical training of the interpreter, who otherwise spoke Spanish very well, but who, during dictation or in translations, often said the same sentence entirely differently when repeating it; possibly because he could translate it better this way. When his attention was called to this, the stereotyped answer was: "One can say it that way, too" or "that is the way we speak." Another thing was that the interpreter was able to summon up the unusual mental concentration for linguistic recording for only two or at most three hours daily, distributed over the forenoon and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collection of ethnological data, the following word list was also made with my Calderun interpreter, Victoriano Piñakuẽ.

In the Paez alphabet the complete palatal range, which includes all consonants, is noteworthy. Almost as numerous are the consonant combinations with the English "w." In the

/220 cont./

194 alike at first, but in reality differ -- aside from context -- in minimal nasal differences in pronunciation. Thus, for example, atc means "I," "today," "ruana," and "digging stick."

Stress is indicated by an accent (ˈ) or by a circumflex. Words without a mark for stress are stressed on the penultimate syllable. An accent (ˈ) between a vowel and the following consonant has sound value and indicates a "glottal stop" (glottal catch).

b) Grammar

● 193 The substantive: There is no article. Gender is not distinguished in words for things and plants. In the case of human beings and animals such a distinction occurs only in exceptional cases, for the terminology for human beings with respect to sex and age or circumstances is so rich in special words that special designations for the sex in general are not required (cf. the kinship nomenclature in the section "Family Organization"). The distinction is not only so exact with respect to human beings, but even maize, for example, is designated by entirely different words, depending on whether it is ripe or still green (kotc or tsot). If a more precise distinction is nevertheless required, the suffixes -pits (man) for the male sex and -ói (woman for the female sex are used, for example, éčpits, "widower," éčoi, "widow." In general, however, these are artificial distinctions which are used primarily for loanwords. In this case one proceeds from the general or typical. Thus, átaly is the "chicken," and it is the rooster that is singled out and distinguished from the chicken by the suffix -pits (átályepítste). "Horse" is regarded as general and is designated as hímba; the special distinctions are himbapítste, "stallion," and himbaóite, "mare." Moreover, the word lečkwe (child) is added as a suffix to designate small living creatures or small things, for example, luč, "child," lučléčkwe "small child"; hímba, "horse," himbaléčkwe, "foal"; átaly, "chicken," atályeléčkwe, "little chicken"; yat, "house," yatléčkwe, "small

/220 cont./

193 house"; witõñ, "tree," wítoñléčkwe, "small tree."

193 601 In the case of kinship nouns, there is a prefix pe- for designating female relatives, for example, pétsots, "father's sister," pěnyok, "mother's sister," "stepmother," "mother's brother's wife." Within the family a dual is designated with the prefix pe-, for example, pětãm, "father /221/ and mother together," pěndyík, "father and son together" or "mother and son together," pěndyĩs, "father and daughter together" or "mother and daughter together."

193 The suffix -nas often designates a state or an activity and is used chiefly to form new words: fisnãs, "writer," ãtycatynãs, "tailor," yãsnãs, "baptizer" (name-giver), pãsnãs, "stranger, new arrival," ká'nas, "burgomaster," ndõsoknãs, "midwife," gnãs, "virgin." "To become intoxicated" is toñ, the "drunken man" tónas, "one who is becoming intoxicated" tónye. The forms tátyinas, "creator," and tótenas, "gobernador," are used only in sentences. As an individual word one says tákiyi or tótens, respectively. Possibly the ending -nas is one used only in a specific context, like the suffixes -pas and -sa, which are not infrequently encountered. In the case of adjectives, some in the positive and others in the comparative end in -nas: čačanas (strong), wac nyíčkwenas (more beautiful), wac éwnas (better).

There is no general plural. For a more precise designation either a number or an indefinite pronoun is added, for example, teč, "one," or in the plural, é'nzí, "both" (from é'nz, "two"), ko, "several," tak, "many." For the plural in connection with persons the suffix -weš is used in part, for example, pítstewes, "people," Mogweš, tribe of Guambiano, či'meweš, "whites" (či'me=white).

There is no declension. The sentence order is generally: subject, object, predicate. The nominative is to be distinguished only by its position at the beginning of the sentence. The accusative comes after the nominative and generally before the verb.

Atya na himbása vítepitsna óson, "I this horse this man give," ãtya táwas tyaóinat ípak, "I the belt (taw) from this woman (of)

193 /221 cont./
received," kwéša éšpas kyéhi óratepa óñwetáw, "we coca at any hour eat," čõosoñ pítstečãta mahẽ, yátde oíčãta mahẽ, "in the field men only work, in the house women only work," pálkite táwala kíma õsya, "in the park many sand fleas there are," but: ãtya evít kyákulása, "I lost this cow" (kula = cow), ãtya pákan teč pésnye, "I receive a present."

The genitive is expressed by its position before the subject. Pítste šwáa, "the hat of the man" (šwa = hat), ói táwa, "the belt of the woman" (taw = belt), pítste álko, "the dog of the man," tótenas nyó, "the wife of the gobernador."

Negation is generally expressed by met, for example, hip met, "I do not have"; ñéndya, "to like," ñéndyi met, "not to like"; ãtya uwẽt, "I am hungry," ãtya ũwemẽt, "I am not hungry"; ãtya teč nyákča hipt, "I a brother have" (brother = yacté), ãtya teč nyákča /222/ hip met, "I have a brother not"; ãtya teč péšča nyópa, "I a sister not have" (sister = peš; "nyópa" was likewise translated for me as "not have").

Adjective: In the Paez the adjectives follow and do not change with respect to sex and number: yat ĩš, "the old house" pits ĩš, "the old man." The meaning of the adjective is in some cases differentiated more than in German, for example, "strong": pítste čãčat, "the strong man," hímba čãčat, "the strong horse," but: mbéka põs, "the strong chicha." For "stout," the following adjectives are used: pítste nyíš, "the stout man"; víton hõt "the stout tree." Likewise there are different words for young or old, depending on whether it is a matter of men or women.

Comparisons are expressed by wac, "more": hímba éw, "the good horse," hímba wac éwnas, "the better horse"; ói nyíčkwe, "the beautiful woman," ói wac nyíčkwenas, "the more beautiful woman"; ganš, "ugly," wac ganš, "uglier"; wéča, "little," wac wẽ, "less."

/222 cont./

802 Numerals: The cardinal numbers and the ordinal numbers are the same. The decimal counting system is built up on counting with the fingers. The numbers six to nine are compounds with "sáki" (six), whereby seven is formed as "six and two," eight as "six and three." There is no counting beyond ten. For "very many" one says "teč kwat" in Paez, literally "one stone." Today it has the meaning of "hundred."

1	teč	7	é'nzsáki
2	é'nz	8	tēksaki
3	tek	9	pánssaki
4	pans	10	kosēmba (literally kōse pēmba "end of hands")
5	tats		
6	sáki or tēčsaki		

● 193 Pronouns: The personal pronouns are absolutely necessary for conjugation. They are put at the beginning. In the first person singular a distinction is made without exception between masculine and feminine; in the second person singular, only in special cases. These cases are the address of spouses to each other, of siblings among themselves, and address to persons of respect. Otherwise there is no distinction according to sex either in the second person singular or in other forms of the singular and plural.

I (masc.): atc; in connection with the verb, ātya; in the conjugations the suffix -pa, "too /auch, "too, also, likewise"/," is often added to the personal pronouns, ātypa, "I, too."

I (fem): ōk.

/223/

193 576 you (masc. and fem.): inc. Young people address older ones neither with "inc" nor with their names. In the case of men, they must first inquire about the name of the man's son (or if he has none, his daughter) and then

/223 cont./

193 576

address him as "father of ..." If the person concerned has no children, one addresses him, like contemporaries, by his first name, "since a man who has no children is no man."

Older women are respectfully addressed "ĩkf."

193 601

you (father or mother to son):	kwe
you (father or mother to daughter):	ĩča
you (wife to husband):	ĩngya
you (husband to wife):	ĩkwe
you (brother to brother or sister to sister):	yakté
you (brother to sister):	pe'š
you (sister to brother):	ndyĩš
you (fem.):	ĩkf, respectful address for older women
he, she, it:	kya
we (masc. and fem.):	kweš
they (masc. and fem.):	kyáṅweš

193 [576]

you /plural/: not known; in the corresponding translation the word cúkai (all) was sometimes used. In the grammar of Castillo i Orosco, the Paez word "icuexs" (ikweš) is given for "vosotros." The interpreter translated this for me as "Ustedes." It is not used to conjugate verbs.

[114]

The possessive pronouns correspond -- except in the third person singular -- to the personal pronouns. They are placed first.

/223 cont./

193 The masculine forms are:

my	horse	ãtc	himba
your	horse	inc	himba
his	horse	kyec	himba
our	horse	kweš	himba
their	horse	kyánweš	himba

The feminine forms are:

my	belt	ōk	táwa
your	belt	inc	táwa
her	belt	kyec	táwa
our	belt	kweš	táwa
their	belt	kyánweš	táwa

The demonstrative pronouns are: "na" (this) and wíte (literally, "the other") in combination with /224/ "na," before or after, in the sense of "that." Na ãtc, "this ruana," wítena ãtc,, "that ruana"; na hímba, "this horse," wíte hímbana "that horse." Sometimes the third person singular of the personal pronoun (kya) is used as a demonstrative pronoun.

As an interrogative pronoun "ma" has the meaning of "which" and "how many." Ma hímba, "which horse," ma hímbanang inc uwáy, "which horse did you buy"; ma pits, "which man," ma pítsnang inc ói, "which man did you see"; ma ãtc "which ruana," ma ãtynak kya om, "which ruana did she weave"; ma ói, "which woman," ma óiweš twétsyo, "which women are walking there," mãnstyin, "how many," mans vyó hípong, "how much money have you."

Indefinite pronouns are:

all: cúcai; cúcai pits, "all men,"
cúcai ói, "all women";

each: tečteč (cf. 1 = teč);

both: é'nzi (cf. 2 = é'nz); é'nzi pits, "both men,"
é'nzi ói, "both women";

enough: ãhna; ãhna vyó, "enough money";

anyone: mãpa

/224 cont./

193 no one: tĕčanyópa; tĕčanyópa máhiméta, "no one is working";

several, various: ko; ãtya ko hímba hípt, "I several horses have";

many: tak; tak nása, "many people";

little: wé; very little: táwala wẽha.

193 114 Verbs: The infinitive forms of the verbs end in -ya. The only data thus far published about the conjugation system are to be found in Castillo i Orosco, who conjugates the verb "to write" [177] in all paradigms according to Latin grammar. The word formation of the model verb and the conjugation are artificial and set [797] up for teaching at the mission schools. People do not speak that way in Calderas.

193 124 177 The conjugations of a few verbs given in the following do not represent all the conjugation possibilities, since -- as was mentioned -- the interpreter lacked a knowledge of Spanish grammar. Hence the schema of the paradigms is largely theoretical. Everyday speech is different, and especially in storytelling the interpreter used forms which he reproduced in Spanish with participial constructions. Nevertheless the forms reproduced here are /225/ "correct" in the sense that one "can" speak this way and be understood while using the forms.

193 [124] Besides the four tenses reproduced here (present, future, and two forms of the perfect), there are probably also forms corresponding to the conjunctive, which, however, the interpreter neither understood nor was able to reproduce in Spanish. The forms of the future are not always used. Very often the present is used with the addition of "tomorrow" or "later," for example, ãtya gwágwan kúskay, "I speak tomorrow," instead of ãtya gwágwahípt, "I shall speak." The forms of the two past tenses are apparently used arbitrarily. To my questions on this point I always merely received the answer: "one can say it this way and also that way." Here, too, the addition of óñna, "yesterday" (in context: óñnaha), or esé, "some time ago," is customary.

[126] The abstract, consecutive listing of the forms of a conjugation is hardly possible for the Paez. I always had to make

/225 cont./

193 inquiries with reference to examples that were easily comprehensible.
126 If these lay outside of the context just discussed, I was often requested to provide the appropriate form myself, which I always succeeded in doing with the help of my examples, to the joyful surprise of the Paez. Their confirmation in each case, that "one can say it that way, too," permits me to set down the following
193 paradigms. Phonetic discrepancies are purposely retained, for
128 example, in the second person singular the endings -eg and -eng, in the third person plural the endings -yin or -yen. In the present, the first and third persons singular are generally the same. The personal pronouns for all forms are placed before the verb. In the model verbs the feminine form of the first person singular and the various forms of the second person singular were omitted in favor of the simple masculine forms.

193 ōpya, "to live"

Present:	ātya ōpon	Future:	ātya apohípt
	inç ōponeng		inç opohípeneng
	kya ōpon		kya opohípa
	kweš ōpontkaw		kweš opohíptaw
	kyáñweš ōpotyin		kyáñweš opohíptyin

Perfect:	ātya ōpokot	or:	ópnast	(óñnaha)
	inç ōpcing	or:	opnásing	(óñnaha)
	kya ōpok	or:	ópnasa	(óñnaha)
	kweš ōpotaw	or:	ópnastaw	(óñnaha)
	kyáñweš ōpotç	or:	ópnastyin	(óñnaha)

/226/

●/93 In like manner óhoya, "to go," is therefore conjugated:

Present:	ātya óhon	Future:	ātya ohohípt	
	inç óhoneg		inç ohohípeneṅg	
	kya óhon		kya ohohípa	
	kweš óhontkaw		kweš ohohíptaw	
	kyáṅweš óhoyen		kyáṅweš ohohíptyin	
Perfect:	ātya óhokot	or:	óhonast	(esé)
	inç óhoing	or:	ohonásiṅg	(esé)
	kyá óhok	or:	ohonása	(esé)
	kweš óhotaw	or:	ohonástaw	(esé)
	kyáṅweš óhotç	or:	ohonástyin	(esé)

In like manner úsya, "to give," is conjugated: present: átya úson, inç úsoneṅg, etc.

gwábya, "to speak"; here the "b" becomes "g" in the conjugation:

Present: ātya gwágwan
inç gwágwaneṅg, etc.
(on another occasion, however, I was given átya gwábal for "I speak").

Perfect:	ātya gwágwakot	(óṅnaha)
	inç gwáving	(óṅnaha)
	kya gwáok	(óṅnaha)
	kweš gwáotaw	(óṅnaha)
	kyáṅweš gwáotç	(óṅnaha)

Future: ātya gwágwahípt
inç gwágwahípeneṅg
etc.

/226 cont./

●193 In the future and perfect, básya, "to answer," is conjugated slightly differently:

Present:		Future:	
	ãtya báson		ãtya basohípt
	inç básoneg		inç básmaṅg
	kya báson		kya básmak
	kweš básontkaw		kweš básĕntaw
	kyáṅweš básotyin		kyáṅweš básmatç

Perfect:		
	ãtya bást	(esé)
	inç básiṅg	(esé)
	kya básk	(esé)
	kweš bástaw	(esé)
	kyáṅweš bástç	(esé)

/227/

Similarly píyeya, "to learn":

Present:		Future:	
	ãtya píya'n		ãtya piyahípt
	inç piyáneṅg		inç píymaṅg
	kya piyán		kya píymak
	kweš piyántkaw		kweš píyĕmtaw
	kyáṅweš piyátyin		kyáṅweš píymatç

Perfect:		
	ãtya píyt	(ónnaha)
	inç píyiṅg	(ónnaha)
	kya píyik	(ónnaha)
	kweš píyĕtaw	(ónnaha)
	kyáṅweš píyitç	(ónnaha)

"To be" as an auxiliary verb is not known, but only õsya as a verb in the sense of "to be found."

Present:		Future:
I am in Calderas	ãtya Caldelaste õst	ãtya õsohípt
you are in Calderas	íncpa Caldelaste õsiṅg	inç õsohípenen
he is in Calderas	kyápa Caldelaste õsĕn	kya õsohípa
we are in Calderas	kwéšpa Caldelaste õstaw	kweš õsohíptaw
they are in Calderas	kyáṅwešpa Caldelaste õstyin	kyáṅweš õsohíptyin

/227 cont./

193 Perfect:

ātya ōsot		or:	ōsnast
inç ōsoing		or:	ōsnasiṅg
kya ōsok		or:	ōsnasa
kweš ōsotaw		or:	ōsnastaw
kyáṅweš ōsotç		or:	ōsnastyin

Formed without auxiliary verbs:

I am	strong:	ātya čáčat	I am	tired:	ātya wátyt
you are	strong:	inç čáčaing	you are	tired:	inç wátyenen
he is	strong:	kya čáča	he is	tired:	kya wátyin
we are	strong:	kweš čáčataw	we are	tired:	kweš wátytau
they are	strong:	kyáṅweš čáčatyin	they are	tired:	kyáṅweš wátytyin

"To have," hípoya, which is conjugated normally, serves as an auxiliary verb:

Present:	I have	fleas	ātya pá'pa hīpt
	you have	fleas	inçpa pá'pa hípěneṅg
	he has	fleas	kyápa pá'pa hípěnen
	we have	fleas	kwéšpa pá'pa híptaw
	they have	fleas	kyáṅwešpa pa'pa híptyin

/228/

Future:	ātya hípohīpt	Perfect:	ātya hípokot
	inç hípohípeneṅg		inç híponiṅg
	kya hípohípa		kya híponek
	kweš hípohíptaw		kweš hípoktaw
	kyáṅweš hípohítyin		kyáṅweš hípokotç

In like manner, one conjugates:

I have water: ātya yó hipt

inç yó hípěneṅg, etc.

/Section c), "German-Paez Vocabulary," has been omitted in the translation; see pp. 228-251 of the foreign text./

/318 cont./

105 assumed Chibcha language in particular. The difficulty of language
114 comparison in the northern Andean area lies in the wholely in-
197 adequate material for comparison. The majority of the tribes investigated have died out long ago, and there is seldom sufficiently complete material available from the few living ones. Even the true Chibcha (Mwiska) on the plateau of Bogotá has not been spoken for two and a half centuries and is known only from the literature. Beuchat and Rivet choose the lexicographic and grammatical method for their language comparison. The total vocabulary of the languages investigated contains about 200 words. These serve as comparative material for 49 languages, namely, for true Chibcha (Mwiska) and 23 other languages and dialects in northern Colombia and Panama, as well as for 25 languages and dialects of southern Colombian languages! Methodologically the procedure was to find a lexicographic agreement between language A and language B, another agreement between language B and language C, a further agreement between language C and language D, etc. In the proof, language A is related to languages B,
105 C, D, etc. Applied to Paez: In the vocabulary given by Beuchat
114 and Rivet there is no Paez word in direct agreement with Chibcha!
192 Nor was there even a choice of words according to their qualita-
197 tive significance. Thus it is especially noteworthy that there is a complete lack of corresponding designations for food, animals, useful plants, metals (gold), parts of the body, kinship designations, etc. /319/ On the basis of the vocabulary, therefore, it is not possible to designate Paez as a Chibcha language. To what extent this applies to the other southern Colombian tribes, for whom there usually exists only a very limited vocabulary, cannot be discussed here. In any case, there is a large number of Kechua /Quechua/ words in all these languages -- as a result of the close proximity to Kechua-speaking peoples. (For Paez, cf. the
105 compilations in Castillo i Orosco and Pittier de Fábrega.) Gram-
197 matical agreements between Chibcha and Paez do exist. At the
[114] same time, however, Beuchat and Rivet expressly point out that,
[193] of the languages compared, Paez shows the greatest grammatical differences with Chibcha (pp. 190/191). In summary it may be

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

deserted savannas. It must be said, in extenuation, that they have been subjected to much abuse by their neighbors of the "superior race." Moreover, the Paeces are naturally hostile to strangers, descending, as we have seen, from a warlike people. The old Paeces always went about armed, carrying a lance or javelin in the hand and ready to protect their bodies from the darts of an enemy by means of a shield of basket-work (*opinuß*), or of tapir hide (*yimba-kát*). The warlike tendencies of the tribe were stimulated by means of periodical contests in which the most valiant warriors fought each other in the presence of the multitude.

To-day, as we have seen, the descendants of these have abundant opportunity to satisfy their fighting propensity by taking sides in the frequent quarrels of the political parties that thus far have kept Colombia in an almost continual turmoil.

Sexual intercourse between Paez women and men of other races is said not to exist; barbarous chastisement would be the fate of the offending female. It is to be expected, however, that the closer contact brought about by the gradual penetration of the Tierra Andentro by whites and negroes will soon overcome the purity of the Paez blood and open the way to amalgamation with the neo-Colombian race.

Reclus, cited above (page 311), gives us to understand that the Paez were cannibals, and the tradition current in the villages along the western foot of the cordillera confirms his intimation with reference to the Pijaos; for the coming of "el Pijao" is still a menace to children. The early chroniclers tell us of several anthropophagous tribes which lived in this region, and it is not unlikely that the Paeces had a share in that custom.

GRAMMATICAL NOTES

Castillo's *Nociones gramaticales* is limited to a list of the personal pronouns and the conjugation of the verbs 'to be' and 'to write.' A few more grammatical indications are incorporated in the vocabularies, but on the whole these data are very meager, and much remains to be done in this direction.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194	*epruch*	is now	*pens*,	old (applied to female only).
114	*isus*	" "	*sus*,	urine.
[192]	*atamp*	" "	*taap*,	fog, cloud.

In Castillo's vocabularies *rs* stands for *s*, *z* for *ts* and *tz*, *ch* for *tt*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mis-a*, it is not; *ishe* for *its-i*, to join, to marry, etc.

II. — Word-formation

192 *Remarks.* — A few preliminary remarks as to the vocabulary
114 given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's
114 vocabulary and their orthography adapted to our own.
192 Among those words not included in Castillo's, some have
197 simply escaped him, as, for instance, a number of plant names.
174 But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 *Compound Nouns.* — The Paez language, like most of the
114 languages belonging to the Chibchan group, has suffixes indica-
[171] tive of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

easy to determine the words that form such families, and it remains for the future student to systematize and complete them. We are able, however, to give a few examples: 193 114

Kuė is indicative of smallness, fragility, and is found also in several terms referring to childhood or parental relations. Examples: 192 193

kuė	child.
a-kuė	monkey.
ala-kuė	child.
anl-kuė	nephew.
anl-tsun-kuė	grandson.
atl-kuė	nephew.
doŋ-kuė	nephew.
etl-kuė	orphan (phantom's son).
ñu-kuė	uncle, father's brother.
pe-ñu-kuė	aunt, father's sister.
tuku-kuė (onomatope)	a small dove.
ueza-kuė	girl.
uez-kuė	thread.
uitla-kuė	bird.

In the following words, however, the signification of the suffix is not apparent:

ak-kuė	burial.
ciŋ-ka-kuė	ant.
ia-kuė	ceremonial feather-dress.
ka-kuė	body.
imeta-kuė	dorsal spine.
ne-kuė	challenge, contest.
sa-kuė	heart of a tree.

Guė, meaning disease, is found as a suffix in a few known cases:

atla-guė	hectic fever (lit. hot-ache). [164]
buts-guė	smallpox.
iaia-guė	intermittent fever.
su-guė	a medicinal plant.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193
192

Nin signifies a small, round object, and is found in:

ipi-nin	ember, red-hot coal (lit. fire-seed).
kigue-nin	clay bullet, used with the blow-gun.
segua-nin	powder.

The verbal desinence *nàs*, corresponding to the gerund tense, is largely used to form nouns that indicate condition or state, as in the following examples:

aknuk-nàs	coward, from *aknuk*, to be frightened.
atì-kats-nàs	tailor (*atì*, a piece of dress; *kats*, to sew).
do-nàs	lying-in woman (*do*, to bring forth, to give birth).
fìs-nàs	the writer (*fìs*, to write).
idìs-nàs	the one named (*idìs-a*, to call oneself).
idìse-nàs	he who baptizes (*idìs-e*, to baptize).
ikas-nàs	the chief, he who commands (*ikas-a*, to command).
ipons-nàs	he who is powerful (*ipons*, the Pleiades).
χìp-nàs	the owner (*χìp*, to have, to own).
pang-nàs	he who is sentenced (*pang*, to sentence, to condemn).
pas-nàs	the stranger, he who arrives (*pas*, to arrive).
sikia-nàs	he who knows (*sikia*, to know).
tòte-nàs	the governor, he who talks loud (*tòt*, to yell, to talk loud).
ukoments-nàs	a kind of wasp.

193 It is also found that large groups of compound nouns have the same initial word, generally in the form of a monosyllabic prefix. Among them, two are of peculiar interest, on account of the apparent specialization of the prefixes *nc* and *pc*, the first of which seems to indicate only relationship, while the second is still more restrictive and refers almost exclusively to relations between father, mother, and children. The signification of *nc* is obscure; while *pc*, used as a prefix before a noun, evidently indicates the coming together of two or of several things or persons. Both groups have been incorporated in the vocabulary, as have a large group of verbs with the same prefix *pc*, but which have seemingly no relation to each other.

Formation of Adjectives. — A good number of adjectives also end in *kuí*, but this suffix seems to correspond to a form of the

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

verb 'to be,' following what may be a noun or another adjective, and may be regarded as a predicate adjective or denominative verb: 193

ampa-kuł, lean, sad.
dilł-kuł, pretty (Cast.).
dłiłł-kuł, pretty (Pitt.).
dzuns-kuł, frail, slender.
its-kuł, lean.
łála-kuł, small.
nu-kuł, small, low, of a river. [192]
o-kuł, plane, even.
pats-kuł, ugly.
pets-kuł, thin, like paper.
uáts-kuł, lazy.

It should not be inferred from the scarcity of this class of words in the examples given that the Paez language is lacking in them. On the contrary, a few examples show that, like many other primitive idioms, the Paez distinguishes gradations and categories in the qualities he attributes to an object or to different objects or persons. Thus, Castillo gives four different words for 'thick,' all of which, and one more, are still in use to-day. Now it is found that every one of them has a distinct signification or is applied in distinct cases:

fitse, thick, viscous, semi-liquid (of soup, mud, etc.). [192]
χot, thick (of a tree).
łłł, thick, stout (of a person).
iot, thick, bulky.
tat-a, thick or dense (of a forest, a jungle).

In the same way we have four expressions for 'large' three for 'soft,' etc., but without data to exemplify their use.

Reduplication is frequent in adjectives and seems to correspond to a superlative gradation.

The adjectives for 'young' and 'old' differ according to the sex of the person to whom they apply. The first is translated by *taki* when it applies to males, as in *pits-taki*, 'young man,' and by *kue-nas* when applied to females. 'Old' is *inŭ*, or *tei* [561] when referring to males, and *pcnŭ* (or *e-pcnŭ*) when used for females. [562]

Formation of Verbs. — Owing to the brevity of my stay among the Paez Indians, I felt from the first a certain reluctance to enter into the intricate study of the verbs, fearing that, should 193 114

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 114 I begin it, I might be induced to accept *a priori* as true apparent rules which would then draw me into further mistakes. My former experience shows that a reliable comprehension of the infinite variations of the verbs, as bearing on flexion, derivation, etc., is not really acquired until one is fully cognizant of the spirit of the language to which they belong and is able to handle this almost as easily as his own.

In consequence of this, the few notes that follow are based mainly on the verbal terms included in Castillo's vocabulary.

193 192 (*a*) *Primitive Verbs.* — We find first that there are terms, expressive of condition, action, or motion, that can be considered as essentially verbal, and could be called, for simplicity's sake, "primitive verbs." Here are a few of them:

dî, to sleep	*ôts*, to burn.
gôgu, to run	*peh*, to beg, to ask.
ios, to fly	*pas*, to stretch.
kis, to fast	*pot*, to breathe.
ktond, to carry	*si*, to attend, to serve.
o, to eat	*so*, to take, to receive.
ô, to die	*tunt*, to soften, to knead.
ôp, to shut, to close	*tet*, to beat, to knock.
os, to give	*tetl*, to lick.
ôs, to plant	*vis*, to touch.
ots, to work wood (labrar madera).	

It is not unlikely that most of these verbs were originally nouns or adjectives, and that a few of them are still in use as such, although they do not so appear in the vocabulary. The following are given with a nominal, or a qualificative, and a verbal signification, and may be considered as true

(*b*) *Denominative Verbs* — susceptible of all flexions corresponding to person, mode, or time:

ampô-kuô, sad, to be sad.
aftatî, warm; *aftaô*, to be warm (*ô-aft*, to warm one's self).
ios-ô, standing, to be standing.
ipe-inka, thoughtful, to be thoughtful.
χuend, laying, to be laying.
paia-hi, careless, to be careless.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

A3
A2

tlitan, hung, hanging, to be hanging.
ti, hiccough, to gasp, to breathe one's last.
is, rut, menstruum, to be in heat (applied to a female animal).
kami, to lie, lie.
kik-ki, light, to dawn.
kit, tooth; *kit-ik*, to lie on the abdomen (estar boca abajo).
ko-ia, food, to cook.
uetla, be merry, to be merry.

(*c*) *Verbal Prefixes.* — But more generally the transition from the adjective or from the noun is indicated by the prefix *i*, the exact sense of which is not clear. Thus —

ne-io, wife;	*i-io*, to marry (when the man marries).
ne-mi, husband;	*i-mi*, to marry (when the woman marries).
puns-a, arm-pit;	*i-puns*, to carry under the arm.
sus, urine;	*i-sus*, to urinate.
tlu, short;	*i-tlu*, to shorten.

Sometimes the radical word is already a verbal form, as in —

i-pi-ñas-á, to be jealous, to accuse; derived from *ñas-á*, to hit.
i-pot, to smell like; derived from *pot*, to stink.

In other cases of this class the prefix is *pe*, or *ka*, the meaning of which is equally obscure:

fiuts, to fix, to nail;	*pe-fiu*, to put together.
kit, a tooth;	*pe-kit*, to masticate.
tlantl, to suck;	*petlantl*, to suck.
gógu, to run;	*ka-gó*, to roll down.
itse, to join;	*ka-itse*, to join, to put together.
kond, to break;	*ka-kond*, to carry off violently.
pang, to sentence;	*ka-pangó*, to punish.

III. — Parts of Speech

A. — *The Noun*

1. *Gender of Nouns.* — When gender is indicated, it is usually by means of suffixing the word *pits*, male, or *ii* (Cast. *ói*), female. Examples:

atall-pits, rooster;	*atall-ii*, hen.
de-pits, lover;	*de-ii*, sweetheart, concubine.

2: Pittier de Fábrega E-4, 5 (1906) 1907
' SC15 Paez SC15

193 This rule, however, applies only to persons or animals.
192 Plants and inanimate objects have no gender, so far as known. Moreover, many usual terms, mostly personal, have distinct forms according to sex. We have for instance:

doχ-kuč, nephew;	*doχ-nès*, niece.
inî, grandfather;	*nentî*, grandmother.
e-it / *ne-i* } father;	*ne-si*, mother.
ne-mi, husband;	*ne-ñi*, wife.
ne-tson, brother-in-law;	*ne-soñ*, sister-in-law.
sat, cacique, chieftain;	*eta*, woman principal, cacique's wife.

2. *Number of Nouns.*—The prefix *pe*, already alluded to, may be considered as indicating duality; at least such is distinctly the case in the following instances:

pe-ndii, to be or to go together sister and brother.
pe-niiî, son and father, or mother and daughter.
pe-peî, to be or to go together brother and sister.
pe-tam, male and female, together.
pe-tsik, son and mother, or son and father, together.

Plurality seems to be indicated in most instances simply by means of the determinative *uei* or *gueî*, many, except in the case of nouns designating persons, when the suffix *ueî*, or *gueî*, is used. But the same suffix appears also as a distinctive of collectivity, so that this point is not altogether clear. We have:

pits, man;	*pits-ueî*, men.
teč, adult;	*teč-ueî*, adults.

But also

E-it-ueî	*hus*	*atîatî*	*meng-a?*	Did you annoy your father? (Lit. Did you make your father's hea t hot?)
father	heart	hot	made	

193 3. *Double Gender.*—It is interesting to find in the Paez lan-
601 guage a few cases of what De la Grasserie in a recent work[1] calls "double gender," i. e., nouns that express in a single word the sex of the person who speaks and the sex of the person

[1] Raoul de la Grasserie *De la Catégorie du Genre*, Paris, 1906.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193
[601]

spoken of. These nouns all have reference to parental relations:

dii, brother of a sister.
epei, sister of a brother.
iak-ti, elder sister of a sister.
ne-iak, younger sister of a sister.
ne-udii, brother of a brother.
ne-tei, elder brother of a brother.
pe-ti, younger brother of a brother.

B.— *The Adjective*

As in all languages of the Chibchan group, the Paez adjectives are invariable in gender and in number. The lists at hand are poor and incomplete, but the little we have seems to show a great choice of expressions to indicate degrees or shades in the use of qualificatives.

The superlative gradation seems to be indicated only by the adverb *atha*, 'very,' placed before or after the adjective. There is apparently no way to express a comparison.

C.— *Pronouns*

Our data on this subject are also very meager, and so incomplete that we are at a loss how to give any definite explanation.

In his *Nociones gramaticales* Castillo gives a table of the personal pronouns, from which we infer that there are two forms, according to gender, for both the subjective first and second person of the singular number. From the texts given by the same author, we also deduce that all the personal pronouns are used as possessive, and those of the third person as demonstrative.

In the conjugation of verbs the subject appears to be expressed chiefly by means of a suffix.

Following is Castillo's table:

I	Masc. *anki*, *anti* Fem. *oku*	we	*kuc-k-uei*, *kuc-k-u*, *ku-k-uei*
thou (you)	Masc. *inui* Fem. *itta*	you	*in-k-uei*, *i-k-uei*
he, that	Masc. *kina*, *kiana* ?	they, those	*kina-k-uei*

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 The middle *k* of the plural forms is inserted apparently for the sake of euphony.

D.—*The Verb*

[121 114] As explained above, I did not endeavor to collect material for the study of verbs, by reason of the limited time at my disposal. Castillo's data are also very defective, but the paradigms presented by him as examples of conjugations are sufficient to afford an insight into the mechanism of conjugation. We reproduce the principal tenses with the object of showing that the verbal modifications referring to person, mode, and time, consist of a combination of the verbal root with the copulative or substantive verb and a suffix or ending that expresses the person. Our spelling differs somewhat from that used by [114] Friederich Müller,[1] who had no practical experience with the language:

(1) To be:

	Singular	Plural
	Præsens	
1st p.	*anki-t*, I am;	*ku-k-uel ta-u*, we are;
2d p.	*inui-ng*	*ik-uel ik-u*
3d p.	*kinà-a*	*kinà-(g-)uel i-a.*
	Perfectum	
1st p.	*anki-kil*, I was;	*ku-k-uel ta-u ib*, we were;
2d p.	*inui-ng-ib*	*ik-uel nek-u ib*
3d p.	*kinà-k-ib*	*kina-g-uel ta ib.*
	Futurum	
1st p.	*anki-net*, I shall be;	*ku-k-uel net-ka-u*, we shall be;
2d p.	*inui-neng*	*ik-uel nek-u*
3d p.	*kinà-nen*	*kina-k-uel pat-in.*

(2) To write, or to paint, *fis*:

	Præsens	
1st p.	*anki fis-ats-t*, I write;	*kuè-k-u-fis-ats-ta-u*, we write;
2d p.	*inui fis-ats-eng*	*ik-uel fis-ats-ku-a*
3d p.	*kina fis-ats-k*	*kina-g-uel fis-ats-ib.*

[1] *Grundriss der Sprachwissenschaft*, Bd. II, 358, Wien, 1882.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193

Perfectum

1st p.	*anki-t fis*, I wrote;	*kuł-k-uel ta-u fis*, we wrote;
2d p.	*imui-ug fis*	*ik-uel ik-u fis*
3d p.	*kinâ-k fis*	*kinâ-g-uel tink fis.*

Futurum

1st p.	*anki fis an-et*, I shall write;	*kuł-k-uel fis an-et ka-u*, we shall write;
2d p.	*imui fis an-eng.*	*ik-uel fis an-ek*
3d p.	*kina fis an-en*	*kinâ-g-uel fis a-tin.*

Castillo gives two more forms for the Præsens:

1st p.	*fis ats-it*, I am writing, or painting;	*fis ats-i-ta-u*, we are (etc.);
2d p.	*fis ats-ing*	*fis ats-ik-ua*
3d p.	*fis ats-ik*	*fis ats-i-ta*

and

1st p.	*fis n-op-t*, I am writing, or painting;	*fis op-ta-u*, we are (etc.);
2d p.	*fis op-nga*	*fis n-op-kua*
3d p.	*fis n-op-a*	*fis n-op-ta.*

The infix *ats* is an affirmative particle; *ôp* is a kind of auxiliary verb, corresponding with 'to be,' or 'to have.' The *k* and *g* of the plural forms (1st and 3d pers.) are simply euphonic intercalations.

The imperative tense is often formed by prefixing or suffixing *mä*, with a frequent elision of the *ä*, as in the following examples:

Tund-e-mä! Run! (Hurry up!)
Tata mä-palla! Go (and) call (your) father!
Atta-mä! Go away!
Kla m-ue (*mä-ue*)! Catch the cow!
Io m-pts! Give (me) water!
Mi-io! Come!

E. — *Borrowed Words*

192
177

(1) *From the Spanish.* — As might have been expected, we find in Paez quite a number of Spanish words, most of which are included in the following list:

601 19 — *Sum* . . . . . kno-d-co; co-d-kno; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-m; co-d-ho-d-kno-d-m.

20 — *Sub* . . . . . kno-d-co; co-d-kno-d-co; co-d-kno; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-m; co-d-ho-d-kno-d-m.

B--Feminine Ego (see Fig. 2)

1 — *Nemi* . . . . . co.

2 — *Iaksi* . . . . . kno; ho-d-kno-d-p; ho-d-kno-d-p; ho-d-kno-d-m; ho-d-kno-d-m; co-d-kno-d-co.

3 — *Jiuk* . . . . . kno; ho-d-kno-d-p; ho-d-kno-d-p; ho-d-kno-d-m; ho-d-kno-d-m.

4 — *Sub* . . . . . kno-d-co; co-d-kno-d-co; co-d-kno; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-m; co-d-ho-d-kno-d-m.

5 — *Chinás* . . . . kno-d-co; co-d-kno; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-p; co-d-ho-d-kno-d-m; co-d-ho-d-kno-d-m.

The remaining kinship terms are common for masculine and feminine EGO.

Additional Observations

193 601 A father, in referring to his children of both sexes, places the possessive my (anji) in front of the kinship term, thus:

Anji kué (my son); anji jikuesh (my sons).
Anji wásak (my daughter); anji wasakuesh (my daughters).
Anji nson (my grandson); anji nsonmuesch (my grandsons).

A mother, in referring to her children of both sexes, places the possessive my (uk) in front of the kinship term, thus:

Uk kué (my son); uk kuémuesh (my sons).
Uk wásak (my daughter); uk wásakuesh (my daughters).
Uk nson (my grandson); uk nsonmuesch (my grandsons).

/175 cont./

193 601 In like manner, the children, in referring to their parents, place in front the possessive anji or uk, according to whether the speakers are male or female, respectively.

Anjí téwesh (my parents, male speaker).
Uk tewesh (my parents, female speaker).
Anji ishiwesh (my grandparents).
Uk ishiwesh (my grandparents).

/176/

557 576 609 Non-relatives designate the grandparents: nesh wála.

When a speaker is younger than the person referred to, and that person is a father, the correct way to speak of him is "the father of so-and-so," for example: if our informant Victoriano Piñakué (18 years old) wants to refer to Cerveleón Guagás (55 years old), he does not simply mention him by name, because this is a "grosería" /rudeness/, but he says "the father of Alfonso" (who is his eldest son), Pons nei, or Marcelo nei if he refers to the father of Marcelo. If the first-born is dead, he would say unás nei, father of the deceased. If the speaker is older than the person referred to, he may simply call him by name, but only when there is familiarity between the two; otherwise he must use the form previously mentioned. Thus, for example, Vicente Puche, who is older then Julián Piñakué (father of our informant), and since he is familiar with him, simply calls him Kilián; if he were not, he would say Vit nei (father of Victoriano). The identical form is followed for a woman older than the speaker, for example: Pons nihi (mother of Alfonso); Vit nihi (mother of Victoriano); Unás nihi (mother of the deceased).

If our informant Piñakué wishes to express this thought, "Cerveleón, I want something," he must say, "Father of Alfonso, I want something" (Pons nei tech yugüe guau wet). He may call him simply Cerveleón, but far away from him and when he is among people who are not relatives, but, he adds, this is not respectful. If Cerveleón heard this said, he would be annoyed.

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of the Paez from Pitayó collected by French missionaries.

197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic classification of Paez within the language groups of Colombia and classified it in the southwestern group of the six Chibcha language groups. (These Chibcha-speaking tribes correspond neither archeologically nor ethnologically to the true Chibcha (Mwiska) of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic recording lay, aside from the brief time at our disposal, in the lack of grammatical training of the interpreter, who otherwise spoke Spanish very well, but who, during dictation or in translations, often said the same sentence entirely differently when repeating it; possibly because he could translate it better this way. When his attention was called to this, the stereotyped answer was: "One can say it that way, too" or "that is the way we speak." Another thing was that the interpreter was able to summon up the unusual mental concentration for linguistic recording for only two or at most three hours daily, distributed over the forenoon and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collection of ethnological data, the following word list was also made with my Calderun interpreter, Victoriano Piñakué.

In the Paez alphabet the complete palatal range, which includes all consonants, is noteworthy. Almost as numerous are the consonant combinations with the English "w." In the

/217 cont./ In the
194 transcription of Paez words we departed from the Spanish spelling
104 and used the following alphabet:

'	"glottal stop," as in the German ab'ändern
~	nasal vowel
a	short a, as in the German Ball
ā	long a, as in the German schmal
ai	not a diphthong, a+i as in the Paez áime (star), without "glottal stop"
b	always voiced, as in the German Baum
bw	b with the English w
by	palatalized b
č	Spanish or English ch, German tsch
čy	palatalized č
ç	dental ch sound, as in the German ich
d	always voiced, as in the German dumm, English "and"
dy	palatalized d
/218/	
e	closed e, as in the German Schnee, but short
ē	closed e, as in the German Schnee
e	open e, as in the German wenn, hätte
ē	open, long e, as in the German Schäfer
ĕ (ə)	centralized e, as in German gern
ei	not a diphthong, e+i as in the Paez néi (father), without "glottal stop"
f	dentilabial, as in the German fein
g	always voiced, as in the German gut, English "pig"
gw	g with the English w
gy	palatalized g
h	strong h, between h and the ch in German ach
hw	h with the English w
hy	palatalized h
i	short i, as in the German wie, but short
ī	long i, as in the German nie
k	not aspirated, as in the German
kw	k with the English w
ky	palatalized k
l	as in the German laufen; used in place of r in loanwords from the Spanish
ly	palatalized l
m	as in the German mein

/218 cont./

194
104

mw	m with the English w
my	palatalized m
n	as in the German nur
nw	n and the English w
ny	like the Spanish ñ, French gn
ṅ	velar n, like ng in the German singen
ṅw	ṅ and the English w
ṅy	palatalized ṅ
o	short, closed o, not identified more precisely
o̱	open o, not identified more precisely
ō	long, closed o, as in the German Not
oi	not a diphthong, o+i as in the Paez ôi (woman), without "glottal stop"
p	without aspiration, as in the German "Paul"
pw	p with the English w
py	palatalized p
r	only rarely in Spanish words where l is not spoken in place of it
s	always voiceless, as in the German lassen
sy	palatalized s
ʃ	sch as in the German schon
ʃw	s with the English w
ʃy	palatalized ʃ
t	without aspiration, as in the German Ton
ts	like the z in the German zwei
tw	t with the English w
ty	palatalized t
u	as in the German gut; often difficult to distinguish from o
v	dentilabial v, as in the German warm
vy	palatalized v
w	semivowel, like the English w
y	semivowel, as in the English "York"
z	voiced s, as in the German Rose
zy	palatalized z

/219/

The consonants and semivowels in Paez are the following:

● 194

	Plosive fort	Plosive lene	Fricative fort	Fricative lene	Affricate fort	Affricate lene	Liquid	Nasal	Semi-vowel
Aspirate	'			h					
Velars " (palatal)	k ky	g gy						ṅ	
Palatals	ty	dy	hy ç		č čy		ly	ṅg ny-ñ	y
Alveolars " (palatal)	t	d	s sy	z zy	ts		l	n	
Alveolars with hushing sound " (palatal)			š šy						
Labiodentals " (palatal)			f	v vy					
Bilabials " (palatal)	p py	p by						m my	w

The vowels are the following:

a, ā, ai, e, ē, e, ē, ě (=ə), ei, i, ī, (o), o, ō, oi, u.

The pronunciation of "o" and "o" was not observed accurately enough; similarly, the pronunciation of "o" and "u" varied among different persons and was difficult to distinguish. "Ai," "ei," and "oi" are not diphthongs, but are pronounced separately, but without any "glottal stop." The pronunciation of "ty" and "ky" is not always unequivocal, for example, tyita, "weaving sword." In front of some words beginning with "b" one can hear an "m," for example, in bāts (mbāts), "agave fiber." Also, in the case of Spanish loanwords beginning with "b," an "m" is popularly put in front of them. Thus, mbē! instead of véa! was always said by the Spanish-speaking Paez. The original Paez alphabet contains no "r"; in Spanish loanwords "l" is used instead, for example, trapiče = lapiče, horno = olno, nuestro Señor Jesucristo = neustlo Senyol Hesuklisto. Difficulties /220/ are caused by a number of words which to the stranger seem to sound exactly

/220 cont./

194 alike at first, but in reality differ -- aside from context -- in minimal nasal differences in pronunciation. Thus, for example, atc means "I," "today," "ruana," and "digging stick."

Stress is indicated by an accent (ˈ) or by a circumflex. Words without a mark for stress are stressed on the penultimate syllable. An accent (ˈ) between a vowel and the following consonant has sound value and indicates a "glottal stop" (glottal catch).

b) Grammar

193 The substantive: There is no article. Gender is not distinguished in words for things and plants. In the case of human beings and animals such a distinction occurs only in exceptional cases, for the terminology for human beings with respect to sex and age or circumstances is so rich in special words that special designations for the sex in general are not required (cf. the kinship nomenclature in the section "Family Organization"). The distinction is not only so exact with respect to human beings, but even maize, for example, is designated by entirely different words, depending on whether it is ripe or still green (kotc or tsot). If a more precise distinction is nevertheless required, the suffixes -pits (man) for the male sex and -ói (woman for the female sex are used, for example, éčpits, "widower," éčoi, "widow." In general, however, these are artificial distinctions which are used primarily for loanwords. In this case one proceeds from the general or typical. Thus, átaly is the "chicken," and it is the rooster that is singled out and distinguished from the chicken by the suffix -pits (átályepítste). "Horse" is regarded as general and is designated as hímba; the special distinctions are himbapítste, "stallion," and himbaóite, "mare." Moreover, the word lečkwe (child) is added as a suffix to designate small living creatures or small things, for example, luč, "child," lučléčkwe "small child"; hímba, "horse," himbaléčkwe, "foal"; átaly, "chicken," atályeléčkwe, "little chicken"; yat, "house," yatléčkwe, "small

/317 cont./

105 In the Paez religion there is no cult priesthood with offerings
771 and prayer, just as there is also no cult or worship of numinous
756 beings. The Paez religion is a shamanism, the two forms of which are the evil sorcerer and the good shaman as doctor and helper against evil sorcery. As a religious phenomenon Paez shamanism is not as distinctive as the Siberian or the North American shamanism. Assistant spirits and the soul journey as shamanistic means are only rudimentary with the shamanistic "signs," the "thunder child," and the journeys of the shaman to the house of Thunder on the bottom of the lagoon; there is almost no ceremonial apparatus. Nevertheless, the activity of the good shaman in particular, as doctor and helper in sickness caused by magical practices, as well as his function as sociological crystallization point of the community, is entirely a shamanistic phenomenon.

105 Linguistically Paez belongs among the agglutinative languages,
[197] in which the form element is made up by affixes that characterize
[194] whole classes of words. In phonetics the series of palatals including all the consonants is striking, as well as the frequent occurrence of nasal vowels.

105 /318/ The linguistic classification of Paez is difficult. Since
114 the research of H. Beuchat and P. Rivet it has been regarded as
197 one of the Chibcha languages. This was not always the case. E. Castillo i Orosco emphasized in 1735 that in its grammatical structure Paez is very different from Chibcha (p. 63). It was C. Cuervo Marquez who first regarded Paez as a Chibcha language (p. 199). H. Pittier de Fábrega emphasized in 1907 that the relationship of Paez refers only to the rules of grammatical construction; the vocabulary is completely different (p. 341). Then in 1910 Beuchat and Rivet investigated all the North Andean languages in a work of large scope and then confirmed the distribution of the Chibcha languages from Nicaragua to Eucador. According to this, the majority of the Colombian tribes spoke Chibcha (pp. 193-198). Up to now this classification has neither been examined in greater detail nor disproved by linguistics. This may be left to the philologists. Here there will only be a few remarks about the problem of the Chibcha languages in general and that of Paez as an

194

I. — Phonetics

Vowels

	a	*a*	*ä*		
e	*ẽ*		*o*	*ɔ*	*ɔ̃*
i	*ĩ*		*ũ*	*u*	*ũ*
ä	*ẽ*	*ɨ*	*ɔ̃*	*ũ*	

Consonants

		ẋ	*x*		
k	*g*	*χ*	*χ̇*		*ŋ*
tɨ	*dɨ*	*ɨ*			
ts	*dz*				
t	*d*	*s*	*z*	*l*	*n*
p	*b*	*f*	*v*		*m*

194 In his introduction to Castillo's vocabularies, Uricoechea as-
114 serts, on the faith of the latter, that the Paez vowels are numerous, distinct from those of the Spanish language, and difficult of pronunciation. The Castilian language has only the five fundamental Latin vowels, while the Paez has three more, *ä*, *ɔ̃*, and *ũ*, not including the nasalized vowels, which are not specifically distinct.

This can scarcely be called rich, but if by richness Uricoechea means euphony, then he is certainly correct. Indeed, the diphthongs *ai*, *eu*, *io*, *ua*, *ue*, *ui*, *uo*, recur with extreme frequency, and there are none of the half-mute vowels so often
194 met with in the dialects of the Chibchan group. Again, it cannot be said that the Paez, in its present phonetics, offers any serious difficulty to the student so far as pronunciation is concerned. I have given careful attention to this special question, and think that the above table of vowels and consonants is fairly adequate to an exact transcription of the language.

When we come to the comparison of consonants we find that the Paez has all the consonants used in classical Castilian except the *z* (*ð*, English *th*), and that it has *χ̇*, *tɨ*, *dɨ*, *ɨ*, *ts*, and *dz* in addition. Here we may be justified in speaking of abundance, inasmuch as these fundamental consonants are accompanied by quite a formidable array of compound ones, either

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

initial like *bll, ft, kb, kl, kn, kp, ks, kt, mb, pk, pl, pš, pt, st, tsk,* 194
or terminal like *fχ̇, kχ̇, pχ̇, mb, nš, nt.*

A further comparison of Castillo's material with my own 194
shows three chief points of divergence in the transcription of 114
words. One of them, namely, the prefixing of an initial *g* to words beginning with *na* or *ne*, is general among Spanish authors, there being as much difficulty for a Spaniard to pronounce correctly that broad diphthong as to express any foreign word beginning in *st, sp*, etc., without an initial *e*. Just as a Spaniard will say 'estreet,' 'esprout,' 'estyle,' he is sure to pronounce 'gwatchman,' if not 'gwatchiman,' 'gwarbler,' and so on. This misspelling, then, may be regarded as an idiosyncrasy of our author.

A second difference, often repeated and which must be considered as an error in the reproduction of the original text, is that the words ending in my vocabulary in *ts, fχ̇, kχ̇*, etc., end respectively in *ti, fi, ki*, etc., in Castillo's vocabulary, the terminal *s* and *χ̇* having almost uniformly been mistaken for an *i*. Examples: [192]

efi	for *efχ̇*,	eye-tooth.
equi	" *ekχ̇*,	fuel.
cafi	" *kafχ̇*,	gargante de.
cati	" *kats*,	hide, skin, peel.
conchi	" *kwntl*,	black.
miti	" *mitl* or *mits*,	pot.
tambi	" *tampχ̇*,	flank.

Unwritten languages are subject to rapid alteration. This is sufficient to explain the frequent change of *o* to *u*, and the suppression of the initials *a, e*, and *i*, in certain words. Following are a few examples of both cases: [192]

doj	has become	*duχ̇*,	weight.
rito	" "	*fitu*,	tree.
gnaco	" "	*nâku*,	tick.
ouza	" "	*kuuza*,	mouse.
ioc	" "	*iuk*,	wood, fuel.
aloch	is now	*lutl*,	child.
alawch	" "	*lawetl*,	lizard.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194	*epench*	is now	*pent*,	old (applied to female only).
114	*ites*	" "	*sus*,	urine.
[192]	*atamp*	" "	*taap*,	fog, cloud.

In Castillo's vocabularies *.rs* stands for *ʒ*, *z* for *ts* and *tz*, *ch* for *tš*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mes-a*, it is not; *izhe* for *its-e*, to join, to marry, etc.

II. — Word-formation

192 *Remarks.* — A few preliminary remarks as to the vocabulary
114 given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's
114 vocabulary and their orthography adapted to our own.
192 Among those words not included in Castillo's, some have
197 simply escaped him, as, for instance, a number of plant names.
174 But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 *Compound Nouns.* — The Paez language, like most of the
114 languages belonging to the Chibchan group, has suffixes indica-
[171] tive of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

/216/

IV. Spiritual Culture

1. Language

121 According to A. v. Humboldt, languages are differentiated by the elements of content and form, and, accordingly, languages are divided into three groups, which in the following period were erroneously interpreted as stages of the development of language. According to this, the oldest stage was represented by the isolating languages, which express form elements by means of independent words with the meaning still recognizable as far as content is concerned. Their words, as in Chinese, are monosyllabic, isolating. The second group is made up of the agglutinative languages, in which the element of form is added to the element of content, the stem, through clearly recognizable affixes. The Ural-Altaic and the Bantu languages in particular are put here. The inflected languages occupy the third stage. In them the form element is expressed by inner changes of the stem or by affixes closely intergrown with the stems, as, for example, in the Indo-Germanic and Hamito-Semitic languages.

Even though this classification of languages was subsequently abandoned as the schema of a sequence of development, it is nevertheless quite applicable as an initial, practical orientation. For the more precise classification of a language, the working out of the phonetics and syntax is required.

● 197 193 Paez is an agglutinative language. The grammatical forms are built up by a succession of syllables. The pronunciation is difficult for a European. It is similar to Kechua /Quechua/, from which a number of loanwords have been adopted.

175 797 192 193 114 The oldest linguistic reports about the Paez come from P. Eujenio del Castillo i Orosco, who collected his linguistic material around 1735, as a missionary in Tálaga. It was supplemented and published by E. Uricoechea in 1877. The collected data include a catechism, a vocabulary, and a grammar with information about personal pronouns and the conjugations of "to be" and "to write." The grammar and vocabulary contain some forms and word formations that are alien to the original Paez language.

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of the Paez from Pitayó collected by French missionaries.

●197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic classification of Paez within the language groups of Colombia and classified it in the southwestern group of the six Chibcha language groups. (These Chibcha-speaking tribes correspond neither archeologically nor ethnologically to the true Chibcha (Mwiska) of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic recording lay, aside from the brief time at our disposal, in the lack of grammatical training of the interpreter, who otherwise spoke Spanish very well, but who, during dictation or in translations, often said the same sentence entirely differently when repeating it; possibly because he could translate it better this way. When his attention was called to this, the stereotyped answer was: "One can say it that way, too" or "that is the way we speak." Another thing was that the interpreter was able to summon up the unusual mental concentration for linguistic recording for only two or at most three hours daily, distributed over the forenoon and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collection of ethnological data, the following word list was also made with my Calderun interpreter, Victoriano Piñakuẽ.

In the Paez alphabet the complete palatal range, which includes all consonants, is noteworthy. Almost as numerous are the consonant combinations with the English "w." In the

* /312 cont./

539 when the thief again came, took down some potatoes, kindled a fire, and roasted them in it, he took out both of his eyes "out of foolishness" before he ate and laid them on one of the three hearthstones. Then the owner of the potatoes, whom the thief, of course, could not see, stepped up, saw the eyes, and kicked them into the fire, so that they burned with a bang. The thief heard the bang, to be sure, but thought to himself, how fine the potatoes are popping and sizzling!

When the thief had eaten all the potatoes, he looked for his eyes, but could not find them. He then left the house very sadly, without eyes, and set out for his own house. On the way he met a rat who was out walking there, and they started a conversation. The thief complained that he had lost his eyes and that, without eyes, it was very difficult to find them again. He begged the rat to lend him one of hers only until he had found his own eyes again. The rat lent him one, but since both of his eyes were burned, he could not, of course, find them. The man then turned himself into wind.

The rat searched for the thief of her eye for a long time, but could not find him. Her son, like his mother, also had only one eye. The son in turn had a son, and he, too, had only one eye. Since that time the descendants of this rat family have only one eye. And that is why one can still find rats today who, to be sure, have the nose, mouth, feet, skin, and ears of a rat, but only one eye or none at all; they go back to that rat who once lent one of her eyes.

/313/

105 V. Summary and Culture-historical Classification of Paez Culture

[161] If we briefly summarize the sketch of Paez life and the ele-
[621] ments of their culture, we find before us a democratic agricultural people of 25,000 persons, among whom no one is master and no
[177] one servant. Surrounded for centuries by Spanish culture, they have
[197] preserved their language in extensive sections of their area of settlement.

/317 cont./

105 In the Paez religion there is no cult priesthood with offerings
771 and prayer, just as there is also no cult or worship of numinous
756 beings. The Paez religion is a shamanism, the two forms of which are the evil sorcerer and the good shaman as doctor and helper against evil sorcery. As a religious phenomenon Paez shamanism is not as distinctive as the Siberian or the North American shamanism. Assistant spirits and the soul journey as shamanistic means are only rudimentary with the shamanistic "signs," the "thunder child," and the journeys of the shaman to the house of Thunder on the bottom of the lagoon; there is almost no ceremonial apparatus. Nevertheless, the activity of the good shaman in particular, as doctor and helper in sickness caused by magical practices, as well as his function as sociological crystallization point of the community, is entirely a shamanistic phenomenon.

105 Linguistically Paez belongs among the agglutinative languages,
[197] in which the form element is made up by affixes that characterize
[194] whole classes of words. In phonetics the series of palatals including all the consonants is striking, as well as the frequent occurrence of nasal vowels.

105 /318/ The linguistic classification of Paez is difficult. Since
114 the research of H. Beuchat and P. Rivet it has been regarded as
197 one of the Chibcha languages. This was not always the case. E. Castillo i Orosco emphasized in 1735 that in its grammatical structure Paez is very different from Chibcha (p. 63). It was C. Cuervo Marquez who first regarded Paez as a Chibcha language (p. 199). H. Pittier de Fábrega emphasized in 1907 that the relationship of Paez refers only to the rules of grammatical construction; the vocabulary is completely different (p. 341). Then in 1910 Beuchat and Rivet investigated all the North Andean languages in a work of large scope and then confirmed the distribution of the *Chibcha languages from Nicaragua to Ecuador*. According to this, the majority of the Colombian tribes spoke Chibcha (pp. 193-198). Up to now this classification has neither been examined in greater detail nor disproved by linguistics. This may be left to the philologists. Here there will only be a few remarks about the problem of the Chibcha languages in general and that of Paez as an

/318 cont./

105 assumed Chibcha language in particular. The difficulty of language
114 comparison in the northern Andean area lies in the wholely in-
● 197 adequate material for comparison. The majority of the tribes investigated have died out long ago, and there is seldom sufficiently complete material available from the few living ones. Even the true Chibcha (Mwiska) on the plateau of Bogotá has not been spoken for two and a half centuries and is known only from the literature. Beuchat and Rivet choose the lexicographic and grammatical method for their language comparison. The total vocabulary of the languages investigated contains about 200 words. These serve as comparative material for 49 languages, namely, for true Chibcha (Mwiska) and 23 other languages and dialects in northern Colombia and Panama, as well as for 25 languages and dialects of southern Colombian languages! Methodologically the procedure was to find a lexicographic agreement between language A and language B, another agreement between language B and language C, a further agreement between language C and language D, etc. In the proof, language A is related to languages B,
105 C, D, etc. Applied to Paez: In the vocabulary given by Beuchat.
114 and Rivet there is no Paez word in direct agreement with Chibcha!
192 Nor was there even a choice of words according to their qualita-
197 tive significance. Thus it is especially noteworthy that there is a complete lack of corresponding designations for food, animals, useful plants, metals (gold), parts of the body, kinship designations, etc. /319/ On the basis of the vocabulary, therefore, it is not possible to designate Paez as a Chibcha language. To what extent this applies to the other southern Colombian tribes, for whom there usually exists only a very limited vocabulary, cannot be discussed here. In any case, there is a large number of Kechua /Quechua/ words in all these languages -- as a result of the close proximity to Kechua-speaking peoples. (For Paez, cf. the
105 compilations in Castillo i Orosco and Pittier de Fábrega.) Gram-
197 matical agreements between Chibcha and Paez do exist. At the
[114] same time, however, Beuchat and Rivet expressly point out that,
[193] of the languages compared, Paez shows the greatest grammatical differences with Chibcha (pp. 190/191). In summary it may be

P /319 cont./
105 concluded that the classification of Paez as a Chibcha language
197 cannot be regarded as definite. The grammatical agreements may just as well be remnants of an older, or superimpositions of a younger, population layer. In addition there is the fact that in the sometimes centuries-long struggles since the Conquista considerable shifting and intermingling of populations have taken place. It is possible that the tribes existing or surviving today are only scattered remains or groupings that have been made up from other tribes only after the Conquista.

C P 105 P [197] P E [361] P C [241] [412] P C [323] P [325] P C [411] P C [771]

Culturally the Paez have nothing at all in common with Chibcha culture. The Chibcha language group established by H. Beuchat and Paul Rivet is a linguistic concept, which, in an uninterrupted extension from Nicaragua to Ecuador, embraces completely different cultures! For example, the Chibcha settlements on the plateau of Bogotá are compact villages, whereas the Paez live on individual farms. The agriculture of the Chibcha, with the use of a wooden spade, is relatively advanced in comparison with the digging stick and burned-clearing cultivation of the Paez. Technically the manufacture of Chibcha ceramics is far above that of the Paez, and it is certain that the Paez did not do any gold work. Among the Paez the sling was the principal weapon; among the Chibcha, club and spear with the spear thrower. In the Chibcha religion we have a creator-god or a tribal mother with a pantheon of other gods, with offerings of gold and emeralds; we find hero-temples, holy places, and sacred kings, while among the Paez, only shamans.

C 105 P C 197

Thus we have a gaping division between the Chibcha language group and the Chibcha culture. Scientific terms, however, should be unequivocal and not designate different concepts with the same words. This is done correctly in Europe, for example, with /320/ the Indo-Germanic family of languages, the Dinaric race, or the band-ceramics culture.

The cultural concept of the Chibcha is the older one. In order not to identify and confuse the culture group with the language group which is completely different from it, the language group should have a different name, especially since it is not certain whether

C 105 /320 cont./
what is common in the vocabulary and structure of the language
C 197 goes back to Chibcha or to a linguistically different substratum. Analogously this is true of the archeological cultures of the northern Andean area, which are also similar in many aspects, but do not go back to the Chibcha culture.

P 105 172 174 There remains the question of the ethnic relationship of the archeological Tierradentro-culture. In view of their meager material and artistic cultural possessions, the Paez were technically not capable of the manifestations of an advanced culture that exist in Tierradentro. With their strictly democratic social structure, they also lack the organization by estate needed to maintain such a culture. Even in the mythological traditions of the Paez, there is no hint of any relationship with the archeological culture. The only similarity seems to be the Paez method of burial in a niche grave; typologically, however, this is not identical with the shaft grave. In addition there is the difference of the cremation burial in the archeological culture in contrast to the skeleton burial of the entire corpse among the Paez. Moreover, the Paez are a local, relatively narrowly circumscribed tribe; the archeological culture, on the other hand, has the most extensive geographical relationships in the art (*), in the style of

* G. Hernandez de Alba (IV) /see the bibliography in the foreign text, p. 324/ found a necklace of small sodalite figures in a grave chamber. This material is otherwise not found in Colombia. It comes from a Bolivian mine, and works of art made of it are found in Tiahuanaco as well as in Peruvian and Argentinian sites.

their stone statues, and in the method of burial in shaft graves.

Artistic relationships, however, make probable more extensive linguistic relationships than is the case for the Paez and their neighbors. From this standpoint a relatively well-developed trade may also be assumed. The disposition and present activity of the Paez, however, does not give us any support in this respect either.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194	*epench*	is now	*pen3*,	old (applied to female only).
114	*isus*	" "	*sus*,	urine.
[192]	*atamp*	" "	*taap*,	fog, cloud.

In Castillo's vocabularies *.rs* stands for *3*, *z* for *ts* and *tz*, *ch* for *tl*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mis-a*, it is not; *izhc* for *its-i*, to join, to marry, etc.

II. — Word-formation

192 *Remarks.* — A few preliminary remarks as to the vocabulary
114 given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's
114 vocabulary and their orthography adapted to our own.
192 Among those words not included in Castillo's, some have
197 simply escaped him, as, for instance, a number of plant names.
174 But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 *Compound Nouns.* — The Paez language, like most of the
114 languages belonging to the Chibchan group, has suffixes indica-
[171] tive of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguez*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.

[2] Cieza de León, 1932; Aguado, 1916; Simón, 1882-82; Oviedo y Valdés, 1851-55; Velasco, 1841-44.

7:Hernández de Alba E-5 (no date) 1948 SC15 Paez SC15

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

121 A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

131 The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

[3] For the languages, see especially Jijón y Caamaño, 1940-41; Castillo I Orozco, 1878; and Castellví, 1934. For ethnology, see Douay, 1900; Pittier de Fábrega, 1907; Ortiz, 1935; Guerra F., 1942; Jijón y Caamaño, 1936-38; Otero, 1938; Alfés, 1934. See also Languages, pp. 921-922.

Hernández de Alba E-5 (no date) 1948 SC15 Paez SC15
Pasto SC17

distinct people. The present city of Pasto was founded in *Quillacinga* territory in the valley of Atria, which was occupied by several small groups: the *Isancales*, *Paguanes*, *Zacuampues*, *Chorros* (Velasco, 1841–44, 2:153), *Mocondino*, *Bejendino*, *Buyzaco*, *Guajanzangua*, *Mocozonduqus*, *Guacuanquer*, and *Macaxamata* (Cieza, 1932, ch. 33). *Quillacinga* territory extended from the frontier of the *Pasto* on the west, i. e., the Guáitara River, eastward to the mountain ridges from which flow the Caquetá and Putumayo Rivers. Its northern and northeastern limits are the high páramo of the Letrero and the sources of the Cauca River. Recent investigations show that it extends south to the district of Puerres (Guerra, 1942). (See also Ortíz, this volume, p. 911.)

Popayanense.—North of the *Quillacinga* in the province of the *Popayanense*, which is well delimited by the Cauca River valley and by the first spurs of the Cordillera Oriental and Cordillera Central, were numerous peoples who had the same general culture, although some of the first historians differentiate them. These tribes, which may collectively be called *Popayanense*, perhaps included the *Puracé*. The many small groups so lacked political unity, however, that Cieza said "That there were no men among them who were feared," i. e., they lacked chiefs.

Coconuco, Moguex, and Páez.—In the hills and small valleys of the eastern slopes of the Cordillera Central were groups of distinctive and strongly organized people. The *Coconuco*, the *Moguex* (*Guambía*), and the *Páez* lived on the eastern slope of the Cordillera, and the *Guamza* (*Guamea*), *Malausa*, *Polindara*, *Palace*, *Tembio*, *Colaza*, *Zotara*, and *Guachicone* on the western slope of the Cordillera (Cieza, 1932, ch. 32). Linguistically and culturally,[7] these tribes were very homogeneous. There were three important subgroups: (1) the *Coconuco*, *Cotara* (*Zotara*), and *Colaza;* (2) the *Moguex* (*Guambía*), *Totoró*, and *Polindara;* (3) the *Páez*, with groups on both slopes of the Cordillera Central. (See also Lehmann, this volume, p. 969.)

Andaquí and neighboring tribes.—The *Andaquí* lived in the mountains from the source of the Magdalena River to near Timaná and south to the high ridges which form the watershed between the upper Magdalena River and the Fragua and upper Caquetá Rivers (Velasco in Ternaux Compans, 1840, pp. 167–68; Pérez, 1862). This zone contains the important archeological remains known as San Agustín (Arroyo, 1907). The territory of the *Yalcón* (*Cambi*) was between the headwaters of the Río de la Plata and the Magdalena River (Simón, 1882–92, vol. 4, Noticia cuarta, ch. iii). The *Timaná* were found by the conquistadors to the southeast of this region, between the Guarapas and Magdalena Rivers centering around Timaná (Velasco, in Ternaux Compans, 1840, 3:26). The *Páez* lived to the north of the

P 113 **Contemporary descriptions.**—Albis (1934), describing a visit to the *Andaquí* in 1854; Bollaert (1860); Brisson (1899), good on the *Pasto*; Castellví (1934), on language groups; Castillo i Orosco (1878), on *Páez* language; Censo de la Población de la República de Colombia (1924); Cortés (1919), on the flora; Cuervo, M. C. (1920), on archeology and ethnology; Garganta Fabrega (1942), on coca; Douay (1900), on language; Jiménez (1936), on geography; Ortíz (1935), on the native communities of Jamondino and Males; Otero (1938), on the *Guanaca* and (1939) on languages in the Departamento del Cauca; Pérez (1862), on the geography of Cauca; Pittier de Fabrega (1907), on the *Páez;* Reclus (1893); Thrasher, (1860–61); and Triana (1907).

LANGUAGES

P ● 197 175 Ever since the chroniclers wrote of the Conquest, the problem of the native languages in this part of Colombia has been extremely complicated. One writer affirmed, "It is certain that there are more languages differing from another than there are leagues in the whole province" (Jijón y Caamaño, 1936–38, 2: 179–82). According to the "Relación de los Sucesos de Pedrarias Dávila," by Governor Andagoya, the Spaniards ascending the Cauca Valley found within 2 leagues east of Cali:

> There are other peoples with a different language from that of the *Lili*. In the ten leagues of the road toward Popayán there is another people of another language . . . toward the other cordillera of the mountains in the eastern part . . . the language of Popayán extends some ten leagues toward the south. And from the top of the mountains toward the valley of Timaná is another different language and ten leagues beyond [from Popayán] from one cordillera to the other there are other different languages all the way to Quito. [Cuervo, 1894, 2:112.]

P 197 But modern linguistic studies in this region have classified the languages spoken at the time of the Conquest as follows:

- *Chibchan* family
  - *Chibcha-Aruaco* group
    - *Aruaco* subgroup
      - *Andaquí* (Castellví, 1934)
  - *Talamanca-Barbacoa* group
    - *Páez* subgroup
      - *Páez, Paniquitá, Quilla*
      - *Totoró, Polindara, Moguex* (*Guambia*), *Cocoauco*, and *Guanaca*
      - *Pijao, Pancha, Quimbaya, Paniágua**
  - Po [197] *Cochean* (*Kamsá*) family
    - *Quillacinga* subgroup (Castellví)
  - *Tucanoan* family
    - *Pasto* subgroup†

*Castellví, 1934; *Jijón y Caamaño*, 1938; and Otero, 1938.
†Rivet cited by Guerra. Jijón y Caamaño classifies the *Pasto* or *Cuaiquer* language in the *Talamanca-Barbacoa* group of the *Chibchan* family.

7:Hernández de Alba E-5,¶ (no date) 1948 SC15 Paez SC15
Pasto SC17

All the region of Popayán and of the *Páez* in the Cordillera Central thus spoke closely related and very similar dialects which were often grouped. For example, the dialects of the *Pijao*, *Páez*, *Timaná*, and *Yalcón* were classed together. In the south, an area of the *Pasto* language extended to Ecuador. Between the *Pasto* and *Páez*, bordering also on the *Pijao*, the native peoples spoke *Quillacinga* and *Andaquí*.

P 197 Po [197]

Of all these languages, there survive today only *Páez*, which is spoken in Tierradentro, and its dialect, *Paniquitá*, on the western slope of the Cordillera Central in Toribío, Caldono, Jambaló, and in parts of Silvia and Totoró. *Moguex* and the related *Totoró* and *Polindara* are spoken in Silvia and in the regions of Totoró and Polindara, according to Otero. *Andaquí* is spoken by only a few scattered groups surviving in the lower region of the Caquetá River.

HISTORY

P 175 648

After Don Sebastián de Belalcázar founded the City of Quito, he sent Diego de Tapia on a voyage of exploration toward the north in 1535 (Otero d'Costa, 1935 a). This expedition discovered the new lands of the Cordillera as far as the large Quillacinga River, today the Carchi River. This river became the point of departure for important travels in the same year by Pedro de Añasco, and in 1536 by Belalcázar, who founded Cali and Popayán, both key points for future expeditions and discoveries. These were the first White contacts with the Andean tribes of southern Colombia. In 1538, Belalcázar undertook a second expedition from Quito, crossing the Cordillera through *Páez* territory and then passing among the *Pijao* Indians. Both tribes resisted him with their feeble arms. He continued toward the east until he met the expeditions of Jiménez de Quesada and Federman at Bogotá. With the foundation of outposts by Jiménez de Quesada in the lands called the New Kingdom of Granada, Añasco was sent back to found Timaná in the territory of the *Timaná* and *Yalcón*. This city was to be the base for communications between Perú, Quito, Popayán, and Santa Fé de Bogotá.

Po 175 648 [411]

The *Pasto* and *Quillacinga*, after a few encounters with the Spanish soldiers, in which they always suffered bloody defeats because of the weakness of their weapons (arrows, lances, wooden swords, and sometimes slings) and because the Spaniards used horses and hunting dogs, began to surrender. The inhabitants of the Valley of Popayán, who were poor warriors, also ceased to struggle. These tribes had previously suffered the *Inca* invasion, which had extended north to the Angasmayo River, which washed their lands. But the *Páez*, *Moguex*, *Andaquí*, and *Pijao*, thanks to the rugged mountains in their territory and to their more bellicose character and better organization, presented a serious obstacle to the Spaniards' ideal route, which had been drawn

600 Bases for the Study of the Social Organization of the Páez

By
Segundo Bernal Villa.

/Page 166 is blank./

124 /167/ The material for the study of the kinship system of
128 the Páez was collected in the month of May, 1953, thanks to the
[114] enthusiastic collaboration of Victoriano Piñakuĕ, 18 years of age,
[115] bilingual, and a native of the parcialidad /a village and the lands
belonging to it/ of Calderas. With this material we made an
analysis of the kinship system, which we present below without
any major modifications. It was later discussed with several na-
tive men of the parcialidad of San Andrés, who found it to be
correct. At the end of May, 1954, we had the opportunity to
discuss it again in Mosoco with two male informants of the lo-
[197] cality. They found practically no phonological differences, in
spite of the fact that the Páez spoken in that parcialidad showed
some different nuances in relation to that spoken in the other
124 parcialidades. They made only one fundamental observation,
128 which we accepted, since we consider it to be convincing. It
601 refers to the terms used to designate the sons and daughters of the
brothers and sisters of EGO. According to Piñakuĕ, they are
designated with the Spanish terms: sobrino and sobrina /nephew
and niece/. Jorge Mulcuĕ (Mosqueño /a person from Mosoco/
58 years old) affirmed that they are designated with the words kuĕ
or wĕsak (son and daughter) preceded by the possessive my (anji).
601 Men and women use the same terms for both the paternal
and the maternal line, with certain exceptions, subordinating the
real degree of kinship to the generation. The Páez system of
kinship terminology is, therefore, classificatory and bilateral.

764 protected from the earth above it as if it were lying in a lateral
184 niche (Ill. 206 /see p. 291/). It was expressly confirmed to me
[178] that this form of grave has been used for only about 20 years, and that previously regular niche-graves had been made. The transitional character of this covered pit from the shaft grave with the lateral niche becomes even more apparent from the fact that an additional niche was dug about 30 centimeters deep at the head end of the pit, into which the capitan was laid part way, "so that at least the head is lying in a niche."

/199/ The corpse, wrapped in Colombian clothing, was carried on a bier on the shoulders of two men. The bier consists of two poles held by cross-sticks lashed crosswise one above the other at intervals of 30 centimeters. The cross-sticks are lashed with lianas in pairs, each one above the one longitudinal pole and below the other one (Ill. 205 /see p. 291/). After the burial, the bier was chopped up and then left lying in the graveyard.
[201] Shortly before the lowering of the corpse, the members of the
[516] family take leave of it by kneeling down and moving one or both hands before them from above downward and saying: "You are now going to heaven, and we shall not see each other again; we hope it may go well with you!"

After the corpse was lowered and its head pushed into the small niche, the bamboo covering was very carefully and tightly laid over it. Then the pieces of sod as the bottom layer were packed next to each other as closely as they had been when lying on the surface of the ground. The members of the family and the friends, with their left hands, then tossed as many handfuls of earth into the grave as the person concerned has family relatives. Together they fill the grave with all the rest of the earth with their hands. This is an honor for the friends of the deceased; if a person has no friends, the members of his family must do this work themselves. After a few handfuls of earth, the filling of the pit is always stamped down long and thoroughly with tree trunks. This is a very long and exhaustive occupation, and the more beloved the deceased was, the longer the stamping. In the case of the burial of the capitan, this lasted almost two hours. As a

804 The period of a day is subdivided into the day (ẽn) and the
192 night (kos). Early morning is called kosẽ; afternoon at the time when work is at an end, which is reckoned by the position of the sun, is called ff'nze. Other subdivisions of the day are made according to the interval of an ẽšnetc, meaning the time it takes to chew a dose of coca. In translation this designation is used for "hour." The largest period of time is the month, ãte, which is designated by the same word as for "moon." For the period of a year the Spanish word año is used. In former times the word
[221] enzte was used. It is the designation for the large annual com-
[226] munal fishing at the weir during the dry season in February. The
[132] two rainy seasons, called nospá'nye, and the two dry seasons of the year, called sek, are not regarded as time intervals, but as seasons. The latter is at the same time the word for "sun."

823 No large geographical orientations or regional, individual
[491] divisions of any kind could be discovered. Moreover, all of Tierradentro is enclosed by civilized areas -- there is even an auto road leading to Belalcázar -- so that many Paez men have seen the surrounding countryside and even cities with their own eyes.
601 Only the western bordering mountains of the Central Cordillera,
[186] in the direction of Popayán, are conjectured to be the habitation
123 area of the dreadful man-eaters, the Pijao. Geographical means
